TO ADVERTISERS.—In consequence of the pressure upon our space, we have been compelled to postpone the insertion of several pages of advertisements.

LITERATURE.

Personal Recollections from Early Life to Old Age of Mary Somerville, with Selections from her Correspondence. By her daughter, Martha Somerville. (Murray, 1873.)

THE announcement which the telegraph brought to us little more than a year ago that Mrs. Somerville had just died at Naples, probably startled the majority of readers, rather by showing that her life had lasted so long than that it had finally closed. The lady to whom Scott and Blair, Lafayette and Arago were familiar friends, and to whom Sydney Smith had pointed as evidence that it was not always (as "Noddledom" asserted) "a misfortune for a woman to be spoken of," seemed to belong, not so much to the last, as to the penultimate generation. To a few individuals only those simple words of intelligence which flashed across Europe brought the pang of a living loss; the signal of the departure from the world of one whose presence in it had been what a spire is in a landscape. The book which has now appeared will, however, bring back vividly to many who are old enough to recall the intellectual circles of London a quarter of a century ago, and to others who have more recently mingled in those of Italy, the slender and fragile feminine form which, wherever it was seen, held a place of honour, and about which there hung always a curious sense of semi-mystery, such as might have belonged to some childlike Mozart with his gift of melody, or to a gentle little linnet believed to take an eagle's swoop round the sky every morning, and then come back to its cage and peck hemp-seed like the rest of its kind.

When Byron wished to turn his wife to ridicule, he thought no sarcasm so cutting as to observe that

"Her wit—for she had wit—was Attic all;

Her favourite science was the Mathematical."

The bare idea of a woman knowing algebra, or taking pleasure in a fine demonstration of geometry, seemed necessarily to prove her an icicle and a pedant; and to the same generation, the notion that Mrs. Somerville could both translate *La Place* and behave in company as a rational and well-bred lady seems always to have offered a paradox on which the minds of her contemporaries expatiated with wearisome surprise and somewhat impertinent approval. In truth, as all who read her 'Recollections' will see, there never was anything simpler than her life and character from beginning to end, nor anything further from a mystery than the fact that the ardent young girl, inspired with wholesome thirst for knowledge and with unusual faculties for sustained and consecutive thought, should develop into a woman full of gentle dignity and animation, loving order and grace in everything around her, and lifted so far above pettiness or vanity that such things were practically hid beneath her horizon. The wonder would

have been if the child who rambled about the "Links" of Burntisland, pondering on every flower and shell, and who lay awake at night rehearsing to herself the first six books of Euclid, had proved, after all, a vulgar woman; or had united elevated mental pursuits with sordid domestic habits. Some of her critics indeed, it would seem, were so impatient at her unaccountable simplicity and good breeding, that one, at the time of her death, thought fit to describe her as "common-place." Miss Cornelia Blimber's erudite allusions to Cicero, or perhaps a more frequent reference to Logarithms and the Solar System, would no doubt, in this writer's opinion, have been a vast improvement on Mrs. Somerville's style of conversation.

The story of her long and rich life of ninety-two years may yet be very shortly told. Born at Jedburgh in Dec. 1780, the daughter of the gallant old admiral, Sir William Fairfax, to whom the nation was mainly indebted for the victory of Camperdown, Mary Fairfax spent her youth, as she says herself, "like a wild thing," among the rocks and sands round her mother's home in Burntisland on the Frith of Forth. Her formal education consisted in a year spent at the establishment of the Misses Primrose of Musselburgh, who braced up the straight and healthy girl in a hideous sort of portable pillory, and gave her daily a page of Johnson's Dictionary for her mental instruction. Later on she acquired the arts of sewing a shirt and a sampler, and received elaborate instructions in cookery at a confectioner's shop. Music and dancing were graciously added to this extensive curriculum in later years. As for such trifles as history, geography, physics and mathematics, they were, as she piteously remarks, "not for me;" and only by circuitous and occult paths did she climb step by step up the steep of science. "Not a hand held out to help me," she says, "I was often very sad and lonely." But if it be true that "stolen waters are sweetest," those drops of knowledge with which the young girl at last managed to allay her thirst were, doubtless, all the more precious in that they had not gushed from the shallow fountain of a fashionable governess's lectures; and the sacred appetite itself, instead of being appeased by satiety, remained in all its early strength to the very end of her days. That great charm which enchants life, the perpetual desire for knowledge, never failed her, nor ceased to surround her in the eyes of others with that special interest which few have learned to analyse, but which undoubtedly comes of the consciousness that the mind with which we converse is still growing like a tree, not planed and sawn across like a mast. Not vainly did the old Greeks honour their sage for "growing old, learning something every day," for it is one of the truest signs of sagehood so to do; and the woman who learned Quaternions at ninety was perhaps more worthy of respect on that account than because she wrote the 'Mechanism of the Heavens' just half a century before.

After a few years, alternated between her home in Burntisland and brief gay visits to Edinburgh society, where the "Rose of Jedburgh" was ever a welcome guest, Mary Fairfax took a bold step, and married her

relative, Samuel Greig, Commissioner of the Russian Navy, and afterwards Russian Consul for Britain. Why she married this man, who was to the last degree harsh, stern, and unsympathising, and why he, who was totally incapable of appreciating any of the higher qualities of woman, lighted upon the very ablest young girl in the world, is one of those mysteries which must be left to swell the list of inscrutable matrimonial problems. Probably good Lady Fairfax held the creed then well-nigh universal, that a young lady commits unpardonable impertinence if she reject the proposals of "an honest man" of suitable worldly condition; and that no less tremendous doom than being "left to wither upon the cold bank there," is the legitimate retribution for entertaining the heresy that Love is no less needful to sanctify Marriage than Marriage to sanctify Love. Any way, Mary Fairfax wedded Samuel Greig, and was brought by him into his gloomy and miserable bachelor's home in London, wherein (albeit a rich man, making nearly £10,000 a year) he thought fit to lodge her during all their married life. Mr. Greig never forgave Sir William and Lady Fairfax for insisting that, at least, their daughter should live in England and not in Russia, and revenged himself by keeping her much apart from her family and from nearly all his own friends. It is piteous to read that, being tempted by her affectionate heart to spend the only £20 she possessed on a picture of her father, she was allowed actually to suffer from cold till her brother-in-law, Sir Alexis Greig, gave her some furs, which were "very welcome;" albeit, poor young thing! she only wore them on her dreary, solitary rounds of the London square to which she had a key. On Sundays there was the nearest church to attend alone; but beyond this, the beautiful and gifted young wife had little to interest her, except now and then acting as chaperone at the opera to Countess Catherine Woronzow (afterwards Countess of Pembroke), and visiting the ill-fated family of the Bonars at the villa since occupied by Napoleon III. at Chislehurst. After three years this marriage, which has been so absurdly described as the origin of Mrs. Somerville's scientific pursuits, was dissolved by death; Mr. Greig, we believe, expressing at the last his consciousness that his widow would have but little reason to regret his memory. She brought back, however, to her old home in Burntisland, a child who was destined to become a true source of happiness to her during her later years. Woronzow Greig, who alone survived of her two boys, grew up to manhood and lived till 1865, from first to last a most affectionate and devoted son. His duties (as Clerk of the Peace for Surrey) kept him mainly in England; but his frequent visits to Italy, accompanied by his amiable wife (scarcely less attached than himself to his mother), were the grand holidays of Mrs. Somerville and her daughters. Even when necessarily kept away, he perpetually provided that she and his sisters should lack no luxuries which could be sent from England, from the rare old wine for his mother's sip at dinner, to the beautiful little yacht which arrived in the Bay of Naples almost simultaneously with the sad news of his sudden death.

At Mr. Samuel Greig's death the last impediment in the way of the development of Mrs. Somerville's special abilities was removed. She immediately threw herself ardently into study, purchased a library of mathematical works (since given with the rest of her scientific books to Girton College), and ere long married a man who, instead of being a check and kill-joy, encouraged and aided her to the very utmost of his power. From that happy period, except the events of the birth of her two daughters, and her various migrations from London to Paris, and finally to Italy, there remains little to add concerning Mrs. Somerville's private history. The error so pertinaciously repeated and brought out once more in a striking obituary notice in a daily newspaper at the time of her death—that she was unhappy in all the conditions of her second marriage, and that she bitterly regretted being obliged to live in Italy during her later years—will be, we trust, by these 'Recollections,' at last disproved and exploded. No more devoted, and scarcely a more congenial husband could have been found for her than Dr. Somerville, with whom she had every pursuit in common, and whose generous self-effacement, in pride in her success, deserved, as it received, her warmest gratitude and affection. If it were impossible that she should not miss in Italy many social and scientific advantages which she would have possessed in England, she obtained, on the other hand, by her (entirely voluntary) residence there a multitude of pleasures which she valued still more highly. It is time once for all to put an end to these misbestowed regrets, and further, to bear testimony—as the present writer is personally qualified to do, and as indeed Mrs. Somerville fully reveals in her 'Recollections'—that no wife or parent could be surrounded through her declining years by more dutiful and tender care. It was not her life which was sacrificed to her family, but those nearest to her who esteemed it their happiness and privilege to make her comfort and health the leading consideration in every arrangement; and contrived that her modest pension and fortune should go as far as possible in promoting her personal enjoyment. Happy is the old age whose tottering steps are supported by such loving hands as those of the son and daughters of Mary Somerville!

Beside her own family, she lived always, as she very well knew, in the hearts of a wide circle of friends, who esteemed it among the happiest events of an Italian tour to spend an evening in her drawing-room, renewing afresh, as none ever failed to do, the love and respect which they had before entertained or perchance inherited from parents long passed away. There was something singularly attractive in her looks and manners in age, as there had been doubtless in a different way in the beauty and grace of her youth—a slender woman of middle height, who walked with feeble and yet dignified steps across her large *salon* to greet the entering guest, and gave her hand (or perchance, to some privileged ones, her lips) with such cordial welcome. She was always dressed in some rich silk, dark brown or black, with soft lace and cap, generally with a little lilac ribbon surmounting the hair, which faded

slowly from the softest brown to grey. Her face naturally in later years showed the marks of extreme old age, but also retained the aspects of undimmed intelligence and of gentle strength, while a sweetness and peace, such as only come at the close of all life's struggles and battles seemed to surround her with an atmosphere different from that of other women. She drew every one nearer to her; and to younger women, whom she treated with motherly kindness, it was often impossible to forbear from passing an arm of protecting tenderness round the form which seemed so fragile, or caressing the aged hand which lay so readily in their own. Her voice was exceedingly gentle, with a pronounced Scotch accent, of the old well-bred kind; and as she now and then poured forth her accounts of some new discoveries or speculations which had just come to her ears or which had formed her morning study, it was delight enough to her hearers to listen to and watch her, even if perhaps their own ignorance left them little power to share her enthusiasm. But it was only rarely, and not without suggestion or invitation, that she thus turned the conversation on scientific themes. Last night's play or concert; the prettiest drives within reach; her own and her friends' pet animals, and their doings; a new novel; the efforts for the improved education and political emancipation of woman; or the growing prospects of Italian unity,—these were the subjects on which we have oftentimes heard her speak with sympathy, humour, and unfailing animation. Nothing but ill-natured gossip was tabooed in her presence: and few were the guests who would have thought of bringing her such wares. Of religion she only spoke with those who, like herself, thought freely and felt strongly. She was eminently a devout woman, full of unswerving faith in God, in Prayer, and in Immortality, while fearlessly following the guidance of science and of conscience in judging of traditional creeds.

We have left small space for the task, nor is the present writer competent to undertake it, of giving a critical survey of Mrs. Somerville's writings. The Preliminary Dissertation affixed to her 'Mechanism of the Heavens' is probably in all respects the finest thing she ever wrote, and in it she struck the key of all the rest. Sir John Herschel, in reviewing the whole work (in the 99th number of the *Quarterly*), gave it as his judgment, "that there was no geometer in England who might not have been proud to have achieved such a work." Her better known 'Connexion of the Physical Sciences' and 'Physical Geography' have passed through many editions and translations, and for a time, at all events, have held the rank of standard works on their respective subjects. Probably the latter, revised afresh by its last able editor, Mr. Bartley, may remain a class book for another generation. Her 'Microscopic and Molecular Science' was less successful. The work in truth was one which it was practically impossible to render perfect in her Italian isolation. Mrs. Somerville's style was far from faultless. Wholly free from affectation or meretricious ornament, it yet betrayed the want of comprehension of the reader's ignorance and difficulties; and sometimes left obscure what a more lucid

statement would have rendered perfectly simple. "So many things," as her daughter remarks, "were easy to her which were difficult to 'other people'!" In the present charming volume, the language is that of an old lady dictating to her grandchild by her fireside, and never once stopping to recast a sentence or turn a phrase into a more literary or less colloquial form. Essentially of an analytic rather than synthetic character, her mind naturally ran on, stringing the successive wonders of science on a thread of simple words, rather than constructing any frame of synoptical system by which the learner might have been aided to understand and recall them. Undoubtedly her really exceptional genius lay in the direction of Pure Mathematics, wherein, as Mr. Proctor has observed, "no department seemed beyond her powers." Her own regret that she had not employed all her life's labours in that field was probably justified.

But here once more, in closing the record of this long and industrious life, we reach the grand result, "To be is greater than to do." Mary Somerville's wise and learned books, having doubtless done good service in their time, will be laid on the shelves of libraries, to be opened only when students wish to trace the history of science. But Mary Somerville *herself*, the woman, so nearly faultless in every relation of life, so good and gifted, so loving and beloved, will have ennobled all womanhood for generations to come.

FRANCES POWER CORBE.

The Lands of Cazembe: Lacerda's Journey to Cazembe in 1798. Edited by Captain Burton. (Murray.)
Supplementary Papers. By the Same. (Trübner.)

THE publication at the present day of travels more than half a century old, and which, though not unimportant, are totally devoid of agreeable incident, needs more explanation than we find in this volume. The loud praises of the admirable traveller avail nothing. His accomplishments, whatever they may have been, make no figure in the brief diary of his journey to the Cazembe. The dreary narrative of an expedition marred from first to last by discord, desertion, and famine, without a single adventure to divert attention from its misery, cannot be made agreeable. These travels, says Captain Burton, are unknown. But why are they so? The fact is, that translated by a gentleman long resident in Lisbon, and who spent a year on the eastern coast of Africa, they were offered to London publishers thirty years ago, and rejected by them, because found to be meagre and devoid of interest. In 1852, however, a summary but sufficient account of them was given in a volume by me, entitled 'Inner Africa laid open,' a fact of which Captain Burton cannot be ignorant. He seems, however, to think that the value of these narratives is at the present moment enhanced by their relation to the discoveries now in progress in Equatorial Africa. This may be true, though certainly not in the sense in which he understands it, for the real bearing of the narratives which he has edited he totally mistakes. He has found,

however, a good opportunity of advocating, in the capacity of editor, the doctrines maintained by the geographical party of which he is now the self-constituted leader. While introducing the admirable Lacerda to the public, he himself makes the chief figure. He therefore annotates the volume copiously, his notes forming at least a third of the volume, and most of them attacking me, chiefly by misrepresentation. They are lively and varied with borrowed learning, which is sometimes ludicrous, as when he gravely cites João dos Santos to prove that the Portuguese at an early date navigated the river Shire up to the lake: not aware that his author believed the Shire to be a branch of "the great river Suabo." The notes relieve the dulness of the text, but they err by excess, fatiguing by their unquiet spirit and want of calm thought.

The value and authenticity of the geographical discoveries made of late years in Africa south of the Equator have been rendered by peculiar circumstances a thorny and embarrassing subject, hard to treat within narrow limits. Nevertheless, the chief problems involved in it, with the opinions of Captain Burton and his opponents, may be fairly weighed, if we discuss the various matters of the volume before us—a volume of controversy in disguise—in the following order: 1. The results of the Portuguese expeditions into the interior; 2. The discovery of the great Lake Nyanja, Nyanza, or Nyassa; 3. The map constructed for Dr. Livingstone's 'Missionary Travels' and the part taken by the Royal Geographical Society; and 4. Burton's expedition to the Lake Regions.

Lacerda on his way northward from Tété crossed some rivers running eastwards into the Nyanja or Shire; for the Movizas (Babiza), the race of trading natives from whom the traveller derived his information, deem the lake a river, and call it everywhere Shire. Beyond the Aroangoa again, when enquiring respecting the Serra Muchingue, to the N.E., he was told that it trends to the Zambezi and the Shire, which implies that the latter water is N.E. of the mountain. When he came to the Chambeze, or, as he called it, the New Zambezi, he was told that "it trends to the river that runs by the side of the Cazembe's town,"—that is, to the Luapula, which according to all native reports flows to the Nyanza (called in the south Nyanja), the Lake Tanganyika of Captain Burton. At length arrived at Moiro-a-Chinto, in lat. 10° 20', he learned that "the Mussacumas in the north dwell on the borders of the Shire." The word Mussacumas signifies "the people in the north," and thus the Shire is traced up to about the ninth parallel of latitude. Gamitto informs us that, according to Lacerda, the Arungo dwell on the Shire. Now the people so named, and known to Gamitto, occupy the left bank of the Luapula, opposite the Cazembe. They are the Marungos of Arab traders. Thus it is evident that the information collected by Lacerda led him to believe in the continuity of the waters from the Luapula to the Nyanja or lake Maravi. Whether the connection of this with the Zambezi by the river Shire, denied by Gamitto, was admitted by him, we know not. When Lacerda first

enquired respecting the further course of the New Zambezi running to the west, he was told that "it flows to the right hand of one going to the Cazembe" (i.e. facing the north). This appeared to him utterly absurd, and he concluded that Pereira, who interpreted and adopted the accounts of the natives, did not know his right hand from his left. But it is obvious that the natives meant to speak of the ultimate course of the river, and that, in describing the stream actually flowing to the left as going to the right, they only put into other words the statement that it trends to the river that runs by the Cazembe's town.

At Capremera's village, south of the Aroangoa, Lacerda enquired respecting the trade of the country, and was told that it all passed through the hands of the Anguro and Ajáo (or Waiáo) about the lake, who communicate with Kilwa. It was added that nearly all the ivory from the Cazembe goes the same road. Lacerda suspected some more direct intercourse between the Cazembe and Zanzibar, simply because it was hard to account for the exclusive adoption of a very circuitous route; but he learned nothing whatever of any other line of traffic. Captain Burton's assertion that Lacerda knew of a direct road to the coast has no foundation.

Following in like manner the steps of Monteiro's expedition, we get a view from what is erroneously called the country of the Maravis, of the adjacent lake. "The lake Maravi of geographers," writes Gamitto, the author of the volume 'O Muata Cazembe,' "is called by the natives Nyanja-Mucuro" (great lake). Now Captain Burton, who assures us that he has most carefully studied Gamitto's volume, writes as follows ('Lake Regions,' in *Journal of the Royal Geographical Society*, vol. xxix. p. 272, n.):—"Messrs. Gamitto and Monteiro have heard that the Nyanja-Mucuro Grande, or Great water, is nine leagues (thirty geographical miles) broad, and this, which represents the Tanganyika, they distinguish from the Nyanja-Pequeno, or Little Nyanja,—namely, Little Nyassa." Does not Captain Burton here grossly misrepresent the author whom he pretends to follow? Gamitto says that Nyanja-Mucuro is Lake Maravi, and round its shores dwell the Ajáo, the Bororo, Manganja, Maravi, Anguro, &c. Captain Burton gravely states that the Nyanja-Mucuro of Gamitto is Lake Tanganyika, on the shores of which the nations just named are not to be found. This bold style of misrepresentation is the chief characteristic of all that Captain Burton writes in defence of his peculiar views of the Lake Regions. Redundant as a commentator, he is as an editor negligent and undiscerning. He does not perceive that Guapula is only Luapula disfigured by a flourish of the penman, and that the Guarava, which he says flows into the Luapula, is that river itself. The numerous clerical errors of the Portuguese text he leaves uncorrected.

I now turn to the advances made in the geography of Africa from other quarters. In 1835 an account of Captain Owen's voyage, given by me to the *Edinburgh Review*, first called attention to the great inland sea; pointed out the lofty Kilima

Njaro and the most eligible points on the eastern coast, some of which were soon after occupied by missionaries. In 1845 a Memoir on the Lake, presented by me to the Royal Geographical Society, united all the information obtainable at that date respecting the inland sea. In 1852, in 'Inner Africa laid open,' I returned to this subject, adding, among other things, the results of Lacerda's expedition and that of the Pombeiros.

In 1855 there appeared in the *Missionary Intelligencer* a very modest and interesting account of the results of enquiries made by a missionary, Mr. Erhardt, during two years, in all the places of trade along the eastern coast of Africa from natives of all parts in the interior. All agreed in stating that there is a single lake extending apparently through twelve degrees of latitude, and he adds that all call it Nyanja. But the editor of the *Proceedings of the Royal Geographical Society* (vol. i. p. 8) was pleased to state that its southern end is called Nyassa. The patient perseverance of Mr. Erhardt and his ample opportunities entitle his testimony to great weight.

The works of mine above enumerated seem to have never attracted the attention of the Royal Geographical Society; on the contrary, pains were taken in that quarter to suppress my name, as if it were a crime to cultivate geography beyond the precincts or independently of that learned institution.

In those researches I was not alone. A veteran geographer, who took a deep interest in them (Mr. J. Arrowsmith), was ever at my side. To encourage and facilitate my pursuits, he spontaneously engraved various outline maps on a large scale for me to fill up. He also engraved a map combining the routes of the Pombeiros and of Lacerda. Of this map two proofs remained in my possession, one of which is now in the map-room of the Royal Geographical Society. These preliminary sketches were regarded by him as materials for a great map which he meant to make his own. The MS. work to be illustrated by this map, when complete, was placed in his hands for publication; but as soon as it became apparent that he would consult—as to the time of publication—only his own convenience, and not the author's wishes, it was taken from him, and published elsewhere with a small and imperfect map.

At this turn of affairs his resentment knew no bounds, and never abated. Consequently, when called on in 1857 to construct a map for Livingstone's 'Missionary Travels,' he seized the opportunity of repudiating and discrediting, as far as was in his power, whatever there was of novelty in the maps designed by me. It is the geographer's duty, in drawing a map, to combine in it all the authentic information obtainable. Lacerda's information was of this character, yet it was not allowed a place in Livingstone's map. Mr. Arrowsmith, the close and indispensable ally of Dr. N. Shaw, was also from his temper and technical knowledge the ruling party. In geographical matters he was little disposed to yield; and so utterly absurd was the circle of intertwined rivers reported by Dr. Livingstone in the middle of the continent, that Arrowsmith certainly never would

have engraved it had he not been impelled by some overbearing passion.

What has been just said helps to explain the extraordinary misstatements that occur in Dr. Livingstone's volume. He tells us that Lacerda started from Zumbo, a point 200 miles west of Tété, and in his day inaccessible to the Portuguese; that his papers were all lost; and that in the map prefixed to Bowdich's 'Discoveries of the Portuguese' Tété is placed on the north of the river. These statements, and many more, are totally unfounded. Dr. Livingstone is obviously not a bookish man, and in referring to books and historical matters doubtless relied on his advisers: they, if they did not mislead him, certainly never corrected his errors. The journal of Lacerda, and even Gamitto's volume, lay on the shelves of the library while Dr. N. Shaw was "carefully elaborating" (as he expressed it) Dr. Livingstone's volume. Arrowsmith knew well that Lacerda did not start from Zumbo; he was well acquainted with the map in Bowdich's book; both he and Dr. Shaw were aware that the narrative of Lacerda's expedition, and the authorities for it, were to be found in my 'Inner Africa laid open.'

A proof of the influence exercised on Dr. Livingstone while preparing his volume is manifest in the fact that the most ridiculously silly paragraph in the whole long series of the Society's *Transactions** was copied and transferred by him to his own pages,† selected for him, no doubt, by Dr. Shaw; I mean the paragraph explanatory of the names Monomoizas and Monotapistas. The northern portion of the map belongs wholly to Arrowsmith; and that it is an inexplicable, unpardonable fabrication, will be evident to anyone who compares it with the map of Lacerda's route engraved seven years before by the same geographer.

Dr. Livingstone in the course of his rambles met with an Arab traveller, who stated that crossing Lake Tanganyenke from Ujiji he travelled S. by W., and then visited the Cazembe, going east round the south end of the lake. The Arab's account might have been misunderstood; the words reported admitted of different interpretations. It was evident that the Arab did not return to the coast; in truth, he went eastward only round the Lake Mofo, on the eastern side of which stands the Cazembe's town. But his words were seized on by Dr. Livingstone's advisers as a pretence for dividing the lake; and as my account of Nyassa could not be deemed a fiction, they suggested that it applied only to the southern lake, though on its eastern shore was marked Ujiji, which belongs to their northern lake. Thus my map was condemned, Erhardt's soon forgotten. Yet this change depended entirely on the interpretation of a doubtful sentence in the narrative of an Arab traveller. That narrative was soon after published in Bombay (*Geographical Society's Transactions*), Lisbon (*Boletim e Annuaes*), and London (*Journal of the Royal Geographical Society*, 1854); and then it plainly appeared that the Arabs had never gone round the sup-

posed end of the lake. Crossing the lake westward at Ujiji, they travelled to Benguela, and thence returned to Kilwa by the southern road. Thus the foundation of the two-lake system crumbled to dust; there remained not a tittle of evidence in its favour. But its authors cared little for facts; strong in their position at the Royal Geographical Society, their self-esteem urged them to persist in their errors. On this falsification of the map drawn for the 'Missionary Travels' was founded an article of the Society's creed, which I venture to deny, and Captain Burton defends.

In this state of things, Capt. Burton, unacquainted with the circumstances of the question in dispute, possessing scanty erudition, but great powers of borrowing, and ill-instructed by the Royal Geographical Society, sallied forth, the champion of their errors, resolved to discover in the Land of the Moon confirmation of every crude hypothesis favoured by his patrons. All authorities, foreign and native, of any value, from Duarte Lopez down to Mr. Erhardt, agree, as we have seen, in vouching for the existence of a single lake of immense length. But what they could not elicit by years of investigation was discovered by Captain Burton in an instant. He learned, as soon as he reached Zanzibar, that "the Nyassa is a small lake." Now this language implies a plurality of lakes, and that Nyassa is a proper name. But Captain Burton's oft-repeated statement that Nyassa is the indigenous name of the southern lake is totally untrue. It is the Zanzibar equivalent of Nyanja and Nyanza, names of the inland sea; used, the former in the south, the latter in the north. It is clear, therefore, that his reported account of the Nyassa is the offspring of his own conception, in his own language. But he has great resources; he tells us that caravans from the Cazembe going between the two lakes descend on Kilwa from the north-west. Why from that quarter? The Cazembe is nearly in the latitude of Kilwa. Then he adds that hundreds of caravans visit the northern end of Nyassa (Nyanja), though unknown further south. Why do they resort to that secluded and unapproachable point? Why do they remain unknown to everybody but Capt. Burton? When asked how he came to make this remarkable discovery, so directly opposed to all previous authorities, his answer is, "Somebody told me."

It is not surprising that with this dispute in hand Captain Burton grows irritable and excited. To others, the question may seem to be, are there two lakes or one? To him, his conscience suggests that it is, whether he has not fabricated a statement in defence of his own views? Instead of endeavouring to vindicate his veracity, he multiplies disputes on all points in order to hide by confusion the point at issue, and flings dirt at his opponents. He might plead that he has been duped, but he cannot expect much lenity on that account; for while receiving the lessons of his Mephistopheles, he has imbibed not a little of his malignity. His object being to establish that instead of one lake 12° in length, there are two lakes with a caravan route passing between them from the Cazembe to the coast, he has very

recently condescended to offer a proof of this fact of a most surprising kind. He informs us ('Supplementary Papers,' xxix.) that Dr. Livingstone, starting from Buromaji on the coast (lat. 6° 53'), reached the interior of the continent, marching over the land between the lakes, and therefore calls on me to cry, "peccavi." That of course I must do as soon as I find the preceding statement to be true. But I have always believed that Dr. Livingstone entered the continent where he now is by way of Mikindani, south of Kilwa, and the southern end of Nyanja. To that belief I still adhere. If Capt. Burton has any regard for his reputation, he will hasten to prove his assertion; and, until that be done, it is to be hoped that he will abstain from the intemperate use of pen and ink.

W. D. COOLEY.

Religion and Allegiance; Two Sermons preached before the King. By Roger Mainwaring. (London, 1627.)

WE are all familiar with the woes of authors whose works have been, in their own opinions, dealt with too hardly by the criticism of some leading journal of the present day. But what is the fate of the man who has been ill-treated by the *Times* or the *Saturday Review* compared with the fate of the man who has been ill-treated by Rushworth? In a few weeks, perhaps in a few days, the best newspaper article is forgotten; and the victim walks abroad with his head erect, as though nothing worth speaking of had happened. But a dry and laborious compiler like Rushworth never reaches the land of forgetfulness. If the general reader is shy of approaching his ponderous folios, there is always a generation of writers ready to hang upon his lips, and to deck out his old dull story in all the latest fashion of the hour.

It is the misfortune of a vanquished cause that men cease to care about what its defenders thought or said. Laud's force of character and high political position have indeed secured him a permanent place in English history. But who, even for historical purposes, reads Montague's 'New Gag,' or 'Appello Cæsarem;' or Sibthorpe's 'Apostolic Obedience,' or Mainwaring's 'Religion and Allegiance'? Are not a few extracts to be found in Rushworth? and what is the use, even for an historian, of knowing more?

And yet, if anything is certain, it is that no history is ever properly written, unless the writer does his best to understand what people, of whose conduct or theories he disapproves, have to say for themselves. And if ever there was a doctrine of which a writer of the present day is sure to disapprove, it is that which supported Charles I. when he was levying the forced loan which roused the people of England to demand the Petition of Right, and for opposing which Eliot was a prisoner in the Gate House, and Wentworth in confinement in Kent. It appears to us a monstrous thing that a couple of Laudian divines should justify this iniquitous exaction from the pulpit, and should endeavour to commit the nation to a recognition of something very like absolute power.

Nevertheless, let us hear, even if we strike. Sibthorpe's sermon was preached in February 1627, at the Assizes at Northampton. Two

* *Journal of the Royal Geographical Society*, xxvi. p. 117.

† *Missionary Travels*, p. 617.

or three months later it was the cause of a great commotion in England, Archbishop Abbot refusing to license its publication, and being in consequence banished into Kent, and subsequently suspended from all judicial functions attached to his see. But the sermon itself is a poor production; and anyone who takes the trouble to read it will have no difficulty in understanding why its author, son-in-law as he was to so influential a personage as Sir John Lambe, never reached the episcopal bench.

Roger Mainwaring was far superior to Sibthorpe in every way. The first of his two sermons was preached before the king at Oatlands, on July 4, just as a desperate effort was being made to collect the loan, in order to supply the needs of Buckingham after he landed in Rhé. And there is a fiery vehemence about the man, united with an evident wish to find an intellectual basis for his exhortations, which at once attracts attention.

Translated into modern language, his argument is that, if left to themselves, men would be simply a mass of individuals without possibility of order or discipline. To save them from this, God has placed them in various relations, and happiness and prosperity result from the fulfilment of the duties arising out of those relations.

"From all which forenamed respects, there did arise that most high, sacred, and transcendent relation which naturally grows between the Lord's anointed and their loyal subjects; to and over whom their lawful sovereigns are no less than fathers, lords, kings, and gods on earth."

Out of the rule of kings comes harmony and order.

"For that no parts within their dominions, no persons under their jurisdictions—be they never so great—can be privileged from their power, nor be exempted from their care, be they never so mean. To this power the highest and greatest peer must stoop, and cast down his coronet at the footstool of his sovereign. The poorest creature which lieth by the wall, or goes by the highway-side, is not without sundry and sensible tokens of that sweet and royal care and providence which extendeth itself to the lowest of his subjects. The way they pass by is the king's highway. The laws which make provision for their relief take their binding force from the supreme will of their liege lord. The bread that feeds their hungry souls, the poor rags which hide their nakedness, all are the fruit and superfluity of that happy plenty and abundance caused by a wise and peaceable government."

Such a power is superhuman.

"For if it were of men, or if that power which is dispersed in communities and multitudes were collected and settled in the king, then might this power be thought human, and to rise from men."

Whereas kings have

"a participation of God's own omnipotency which He never did communicate to any multitudes of men in the world, but only and immediately to His own vicegerents, and that is His meaning when He saith, 'By me kings reign.'"

Evidently Mainwaring wants something more than mere flattery of the reigning sovereign to fill his sermon with. He must have a theory to fall back upon; and if only we take the trouble to strip off the religious and biblical clothing from his thought, we shall find it wonderfully like the sayings of some men in our days whose

words are of weight in the world. What, for instance, is the doctrine of a government standing up for the permanent needs of men above their shifting interests, but the very doctrine which Dr. Gneist has elaborated in so many voluminous works written in defence of what he calls "the State," against the encroachments of society? And do not even those who do not share his views, and who perhaps differ amongst themselves as to the way in which the society of the future is to be organised, yet all agree in this, that in some way or another—by giving due weight to those who have the advantage of wealth and station, according to some; by giving free play to intelligence and virtue, according to others—the mass of men must be lifted up from the consideration of their immediate wants to provide, as far as possible, for that which is future and distant?

To us it seems so unutterably absurd that anyone in his senses should hope to find all this in Charles I., that it is long before we can recognise the possibility of looking for anything in common between Mainwaring and the thinkers of our own time. And yet if any set of men might be pardoned for looking to Charles, it was the religious party to which Mainwaring belonged. These men had ventured to think for themselves, and had been met by the House of Commons with the assertion that their doctrines were not in accordance with those of the Church of England. In the last Parliament Pym had reported that one of their number ought to be impeached, because, amongst other reasons,

"the wisdom of all great States do concur herein. 1. Upon the principle of reason; for that nothing works more upon the inward faculties than the stirrings in point of religion. 2. Upon the principle of experience, that the raising of a division or distemper in religion doth often meet in this *tertio* to ruin the body of the Church and State."

What wonder if they saw the principles of justice and permanency represented better in Charles than in the House of Commons?

We can see that this was not so—that there were elements of weakness and tyranny in the exaggeration which they permitted themselves in defending their own cause; elements, too, of justice and nobleness in the cause of their opponents which they entirely overlooked. But nothing will conduce so much to the proper understanding of this most important reign, as the knowledge that there were arrayed on both sides principles as well as persons; that one side won and the other lost, not because all the reason was on the side of the Parliament, and all the folly on the side of Charles, but because between opposing reasons the balance inclined pretty heavily against the king.

It is hardly necessary to go any further. When once the theory had been accepted that the king represented the permanent interests of the State, we are prepared to hear that though assemblies are

"necessary to the ends to which they were at first instituted, yet know we must that ordained they were not to this end, to contribute any right to kings whereby to challenge tributary aids and subsidiary helps, but for the more equal imposing and more easy exacting of that which unto kings doth appertain by natural and original law and justice as their proper inheritance, an-

nexed to their imperial crowns from their very births. And therefore if, by a magistrate that is supreme; if, upon necessity extreme and urgent, such subsidiary helps be required, a proportion being held respectively to the abilities of the persons charged, and the sum or quantity so required surmount not too remarkably the use and charge for which it was levied, very hard would it be for any man in the world, that should not accordingly satisfy such demands, to defend his conscience from that heavy prejudice of resisting the ordinance of God and receiving to himself damnation, though every of those circumstances be not observed which by the municipal laws is required."

The way in which Mainwaring attempts to guard against extreme consequences is especially noticeable. But it was not to be expected that he should find favour with Parliament. He was impeached by the Commons, and Pym, who conducted the impeachment, seems to have found out that he had something more than a Court flatterer to deal with. Put upon his mettle, he too has his idea of the State to set forth.

"The best form of government," he said, "is that which doth actuate and dispose every part and member of the State to the common good; and as those parts give strength and ornament to the whole, so they receive from it again strength and protection in their several stations and degrees."

Far higher and nobler doctrine this than Mainwaring's. The sermons were in the end condemned to be burnt. They appear now to be extremely rare. A search for them in the catalogues of the Museum Library ended in defeat. The extracts given above are taken from a copy in the library of Sion College.

SAMUEL R. GARDINER.

Johannis de Fordun Chronica Gentis Scotorum
Edited by William F. Skene. Two vols.
8vo. (Edinburgh: Edmonston & Douglas.)

WE welcome with much pleasure a new, and by far the best, edition of the *Scotichronicon* of John de Fordun. The production of it places us under a fresh obligation to the Scottish antiquaries, who have always set a praiseworthy example to their brethren across the Tweed. With the exception of two or three chartularies of some of the smaller religious houses in Scotland, there is no chronicle or book of monastic evidences connected with that country that has not been printed. Would that England could make the same boast!

The work of Fordun, in one form or another, has been long familiar to the historical student. Dean Gale was the first person to draw attention to it, by including it in his collection of mediæval chronicles; and his labours were soon afterwards supplemented by Thomas Hearne of Oxford. His edition of Fordun, in five octavo volumes, is perhaps the most favourable specimen that we have of the typography of his remarkable series of Annals. Still, although more complete than Gale's work, it is not free from blemishes. The text of Fordun with which the majority of our readers will be best acquainted, is that contained in two handsome folio volumes, published at Edinburgh in 1759, under the editorial care of Walter Goodall. All these editions must now be laid aside for that with

which Mr. Skene has recently favoured us, having rendered it doubly interesting by his prefaces and historical illustrations.

There is little known about Fordun himself. It is probable that he was a chantry-priest at Aberdeen, and it is pretty plain, from internal evidence, as Mr. Skene observes, that he wrote the earlier portion of his work between the years 1384 and 1387. It seems to have been Fordun's intention to compile a history of his country, taking the *Polychronicon* of Ranulph Higden as his model. To effect this Fordun spared no pains. In the monastic libraries of Scotland he would find many MSS. which would be of use to him; and we know that he crossed the Borders into England on a literary campaign. The references to authorities which, with a rare candour, he gives in his text, enable us to trace with more or less certainty the course of his reading. But these references are by no means exhaustive. Mr. Skene gives a list of fifty-seven works which Fordun quotes by name. But with many of these he seems to have been acquainted at second-hand through the pages of Higden, as for instance with Bede, Geoffrey of Monmouth, Henry of Huntingdon, and the 'Gesta Regum' of William of Malmesbury. As a Scot he would have great difficulty in gaining access to the English libraries. About Hexham, Durham, and York he knows next to nothing, and yet they had historians who could have assisted him. He found indeed in Scotland the Life of St. Margaret, which Turgot, prior of Durham, had composed; and he made large use of the works of Aelred, abbot of Rievaulx, in Yorkshire. Aelred was a son of one of the hereditary priests of Hexham; but Fordun, strange to say, gives him a new name and nationality. He calls him Baldred, and seems to identify him with a local saint who was well known in Lothian in the eighth century. Fordun seems to have been almost entirely unacquainted with what we may call the Cuthbertine literature. He knew nothing of the Chronicle of Lanercost. But Lanercost might well be excused for refusing to open her scanty hutch of books even to an antiquary from Scotland.

However comprehensive the design and collections of Fordun may have been, we know that he only completed five books of his History and a portion of the sixth. These bring the annals of Scotland down to the year 1153, the year of the decease of David I. Soon after Fordun's death, his unfinished labours were taken up by a friendly chronicler, Walter Bower, who carried on the history to the death of James I. in 1436. But Bower did more than this. He not only added nearly eleven books to the five which Fordun left behind him, but he introduced many interpolations into his predecessor's work, which were unrecognised until Mr. Skene was fortunate enough to discover the MS. on which his edition of Fordun is based. In the obscure little German town of Wolfenbüttel is a fine library, the gift of a Duke of Brunswick, in which is a MS. of the *Scotichronicon* as it left Fordun's hands. It is unnecessary to say that this is a volume of exceeding value. And it is the more important to know what Fordun and Bower severally wrote, because it is evident that Bower, from political mo-

tives, altered Fordun's facts as well as interpolated his narrative. The knowledge of this makes us look with no little suspicion upon those portions of the Chronicle for which Bower is more immediately responsible.

The earlier part of Fordun's work might very appropriately be called a Scottish *Æneid*. The writer is so much at home with Geoffrey of Monmouth, that we see how fond he was of historical romance. But it is only fair to say that this portion of Fordun's History seems to have been an afterthought. It was his intention, in the first instance, to deduce the annals of his country from Malcolm Canmore to his own time. He subsequently changed his plan and went farther back, and then he found materials which were often of a very questionable character. Still, as a whole, his work is one of high value, because it is the only General Chronicle of Scotland to which the historical student can refer. It is strange that in a country where the *amor patriæ* was so keen, more annalists should not have arisen to celebrate her fame.

The central figure in Fordun's Chronicle, nay the central figure in all Scottish history, seems to us to be David I. He was the great organiser of his kingdom, and it needed organisation. English on his mother's side, and brought up at the English court, an English noble all his life, he remodelled or created nearly all the institutions of his country after an English pattern. He was the great lawgiver of his country, the introducer of a new aristocracy, and the protector of freedom as the founder of the free burghs of Scotland with their chartered privileges. He had the Norman love of order and discipline, and he made his people love it, as far as it was in their nature to do so. As a Church reformer he was wonderfully successful. He practically established a new Church upon the old Celtic foundations, bringing in the foreign monastic orders and a fresh ritual. He founded six bishoprics, and some of the noblest religious houses in Scotland owe their origin and their endowments to his pious generosity. David was blessed with a son of rare promise and ability, but who predeceased him, and the father did not long survive his child. To say that his people mourned him would be too slight a compliment. John of Hexham could say of him, "*Cujus memoria per omnes generationes in benedictione sit. Similis illius principis in diebus nostris non fuit.*" But those who would know more of the virtues of sire and son must read Aelred's noble panegyric upon them. It occupies as many as fifteen chapters in Fordun's History. A new edition of this tract, conjoined with the other products of Aelred's pen, would be worthy of the attention of our Historical Societies.

We are glad to learn that the abridgments, etc., of Fordun's Chronicle are to form a part of the series in which these two volumes appear. We trust they will contain, *inter alia*, a good index to the set. As we have now before us, probably, the most complete evidences of early Scottish history that we are likely to obtain, we shall be glad to see from Mr. Skene's pen a critical history of the Celtic race. No one is so well qualified to extract the gold from the dross, of which there is a considerable quantity.

JAMES RAINE.

The Parisians. 4 Vols. By Lord Lytton. (Blackwood & Sons, 1874.)

LORD LYTTON's reputation as a novelist is of a somewhat curious kind; it rests upon one incontestable fact—for forty-six years he continued to supply the public with a large number of novels which were confessedly ambitious and undeniably good of their kind, and those kinds were very various. But this is hardly by itself an adequate explanation of the fact that at any time between 1827 and 1873 Mr. Bulwer, or Sir Edward Bulwer Lytton, or Lord Lytton, would have had to be named as one of the first three or four living English novelists, and that between the death of Scott and the publication of 'Vanity Fair' he would have been placed at the head of all by something of the same kind of consent, and on something of the same kind of ground, as Byron after the publication of 'Childe Harold' was placed at the head of living English poets. And what makes this long term of generally recognised pre-eminence, this still longer term of incontestable eminence, a more curious problem is, that all the time there were good judges, who got to be the majority among good judges at last, who maintained that if this reputation was not spurious, it was at any rate exaggerated; that there was an element of pretension in it, almost an element of charlatanism. It would be useless to deny that there was an element in Lord Lytton's popularity, a side of his talent which was fairly open to satire and caricature; it would be equally useless to deny that he was a diligent and skilful man of letters, but the puzzling thing is that his genuine skill and his false ambition, if it was a false ambition, helped each other and sustained each other to the last. There have been plenty of critics to assert or imply that his sublimities were stilted and his mysticism shallow, and his knowledge of the world superficial; and they could always make out a very plausible case, only they never answered the question why he did not go the way of Samuel Warren, and G. P. R. James, and the Abbé Delille. It is some approach to an answer to say that in the early and critical part of the author's career his social and literary reputation helped each other amazingly, so that he was able in the absence of competitors to place himself on a pedestal, and that then industry and intelligence were enough to keep him there. And it carries us a little further to notice that he was careful to renew himself, that he passed from fashionable life to the romance of crime and of psychological mysteries, and from these to historical romances that contained a good deal of historical theory, and from these to the poetry of middle-class life, domestic and commercial, and from these to spiritualism, and from spiritualism to sociological speculation, with a versatility that did not leave his public time to tire. But this only suggests another difficulty,—his versatility was largely sustained by borrowing, and it cannot be said that he always borrowed from his equals or his superiors, or that he always improved what he borrowed. In 'The Parisians,' for instance, we feel not once or twice that the author has read the 'Mémorial for Paris,' and other sketches by the same well-known hand in the *Pall Mall Gazette* and the *Cornhill Magazine*, and we do not feel that the author of 'The Parisians'

is exactly the more penetrating or the more incisive of the two; and yet 'The Parisians' serves in a way to sustain a reputation of quite a different order from that which the 'Member for Paris' helped to make. There is another contrast between the two books which throws some light upon the problem we are trying to elucidate: the author of the 'Member for Paris' seems to value himself upon his ideas, to claim his reader's respect on the ground that he has such an ingenious insight into the corruption of French society, and represents what he sees so wittily: while the author of 'The Parisians' seems to value his views and his ideas chiefly if not exclusively because they have commended themselves to him. And here, perhaps, we touch the secret why an ambition distinctly in excess of Lord Lytton's imagination and his intelligence (though both were decidedly above the average of even able men) did not defeat itself, why it was an element in the success he attained. His personality was more distinguished than his talent, and his talent always displayed itself on the level of his personality: the public, at least the unsophisticated section of it, admired his books at more than their intrinsic value, in the same sort of way as the conversation of a high-toned, high-bred man is admired more than that of a mere saver of good things, save that the charm of high-bred conversation depends a great deal upon reticence and refinement of temperance, whereas the charm of Lord Lytton is a subtle patrician joyousness, a high-strung pride of life.

'The Parisians' is at once an illustration of the essential distinction which placed Lord Lytton above the average run of successful novelists, and of the peculiarities of his talent as a successful novelist. From the latter point of view it does not detract from its value that it is, at least in its present form, not one of his most successful works. We say in its present form, because, as we have the same scheme of constitution for France invented by the same character twice over, it is obvious that, though the author's death left very few gaps to fill, he had not passed a final decision on the work as far as it went. This incompleteness, and what it is natural to take for traces of the disjointed stiffness of incipient age, only make it easier to detect the springs of the powerful machine that had been wound up so often, and seemed to be beginning to go to pieces at last.

The plot is very characteristic; it is complicated without being in the least sensational, and keeps our curiosity alive, while it rather chills than excites our interest. Instead of following the discoveries which the characters make by their own energy, we watch languidly the disclosures which the author doles out impartially at arbitrary intervals to them and to us. It is not till near the end of the second volume that we are told the situation of the hero, though there was no reason for keeping it back except that the author thought the disclosure would come with more effect when it served to make a mass of incomprehensible conduct comparatively intelligible. There are three persons who are more or less interested in the fate of a girl who is and is not legitimate, and turns out at last to be a ballet-dancer in love with a Red poet. Of the three one is a

grand-uncle who wishes to provide for her as the representative of her mother; another, the hero, is the representative of her father, who has left him a fortune, with the obligation in conscience to give her as much of it as he thinks she deserves or will do her good; the third is a financier, who wanted to marry the mother, and fancies erroneously that he was thwarted by the father of the secondary hero, who is French (a Breton noble), while the principal hero is English, and a good deal of the story turns upon the shadowy schemes of vengeance of this financier, who is a Liberal, happily defeated by another financier, who is an Imperialist. The two financiers rather resemble well-managed puppets rehearsing a spirited imitation of Balzac's comedy of affairs. Still there is a good deal of skill in the way the secret about the daughter of Louise Duval is made to interpenetrate the rest of the story, which is intended to give us a panorama of Paris society at the period of the fall of the Second Empire. There is a Breton noble, whose estate has been ruined, and who comes to Paris to learn how to keep the ruins together; there are Legitimist nobles who are not ruined, though the sons are reduced to find pocket-money for their pleasures and their charities by setting up a shop of dandies' requisites for their nurse to manage; an exquisite of the *Chaussée d'Antin*, a *viveur* who disappears under a cloud, and reappears as a consummate politician, who uses a secret society and a journal, of which he makes the Red poet editor, as machines to abolish the Second Empire. Then there is a poetess who was intended for an opera-singer, and eventually marries the English hero after a great deal of heart-searching about her vocation, and a great deal of correspondence with a Madame de Grantmesnil, and also after a narrow escape of sacrificing herself to the redemption of the Red poet, which is taken in hand under better auspices (with what success we do not learn, as the book is unfinished) by the daughter of Louise Duval. There are perhaps two thoroughly lifelike characters in the book,—the good-natured, tasteless duenna of the poetess, and the Red poet, who is made up of insatiable vanity and diseased sensibility, passing into insincere ferocity; and it might be possible to add the *bourgeois* exquisite, who contrasts throughout effectively with the real aristocrats without ever becoming vulgar.

In general the characters that have not to carry on the story are better than those who have; there is nothing to disturb their make-up as lay figures, and the make-up is often careful enough. The conduct of the acting characters is, for the most part, unreal and theatrical (the poetess is an exception), but then it is also true that there is an element in most of us that finds the theatrical method of procedure pleasanter and finer than the method of real life, and that it was part of Lord Lytton's distinction that his personality was strong enough to enable him to indulge his preference for the theatrical, and to enable his readers to indulge their preference for—once unblushingly. And one sees the value, such as it is, of his situations all the better because in his latest story they are arbitrarily produced, and

terminate without result: our interest is not in the action, but in a complicated series of æsthetic moments. Occasionally the conversations are amusing, one especially, where it is brought out that the Red poet has condemned Tasso without reading him, but in general the characters talk opinions rather than epigrams. One learns at great length, and yet without much fatigue, that Lord Lytton thought the same as most Englishmen about the interests of France, and that he had been much exercised by the ideal reasons which might prevent an Englishman from marrying an actress, or even, if very fastidious, an authoress, and had moreover endeavoured to enter into the peculiar trials of a womanly woman of genius. Of course it would have been better if the characters, or at least the situations, could have been made to speak for themselves, instead of being the mouthpieces of the author. But if the characters talk the author's opinions, we have still reason to be thankful that they are not made to talk his system; if his originality is not sufficient to enable him to think very differently from common people, at least it serves him to think at first-hand in the concrete what they were thinking already at second-hand in the abstract. It is always a praise to have lived near the rose. Lord Lytton spent his life in coming very near to many roses; if he failed to gather any rose for us, he made us artificial flowers of the very best *pot-pourri*. We may say, if we are ungrateful, that the colours showed best by gaslight; but, after all, the fragrance comes through the paint.

G. A. SIMCOX.

BOOKS FOR CHILDREN.

OF late years there has been a healthy reaction shown in the books written for children. Moral conflict is not so frequently depicted as it was, for every vice and virtue has had its turn. Children's feelings have been analysed and dissected with an amount of skill which has been somewhat wasted on such volatile material. The animals, too, have been pressed into the service, and made to bear their part in this subjective teaching. Ducks have set an example of truthfulness and sobriety; cats have shown surpassing generosity; rats and mice have been made to proclaim that "honesty is the best policy." But even this stage is passing by, and there is now a healthy amount of story-books without any particular moral, or, if they have a moral, it is something simple and easily comprehended in child life.

There is a tendency in the popular taste towards fairy tales, with their vivid colouring, their broad effects, their grotesque variety. But a thoroughly good fairy tale is a very difficult thing to produce. It should not be too long, it should not be too horrible, it should be funny without effort, and without vulgarity, and it should keep up its interest to the last word. We do not think *Queer Folk: Seven Stories by the Right Hon. E. H. Knatchbull-Hugessen, M.P.* (Macmillan and Co.), quite fulfils these conditions. The writer has a quick eye for the picturesque, and a great knack of painting horrors, but we pity the sensitive child who dreams after hearing one of his stories. They are best suited for sturdy schoolboys and their strong-minded sisters from twelve years old and upwards. "The Warlock of Combé," the first story in the book, is amusing, and is told with great spirit. A warlock—perhaps it is not generally known—is a wise man of the woods who watches over the interests of specially favoured mortals. He is introduced to us as defending a

farmer who has been entrapped into the company of a highwayman in a dark forest. The friendly warlock puts the highwayman to flight by causing a number of hares and rabbits to fly at him, and the ruffian is finally suppressed by having a well-aimed hedgehog thrown in his face. The farmer and his daughter Grace go through many subsequent adventures, in which the warlock befriends them. We like even better than this the story of Little Grub, the boy who dreams that he is taken prisoner by Punch, is sugared into an image on a Twelfth-cake, and wakes to find himself carried in rheumatic fever to a children's hospital. "The Strange City," too, which is the capital of some Utopia or New Atlantis, where a cabman is indignant at being given more than his fare, and one of "the company's servants" refuses a gratuity, is funny. But "The Pig-Faced Queen," which clumsily attempts to make fun of the women's questions of the day, only succeeds in being vulgar; and "The Old Bachelor Married" is not a suitable story for children, and ought not to be given to them to read.

The Fairy Family: a series of Ballads and Metrical Tales illustrating the Fairy Mythology of Europe, by Archibald MacLaren (Macmillan and Co.) has a great deal that is interesting in its information about the fairy beliefs of various nations, and the verses which illustrate them are some of them pretty and for the most part spirited. Take, for instance, these lines from "The Elf Folk and Little Mabel," as a specimen of the pleasant way in which most of the stories are told:—

"Trooping, trooping, on they go
O'er the dewy grass,
Little feet as white as snow
Twinkling as they pass;
O'er the grass their mantles sweep,
And the daisies roused from sleep
Half unclothe their dreamy eyes
Timidly and with surprise—
Nothing but the starry skies
And the dewy grass.

"Listen! listen! all is still—
Mabel is asleep.
Up upon the window sill,
Where nasturtiums creep;
All into the room have gone,
Sound of turning hinge was none,
Past the box of mignonette
In that latticed window set,
To the curtained bassinette—
Mabel is asleep."

But there is nothing about that great host of fire-fairies—the Salamander tribe—nor about the gnomes, who are the guardians of subterranean treasure; and Ireland ought to have been represented amongst the fairy-haunted lands.

Fantastic Stories. By Richard Leander, translated by Paulina Granville, and illustrated by M. Fraser-Tytler (Henry S. King and Co.) Richard Leander in his preface professes to have written these stories while away from his home during the Franco-German war. We should like to know the German of the sentence which has been thus rendered in English, "They must be buried high on the tops of mountains, so that they can look out over the country, far away into the valleys where the ships sail." But the stories of "The Knight who grew Rusty," and "Heino in the Marsh," are beautiful, and none of them are uninteresting; the translation is for the most part smooth and easy, and the book has the additional charm of being prettily illustrated.

Happy Spring-Time in Pictures. Verses for Mothers and Children. By Mrs. Charles Heaton, with illustrations by Oscar Pletsch. (Macmillan and Co.) Oscar Pletsch's pictures are delightful. They are chiefly of round chubby children toddling into every sort of mischief. It must be very difficult to make a book that will do equally for mothers and children. In this case we should advise that the children should have the pictures, and the mothers the verses, but the children will have the best of it.

Feathers and Fairies: or, Stories from the Realms of Fancy, by the Hon. Augusta Bethell (Griffith and Farran), will be a favourite with children, and may safely be given to them. The stories are graceful, and are told with much feeling. We specially liked "The Fairy Lobelia," and "The Bag of Troubles and the Bag of Joys."

Pet; or, Pastimes and Penalties, by the Rev. H. R. Haweis, with Fifty Illustrations by M. E. Haweis (Isbister and Co.), is a story about children, but not well calculated for them. It is too sensational, and the tragic end is too harrowing. Some of the situations are very comical, as for instance that of the nasty concoction Ben makes for soup and is compelled to drink up to save appearances. But the style is laboured, and has too many long words in it. What does a little child know about "depressing circumstances," "wounded sensibility"—of being "proportionately agitated," or of a "hazardous operation"? The illustrations are very much above the average, and are the principal attraction of the book. One of the prettiest is that near the end, which has underneath it "I shall never marry you now, Ben." But why did Mr. Haweis kill Pet?

The best children's book we have seen this Christmas is *Lob-lie-by-the-Fire; or, the Luck of Lingborough and other Tales*. By Juliana Horatia Ewing, author of 'Mrs. Overthway's Remembrances, &c.' with Illustrations by George Cruikshank (George Bell and Sons).—The story is of a baby-waif picked up and adopted by two old maiden ladies. In spite of, or in consequence of, judicious training, the boy becomes restless and runs away. His adventures with sailors and soldiers are told, and his final restoration to his home, through the influence of a tall Highlander to whom he is devoted. The hero goes back and conceals himself in the neighbourhood, doing out of long delayed gratitude many small good offices for his benefactresses, and keeping up a delusion that he is the Lubber-fiend, or Lob-lie-by-the-fire; a certain spirit of which he had heard stories in his early days. He is discovered at last asleep with his arms round the neck of a favourite old dog. But this bald description can give no idea of the freshness and charm, with which the story is told. Mrs. Ewing has much of the grace and the graphic power in which Mrs. Gaskell excelled, and she adds to them an originality of her own. The finding of the baby under the bush of broom, during the search for the lost diamond, is told with great humour, while the episode of the death of the tall Highland soldier, and the timely warning given him by the little hero which saved him from disgrace, are full of pathos. The other stories in the book are good, "Timothy's Shoes," "Benjy in Beastland," &c., but especially the one called "the Peace Egg," which has for its hero a fascinating boy named Robin. Take the following example of him:—Robin wants to have a military funeral for one of his sister Dora's dolls, an old one to which she is much attached. Dora is in great grief, but she has a sympathetic little brother called Nicholas:—

"The eyes of the soft-hearted Nicholas began to fill with tears, and he squatted down before her, looking most dismal. He had a fellow-feeling for her attachment to an old toy, and yet Robin's will was law to him.

"'Couldn't we make a coffin, and pretend the body was inside?' he suggested. 'No! we couldn't,' said Robin; 'I wouldn't play the Dead March after an empty candle-box. It's a great shame, and I promised she should be chaplain in one of my night gowns too.' 'Perhaps you'll get just as fond of the new one,' said Nicholas, turning to Dora. But Dora only cried. 'No, no! He shall have the new one to bury, and I'll keep my poor dear, darling Betsy,' and she clasped Betsy tighter than before. 'That's the meanest thing you've said yet,' retorted Robin, 'for you know mamma wouldn't let me bury the new one.' And with an air of great disgust he quitted the nursery."

Harry's Big Boots: a Fairy Tale for "Smalle Folke". By S. E. Gay. With illustrations by the author (Samuel Tinsley.) The opening sen-

tence of the preface is this:—"There needs no 'author's apology' for aught written for the young." We do not think this is true, but if it be so, 'Harry's Big Boots' is an exception to the rule. The writer says it has been "committed to the stern custody of print with the hope of making some little child laugh." This is a benevolent intention; we hope it will be more successful with the little child than it has been with ourselves.

The Little People, and other Tales. By Lady Pollock, W. K. Clifford, and Walter Herries Pollock (Chapman and Hall). There is a good deal that is amusing in this collection of fairy tales; they are prettily written, and the fun in them is for the most part really funny. We like best the story of "Silvershine," by Lady Pollock; and the "Giant's Shoes," by Professor Clifford. We wish the latter story had been longer, for we want to hear a great deal more of that giant. "He slept for three weeks at a time, and two days after he woke his breakfast was brought to him, consisting of bright brown horses sprinkled on his bread and butter." That was something like a giant! We hope next Christmas some more clever people will associate themselves together to give us amusement of this sort; or if these same clever people will do it again, both young and old will welcome their book.

F. M. OWEN.

NEWS AND NOTES.

As our readers have long been expecting the series of articles on Junius, by the Lord Chief Justice of England, we beg to inform them that although the work has been interrupted by the Geneva Arbitration and the terrible Tichborne case, it has not by any means been relinquished. A good deal has already been written, and the Chief Justice has spent many hours, won from his laborious weeks, at the British Museum in collecting evidence. The services of an eminent expert in handwriting have also been called into requisition.

THE 37th number of *Fors Clavigera* (Jan. 1, 1874) contains a clearer account than has yet been given of the community which Professor Ruskin proposes to establish. Its object is "the highest possible education of English men and women living by agriculture in their native land." It is to live under the laws—slightly modified—of Florence in the 14th century. "In what additional rules may be adopted I shall follow, for the most part, Bacon or Sir Thomas More, under sanction always of that higher authority which of late the English nation has wholly set its strength to defy—that of the Founder of its Religion." And he adds a well-known passage out of Plato's 'Republic.' "That it should be left to me," he complains, "to begin such a work, with only one man in England—Thomas Carlyle—to whom I can look for steady guidance, is alike wonderful and sorrowful to me. . . . I am left utterly stranded and alone in life and thought. . . ."

"I don't suppose any man, with a tongue in his head and zeal to use it, was ever left so entirely unattended to, as he grew old, by his early friends; and it is doubly and trebly strange to me, because I have lost none of my power of sympathy with them. Some are chemists, and I am always glad to hear of the last new thing in elements; some are paleontologists, and I am no less happy to know of any lately unburied beast peculiar in his bones; the lawyers and clergymen can always interest me with any story out of their courts or parishes; but not one of them ever asks what I am about myself. If they chance to meet me in the streets of Oxford, they ask whether I am staying there. When I say yes, they ask how I like it; and when I tell them I don't like it all, and don't think little girls should have large shoes, they tell me I ought to read the 'Cours de Philosophie Positive.'"

There are not wanting, however, people besides Mr. Carlyle who cordially welcome Mr. Ruskin's ideal of "simplicity of life without coarseness, and

delight in life without lasciviousness;" and to whom the monthly reading of *For* is like a bath in a running stream or a walk in the cool air of the dawn. There would be more if he would not persist in publishing with such an outlandish bookseller as Mr. Allen, Sunnyside, Orpington, Kent.

MR. WILLIAM MACMATH, of Edinburgh, has obtained the consent of Mr. Kinloch to copy that gentleman's two volumes of manuscript Scotch ballads for the use of Professor F. J. Child, of Harvard, in the new edition of his 'English and Scotch Ballads.' There is still one collection, at least, of MS. ballads at Abbotsford which Sir Walter Scott used for his 'Border Minstrelsy,' that Professor Child has not yet got access to; but we hope that the heiress of Abbotsford or her trustees will allow the Professor to have this volume copied, so that he may exhaust all possible sources of ballad supply.

DR. JAMES RUSSELL LOWELL is now at Florence, whence he will return to the United States in the spring, staying in Paris and London on his way home. It is hoped that, during the time he is in London, he will take the chair at one of the meetings of the New Shakspeare Society, of which he is one of the vice-presidents, and to whose transactions he will, after a time, contribute a paper. It is also understood that he will answer Professor Joseph Payne's argument against him in the last part of the 'Chaucer Society's Essays,' as to the sounding of the final *e* in Old French and Early English verse, a point on which Dr. Lowell, in his 'My Study Windows,' disputed Professor Payne's views, or his understanding of them, as contained in that gentleman's paper in the *Philological Society's Transactions*.

PROFESSOR SEELEY is to lecture for six consecutive nights next week in Edinburgh and other towns near it. His lectures in Edinburgh will be, as usual, given to the Philosophical Society there.

M. JOHN ANTHONY GALIGNANI, the elder of the two brothers who carry on *Galignani's Messenger*, has just died at the age of seventy-seven.

THE NEW SHAKSPEARE SOCIETY is to have a fresh series of publications added to the five named in its director's prospectus, namely, one of 'Shakspeare Allusion-Books.' The works will be edited chiefly by Dr. C. Mansfield Ingleby, who has suggested as the first of them—

1. Greene's 'Groatsworth of Wit,' 1596, a copy of which is in Mr. Henry Huth's library, and which was reprinted, but with modernised spelling and punctuation, by Sir Egerton Brydges in 1813, in 4to. To this tract Dr. Ingleby will add copious illustrations.

2. Henry Chettle's 'Kind Hart's Dream,' 4to; with no date, but it must be about 1600. Copies are in Mr. Henry Huth's library, and in the British Museum.

3. Henry Chettle's 'Mourning Garment,' published anonymously in 4to, without date; but it must be about 1603. A copy is in Mr. Henry Huth's library and in the British Museum.

4. If Mr. S. Christie-Miller's consent be obtained, his copy, in his Heber Collection of Ballads, of 'A Mournefull Dittie, entituled Elizabeth's Lasse, together with a Welcome for King James, to a pleasant new tune.' Imprinted at London for T. P. [Thomas Purfoote the younger (1597-1629), about March 24, 1603, the date of James's accession.]

This ballad, as is known by Mr. Christie-Miller's catalogue of his ballads, contains the following stanza:—

"You Poets all, brave Shakspeare,
Johnson, Greene,
Bestow your time to write
For England's Queene.

Lament, lament," &c.

It is hoped that Mr. Christie-Miller will himself edit this ballad for the Society, while Mr. Henry Huth's well-known unflinching generosity is relied on for permission to copy and reprint his books. Francis Meres's 'Palladis Tamia,' 1598, already announced as to be edited for the New Shakspeare

Society by Dr. Ingleby, will naturally fall into this series of 'Shakspeare Allusion-Books,' and will be edited by J. W. Hales, Esq., M.A.

Professor Ruskin has sent fifty guineas to Mr. Furnivall for the Chaucer Society—twenty as a subscription, thirty as a donation—with a note, in which he says, "I am grateful to you in no small degree for your teaching concerning Chaucer. . . I congratulate you very earnestly on the fine literary work you have done for England." Though the Chaucer Society has been so miserably and grudgingly supported by rich men and libraries in England, it has yet done work worthy of the liberal help that it is to be hoped it will some day get. Money is all that it and the other Early English Societies want now.

MEMBERS of the Early English Text Society and others who possess Mr. Sweet's edition of Ælfred's translation of Gregory's 'Pastoral Care,' may be glad to learn that the Latin original is now very accessible. An excellent and handy edition of the Benedictine Text has lately been printed at Leipsic, "sumtibus Ernesti Bredti," and another edition of the same text, with a modern English translation by the Rev. H. R. Bramley, has also lately been published by Parker & Co.

THE Hunterian Club at Glasgow, which is issuing a series of Scotch Poets, and one of English, beginning with Samuel Rowlands, is lucky in having some liberal members of Council. One of them will give the members of the Club in 1873, Richard Niccoll's 'Sir Thomas Overburie's Vision,' 1616, with an introduction by that well-known editor, Mr. James Maidment. Another will give the members in 1874, Patrick Hannay's 'The Nightingale,' 'Sheretine and Mariana,' 'A Happy Husband,' 'Elegies on the Death of Queen Anne,' 'Songs and Sonnets, 1622.' The Hunterian Club's first issue for 1873 will be sent to members in January 1874, and will consist of the remaining works of Alexander Craig; his 'Poetical Essayes, 1604;' 'Poetical Recreations, 1623;' 'Pilgrimage and Heremite, 1631;' 'Miscellaneous Poems, with a Preface by Dr. David Laing;' Samuel Rowlands's 'Diogenes' Lanthorne, 1607'—

"Athens I seeke for honest men;
But I shall finde them. God knows when;
He search the citie, where if I can see
One honest man, he shal goe with me."

Samuel Rowlands's 'A Foole's Bolt is soone shott, 1614' (a collection of stories in verse); Part I. of 'George Bannatyne's celebrated MS. of Scotch Poetry, written by him during the Plague of 1568.' If further subscriptions come in, more books will be issued. The Second Part of the Bannatyne MS. and other Poems of Rowlands's are in the press. The honorary secretary of the Society is Mr. Alexander Smith, 43 Campbell Street West, Glasgow.

THE Early English Text Society announces that, in its original series, its Publications for 1874 will be chosen from—'The Gest Historiale of the Destruction of Troy;' translated from Guido de Colonna, in alliterative verse, and edited from the unique MS. in the Hunterian Museum, Glasgow, by D. Donaldson, Esq., and the late Rev. G. A. Panton, Part II. (Now ready.)—'The Early English Version of the "Cursor Mundi;"' in four Texts, from MS. Cotton, Vesp. A. iii. in the British Museum; Fairfax MS. 14 in the Bodleian; the Göttingen MS. theol. 107; MS. R. 3. 8 in Trinity College, Cambridge; edited by the Rev. R. Morris, LL.D. Part I. with two photolithographic facsimiles by Cooke and Fotheringham. (Part I. to be ready in January.)—'The Lay Folk's Mass-Book,' four texts, edited from the MSS. by the Rev. T. F. Simmons, Canon of York. (In the press.)—'Palladius on Husbandrie,' english (ab. 1420 A.D.), edited from the unique MS. in Colchester Castle, by the Rev. Barton Lodge, M.A. Part II. (In the press.)—'The Blickling Homilies,' edited from the Marquis of Lothian's Anglo-Saxon MS. of the 10th century, by the Rev. Richard Morris, LL.D. (With a photolithograph.) (In the press.)—'Generydes,' a Romance, edited

from the unique MS. (ab. 1440 A.D.), in Trinity College Cambridge, by W. Aldis Wright, Esq., M.A., Trinity College, Cambridge. Part II.—'Thomas of Ercildoune: his Rymes and his Prophecies,' edited from all the extant MSS., by James A. H. Murray, Esq.—'Merlin,' Part IV., containing Preface, Index, and Glossary. Edited by H. B. Wheatley, Esq.

In its Extra Series, its Publications for 1874 will be—'Lonelich's Saint Graal,' edited by F. J. Furnivall, Esq., M.A. Part I. (To be ready in January.)—'Barbour's Bruce,' Part II., edited from the MSS. and early printed editions by the Rev. W. W. Skeat, M.A. (At press.)—'Early English Pronunciation,' with especial reference to Shakspeare and Chaucer, by A. J. Ellis, Esq., F.R.S. Part IV. (To be ready by May 1.)

WILLIAM ROY, who took part in Tyndale's translation of the New Testament, and who is also famous in English literature for his bitter satirical poem against Cardinal Wolsey, was likewise the translator and editor of a religious conversation between father and son, written anonymously in German, which is commonly quoted under the title of 'Dialogus inter patrem Christianum et filium contumacem.' All that has hitherto been known of this translation is that it was printed about the year 1527, at Strasburg, where Roy stayed after his separation from Tyndale. Wolsey's agents bought up the entire edition so successfully that not a single copy of the work was to be found in any library in England or on the Continent, or even in that of the British Museum. Hitherto the existence of the work was known only by the quotations from it in the works of Tyndale and Sir Thomas More, and in the list of books proscribed as heretical by the Archbishop of Canterbury between 1527 and 1532. A perfect copy of this translation has recently been found in the Imperial Library of Vienna, bound up with the (also extremely rare) first edition of Roy's Satire against Wolsey, 'Rede me and be not wrothe' (Arber's Reprints, 1872); and Herr Adolf Wolf, Custos of the Library, will very shortly publish an accurate reprint of this work, which is of the greatest importance for the early history of the Protestant movement in England.

MR. JULIAN SHARMAN is editing John Heywood's 'Proverbes,' with copious quotations from earlier and contemporary authors, for Messrs. George Bell & Sons.

WE hear that the Corporation of the City of London are thinking of appointing a Keeper of their Records. The sooner they do so the better, as then we should hope for proper indexes to the present clueless maze of rolls, &c., whose state is certainly no credit to the wealthiest corporation in Great Britain.

PROFESSOR MOMMSEN has at length made up his mind to leave Berlin and go to Leipzig—a great blow to the former place, where the number of students has been steadily decreasing for two or three years, and a powerful accession to Leipzig, which is now incomparably the best equipped and best attended of all German universities. It is to be expected that the study of history, the only subject hitherto not very much favoured at Leipzig, will receive a great impulse from MommSEN's lectures on the institutions and the policy of ancient Rome. Other universities are advancing, though more slowly. At Göttingen, for instance, there are now more than a thousand students, a number which has not been reached during the last forty years.

WE understand that a new work by Mr. S. R. Gardiner, 'England under the Duke of Buckingham and Charles I., 1624-1628,' is almost ready for publication. It will take up the history of England on the return of Prince Charles from Madrid, and tell the story of his short-lived popularity, which was followed by his quarrel as king with three successive Parliaments, till the murder of

his favourite left him face to face with an alienated nation. Although the whole of this period is trodden ground, the mass of hitherto unused material is large enough to throw unexpected light upon many of the most material transactions. By this means the original quarrel between Charles and his first Parliament, and the causes of the French war which ended so disastrously, receive considerable elucidation; while the use of full reports of the debates of the third Parliament makes it possible for the first time to arrive at a complete knowledge of the difficulties which stood in the way of the Petition of Right, and finally disposes of the charge of apostasy so persistently brought against Sir Thomas Wentworth.

■ MR. C. H. PEARSON, M.A., late Fellow of Oriel, author of 'The Early and Middle Ages of England,' has been appointed Professor of History and Political Economy in the University of Melbourne, Victoria. Mr. Pearson gives up his bush farm to settle in Melbourne. He has lately lectured to large popular audiences in Adelaide on 'England in the Fourteenth Century,' with great success, and is just completing a little book on the same subject for Messrs. Rivingtons' series.

THE Council of the Camden Society have the intention of publishing 'Papers relating to the quarrel between Cromwell and the Earl of Manchester,' with a preface by the late Director, Mr. John Bruce. Mr. Bruce has also left a fragment on the marriage and accession of Charles I., as well as a fragment on the early life of Prynne, which have been placed by his executor at the disposal of the Camden Society, together with his collections of papers relating to those subjects.

MR. J. G. NICHOLS was during the last years of his life engaged in editing for the Camden Society the 'Autobiography of Lady Anne Halket.' He had made considerable collections for that purpose, and had written a large portion of a biographical introduction.

THE accomplished Princess Dora d'Istria has just published a second edition of her history of the princes of the house of Ghika, under the title of 'Gli Albanesi in Rumania.' The work, of which the Continental papers speak in high terms, is largely based upon documents in the French Archives, and was originally published in the *Rivista Europea*.

HERR VON ARNETH, the distinguished keeper of the Austrian archives, is about to publish (*chez Didot*), in conjunction with M. A. Gellroy, three volumes containing fresh extracts from the correspondence of Maria Theresa, and the secret reports sent to her from Versailles by the Count de Mercy-Argeuteau. The *Revue des deux Mondes* (Dec. 15) gives an interesting account of the substance of the forthcoming work, which the writer represents as proving that the influence exercised by the Court of Austria through Marie Antoinette upon the domestic policy of France was inconsiderable, and that Maria Theresa was most prudently desirous of not straining it so far as to endanger her daughter's credit. Mercy's reports are extremely circumstantial, and throw valuable light upon the life of the French Court from 1770 to 1780; they exonerate Marie Antoinette from all blame more serious than belongs to the levity of a child (married in her fifteenth year), and the imprudence of a young woman who had no disinterested friends; but they show that when her influence was distinctly mischievous, as in procuring the disgrace of Malesherbes and Turgot, she was acting, against the advice of her Austrian counsellors, at the instigation of the court faction which had gained her ear. The article also contains unpublished extracts from Maria Theresa's letters of advice to her fourth daughter, Maria Amelia, the wife of the Duke of Parma, and some extremely interesting memoranda respecting the partition of Poland, her feeling about which is faithfully condensed in the sentence pronounced in February 1773: "J'ai été toujours contraire à cet unique partage, si inégal!"

THE *Revue des deux Mondes* for January 1st contains the first number of a new novel by Georges Sand, 'Ma sœur Jeanne,' which will be followed by one by M. Octave Feuillet. The table of contents from 1831 to 1874, which has been announced for some time, will be published in April or May. The *Revue* for December 1st contains instalments of another forthcoming volume of correspondence ('Lettres à une Inconnue,' par Prosper Mérimée, de l'Académie française, en 2 volumes, chez Michel Lévy), which have an interest at once romantic and biographical. The *inconnue* is an English lady. The letters have all the merits of the writer's usual style, and are certainly a psychological curiosity. The French novelists who are fond of throwing their romances into epistolary shape, might do well to notice how much power a simple expression may have, if there is evidently real individual feeling behind it, and how little eloquence finds room when the feeling to be expressed is serious. The letters extend over thirty years, and touch on all kinds of subjects, political, literary, and artistic, as well as sentimental. In 1868 the author mentions casually as a person whose acquaintance had pleased him, "un grand Allemand, très poli, qui n'est point naïf," by name M. de Bismarck. The last letter (September 23, 1870) was written two hours before his death, which was hastened by the political events that make such a sentence from the pen of an imperial senator read like an epigram.

NOTES ON TRAVEL.

WE understand that Sir Bartle Frere, the President of the Royal Geographical Society, has left London for Edinburgh and Glasgow, where he intends delivering two lectures, one at Edinburgh on the 5th inst., on the "Future of Africa;" the other at Glasgow on the 8th inst., which will have for its subject, "What Livingstone has done for Africa." To a travelling people like the Scotch, the information that will thus be afforded them from the lips of so distinguished and practical a philanthropist cannot fail to be of the highest interest, especially in relation to the wide field that is rapidly opening out on the coast of East Africa for commercial enterprise. Glasgow, moreover, has the right to look upon Dr. Livingstone as peculiarly her own.

THE joint memorandum of the Royal Society, the Royal Geographical Society, and the British Association, setting forth the reasons for equipping a national expedition to the Arctic regions, which has already been submitted to Government, was, we understand, drawn up by Mr. C. R. Markham, and is published as an appendix to Captain Markham's new work. The deputation will wait upon the Premier at an early date.

THE latest accounts from Lieutenant Cameron, of the Livingstone Relief Expeditions, bearing date the 15th of July, reported the whole party in excellent health, and making good progress. Up to the present, their march has not been marked by any very interesting discoveries or adventures. They have followed what may be called in Africa a well-beaten track. Dr. Livingstone seems again to have disappeared from the knowledge of men; but at Unyembe, which native reports say that Cameron reached about the middle of September, sufficient information ought certainly to be gained to enable that officer to decide as to the best chance of striking on the Doctor's trail. In this month's number of *Ocean Highways*, we observe that an appeal is made on behalf of Lieut. Cameron's expedition, for funds, which are said to be running short. Of Lieut. Grandy's Congo expedition no news have lately been received.

THE Consul-general, Dr. Kirk, has left Zanzibar on leave, and is expected in England about the middle of the present month. Dr. Kirk has been untiring in his efforts to give effect to the provisions of the Anti-Slave Trade treaty but lately signed by the Sultan of Zanzibar, and in these

efforts he has been most loyally supported by his Highness himself. Dr. Kirk has freed more than 450 slaves held by the British Indian subjects on the mainland, and has done this with such tact and good sense as to render these even more disposed than ever to our English rule; the feeling of constant danger as to punishment and of uncertainty in the possession of these slaves having given place to one of security and confidence. Dr. Kirk's failing health is the primary cause of his leaving Zanzibar at this very important period in its new existence. No man has worked more patiently, more loyally, or more successfully, to benefit the ruler of Zanzibar and the community at large. Captain Prideaux, of Abyssinian notoriety, will act for him in his absence.

A CONTRACT has lately been signed between the French Government and the British India Steam Navigation Company for the running of a monthly mail steamer between Zanzibar and the French possessions of Nossi Bé and Mayotte to the N.W. of Madagascar. The importance of this line in developing legitimate commerce and suppressing the Slave-trade cannot be over-rated. By its means Madagascar, the Seychelles, and presumably the whole group of the Comoro Islands, will be brought into direct monthly communication with Europe. The first steamer will leave Zanzibar for Mayotte and Nossi Bé at an early date.

The Mission to Yarkand.—Important geographical despatches have, we believe, been received from the Mission by the Royal Geographical Society, supplementing the scanty telegraphic news which records from time to time its satisfactory progress. It is difficult to imagine anything more interesting than the experiences of Mr. Forsyth and his able coadjutors. Mr. Forsyth crossed the Himalayas by the Kara-Korum pass.

Captain Trotter, R.E., took the Changchemmo route which, we believe, was originally discovered and described by Dr. Cayley. We trust that the despatches referred to will soon be made public.

THE very able article on Aden in the present number of the *Ocean Highways* is, we believe, from the pen of Mr. Clements Markham, C.B., who has received great assistance from the Rev. Dr. Badger. There is no one living so intimately acquainted with the subject as Dr. Badger.

FROM private advices received from Zanzibar, it would appear that there is no reason to believe that the murder of Lieut. Marcus McCausland, R.N., was due to any more wide-spread motive than a wish for revenge harboured by the men of an isolated village, who may have suffered loss from the presence in their vicinity of the men-of-war's boats engaged in the suppression of the Slave-trade. The signal and sweeping destruction to which the village was subsequently subjected by our infuriated sailors was but natural; but the real murderers unfortunately escaped, and our action has placed it quite out of the power of the Sultan to apprehend the actual murderer.

WE have perused with much interest a small pamphlet, by the Rev. Horace Waller, on 'Bilious Remittent Fever in Africa, its Treatment, and the Precautions to be used against it in dangerous Localities.' The advice therein given is, as we know from experience, so valuable, and is stated in such a clear, practical, and simple manner, that we cordially recommend it to the notice of all who have friends on the Gold Coast, or in any other portion of Africa. It is a little book which should be issued by Government to all concerned in the present Ashantee War.

In the *Pall Mall* of December 24, there is a note to the effect that the West Coast of Africa, from the Cameroons to our own Cape Colony, has been left unexplored and "unpierced" by our modern explorers. Surely the writer must have forgotten Du Chailu's exploit and Captain Tuckey's disastrous ascent of the Congo. Livingstone himself cannot yet have outlived the memory of his great journey across the Continent to St. Paul de

Loanda. The Portuguese, too, are not indifferent to the exploration of this part of their African possessions, as Macqueen, Cooley, and quite recently Burton, have borne witness; while, to the South, the travels of Anderson, Galton, and Barnes have also done much to elucidate matters.

The occasional note in which this oversight occurs had reference to a lecture before the Berlin Geographical Society, given by Professor Bastian on the prospects of a German expedition under Dr. Gussefeldt into the interior of Africa by way of the Congo. Strangely enough, no reference is made to the English expedition under Lieut. Grandy, which, under Mr. Young's auspices, has gone forth with the same object.

A most serious obstruction stands in the way of both expeditions, and that is the jealousy of the trading tribes which monopolize the traffic between the coast and the interior. They endeavoured to turn back Livingstone coming from the interior. They have obstructed Grandy's first attempt. The same difficulty stands in the way of Liberian commerce. It is the one great bar to the development of European intercourse with the interior of Africa, the civilisation of its people, and the contribution of its abundant raw products towards the trade and wealth of the world.

Few tracts of the earth's surface are less known than the regions which intervene between the valley of the Lower Indus and the dominions of the Shah. From the time that Alexander marched the remains of his army through the arid hills and burning deserts of Gedrosia, while Nearchus coasted its shores, till the beginning of the present century, Baluchistan and Sistan remained untrodden by a European foot. In 1809-10 the adventurous journeys of Grant, Christie, and Pottinger gave the first trustworthy details that had reached Europe regarding the geography of those inhospitable regions; after which, apprehensions of an invasion of India from that quarter having subsided, they were unvisited till the last few years. In 1866, Sir Frederic, then Colonel, Goldsmid travelled from Kirmân through Bam and Bampur to Charbar, on the coast of Makran, with the view of ascertaining the practicability of establishing telegraphic communication by that route. He found the country completely under the authority of the Persian governor of Kirmân, who was so rapidly extending the dominion of his master to the eastward as to threaten the territory of our ally, the Khân of Kalât. A diplomatic correspondence ensued with the Court of Tehrân concerning this and the kindred subject of the suzerainty of Sistan, disputed between the Shah and the 'Amir of Kâbul. The result was the dispatch of a mixed commission, under Sir Frederic Goldsmid as arbitrator, to settle the question on the spot, and to define the frontier of Persia from the northern end of the Sistan Lake to the sea. This was successfully accomplished during the winters of 1870-1 and 1871-2; and Sir Frederic Goldsmid's decision, after some demur, has been accepted by the three potentates concerned. A very large amount of interesting and valuable information was of course gathered by Sir F. Goldsmid and the officers under his orders. For once this is not to be consigned to the limbo of official record-rooms, or scattered through the pages of scientific periodicals. We are glad to learn that Messrs. Macmillan are about to publish the results of the labours of the Persian Frontier Commission on behalf of the India Office. The work will contain a preface by Sir F. Goldsmid; a narrative of his different journeys through Baluchistan and Sistan, by Major Euan Smith, his secretary; and accounts of his own separate routes in the former country, by Major Lovett, the Engineer officer attached to Sir F. Goldsmid's staff. It will comprise a journal of a later expedition, from Gwadar, through Northern Baluchistan and Eastern Persia to Shirâz, by Major St. John and Mr. Blanford, with an account of the geology and zoology of the country by the latter. It will be accompanied by maps from the original surveys, and

Plates of several new species of birds and mammals. The whole should be one of the most valuable additions to our knowledge of Western Asia that has appeared for many years, and will form at least one exception to the rule of carelessness for the interests of science with which the English Government is so often and so justly reproached by foreigners.

SELECTED BOOKS.

General Literature and Art.

- BEAUNE, H. Voltaire au collège, sa famille, ses études, ses premiers annes. Lettres et documents inédits. Paris: Anyot.
- BODI, D. Dizionario storico e geografico universale della Divina Commedia, contenente la biografia dei personaggi, ecc. Torino.
- BURGMANN, Hans. The Triumphs of the Emperor Maximilian I. Edited by A. ASPLAND, F.R.H.S. Part I. (Holbein Society). Trübner.
- BUTLER, W. F. The Wild North Land. Sampson Low.
- FLEURY, G. Rohault de. Les monuments de l'Égypte au Moyen-Âge. Paris: Baudry.
- GREIN, C. W. M. Alselder Passionsspiel mit Wörterbuch. Cassel: Kay.
- HUDSON, H. N. Shakespeare; his Life, Art, and Characters. (Boston). Trübner.
- KLEIN, I. L. Geschichte des Dramas. 10. Bd. Das Spanische Drama. 3. Bd. Leipzig: Voegel.
- KREYSSIG, F. Vorlesungen über Shakespeare, seine Zeit und seine Werke. 2te verbesserte und vermehrte Auflage. 1er Bd. Berlin: Nicolai.
- MASSON, D. Drummond of Hawthornden: The Story of his Life. Macmillan.
- MONNIER, M. Genève et ses Poètes du XVI. siècle à nos jours. Paris: Sandoz et Fischbacher.
- PLON, E. Thorwaldsen, his Life and Works. Translated by Mrs. C. Hoey. Bentley.
- QUELLENSCHREIFEN FÜR KUNSTGESCHICHTE und Kunsttechnik des Mittelalters und der Renaissance. Hrsg. von R. Eitelberger von Eidelberg. 6. Lfg. Das Leben des Michelangelo Buonarroti, von H. Condi. Wien: Braumüller.
- REDGRAVE, S. A. Dictionary of Artists of the English School; Painters, Sculptors, Architects, Engravers, and Ornamentists; with Notices of their Lives and Works. Longmans.
- THACKERAY, Miss. Toilers and Spinners, and other Essays. Smith & Elder.
- VINCENT, F. The Land of the White Elephant: Sights and Scenes in South-Eastern Asia. Sampson Low.

Musik.

- BRUNN, J. Zwei Quartette. Berlin: Simrock.
- BRUNN, J. Requiem, the words selected from the Holy Scriptures, for Solo, Chorus, and Orchestra. Op. 45. Vocal Score. Stanley Lucas, Weber and Co.
- HANSLIK, E. Concert-wesen in Wien. Vienna.
- HILLER, F. Lulline, Poem by W. Müller v. Königswinter, set to music for Solo Voices, Chorus, and Orchestra. Op. 70. Vocal Score. Stanley Lucas, Weber and Co.
- HILLER, F. Spring-time, Poem by Immergrün, set to music for Chorus and Orchestra. Op. 119. Vocal Score. Stanley Lucas, Weber and Co.
- RAFF, J. Octett Sextett. Leipzig: Seitz.
- RAFF, J. Concert für Pianoforte. Leipzig: Siegel.
- RHEINBERGER, J. Wallenstein Svendsen: Symphonie in D. Leipzig: Fritsch.
- SCHUBERT, C. Thematisches Verzeichniss, von Gustav Nottebohm. Wien: Spina.
- SCHUMANN, R. 5 Symphonische Studien. Berlin: Simrock.
- SCHUMANN, R. Hymn for Advent, written by F. Rückert, set to music for Solo Voices, Chorus, and Orchestra, by Robert Schumann. Op. 71. Vocal Score. Stanley Lucas, Weber and Co.
- SCHUMANN, R. Requiem for Mignon from Goethe's Wilhelm Meister, for Solo Voices, Chorus, and Orchestra. Op. 98b. Vocal Score. Stanley Lucas, Weber and Co.
- SCHUMANN, R. Requiem für Chor und Orchester. Op. 143. Clavierauszug. Stanley Lucas, Weber and Co.

PARIS LETTER.

4 Place Wagram, Paris, Dec. 29, 1873.

Sunday morning yielded a passing peep into the privacy of a celebrity, and was consequently a red-letter day for the modern Athenians. Poets, dramatists, painters, comedians—men whose names are familiar in Salon catalogues and boulevard playbills—were passing down the Rue Drouot at an early hour, paying the last honours to François Victor Hugo. All parties were represented. The poet's recent sufferings have disarmed even the ferocious critics of the "presse légère." Of four children, but one daughter now remains to Victor Hugo. His youngest daughter, Léopoldine, was drowned with her husband, Charles Vacquerie, in 1843, by the sudden sinking of a pleasure-boat at Villequier. Charles Hugo, the eldest son, died unexpectedly at Bordeaux in 1871, leaving two children, to whom are dedicated some of the tenderest poems of the 'Année Terrible.' There was a notable difference of character as well as of talent between François Hugo and his father and brother. Charles was an ardent polemic, the friend of Rochefort, and wielded a pen as bitter, if not as epigrammatic, as that which wrote the *Lanterne*. François had the simple tastes of a scholar and contemplative poet; and his few *chroniques* in the *Rappel* were more remarkable for their purity of style than for any political profundity or party vehemence. He had only just left the Lycée Charle-

magne in 1848 when he began his career by contributing to his father's journal, *L'Événement*. When Victor Hugo left France after the *Coup d'Etat*, François accompanied him. During the first days of their exile all their future life at Jersey was planned; Victor Hugo saying, "I will contemplate the ocean," and François, "I will translate Shakespeare."

This translation is François Hugo's most important work. It is the best that has yet appeared in France, where the feeble and mutilated rendering of Ducis was for a long time the only standard interpretation of Shakespeare. François Hugo was also the first to give a complete edition of Shakespeare's sonnets. He has produced, in addition to these monumental achievements, some three or four historical and archæological works, the best of which is a history of Jersey and its antiquities. At times he could imitate with some success the *verve* and vigour of the 'Châtiments.' Many will remember his indignant letter in the *Times*, denying a rumour that announced his presence in Paris in 1868. Like Victor Hugo, he only returned to France after the 4th of September. M. François Hugo had been ill for eighteen months, suffering from a spinal malady of the most painful character. Victor Hugo arrived too late to witness the end, but Madame Charles Hugo, whom the deceased was about to marry, was present, together with Auguste Vacquerie, the dramatist, and Edmond Lockroy, the Radical deputy and editor of the *Rappel*. The funeral train, comprising nearly two hundred personal friends and some two thousand representatives of literature, art, journalism, and the political world, had become when it reached the gates of Père-la-Chaise a crowd numbering more than ten thousand sympathisers. Grouped around the open grave were the chief *Parnassiens*, Théodore de Banville, Edmond About, Meurice, Dumas *fils*, Leconte de Lisle, Flaubert, the staffs of the *Rappel* and *République Française*, Gambetta, and nearly all the Radical deputies. When Louis Blanc concluded his touching valedictory speech, Victor Hugo threw his arms around him and kissed him on both cheeks.

The new press law is likely to excite the unanimous protests of journalists of all colours—red, white, and tricolour. The re-establishment of the Stamp-duty will have for immediate effect to extinguish six or seven journals, appertaining for the most part to the Royalist interest. The Republican organs are, as a rule, incomparably richer than their opponents. This is not the only charge to be imposed on the press. The Government regards with disfavour the practice of publishing periodical *feuilletons*, and intends to impose a tax of five centimes on every novel issued in this form. The ostensible reason for this manœuvre is the immoral and revolutionary character of many of these publications. The allegation is not altogether unfounded; but the journals which support M. de Broglie's Cabinet are the chief and most shameless sinners. The *Figaro*, notably, is publishing a series of novels, whereof the title alone is frank enough to repel most English readers. M. X. de Montépin calls his "studies" unequivocally 'Les Drames de l'Adultère,' and the narrative carries out to the fullest the promise of the title-page. This is a *spécialité* of the *Figaro*. It will be remembered that this journal first published the impudently offensive works of M. Belot—'Mlle.

Giraud ma Femme' and 'La Femme de Feu.' It is true that these studies (all the modern followers of Paul de Kock are psychological students) were both interrupted, after the worst passages had appeared; but whoever is at all familiar with certain Parisian literary circles knows that this sudden cessation was pre-arranged—to "froth the interest," as a picturesque piece of journalistic slang describes the manœuvre. But the five centimes' duty does not constitute a remedy. It was essayed under the Empire, and failed signally. Ingenious gentlemen managed to give the form of memoirs and travels to the worst romances. 'Jack Sheppard' appeared as an historical study of Old London!

The required moral example is scarcely set by the Government in all its acts. On the one hand it has issued an order to the Prefects calling their attention to the quantity of licentious books circulating in the provinces. In the departments of the Sarthe, Maine et Loire, and Loire-Inférieure, in the Marne, the Ardennes, the Haute-Saône, the number and shameless character of these publications is inconceivable. They are nearly all of Belgian and German origin. But at the same time M. Ernest Daudet is appointed director of the Commission of Colportage (the committee which examines incriminated books), at the Ministry of the Interior. And M. Daudet, a novelist of secondary rank, is distinguished even among Parisian writers of romance, for the persistence with which he devotes his talent to the description of breaches of the seventh commandment, and the *peripateia* of *demi-monde* dramas. His one title to ministerial favour is a political pamphlet, published two days ago and entitled 'La Vérité sur l'Essai Monarchique.' It professes ardent Orléanist principles; but it should be added that M. Daudet was very recently a Bonapartist, and acted during several years as secretary to the Duc de Morny.

There are now fourteen candidates for the three vacant *fauteuils* at the Academy. The Academicians are said to be displeased at the character of the competitors. M. Weiss is a *savant* and a pupil of the Ecole Normale, and therefore thoroughly acceptable to the Forty, as are the two professors of the Collège de France who complete the trio of most "serious" candidates. But the names of the remaining pretenders are regarded as bitter humiliations. Dumas *fils* presents himself, in spite of his repeated assurances that he would never occupy the *fauteuil* refused to his father; Paul Féval asserts his claim—and M. Belmontet, perhaps M. Sardou! The author of the 'Dame aux Camélias,' the author of 'Le Bossu,' the poet who has been for the last twenty years the butt of the entire Parisian press, and the creator of the 'Merveilleuses,'—these are the representatives of French literature whom the Academy is asked to elect. Of course none of the above names are likely to obtain more than one or two suffrages. M. Taine's chance of election appears to be dwindling. Still the author of 'De l'Intelligence' may very possibly enter the Palais Mazarin—after M. Weiss.

It has been announced that the ex-Marshal Bazaine entrusted his private papers to some political friends before leaving for the island of Sainte-Marguerite. I am in a position to state that among these papers is a memoir written by the Marshal, and containing a fluent and soldier-like account of the attempts of the Imperial party to

negotiate with Prussia. This work has been entrusted to M. Lachaud, and is to be published "when circumstances shall permit."

A rather more precise date may be assigned to M. Emile Zola's forthcoming novel. It will appear in the spring, contemporaneously in England and France. M. Zola is the leader of the young realistic school, and a veritable master in his sphere. He is writing the 'Social and Natural History of a Family under the Second Empire'—a work which aims at doing for the Cæsarian epoch what the 'Comédie Humaine' did for the society of the Restoration. The forthcoming instalment describes the conversion of the clergy to Imperialism and the gradual extension of its political influence in France.

The publication of Victor Hugo's 'Quatre-vingt-treize' is deferred for a month. The "epileptic imagination" which M. Veuillot ascribes to the poet does not at all obscure his business-like acuteness and foresight. The deliberations of the Committee of Thirty and the New-year festivities are not, in Victor Hugo's opinion, conducive to the success of a serious political study like 'Quatre-vingt-treize.' The copyright of the work has been purchased in Holland, Germany, and England.

Prosper Mérimée's posthumous works—'Dernières Nouvelles' and 'Lettres à une Inconnue'—have unfortunately revived an ancient and baseless scandal. It has been asserted that the late Academician was the father-in-law of Napoleon III., by reason of his marriage with Mme. de Montijo. The fact is, that a long and intimate friendship connected Mérimée and Mme. de Montijo, who may possibly be the *Inconnue* to whom the letters are addressed. But at the date assigned to the novelist's marriage, Mme. Mérimée was yet living.

EVELYN JERROLD.

CORRESPONDENCE.

HAMLET'S "SOME DOZENE OR SIXTEENE LINES."

3 St. George's Square, Primrose Hill,
Dec. 31, 1873.

Professor Seeley asked me to-day whether any critic had ever identified the "dozen or sixteen lines" which Hamlet asked the Player if he could study, and insert in his play. The Professor said that he had identified them, and that they went far to explain Hamlet's character. No doubt some of the thousand and one critics of Shakespeare have identified the lines; for, the point once raised, mistake in the lines is impossible. But as neither Coleridge, Hazlitt, Schlegel, Gervinus (though he quotes the lines as applying to Hamlet), Dyce, or the Cambridge editors, have a note on the point, it is worth a few words now.

Hamlet says to the Player, whom he asks, "Can you play the murther of Gonzago?"

"You could for a need study a speech of some dozen or sixteen lines, which I would set downe, and insert in't? Could ye not?"

"Play.—I (=aye), my Lord."

Then, having "set downe" this speech, and declaimed or "pronounc'd" it to this Player, Hamlet afterwards says to "two or three of the Players," evidently speaking mainly to the one who is to speak the inserted speech:—

"Speake the Speech, I pray you, as I pronounc'd it to you, trippingly on the Tongue. . . . Be not too tame neyther: but let your owne Discretion be your Tutor," &c.

Then comes the play, and in it the more than a "dozen or sixteen lines," "the Speech" "set downe" by Hamlet for the Player who plays the King, and thus pictures Hamlet himself:—

... "But what we do determine, oft we break:
Purpose is but the slave to Memory,
Of violent Birth, but poor validity:
Which now, like Fruite unripe, sticke on the Tree,
But fall vnshaken, when they mellow bee.
Most necessary 'tis, that we forget
To pay our selves, what to our selves is debt:
What to our selves in passion we propose,
The passion ending, doth the purpose lose.

But orderly to end, when I begun,
Our Willes and Fates do so contrary run,
That our Devices still are overthrowne;
Our thoughts are ours, their ends none of our owne."

This is surely Hamlet's inserted speech, the moral of 'The Tragedie of Hamlet,' written by Shakspeare himself. Weak Will, strong Fate, are at war throughout the play, till the end comes, and the Will, in a way "none of its own," carries out Fate's decree.

Dec. 31, 1873.

F. J. FURNIVALL.

THE GREY DOLPHIN.

Cintra Terrace, Cambridge, Dec. 27, 1873.

It may interest readers of the 'Ingoldsby Legends' to learn that the original of part of the story called "Grey Dolphin" may be found in Lambard's 'Perambulation of Kent,' under the heading "Chetham," i.e. Chatham.

WALTER W. SKEAT.

THE AUDIENCE QUESTION IN CHINA.

9 Dacre Park, Dec. 31, 1873.

On the authority of a Chinese journal, the *Echo*, in its issue of December 30, gives prominence to the following extraordinary *canard*:—

"The Foreign Office appears to be very badly informed regarding the proceedings of the representatives of this country in other lands, more especially in China. According to a Chinese account of the reception of the European envoys by the Emperor of China, ours seems to have acquitted himself very indifferently. Foremost among the twelve envoys was the representative of Great Britain. When he had read a few sentences of his credentials, 'he began,' we are informed, 'to tremble from head to foot, and was incapable of completing the perusal.' The Emperor asked, 'Is the Prince of your country well?' but he could utter no reply. The Emperor again asked, 'You have besought permission to see me time and again; what is it you have to say to me?' But again he was unable to answer. The next proceeding was to hand in the credentials, but in doing this he fell down on the ground time after time, and not a syllable could he articulate. Upon this Prince Khun laughed loud at him before the entire Court, exclaiming, 'Chicken-feather!' and gave orders to have him assisted down the steps. He was unable to move of his own accord, and sat down on the floor, perspiring and panting for breath. All this would be very mortifying, but the Chinese journal adds that there must have been some divine apparition before the eyes of the envoys to cause them to tremble and be afraid. This, of course, makes all the difference, and saves our dignity most completely."

This statement is so absurd on the face of it as to be hardly worthy of notice in your columns; but I think that, for more than one reason, it ought not to pass unchallenged. I was not in Peking at the time when this audience took place, and, therefore, have no *personal* knowledge of the circumstances attending it; but on *a priori* grounds, as well as from intimate personal knowledge of our envoy, Mr. Wade, I feel myself justified in emphatically contradicting the whole story.

In China there is no *native* journal or newspaper; the nearest approach to one being the *Ching-pao*, or Government Gazette, published at Peking, and commonly called by foreigners the *Peking Gazette*; this publication, however, contains no news, but only Imperial edicts and such-like documents. Who "Prince Khun" may be we cannot, of course, say; the late Regent's name was Kung, and he is called by the Chinese Kung Chin-wang (literally, "Kung, Imperial Prince"). I am quite certain that that high official would

not have been guilty of the breach of decorum attributed to him. Again, with regard to Her Majesty's Envoy himself, Mr. T. F. Wade, who now fills that post, was for several years an officer in H.M.'s Army, and afterwards joined H.M.'s Consular Service. He was made a Companion of the Bath for his services during the last war, and no one who knows him will believe that he would be likely "to tremble from head to foot" before the youthful Emperor of China. Further, it is well known that Mr. Wade's linguistic attainments are of the highest order, and there can be no doubt that he is a far abler Chinese scholar than the Emperor himself; it is utterly improbable, therefore, that he would find himself at a loss for words with which to address the occupant of the Dragon Throne.

EDWARD DUFFIELD JONES.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Jan. 3, 3 p.m. London Ballad Concert, St. James' Hall.

3 p.m. Royal Institution. Professor Tyndall's Fourth Juvenile Lecture on "Motion and Sensation of Sound."

First night of Mr. Gilbert's "Charity" at the Haymarket.

SUNDAY, Jan. 4, 4 p.m. Lecture at St. George's Hall by Mr. Lawson Tait on "The Mechanical Principles of Beauty."

MONDAY, Jan. 5, 1 p.m. Sale of Books at Messrs. Holmson's. Sale of fourth part of the late Mr. Hotten's stock—by Messrs. Puttick & Simpson.

7 p.m. Entomological Society.

8 p.m. Medical Society.

8 p.m. Surveyors.

TUESDAY, Jan. 6, 3 p.m. Royal Institution. Prof. Tyndall, Fifth Juvenile Lecture.

7 p.m. Sculptors of England.

8 p.m. Pathological Society (Anniversary).

8 p.m. Anthropological Society.

8.30 p.m. Zoological Society.

8.30 p.m. Society of Biblical Archaeology. "The Sallier Papyrus" by Prof. Lushington; "Assyrian Illustrations of the Book of Daniel" by Mr. H. Fox Talbot.

WEDNESDAY, Jan. 7, 4.30 p.m. Royal Society of Literature.

8 p.m. Colonial Institute.

8 p.m. Geological, Microscopical, Obstetrical Society (Anniversary).

THURSDAY, Jan. 8, 3 p.m. Royal Institution. Prof. Tyndall, Sixth Juvenile Lecture.

6 p.m. Royal Society Club.

8 p.m. Royal Academy.

8 p.m. Mathematical Society.

8 p.m. Haydn's "Creation." Royal Albert Hall.

8.30 p.m. Society of Antiquaries (Ballot for Fellows).

8.30 p.m. Royal Society.

FRIDAY, Jan. 9, British Museum opens.

7 p.m. Literary and Artistic Society.

8 p.m. Astronomical Society.

8 p.m. Quekett Club.

8.30 p.m. Clinical Society (Anniversary).

SCIENCE.

The Etruscan Language. A Paper read before the Philological Society by Rev. Isaac Taylor. (In manuscript.)*

In a paper read before the Philological Society on December 5, the Rev. Isaac Taylor gave a short account of his new method of deciphering the Etruscan Inscriptions. As a more complete essay of his on the same subject is soon to appear, it would not be right at present to express any definite opinion. Corssen's work on the Etruscan language is likewise advertised, and from the short notice in Teubner's Catalogue it is quite clear that Corssen's interpretation of the Etruscan Inscriptions is totally different from that proposed by Mr. Isaac Taylor. For some years, and particularly since the publication of Dr. Lorenz's papers, there has been a general, though tacit, agreement among classical and comparative scholars as to the nature of the Etruscan language.

* Kindly lent by Mr. Taylor.

The grammatical criteria were few; yet they left little doubt that Etruscan would turn out to be an Aryan, though probably a mixed language; and, more than that, that it would take its place as an independent Italic dialect by the side of Oscan, Umbrian, Sabelian, Latin, &c. The grammatical evidence, such as it is, was carefully put together by Dr. Lorenz in his articles on the Etruscan Inscriptions, published in 1865. Professor Aufrecht's excellent remarks in Bunsen's 'Outlines of the Philosophy of Universal History,' vol. i. p. 87, published in 1854, pointed in the same direction. He mentioned the *s* as the sign of the genitive; the *a* and *ia*, as signs of the feminine gender, *al* as a patronymic suffix, &c. At that time, Dr. Freund, the author of the 'Latin-German Dictionary,' had been sent by the Berlin Academy to explore the monuments and the language of the ancient Rætia (not Rhætia), whence, as first suggested by Niebuhr, the Etruscans seem to have migrated southwards. In its greatest extension Rætia comprised the Grisons, Tyrol, Vorarlberg (not Vorarlberg), and part of the Bavarian Highland. The country, however, more particularly marked as the home of the Etruscans was on the southern declivities of the Alps, where the Euganeans were settled on the Lake of Garda, the Camuni in Val Camonica, and the Lepontii, near the Adula Mountain or the St. Gothard. In these parts inscriptions had been found in the Etruscan alphabet and the Etruscan language; and it was supposed that in the Romance dialects, still spoken here, some remnants of the old language of the Etruscans might have been preserved. Nothing, however, seems to have come of these researches, although it was stated at the time that Dr. Freund has discovered a far greater number of words that were neither Romaic, Celtic, nor Teutonic, than he expected.

Of late years it was so well known that Corssen had devoted himself to Etruscan, that no one felt induced to interfere with his work. Particularly when it was announced that he had found the key, that he had translated the large inscriptions,—lately again the inscription on the newly-discovered alabaster sarcophagus,—and that his rendering had satisfied some really competent judges, most scholars felt that it was right to wait. It required therefore no inconsiderable courage for Mr. Isaac Taylor to come forward at this moment, and announce to the world that he had found the true key to Etruscan, and that the language of the inscriptions was neither Italic, nor Aryan, but North-Turanian, Altaic, and chiefly Finnic.

In the paper read before the Philological Society, Mr. Isaac Taylor only wished to explain how he came to adopt this theory. He did not attempt the translation of any large inscription, but referred his hearers to his book which is in the press. We have therefore no materials to criticise, nothing to enable us to say either Yes or No. All we can do is to examine the process of reasoning by which Mr. Isaac Taylor was brought to believe in the Turanian character of the Etruscan language; and here we must confess at once that he has failed to convince us. It is well known that, in the year 1848, the brothers Campanari, in opening a

tomb at Toscanella, discovered a pair of dice which, instead of being simply marked with pips, were inscribed with six words. These words were at once supposed to be the six Etruscan numerals, and in consequence attracted great attention. Bunsen repeatedly spoke of them as containing the key to Etruscan, and Dr. Lorenz as late as 1868 devoted a separate article to them in Kuhn's *Beiträge*, vol. v. p. 204. These words are 1 *mach*, 2 *thu*, 3 *zal* or *zal*, 4 *huth*, 5 *ci*, 6 *sa*. Mr. Taylor, however, by reading the sides of the dice in a different succession, arrives at the following series: 1 *mach*, 2 *ci*, 3 *zal*, 4 *sa*, 5 *thu*, 6 *huth*. Whether such a reading of the dice is allowable must depend on a comparison with other dice which are marked with pips. But supposing that archæologists would not object to this transposition, we have next to see whether these numerals are Altaic. After following Mr. Isaac Taylor through his analysis and his attempts at tracing back these numerals to Altaic prototypes, all we can say is, that if everything else were certain, if Etruscan had been proved to be Finnic as decidedly as Phœnician is proved to be Semitic, one might feel inclined to admit phonetic changes like those which are necessary to connect these Etruscan numerals with their supposed Altaic type. By themselves, however, these numerals carry no conviction, or, at least, much less than they would carry in favour of an Aryan origin.

If it were quite certain that Etruscan was an Aryan language, these numerals would offer no insurmountable difficulties. The words for one are frequently independent in the different Aryan languages, but *mach* might be connected with the base *sama*, from which *ῥμος*, *sem-el*, and possibly *μία*. *Thu* for *duo*, *ki* for *quinque*, and *sa* for *sex* would offer no difficulties. *Zal* for three, and *huth* for four, are strange; still with the latitude claimed by Mr. Taylor in establishing their Altaic origin, *zal* might be brought back to *tal*, *tar*, *tres*, and *huth* might be treated as an abbreviation of the Sanskrit *chat-ur*, four.

The whole subject of the Turanian numerals was fully discussed by myself in the year 1857 in my 'Essay on the Turanian Languages.' That essay was to a great extent tentative; and though many of the views therein expressed have been confirmed by further research, others have had to be surrendered. It might be said that some of the phonetic changes which are there admitted, in tracing the Altaic numerals to a common type, are not less violent than those by which Mr. Isaac Taylor brings the Etruscan into harmony with the Altaic numerals. But it should be remembered that I was dealing with languages the common origin of which was to a great extent admitted. That being the case, it was almost certain that their numerals could have become so different as they are by means of phonetic corruption only, and my chief object was to find out something like phonetic laws to explain these phonetic changes. The case is quite different when we have to deal with languages the common origin of which has first to be established, and when we have no phonetic laws peculiar to each language to guide us. Between Finnish and Hungarian, for instance, we have something almost corresponding to Grimm's Law. Finnish *k* is Hungarian *h*;

hence Finnish *kolme* is Hungarian *harm*, Finnish *kuule* is Hungarian *hat*. Finnish *p* is Hungarian *f*; hence Finnish *pilve*, cloud, is Hungarian *felhö*; Finnish *puhu*, he blows, Hungarian *fú*. There are other rules of the same kind which underlie the changes of the North-Turanian numerals, as compared among themselves; but there is nothing like any fixed rule, at least there is none given in Mr. Taylor's paper, to tell us what particular letter in Etruscan may correspond to any particular letter in Finnish or Hungarian. To examine at least one of the Etruscan numerals more in particular, we find that Mr. I. Taylor, taking *thu* to be the Etruscan name, not for two, but for five, tries to establish that this word meant originally hand, and was then used for five in the Altaic dialects. Here the evidence is very weak. We are told, indeed, that *ton* in Yenisei, *tono* in [Kamtschatkian], and *uten* in Samoyed mean hand; but we receive no proof that such a word ever meant five in the same languages, except possibly *tun* in Samoyed *much-tun*, six, i.e. 1 + 5. That *tu* meant five in Egyptian, and that similar words for five occur in the dialects of the Caucasus, is of no importance, till it has been proved that those languages, too, are in any sense of the word Altaic.

The Altaic type for five is *vit*, and of this there is no trace in *thu*.

But this kind of criticism must seem very unfair and unsatisfactory. The great test of any system of deciphering is not, whether it will do this or that, but whether it will do all. Mr. Isaac Taylor says that he can translate every Etruscan inscription: we must wait and see. He says, that the laws, the customs, the modes of burial, the religious belief, the form of government, the marriage laws, the priesthood, the laws of inheritance, the mythology of the Etruscans, all point irresistibly to a Tataric origin. The Etruscan deities, we are told, are the same as those of the Kalevala, the epic poem of the Finns. It would be wonderful indeed if it were so, but Mr. Isaac Taylor's position as a scholar is too high to justify anyone in judging him without hearing him. It would have been more satisfactory to all parties had he given us his translation of the *Cippus Perusinus*. Corssen has translated it, but his translation is not yet *publici juris*. Anyhow, *Hic salta!*

MAX MÜLLER.

Contributions to Solar Physics. By J. Norman Lockyer. (London: Macmillan & Co.)

THIS book consists of two parts. The first part, which is considerably the larger, contains a popular account of ancient and modern sun-work. The second part consists of a series of communications made to the Royal Society on spectroscopic observations of the sun and on laboratory work in connection therewith, and concludes with several notes and some appendices. The communications reprinted in the second part come down to as recent a date as March 14, 1873. In the paper of that date we have discussed the spectra of chemical compounds and of mechanical mixtures. From the results of this paper it appears that in all probability there are no compound vapours in the sun, but that

they seem to exist in the atmospheres of some of the stars. Another important result of this paper, taken in conjunction with the one which immediately precedes it, is that the complexity of the spectrum of any vapour increases with the degree of contiguity into which its molecules are brought. This result, which seems to trace the luminosity of a vapour at any rate largely to oscillations of the molecules as wholes, in contradistinction to the vibration of the internal constituents of these molecules, was first, we believe, obtained in the laboratory experiments on magnesium vapour made by Mr. Lockyer and Dr. Frankland, which explained the different heights in the solar atmosphere to which the different members of the bright line *b* had been observed to extend.

The first part of the book consists almost entirely of a reprint, with some alterations, of various lectures, letters, and articles written from time to time by Mr. Lockyer. It contains twenty-six chapters and 435 pages. The nature of the book entails not a few repetitions, and not unfrequently we find a remark or an explanation occurring two or three times; but the reader who feels that this somewhat detracts from the literary merit of the work, will at the same time gladly recognise that the reproduction of the papers so nearly in their original form, adds vividness to the story which is gradually unfolded in the book, and presents us with the real history of the subject much more accurately than a treatise written by one who was acquainted with the end from the beginning. The story which is unfolded, or rather which unfolds itself, to the reader is one of no mean scientific importance. It contains the wonderful progress which has been made during the last few years—almost entirely during the last five years—in gaining a true knowledge of the atmosphere of the sun.

Not the least interesting chapter, however, will be found to be the twelfth, which deals with the first application of the principles of spectrum analysis to this problem. Many will be surprised, and not a few will be deeply gratified, to see—now, perhaps, for the first time brought clearly before the public—how large a share in the establishment of the first principles of the science is due to Professor Stokes. The great discovery usually attributed to Kirchhoff and Bunsen, of the cause of the reversibility of the bright lines in the solar spectrum, was in fact publicly taught by Stokes prior to 1852. An account will be found of M. Faye's theory of the physical constitution of the sun. This theory is brought into comparison with that of Messrs. Balfour Stewart, De La Rue, and Loewy. The former theory attributed the sun-spots to the assumed inferior radiating power of the interior substance of the sun, which, according to this theory, is at a temperature too high for the existence of chemical association—a phenomenon which was supposed to take place in the cooler regions of the photosphere. The latter theory, which attributes a spot to a downrush of cooler vapour, has been borne out by the observations of more recent years; which, besides showing that there is a downrush of cooler vapour in the centre

of a spot, has shown that this is accompanied frequently by an uprush of more highly-heated vapour in its neighbourhood.

A considerable portion of the book is occupied with accounts of the results gained from the three great eclipses of 1869, 1870, and 1871 respectively, each of which, or at least the first and the last of which (for the weather in 1870 was most unfavourable), contributed enormously to the solution of the problem of the solar envelope. In the year 1868 we had before us numerous questions as to the photosphere, the spots, the prominences, and the corona, which were in much confusion; it is not too much to say that most of these questions are now on a satisfactory way to a solution, that some are completely solved, and that there is no one to which we have not now got some clue. For the sake of the general reader, and for his assistance in following the book, it will be well to give some explanation of the terms used. The photosphere is the name applied to the light-giving surface of the sun, in which the spots seem to be huge chasms formed by the downrush of cooler vapours. This surface is mottled by pores, which apparently are miniature spots, and by brighter portions and regions termed faculæ, which seem to be hotter portions, or portions of the photosphere standing higher than the rest, and whose light, therefore, is less absorbed by the surrounding atmosphere. This atmosphere extends from the photosphere to a height of rather more than twelve minutes. What the photosphere itself may consist of is still a matter of discussion, and is connected with the question as to the region in which the selective absorption takes place, by which the black lines are introduced into the solar spectrum. But the complete reversal of the spectrum, said to have been seen for the instant just preceding totality in the recent eclipses, seems to offer the solution of this question. Immediately above this region, and still in the lower regions of the solar atmosphere, we have the red protuberances, consisting of hydrogen, amongst which is to be found a substance giving the line 1474, not known as belonging to any earthly substance. Above these prominences, which seldom extend more than one minute above the photosphere, and which occupy a region to which the name chromosphere has been assigned, we come to hydrogen at too low a temperature to give a spectrum visible except in a solar eclipse: this extends to a height of about eight minutes; and beyond that, completing the atmosphere, we have another unknown substance giving for its spectrum a line in the green.

The beautiful method of putting a thin prism before the object glass, employed in the last eclipse by Respighi and Lockyer, seems to have shown conclusively that the corona, so far as it is a solar phenomenon, consists of the upper strata of the atmosphere which we have just described. Several points, however, about the corona, particularly its polarisation, still remain not cleared up, and we must look for their explanation to the next total eclipse. It is most encouraging to the hopes of science to contemplate the advance which has thus been made in so short a time in the study of the problem of

the solar atmosphere, dating from the rude theory advanced by Kirchhoff in 1860, which may be said to be the first embodying the new ideas. The attempt to solve the problem, too, has well repaid physicists by the powerful methods of investigation with which its pursuit has rewarded them. We can now not only view the prominences without an eclipse, but can photograph them, thanks to the simplicity of Mr. Huggins's "open slit." We can tell the rate at which the sun's vapours are moving towards us or from us. We are on the way to contemplate matter under conditions different from any obtainable by terrestrial temperatures, and probably in a state of chemical dissociation,—whatever that may mean,—perhaps the primordial matter of chaos, as yet unspecified by any particular molecular aggregation. And last, but not least, we have been put in possession of the elements of discoveries which appear likely to raise spectrum analysis to the rank of a quantitative as well as of a qualitative science. All these subjects will be found unfolded in the volume now before us, by the hand of one who has himself taken a leading part in the momentous discoveries there detailed. We heartily recommend the book to all persons interested in the questions to which it refers.

JAMES STUART.

NOTES AND NEWS.

Pressure of Radiation.—Some experiments exhibited by Mr. Crookes to the Royal Society, on the 11th ult., seem likely to constitute a most interesting confirmation of physical theory. A light rod, having a small disc of pith at each end, was suspended by a delicate thread in a vacuum; on the approach of a body radiating heat (the finger, or a burning piece of magnesium wire) to one of the discs, it was repelled. A piece of ice appeared to attract the disc; this, however, is really a repulsion by the more heated bodies on the other side of it. If this experiment had been made fifty years ago, it would have been regarded as conclusive in favour of the emission-theory of light. It had, however, been recently shown by Maxwell, that the propagation of waves through the ether produces a pressure in the direction of the ray, the pressure on a square foot of surface being equal to the whole energy of radiation in a cubic foot. Thus the pressure of strong sunlight is about three pounds and a quarter per square mile. "A flat body exposed to sunlight would experience this pressure on its illuminated side only, and would therefore be repelled from the side on which the light falls. It is probable that a much greater energy of radiation might be obtained by means of the concentrated rays of the electric lamp. Such rays falling on a thin metallic disc, delicately suspended in a vacuum, might perhaps produce an observable mechanical effect." ('Treatise on Electricity and Magnetism,' vol. ii. p. 391.) The amount of the pressure involved in Mr. Crooke's experiment must of course be measured before we can assert with confidence that it is actually pressure of radiation.

The Shape of the Sun.—In 1809 Lindenau found, in reducing certain observations of the sun, that there were differences in the observed diameters, which he thought could not be explained by errors of observation, as they seemed to be of a periodic nature; and he suggested the hypothesis that the sun was not quite spherical in shape, but spheroidal, and rotating about its major axis. Recently Father Secchi of Rome, unaware of Lindenau's investigation, conjectured that the effect of the active forces in the sun may produce changes of volume in the masses of luminous gas

that surround it, which would be, perhaps, perceptible in accurate observations of the sun's diameter. He accordingly had regular observations made from June 1871, at the Observatory of the Collegio Romano, and, at his instance, similar observations were also made at Palermo. These Father Secchi discussed, and it seemed to him that the two series agreed well together, and that the differences observed were too regular and too great to admit of being attributed to errors of observation. He also found that the greater diameter was observed at those times at which the number of spots and protuberances was less. It thus appeared that the action of solar forces actually did change the visible diameter of the sun; but Dr. Auwers has carefully re-discussed Father Secchi's observations and arrived at an opposite conclusion. He objects to the alleged agreement between the Rome and Palermo observations; and though admitting that both series assign a principal minimum in April 1872, he considers that the general agreement is scarcely more marked than the contrary. A careful comparison also between numerous observations of Bessel and Struve with the solar spot periods does not show any connection. On the whole, therefore, Dr. Auwers considers that it cannot be said that any changes in the sun's diameter, due to agencies upon it, have yet been detected by the telescope. His paper appears in the *Monatsbericht* of the Berlin Academy for May, and an abstract of it was communicated to the Royal Astronomical Society at their November meeting.

MR. E. B. TYLOR sends to *Nature* of Jan. 1 an account of an interesting lecture-room illustration of the refraction of light, consisting of two small wheels connected by an axle, which are rolled from a smooth surface on to a rough one or *vice versa*.

THE same journal contains a note upon the Hoosac Tunnel in the United States, which is expected to be ready for railway traffic next July. The borings from east and west communicated on Nov. 28. The total excavation is about a million tons of rock, and the cost is estimated at twelve and a half million dollars.

ON Dec. 22, the Academy of Sciences of France elected three correspondents; namely, in the Physical Section, MM. Angström and Billet to fill the places vacant by the death of M. Hansteen and the election of Sir C. Wheatstone to a foreign associateship; and in the Astronomical Section, Mr. J. Norman Lockyer, in the room of the late Professor Encke. An interesting discussion took place upon Mr. Lockyer's most recent researches in quantitative spectrum analysis, and M. Dumas spoke in hopeful terms of the speculations on molecular evolutions by which they were accompanied.

PROFESSOR OWEN, who is suffering from a troublesome bronchial affection, is spending the winter in Egypt.

THE following notice is published in several of the papers:—

"We are requested to state that Her Majesty's Commissioners for the Annual International Exhibition propose, as a feature of each year's exhibition, to have a collection of objects illustrative of the Ethnology and Geography of various races and parts of the British Empire. It is intended to pursue the work systematically in the hope of ultimately forming a great national museum of the empire. They will be arranged for the present in the galleries of the Royal Albert Hall. Many portions of the empire are inhabited by aboriginal races, most of which are undergoing rapid changes, and some of which are disappearing altogether. These races are fast losing their primitive characteristics and distinguishing traits. The collections would embrace life-size and other figures representing the aboriginal inhabitants in their ordinary and gala costumes; models of their dwellings; samples of their domestic utensils, idols, weapons of war, boats and canoes; agricultural, musical, and manufacturing instruments and implements; samples of their industries, and in general

all objects tending to show their present ethnological position and their state of civilisation. It is proposed to receive for the Exhibition of 1874 any suitable collections, which will be grouped and classified hereafter in their strict ethnological and geographical relations. As, however, there is at present great public interest in the various tribes inhabiting the West Coast of Africa, including the Ashantees, with whom this country is at war, all objects relating to the Ashantees, Fantees, Dahomeys, Houssas, and the neighbouring tribes are especially desired. The Indian Empire, the Eastern Archipelago, and the Islands of the Southern Hemisphere are also able to afford abundant and valuable materials for the proposed museum, of which it is believed that the nucleus can be formed at once from materials in private collections. Her Majesty's Commissioners confidently appeal to the civil, military, and naval officers of the British service throughout the Queen's dominions to assist them in these collections. Her Majesty's Commissioners have secured the services of eminent gentlemen to advise them from time to time in giving effect to these intentions. It is requested that offers of gifts and loans of objects should be made known at once to the Secretary of Her Majesty's Commissioners, Upper Kensington Gore, London, S.W."

WE extract from *Land and Water* the following list of new arrivals at the Zoological Gardens in Regent's Park:—

"1 Alpaca (*Lama pacos*); 1 Puma (*Felis concolor*); 2 Tuberculated Lizards (*Iguana tuberculata*); 1 Violaceous Plantain Cutter (*Musophaga violacea*); 1 Pileated Parakeet (*Platycercus pileatus*); 1 Gavial (*Gavialis gangeticus*)."

THE appeal made by Mr. A. J. Ellis, F.R.S., some time ago for assistance in the task of more accurately defining the phonetic and grammatical peculiarities of the English dialects, by means of careful versions of a short composition specially prepared for this purpose, has met with considerable success, Mr. Ellis having received about sixty versions (representing the greater part of the English and Scottish counties), in all of which the pronunciation is more or less carefully indicated. The result has been to enable him to extend greatly, and in some measure to complete the classification of the English dialects brought forward by Prince Lucien Bonaparte at the June meeting of the Philological Society, and to present us for the first time with a *coup-d'œil* of the multifarious sound-system of spoken English. Many of the facts thus brought out are very surprising, even to those who thought themselves well acquainted with the subject, and cannot but prove of great importance in connection with Mr. Ellis's inquiry into the 'History of English pronunciation,' for the sake of which, in the first instance, these researches have been made. They are also valuable as showing that though the English Dialect Society has not commenced its labours a day too soon, neither is it yet too late to save much that is still in existence in dialect lore. We hope that while Mr. Ellis's great work on 'Early English Pronunciation' will contain the digested results of his inquiries, he will give the whole to the English Dialect Society to publish among its transactions. The final classification of the dialects (incorporating that of Prince L. L. Bonaparte for South, and Mr. J. A. H. Murray for North Britain) is to recognise four great dialectic branches—*Northern*, *Eastern*, *Central*, or *Southern* and *Western*. The *Northern* includes the *Scoto-Northern*, extending in five dialects from Shetland to the Humber on the east, and Morecambe Bay on the west; the *Mercian* occupying South Lancashire, Cheshire, Staffordshire, and Derby, and meeting in Shropshire with the *Western* English; the *North Anglian* in the W. and S.W. of Yorkshire, passing on the borders of Nottingham and Lincolnshire into the *Eastern* Branch, with its two dialects of *Middle Anglian* (Lincoln, Notts, Leicester, Warwick, North Northampton, North Beds) and *East Anglian* (Norfolk, Suffolk, North Essex, Cambridge, Hunts). The *Southern* or *Central* Branch is best represented by Hertford, South Beds, Bucks, Middlesex, North Surrey, and

adjoining parts of Essex and Kent, the district within which (and not in the North Anglian Rutland, or East Anglian Huntingdon, as has been fancied by Latham) the spoken English of the people approaches most closely to the literary or book-English. Prince L. L. Bonaparte considers Hertfordshire as representing most closely, all things considered, the standard English. In Essex, Kent, Sussex, Hants, Berks, Oxford, and South Northampton, we have a border district within which the Central English begins to fade away into the surrounding dialects. The *Western* English in its two dialects of *Saxon* and *Devonian* occupies a well-defined area, including Dorset, Somerset, Devon, Wiltshire, Gloucester, Hereford, with parts of Hants and Berkshire, and is probably, upon the whole, better defined, both geographically and dialectically, than any of the other branches. The classification of many localities has been a work of great difficulty; Yorkshire especially, with its several dialects and multitudinous sub-dialects and varieties blending into each other, presents a wide field of research in itself. The dialects of Derbyshire also—many curious varieties are found round the Peak—have received much attention. It will surprise many to see how near to London many Northern peculiarities come, in Northamptonshire. Good specimens from Warwickshire, Hereford, Staffordshire, Shropshire, Cheshire, are still wanting; the first-mentioned is especially important in connection with the strong Northern character which Mr. Murray (in a paper read before the Philological Society) claims for the language of Shakspeare, and which he considers must have sounded very broadly provincial to the poet's London contemporaries. In this light many of Shakspeare's peculiarities of grammar and expression, which the modern English reader has glossed for him as "Archaisms," "Elizabethan idioms," &c., are not archaisms at all, and were not used by other Elizabethan writers, but are pure Northern idioms still in use in the Northern area, but never current either in Shakspeare's time or since, in London or Southern England. Any who take an interest in the subject, and can supply Mr. Ellis with specimens from Warwickshire or other of the districts named above, ought at once to communicate with him at his address, 25, Argyll-road, Kensington, W.

THE whole of Part I. of Series B (for Reprinted Glossaries) of the English Dialect Society is now in type, and ought to be ready in the course of the present month. It will contain seven Glossaries, viz., 1. A North of England Glossary, by J. H.; 2—6. Glossaries of East Yorkshire, East Norfolk, Gloucestershire, Midland Counties, and Devonshire, all by Mr. Marshall; and 7. Dr. Willan's Glossary of West Riding words, reprinted, by permission, from vol. xvi. of the *Archæologia*. Intending subscribers to the E. D. S. who have not yet paid their subscription may save themselves and the treasurer (Rev. J. W. Cartmell, Christ's College, Cambridge) some trouble by paying a guinea for the two years 1873 and 1874, as the subscription is but half-a-guinea per annum. The publications for 1873 are somewhat delayed, but some at least will appear, together with the Report, in the course of the month; and the publications for 1874 will follow towards the latter part of the year. No delay is anticipated in the future issue of the publications.

THE *Athenæum* announces the death of Mr. Edward Hyde Clarke, who was, fifty years ago, a prominent writer on West Indian questions.

THE last number of the *Jahrbuch für Romanische und Englische Sprache und Literatur* contains a seemingly accurate text of the 'Legend of St. Michael' from the Bodleian MS., Laud. 108, together with an account of the graphic forms (*sprachliche Eigentümlichkeiten*), by Dr. C. Horstmann, of Münster. According to Dr. Horstmann, the MS. is early 14th cent., and the dialect is clearly southern, and of a very archaic type. Some of the peculiarities registered by the editor have

rather a Kentish look: *leornis* (= *leornian*), *field* (*feld*), the inflections *pene*, *pane* (acc. sg. m.) of the article, and several other archaisms; but other Kentish forms, such as *ine* for *in*, do not seem to appear.

DR. WEYMOUTH's work, in which he combats the opinions held by Mr. Ellis and others as to the development and change of vowel sounds in English, and endeavours to establish that the present pronunciation of such words as *mine*, *house*, *moon*, *deem*, *hue*, *do*, *go*, has been that, not only of English and Anglo-Saxon, but in the case of *mine*, *house*, &c., probably of the Teutonic tongues generally, back as far as their history is known, has now, we believe, passed through the press, and will soon be ready. Dr. Weymouth read a paper on this subject before the Philological Society, which he has since enlarged and extended by an examination of the cognate languages, analysis of Chaucer's and other early rhymes, &c., so that the work will now extend to a considerable size, and will form the fullest, and indeed only systematic exhibition of the opinions of those who think that Hengest and Horsa, like their posterity of the 19th century, said, "white stone house (*hwit stan hus*)," and may be expected to contain all that can be said on this side of the question.

THE delegates of the Clarendon Press have arranged with Mr. J. A. H. Murray (whose 'Dialect of Southern Scotland' was reviewed in the *ACADEMY* a few months ago), to prepare for their series a volume of specimens of Lowland Scotch and Northern English, with notes and glossary, corresponding in plan to Dr. Morris's 'Specimens of Early English,' and Mr. Skeat's 'Specimens of English Literature.' It will illustrate, as far as materials exist, the formation of our Northern tongue, its development in England and Scotland, its literary decay and extinction in England, its continued existence and growth in Scotland, and its decay in that country, also between 1600 and 1707. We hope that the editor will give special attention to such specimens of Scottish as still exist only in MS., as well as to those which have been published only in limited and practically inaccessible editions; many of the latter deserve to be much more widely known than they are at present.

MR. ALEXANDER J. ELLIS, in his great work on Early English Pronunciation, is now beginning to deal with the various provincial dialects of England, concerning which he has received numerous pieces of information of more or less value. He will reprint in full the earliest phonetic account of English dialects, viz. the short sketch by Dr. Gill, written 250 years ago, which may be found in the sixth chapter of his 'Logonomia,' pp. 16—19.

PRINCE LOUIS-LUCIEN BONAPARTE continues his great work on the Basque Language, of which about one-third remains still to be completed. He is now engaged on a comparative glossary of the dialects and sub-dialects of the language. His vocabulary consists of between three and four thousand words collected by himself from the mouths of the peasants as well as from printed books. The Prince has paid five several visits to the country, verifying and reverifying, village by village, all his results, finding out where each word ceased to exist and was replaced by another, so that he has the *habitat* of all his terms. He has secured many popular names of plants, insects, &c., that do not exist in print, and has found the changes in nomenclature in the different districts very interesting.

PROFESSOR POTT's great work, which he calls the second edition of his *Etymologische Forschungen*, is now complete in five large volumes, costing 6*l.* 1*8s.* It is an enormous storehouse for comparative philologists, but it is absolutely necessary that an index should be added.

THE first complete edition of the two texts of

the Rig Veda, the Pada as well as the Samhitā text, which was published by Professor Max Müller in the beginning of last year, is out of print. The editor is preparing a new edition from the stereotype plates; and, in a paragraph published in *Trübner's Record*, he has requested Sanskrit scholars to send him lists of any misprints they may have observed in the first edition. As the hymns of the Rig Veda have never been printed in India, the demand among native scholars for this first edition of the oldest of their sacred books is but natural.

A new volume of the 'Indische Studien' has appeared, containing five articles, all by the editor himself, Professor A. Weber. The article on the Mahābhāṣya is important. Professor Weber attempts to answer the strictures of Pandit Bhandarkar, but the learned native seems to have the advantage over the learned German.

RAJENDRALAL MITRA has a large work on the 'Antiquities of Orissa' in the press. On his last tour through the North-Western Provinces he discovered some important Sanskrit MSS., among the rest, a MS. of the 'Brihaddevatā,' the ancient catalogue of the deities to which the hymns of the Rig Veda are addressed.

THE literary, or, at all events, the publishing activity in India is very great. Whereas it is difficult in Europe to find a publisher for any considerable Sanskrit text, Indian booksellers must find the printing and reprinting of classical Sanskrit works lucrative. One press alone, that of Pandit Jibananda Vidyasagara, a B.A. of the University of Calcutta, the son of the well-known Pandit Taranatha Tarkavachaspati, has just issued a catalogue of seventy-three Sanskrit publications, both large and small. Some of these works are carefully edited, others are simple reprints of former Indian or European editions. The most important work is a new 'Sanskrit Dictionary or Cyclopædia,' by Taranatha, of which we hope soon to give a fuller account. It is based on Indian and European authorities. It is to consist of ten parts, of which two are published, containing 478 closely printed quarto pages, and reaching as far as *asuddhi*.

THE *Contemporary Review* for January has an article by Mr. Alexander S. Murray called 'A New View of the Homeric Question,' in which the writer contends for the usually accepted antiquity of our texts of the Homeric poems, as opposed to Mr. Paley's theory, on the ground of the remarkable coincidence between the language of Homer when speaking of works of art, and the actual condition of Greek art between 1100 and 850 B.C.

In the *Acta Societatis Philologæ Lipsiensis* (tom. iii.) G. Oehmichen investigates the question as to the authors followed by Pliny in the geographical section of his work, more especially his debt to Isidore of Charax and Varro. The latter is shown to be his source in a large number of passages in which there is a manifest agreement between his statements and those in Mela. Ch. Lütjohann gives a series of critical remarks on the text of Apuleius, occasioned apparently by the shortcomings of Eyssenhardt's edition of the 'Metamorphoses.' The main point brought out is the character of the corrections in *F*, and the use that may be made of Eyssenhardt's second Laurentian manuscript, &c. The elaborate essay of P. Schuster on the Fragments of Heraclitus which heads the volume must be reserved for a detailed examination in a future number.

THE Rev. C. Taylor, of St. John's College, Cambridge, is preparing a new edition of the part of the Syriac Chronicle of Bar Hebræus, which was edited last century by Bruns and Kirsch.

THE fifth quarterly report on the Sub-Wealden Exploration has been issued by Mr. H. Willett, of Brighton. The present depth from the surface is 313 feet; some important geological facts have

been decided, and valuable beds of gypsum discovered. The more interesting facts are that the Kimmeridge clay is identical in deposit with that in the Boulonnais district of France, and that the Wealden estuary did formerly extend across the Channel in an unbroken continuity. The probability that coal may be found is therefore greatly increased by the discovery of strata in Sussex identical with those in the Boulonnais district. This investigation is to be continued until the depth of 1,000 feet has been reached.—*Athenæum*.

THE meetings of the Cambridge Philological Society for next year are fixed for Feb. 5, Feb. 26, and March 19 in the Lent Term, and for April 30 and May 21 in the Easter Term. The meetings are held in St. John's College (Lecture Room B, 1st Court); and the chair is taken at 8.20 p.m. The subscription is a guinea a year, or ten guineas for life. The secretary is the Rev. S. S. Lewis, of Corpus Christi College. The subjects of the papers to be read at the meetings are not yet announced. Some of the papers read during the present year have been printed in the last number of the *Journal of Philology*.

CONTENTS OF THE JOURNALS.

Mathematics and Mathematical Physics.

Mathematische Annalen. Vol. VI. Part IV.

- CLERSCH and GORDAN. Ternary Cubic Forms. [Concluded from last part. Systematic investigation of the invariants—proved by Gordan to be finite in number—by the method of symbolic representation.]
- STURM. Problem of Projectivity in Space. [Two groups each of n points being given, to find two straight lines so that the plane-pencils joining them to these groups respectively shall be projective.]
- KLEIN. Surfaces of the Third Order. [Determination of all possible shapes. Remarks on the analysis situs of an infinite space.]
- APFOLTER. Construction of the Regular Polygon. [Extension of the Standt-Schröter method to all cases soluble by right line and circle, and (second paper) to those soluble by trisection of an angle.]
- APFOLTER. Malfatti's Problem.
- THOMÆ. Algebraic expression for the quotient of two theta-functions whose arguments differ by thirds of a period. [Solved for elliptic theta-functions.]
- STOLL. Problem of Apollonius. [Circle tangent to three given circles.]
- IGEL. Curves of third order with a node.

Zeitschrift für Mathematik und Physik, Nov. 30.

- ZETTSCHKE. Siemens' and Halske's Telegraph apparatus.
- SIMONY. New Molecular Theory. [Atoms are unalterable spheres of various sizes acting at a distance r on each other with a force $\frac{e m m'}{r^2} \cos \frac{a}{r}$.]

Grunert's Archiv der Mathematik und Physik.

- WANGERING. Problem of an Elastic Rotating Body.
- GUNTHER. On a passage in Pliny.
- On a problem of the higher geometry. [Error introduced by pivots of elliptic section in a transit instrument; extension of the geometrical result.]
- APFOLTER. Theory of the conchoid.
- HOCHHEIM. Figurative numbers.
- SIMONY. Rational function of cube root of quadratic form integrated by elliptic functions.
- MENDELHALL. Geometric proof of Steiner's construction for Malfatti's problem.

Crelle-Borchardt, Vol. LXXVII, Part I.

- G. LÜBECK. Influence exerted on the Motion of a Pendulum by a viscous fluid contained in a spherical cavity in it.
- SCHWARZ. Plane algebraic isothermals. [Determination of all algebraic solutions of the equation $\frac{d^2n}{dx^2} + \frac{d^2n}{dy^2} = 0$.]
- SOHNCKE. The regular plane point-systems of unlimited extension. [Attempt to obtain a more secure foundation for the theory of crystal-structure.]
- MEITENS. Extract from letter to the Editor. [Radius of circle touching three circles and of sphere touching four spheres; value of a series discussed by Gauss.]

Poggendorf. Vol. CXLIX, Part III.

- VICTOR VON LANG. Dioptric of a system of concentric spherical surfaces.
- AYENARIUS. Theory of the thermal current. [Deduced from the mechanical theory of heat the hitherto empirical formula for the electro-motive force of an unequally heated circuit of two metals.]

Nouvelles Annales, December.

- BELLAVITIS. Equipollences. [Quaternions in one plane.]
- RESAL. Resistance of the air to a long projectile.
- SALTÉL. Generalized principle of correspondence applied to elimination.

Liouville, December.

YVON VILLARCEAU. New theorems on local attraction and the figure of the earth.

S. A. SERRÉ. Integral functions irreducible with a prime modulus, the order being a power of the modulus.

Monthly Notices of the Royal Astronomical Society, Nov. 14, 1873.

- Sir G. AIRY. On the rejection, in the Lunar Theory, of the term of longitude, depending for argument on eight times the mean longitude of Venus minus thirteen times the mean longitude of the Earth, introduced by Professor Hansen; and on the effect of that rejection upon the state of the Lunar Tables, and upon the lunar calculations which serve as basis for ancient chronology.
- Mr. E. NELSON. On the correction to Hansen's semi-diameter of the moon from occultations of stars.
- Mr. E. J. STONE. On the rejection of discordant observations.
- Mr. E. NELSON. On the limit of a possible lunar atmosphere.
- Dr. AUWERS. On an alleged variability of the sun's diameter.
- Dr. AUWERS. On the variable proper motion of *Procyon*.
- Mr. A. C. RYAUUD. On a remarkable nebulous spot observed by Pastorf on the sun's disc.
- Mr. J. M. WILSON and Mr. G. M. SEABROKE. Remarks on spectroscopic observations of the sun, made at the Temple Observatory, Rugby.
- Mr. W. LASSELL. On the determination of time from sextant observations.
- Lord LINSAY and Mr. D. GILL. On a new driving clock for equatorials.
- Mr. R. C. CAIRNGTON. Note on the star 515 in Oeltzen's Catalogue of Schwed's Stars.
- Mr. G. BISHOP. Observations of the periodical Comets of Tempel and Brorsen.
- M. W. E. PLUMMER. Parabolic elements of Comet III. and IV. 1873.
- C. L. PRINCE. Observation of solar spots.
- M. STEPHAN. Observations of Comets and minor planets made at the observatory of Marseilles.
- Dr. WOLFFERS. Comparison of the R.A. and N.P.D. of Standard stars observed at the Radcliffe Observatory, Oxford, in the year 1870, with the R.A. and N.P.D., founded on the *Tabulae Reductionum*.
- Mr. DRACH. Note on the ancient Rabbinical Cubit-measure. Discovery and elements of minor planet (131). (The planet was discovered on the evening of September 27, by Dr. R. Luther, and was of the 10.11 magnitude. At the request of Dr. Luther, Professor Argelander and M. Theodor Wolff of Bonn named it *Sophrone*.)
- Discovery of Comet VII., 1873. (The comet was discovered by M. Coggia at Marseilles on November 10, and by Dr. Winnecke at Strassburg on November 11. The orbit seems to closely resemble that of the first comet of 1818 discovered by Pons at Marseilles.)

FINE ART.

A *Gallery of Literary Characters* (1830–38). Drawn by the late Daniel Maclise, R.A., accompanied by Notices, chiefly by the late William Maginn, LL.D. Edited by W. Bates, B.A., Professor of Classics in Queen's College, Birmingham; with a Preface and copious Notes, biographical, critical, bibliographical, and generally illustrative. (Chatto and Windus.)

THIS is the title, a little shortened, of the long-promised republication of Maclise's portraits, originally given from month to month in *Fraser's Magazine*. The book is a highly desirable book; the engravings and lithographs (because they are in various styles, some of them elaborately engraved from Maclise's drawings) are well reproduced by photo-lithography, we presume, although the process is not mentioned; and the notes by Mr. Bates so ample that they fill nearly 200 quarto pages.

In the ACADEMY of April 15, 1871, was published a short essay on 'Maclise's Character Portraits,' from the pen of Mr. D. G. Rossetti, which, with some letters printed in *Notes and Queries* about the same time, drew attention to this admirable series of whole-length sketches, preserving for ever the veritable every-day aspect of so many men whose names are now household words; and so many more who played a great rôle in the comedy of life forty years ago, but who were comparatively forgotten when the curtain fell. One object of the essay was to recommend the reproduction of the series as we now see it, and the paper closed with these sentences: "The portraits should be accompanied both by the original magazine-

squibs necessary for explanation, and by some competent summary of real merits and relative values as time has shown them since. And, before concluding, I may mention that in the Garrick Club there is a sketch of Thackeray, by Maclise, in pen or pencil (I forget which), evidently meant to enter into this series. It is Thackeray at the best time of his life, and ought certainly to be facsimiled with the rest in the event of their revival." A few weeks after this was published, the late J. C. Hotten took up the suggestion, advertised the work, and applied to Mr. Bates, who had corresponded with *Notes and Queries* regarding some of the characters represented, to edit the work. The idea of adding the portrait of Thackeray from the original belonging to the Garrick Club was also adopted, and consequently such a portrait appears in the present work. But, unhappily, that indifferently given here is *not* the one Mr. Rossetti referred to done by Maclise, but is taken from a picture in oils, freely described by Mr. Bates (who takes no notice whatever of Mr. D. G. Rossetti's paper in the *ACADEMY* in his ample account of 'The Genesis of the Book') as from a picture in the Garrick Club, "the production," he believes, "of Sir John Gilbert."

The truth is, that Professor Bates, able and profuse editor as he is, lover and admirer of this 'Gallery of Portraits' ever since his boyhood, as he says he has been, has little or no knowledge of art, and cannot detect the intrinsic evidence of the authorship of these sketches. Thus he says in his preface: "There is every reason to believe that these portraits are, without any exception, the production of that distinguished artist the late Daniel Maclise, Esq., R.A.," whereas there are four of them not by that very able hand. We cannot look for a moment at that of the Rev. Sydney Smith and believe it to be his. This print, and that of Sir W. Molesworth, appeared two years after Maclise's series closed, in December, 1836. They came out in the magazine in March and April, 1838; were the beginning of an unsuccessful attempt to revive the 'Gallery'; and were most probably by Crowquill (Mr. Forrester), who continued similar portraits in imitation of Maclise's in the *Dublin University Magazine*, extending in number to seventy-two. There are also two other *Fraser* sketches not by Maclise—those of Sir Walter Scott and the Earl of Munster—both occurring early in the present series. These are smaller in size, and inferior artistically to all the others. That of Sir W. Scott is not so decidedly inferior as the other; but the poorly-posed dogs, which have been *prigged* out of some natural history, and have no relation to each other or to Sir Walter; the thing in the left hand of Scott—his right is wanting altogether, and the employment of the left shows the sketch has been transferred and reversed—intended for a Scotch blue-bonnet, would never have been so absurdly drawn by Maclise; besides which, the cranium is caricatured. Sir Walter was very little in London then, and Maclise would have had no chance of seeing him. This drawing appears to me probably worked up by some *employé* of the publisher from one of the many amateur sketches his son-in-law, Lockhart, used to do when one of the

briefless in the Parliament House of Edinburgh, and which circulated a little among his set in London after he became editor of the *Quarterly Review*. Munster may be by him also, only the subject is not much worth enquiring into. Sir Walter's head, it is well known, was the highest observed in modern times, measuring quite as much above the orbital line of the eye as below that line to the base of the lower jaw, and this height was always figured in amateur sketches or caricatures; but here the hand through which the sketch has passed has made it, from want of knowledge of the peculiarity, into a ridiculous cone. These distinctions are eminently important, either in editing or reviewing this work, as its value rests entirely on the character of the portraits, and not at all on the clever but tiresome party-writing and nonsense about *Regina*, proceeding from the "genius of that extraordinary and unfortunate man, William Maginn, LL.D.," as Mr. Bates particularises and eulogises him.

Upon the whole, nevertheless, we find the editing of the volume adds immensely to its interest. It has been evidently done with great affection, and its treatment of the memory of every one represented, gentlemen and ladies, is respectful and full of knowledge of the time. There is also an additional portrait, recovered we are not told how, evidently by Maclise, but never published; possibly because it appears to be rather a failure as it came from the lithographic stone. This is presumed to be Henry Hallam, and is a valuable addition. Many of us have collected these sketches in their original form at considerable expense, but this one can only be got in the present volume. Let us close this short notice by quoting a note on an able publisher, not over well treated by his literary contemporaries.

"Here, again, the hand of death has been busy. In one of his last letters to me, Mr. Hotten says, 'I have not followed your "Notes" as I ought to have done; that pleasure is reserved until completion.' But it was not permitted to this able, energetic, and enterprising man to witness the publication of the volume in the progress of which he had manifested such interest. He died, June 14, 1873, aged forty. Allibone's 'Critical Dictionary of English Literature,' *sub voce* 'Syntax,' affords some idea of his literary labours as contributor to the *Literary Gazette*, the *Parthenon*, the *London Review*, &c.; and there, too, will be found a list of some threescore volumes either written or edited by him, among which may be mentioned his clever biographical sketch of Thackeray, and the 'Story of Charles Dickens's Life'—the latter, as he wrote me at the time, the result of 'twenty days' hard work.'"

We are not surprised by this account of John Camden Hotten, and are glad he has obtained this record in the volume of 'Maclise's Literary Portraits.' One omission we must note on the part of the editor before closing; the date, month and year, on which each portrait originally appeared ought to have been noted at the heading of each article. This, among other advantages, would have enabled the reader to estimate the brutality of Maginn's notices; for instance, in that of Samuel Rogers, who was then nearly seventy, and who would probably receive the number of *Fraser* on his breakfast-table.

WILLIAM B. SCOTT.

Mantegna, the Marquis of Mantua, and the Jew. [Giornale di Erudizione Artistica pubblicato a cura della R. Commissione conservatrice di Belle Arti nella Provincia dell' Umbria. 8vo. (Perugia. 1873)]

We all have seen and admired at the Louvre a large picture by Mantegna, in which the Virgin with the infant Saviour and saints is represented in a bower of leaves and fruit. The Virgin's mantle is held by two bewigged archangels, and hides all but the heads of St. Michael and St. George, whose faces and headgear seem hewn out of stone as if by the hand of a Roman sculptor. The boy l'apstist at the Virgin's knee stands high on the pedestal of the throne protected by his mother, whilst to the left a knight in armour looks up and prays devoutly. This kneeling captain is Francis II., Marquis of Mantua, whose defeat by the French at Fornovo was turned into a victory by the ingenuity of his countrymen. It has always appeared amusing, especially to Frenchmen, that Mantegna should have been called upon to celebrate in a masterpiece a feat of arms redounding in no degree to the credit of the house of Gonzaga. They will be surprised to learn the true story illustrated with the help of documents by Signor Attilio Portioli, and published in the *Giornale di Erudizione* of Perugia.

Two events of unequal historic importance are prominent in this narrative; one is a riot at Mantua, and the other Charles the VIII.'s invasion of Italy in the spring of 1495. Towards the close of April in that year a Jew, called Daniel Simon of Norsa, had received permission to settle at Mantua in an old house adorned by the piety of an earlier occupant with a fresco of the Virgin and Child. Being a member of a timid and notoriously persecuted race, it was natural that Daniel should tremble at the chance of an accident to an image which his own creed gave him no occasion to revere. He had great reason to rejoice when it appeared that his request to the bishop's vicar to be allowed to remove the image had been granted, and he found himself able to take down the sacred figures without attracting public attention. But the Jew, it appeared, had a secret enemy, who maliciously hung, or caused to be hung, on the front of the house certain representations of saints with inappropriate inscriptions, and selected for this mischievous act the eve of Ascension Day. In due course of time a crowd forming part of a procession gathered to curse the Israelite and sack his dwelling. They were happily harangued and stopped by the energy of a bystander, but at what a price! Neither the speech nor the arguments of this bold orator have been preserved, but it may be supposed that he promised for the Jew that he would replace the fresco which he had taken down by another and more valuable picture. How far the suggestion coincided with the wishes and views of the person most aggrieved is doubtful. He was a Jew indeed, yet he had the courage to complain, and he addressed his letter of complaint to the Marquis of Mantua. Francis II. was absent at the time, waiting at the head of the troops of the Italian League for the coming of Charles VIII., who, on his part

was retreating from Naples after having overrun all Italy, and advancing to meet the army of his enemies. The imminence of hostilities no doubt diverted the Marquis's attention from the Jew's complaint, and his inability to perform this duty was not lessened by his meeting Charles VIII. at Fornovo, and his loss of an important battle; but what he had been unable to decide had already been settled by the wisdom of his council, which proposed that the Jew Daniel de Norsa should be called upon to atone for the removal of the Virgin and Child from his house-front, by paying for a picture of the same subject, to be executed by Andrea Mantegna for one of the churches of the city. In the thickest of the fight at Fornovo, Francesco Gonzaga had made a vow that if he personally should be saved from danger, he would build a church in honour of the Virgin at Mantua. On his return he remembered this vow, and not only expressed his intention of carrying it out, but employed an architect to plan the building. The question of a site was one of some importance at this juncture; and here the Marquis and his men bethought themselves of the Jew, the Jew's picture, and the Jew's house. They could not any of them withstand the pleasure of doing honour to God by the plunder of an Israelite. They knocked down his house, and built the church on its foundations. The high altar was adorned with Mantegna's picture at the Jew's expense, and the Madonna of Victory was carried to the altar of Santa Maria della Victoria amidst a concourse of people on the 6th of July, 1496. An imaginary defeat of Charles VIII., a more real defeat of a miserable Jew, were justified by the Marquis of Mantua in a decree drawn up and signed by himself, affirming "that, having implored the Virgin Mary, he had had the fortune to issue as a conqueror, 'cum spoliis opimis,' from the fight of the Taro; that at this very time a certain Jew had had the sacrilegious audacity to tear down the image of the Virgin from the wall and portico of his dwelling, but that to punish this act he (the Marquis) had ordered a far more precious image of the Virgin to be painted, and a temple to be built on the ground, and devoted to the worship of God, under the appropriate name of the church of Victory."

It is not a little curious that the picture which Mantegna furnished for this occasion should have been removed to their capital by the very French whom Francis II. pretended that he had beaten at the Taro; and that whereas most of the pictures taken under similar circumstances were returned to their original places, this one remained in possession of its captors.

J. A. CROWE.

CHRISTMAS BOOKS.

THERE is no doubt that the publication of splendid gift-books for the Yule-tide goes on increasing from year to year. This season the number is very much greater than usual, and embraces all kinds and degrees of excellence or attraction, from Mr. Murray's large folio, *The Albert Monument*, to the little and inexpensive varieties issued by Messrs. Warne and Co. With the increase of numbers, the increase of difficulty in finding good

subjects more than keeps pace, and we observe a new and very interesting feature developing itself by means of photography—the reproduction of old favourites or popular works of the past. In this way *The Boydell Gallery*, *Moore's Anacreon*, illustrated by Girodet, and *The MacLise Portrait Gallery* come again before us. The *Boydell Gallery* (Bickers and Son) is a serious undertaking and a little hazardous, so great a change having taken place in the aims as well as in the technique of our art since these pictures were produced and the engravings published. At that time great actors were on the stage; now our theatrical attractions are mainly spectacular. This change has taken place in our painting also; and the absence of correctness in costume, scenery, &c., gives the Philistines an easy victory over the noblest art of that generation. When shall we hear the last foolish laugh against Fuseli, and when will his many noble inventions be appreciated by us as they deserve? Messrs. Chatto and Windus, who are reissuing the best of Mr. Hotten's publications, give us the set of lovely designs for Anacreon by the classicist Girodet, first published in Paris during the *furor* for Greek and Roman things after the first Revolution. But the most important Christmas book produced by that firm, or by any other perhaps, is *MacLise's Portrait Gallery*, of which we give a separate notice, the interest attaching to it being both of the past and future.

Wild Animals, drawings by Joseph Wolf, with descriptions by D. G. Elliot (Macmillan and Co.), a series of twenty truly admirable designs showing the "life and habits" of birds and beasts in sea and forest, is introduced by a preface written by their skilful engraver, the Alpine climber, E. Whymper, from which we learn that the work is the result of many years' desultory application, and, to our sorrow, that it contains the last drawings ever to be done for publication by the artist, unrivalled in his walk. These 'Wild Animals' pursuing their prey, struggling in the battle for existence, are in a high degree dramatic and even tragic. It is of no use in this short notice to draw attention to particular designs where every one is a masterpiece of invention, the result of knowledge, and of perfect execution both in drawing and engraving. Mr. Elliot, who writes to the designs—an American, it appears—is an able coadjutor in the completion of the volume. Messrs. Virtue and Co., prolific publishers at this season, have followed up their MacLise and Leslie volumes of last year by *Pictures by Sir E. Landseer* and *Pictures by Stanfield*, both of them containing many of the most excellent and best known works of these painters. Stanfield's 'Ischia,' 'Como,' and 'Venice' must be always favourite prints, and the volume contains also two of his historical subjects, 'The Battle of Trafalgar' and 'The Opening of London Bridge,' this last-named being a triumph of spectacular arrangement. In the Landseer volume there are twenty engravings, among which it is only necessary to mention 'Peace' and 'War,' 'High Life' and 'Low Life.' Both books are written by Mr. Dafforne, an able and diligent describer, but subject to occasional peculiarities. Only think of the chapter dealing with the youth of so great a man as Edwin Landseer being headed "The Highway to the—" (what does the reader guess?)—"to the Academy;" his manhood is called, "The A.R.A.," and his subsequent triumphant twenty years, "The R.A.!" Neither must Mr. Dafforne, speaking of "The Old Shepherd's Chief Mourner," call the shepherd's *plaid* a shawl, nor the rue, southernwood, or box, whichever it is, laid on the coffin-lid, laurel. The "eloquent analysis," as he calls the quotation from Mr. Ruskin regarding this noble picture, we do not find a bit more satisfactory. The Professor calls the *plaid* a blanket, and the sweet herbs "a green bough," while he wholly mistakes "the spectacles marking the place where the bible was last closed—indicating his lonely life." This accessory in the picture is really there to enhance

the canine fidelity of the "collie," as it shows even the most pious human watcher by the dead has taken an interval of absence! *Our British Portrait Painters*, also from Virtue and Co., is a companion volume, giving examples from Hogarth and Reynolds to Mr. Sant, Sir T. Lawrence being most fully illustrated. Smaller in size and adorned with vignettes on wood, we have *The Stately Homes of England*, by Messrs. Llewellynn Jewitt and S. C. Hall; also *Recollections of a Rambler*, by G. A. Simcox. This last, published by Chapman and Hall, is simply a book of desultory gossip and traveller's experiences. It has no deeper motive than this, and yet it is full of wit and wisdom, such as one, known already as a scholar, and to be better known in future as a poet, might be expected to produce when not employed on graver work. *The Stately Homes* (Virtue and Co.) deals pleasantly with Alnwick Castle, Cobham, Hardwick, and other places, as well as with the better-known Chatsworth and Warwick Castle.

Jacquemart's *History of the Ceramic Art* (Sampson Low and Co.) is a standard work, a valuable contribution to the literature of a very popular subject, brought within the category of those now under consideration by its choice illustrations. There are twelve admirable artistic etchings and two hundred miniature woodcuts. The etchings are celebrated examples of the art. The treatise is very well translated by Mrs. Bury Palliser, reading, indeed, like an original work. It is, we need scarcely tell our readers, written by Jacquemart with a large amount of special knowledge; but, we must add, from a characteristically French point of view. The amount of space given to England in 600 pages is only about eight, and the number of English marks, out of 1,000, is about twenty-five; while Strasburg, which never produced anything worth notice, occupies considerable attention. Strasburg, moreover, is included in French ceramic centres, although the author admits that the makers there were German immigrants, and the materials they used brought from beyond French territory. Messrs. Routledge and Sons this season have not issued very many Christmas books of an expensive character. Their edition of Keble's *Christian Year*, illustrated by the best artists, is, however, an admirable gift-book, luxuriously produced, and full of pictures by Sir J. Gilbert, Watson, Scott, Small, and others. These by the last-named artists are among the most striking and excellent, both in conception and style, we have seen this year. *Beauties of English Landscape*, a selection of nearly 200 of the most charming designs by Birket Foster, skilfully engraved by Cooper, Harral, and others, will be no doubt a great favourite with a numerous public. In this large number of prints we see the development and culmination of the artist's powers as a landscape painter; nothing can be finer than some in this book, as for instance the "Yew Trees," page 49, the "Fir Trees," page 37, "The Forest-path by Moonlight," page 9, and many others. We see also the beginning of Mr. Foster's ambition in figures, which has been growing on him lately with disastrous effect. The vignettes are accompanied by short poems and verses of Wordsworth, Bunting, and other mild idyllic poets. *The Fine-Arts Annual* (Virtue and Co.), does not require much space in our short summary. In a literary point of view it is remarkable, superior to more expensive and pretentious things. *Chapters on Animals*, by P. G. Hamerton (Seeley, Jackson, and Halliday), has the aspect of "a book for boys," but consists of studies from nature and experience, by Mr. Hamerton, who is gradually widening his sphere of literary activity. It is exceedingly interesting and admirably done. The chapters are embellished by etchings done by two French artists of moderate ability, of whom no one ever heard before. They are artists, however, and endeavour to do their work with some degree of completeness and finish, in this departing from Mr. Hamer-

ton's often expressed conviction that etchers ought to be only sketchers. Of these etchings the best are the horses, but all of them are pleasing, and the book as a whole is very sound and unpretending.

One word regarding the binding of the majority of these books. No doubt it is important to distinguish a volume which stands in competition with so many, and to do this in perfect taste is not easy. One publisher said to the writer last year, "Critics have no business with the outsides of books: let them confine themselves to the work itself." But this is out of the question, and we must say at least in a general way that our gift-books are excessive in their decoration. The best is the simplest, that of *Pictures after Landseer*, by Virtue and Co.

WILLIAM B. SCOTT.

EXHIBITION OF THE BURLINGTON CLUB.

A FINE collection of water-colours by David Cox and Peter De Wint, the property of Mr. John Henderson, has been for some little while past on view at the Burlington Club, No. 17 Savile Row, and will continue there during the greater part of this month. There are fifty works by Cox, and twenty-six by De Wint. Among the capital examples of the former master, we may note:—*'Shrimping on the French Coast, with the brine-washed sands.'* *'Water-mill near Bettws-y-coed,'* 1849, with heavy dense greens of foliage, and mountain-tints of blue. *'A View in Warwickshire:'* here two bulls are butting, and there is a grand trailing sweep of trees and distance, and a clouded, varied sky—an exceedingly covetable specimen. *'Lancaster,'* a sweet finished drawing. *'Festiniog:'* the torrent waterfall comes down between the precipitous slopes of the mountain, the banks being mostly of rounded form to the left hand, peaked and angular to the right: a fleecy mist bridges the two. This is a splendid work, approximating to the quality of Turner, and in feeling hardly less noble; the execution is simple, but altogether masterly; complete, without losing a certain fascinating slightness. *'Old Westminster Bridge, with the Abbey,'*—very pure in manner, and carefully finished. *'Evening, North Wales,'* 1850,—dark and impressive. *'Snowdon,'* 1853: a magnificent rendering of cloud and mist; the forces of nature are seen meeting, hurrying, and interfused. This work, very roughly executed in a certain sense, shows the latest and grandest style of Cox,—there is perhaps nothing from his hand to surpass it. Two other Welsh subjects, also dated 1853, are of a similar order of excellence,—*'The Snowdon Range,'* and *'On the old Road between Capel Curig and Bangor.'* In contrast with these comes the *'Crossing Ulverstone Sands,'* composed with grace and dignified tact, and nobly lighted.

The works by De Wint include—*'The Ruins of Lincoln Castle,'* a striking specimen. *'Westmoreland Hills, bordering the Kent,'*—a bright, truthful rendering of afternoon sun, with long shadows. *'Lincoln Cathedral, from the Castle-moat,'*—a very leading example in respect of high and uniform finish, but hardly one of his absolutely best works. The *'Bridge over a Branch of the Witham'* is possibly the finest thing that De Wint has left us—truly a grand piece of simplicity and solidity, both in the point of view that has been chosen, and in the general vigour of treatment.

Both these painters are so well known that the Exhibition at the Burlington Club can scarcely affect the estimate of them already prevalent among connoisseurs and collectors; although indeed, as regards De Wint, the work last mentioned cannot but tend to enhance his reputation with all who were hitherto familiar only with the average of his broad and manly paintings, and not with the exceptionally fine specimens.

W. M. ROSSETTI.

THE WAGNER SOCIETY'S SECOND CONCERT.

THE second of the present series of these concerts, which was given at St. James's Hall on the 13th

ult., was by no means inferior in interest to its predecessor, though the programme was of a less varied character. In compliance with numerous requests from subscribers, the greater portion of the music performed was selected from the works of Wagner. The remonstrances which, we understand, were addressed to Mr. Dannreuther after the first concert show plainly that public curiosity is at length fairly aroused on the vexed question of Wagner's music; and the same fact was evident from the state of the hall, which was far better filled than on the previous occasion.

The opening piece in the programme was Liszt's *'Tasso: Lamento e Trionfo, Poème Symphonique.'* This most interesting work had been performed about a fortnight previous, at Mr. Walter Bache's concert; and, as the orchestra on both occasions consisted very largely of the same members, increased familiarity with the complex and difficult music conducted largely to a more adequate rendering of the composer's intentions: indeed, a finer performance of the work could not have been desired. *'Tasso'* is one of a series of fourteen so-called "Symphonic Poems" (*Symphonische Dichtungen*) which Liszt has published, and which all belong more or less to the class of what is termed "programme music." Space will not allow a discussion of the interesting questions to which these and similar compositions give rise; it must suffice here to say that, while in certain numbers Liszt has aimed at presenting what is obviously beyond the reach of music to depict, in the *'Tasso'* there is nothing which, allowing the principle of constructing music on a definite programme, is not fairly within its scope. The composer himself describes his plan thus:—"We must first call up the spirit of the hero as it now appears to us, haunting the lagunes of Venice; next we must see his proud and sad figure as it glides among the *fêtes* of Ferrara—the birthplace of his masterpieces; finally, we must follow him to Rome, the Eternal City, which, in holding forth to him his crown, glorified him as a martyr and poet."

The form which Liszt has chosen as the framework of his musical poem is an extension of the "variation form;" and very striking is the masterly way in which the same theme, by slight alterations, is made to express such opposite feelings as those of the lament with which the piece commences, and the triumphal song with which it concludes. It is impossible, however, by mere description, and without the aid of music type, to render this point fully intelligible. The striking beauty of the *tempo di minuetto*, depicting the festivities at Ferrara, arrested the attention of all, and was evidently fully appreciated; and those especially who had been fortunate enough to be present at the previous performance of the work had little difficulty in following the thread of the composer's ideas, in spite of the novelty of the form in which they were presented. For here all the ordinary divisions of the symphony are abandoned, and the piece might perhaps be most accurately described as a "Fantasia" or "Rhapsody" for the orchestra. It was conducted, as at Mr. Bache's concert, by Dr. Hans von Bülow, who again furnished a proof of his prodigious memory by directing the performance without a score before him—an even more wonderful feat than the playing from memory of the most elaborate piece of music. It is a question, however, whether it is wise to subject the mental and nervous energies to so severe a strain as that involved in such constant exercises of memory, which must in time tell even upon the strongest brain.

Dr. Bülow next conducted his own *"Marche des Impériaux,"* from his music to Shakespeare's *"Julius Cæsar"*—a brilliant and finely-scored march on which it is needless to dwell.

The remainder of the concert was occupied entirely with Wagner's music, and comprised selections from his operas *'Rienzi,' 'Tannhäuser,'* and *'Lohengrin,'* concluding with the *'Kaisermarsch.'*

The overture to *'Rienzi,'* the earliest of Wag-

ner's published operas, is by no means one of his best or most striking works. Written when he was quite a young man, the opera bears evident marks of the influence of his predecessors, and only occasionally foreshadows the genuine Wagner. The overture is in style not unlike Spontini, whose overture to *'Olympia'* was produced at the previous concert of this society; and, though not without fine points, fails to impress us as do the preludes to its composer's later works. It shows, nevertheless, much of that mastery in the handling of the orchestra for which Wagner is so distinguished; and its performance as one of the first orchestral works of its author in juxtaposition with the *'Kaisermarsch,'* which is his latest, was peculiarly interesting, as affording an opportunity for observing the immense advance upon himself which Wagner has shown in twenty years. The prayer from the fifth act of the same opera is certainly more interesting than the overture. It was sung with much expression by Herr Werrenrath.

The selection from *'Tannhäuser'* consisted of the introduction and opening song from the second act, and the well-known overture. Produced only three years after *'Rienzi,'* this work shows already a remarkable advance in the composer's style. Though he had not yet broken irrevocably with the old operatic forms, as he did subsequently in the *'Meistersinger'* and *'Tristan und Isolde,'* indications of the coming rupture are already apparent in every scene of the *'Tannhäuser.'* The music is more subservient to the drama, and the pieces which can be detached for concert performance are fewer and less important; and even of those which can be so detached the full meaning is not apparent without the context. Thus, of those who heard the introduction to the second act at this concert, only the very few who knew the whole opera would be aware that the orchestral prelude was founded on Tannhäuser's solo in the first act, in which he expresses his decision to return home. Without this key to the situation the movement appears to be merely a piece of brilliant instrumentation. The song for Elizabeth, which follows, is more intelligible by itself. It was given with considerable dramatic feeling by Mdle. Nita Gaetano, but suffered materially from being sung with an Italian text instead of the original German.

The overture to *'Tannhäuser'*—the most generally popular in this country of all Wagner's compositions—is too well known to require detailed notice. Here, again, it may be remarked that this piece only becomes fully intelligible when the rest of the opera is known, though its abstract musical beauty is such as to delight even those who cannot altogether follow the programme of the work. Wagner's increasing moderation in the use of his orchestra is clearly to be seen by comparing this overture with that to *'Rienzi'*—the latter being much the more noisy of the two.

To the *'Tannhäuser'* selection succeeded what was in some respects the gem of the evening—a fragment from the great duet in the third act of *'Lohengrin,'* between Lohengrin and Elsa. This opera is hardly less of an advance in style on *'Tannhäuser'* than the latter is on *'Rienzi,'* and consequently, from the very nature of Wagner's method of composition, it is even more difficult than before to extract pieces for concert use. The short excerpt given, however, was selected with excellent judgment; and although one felt inclined, like *Oliver Twist*, to "ask for more," there was quite enough of it to produce an unmistakable impression on the audience, who demanded its repetition with an earnestness that there was no refusing. It was excellently sung by Mdle. Gaetano and Herr Werrenrath; but (like the song from *'Tannhäuser'*) lost much by being given in Italian.

The concert concluded with the *'Kaisermarsch,'* a broad and vigorous composition, brilliantly scored for the orchestra, but by no means equal to the same composer's *'Huldigungsmarsch.'* Wagner never appears at his best apart from the stage.

His genius is so essentially dramatic, that when he comes to write "absolute music" he is much less successful than in treating operatic subjects. Admiration for his great, nay, surpassing, talent in his own peculiar branch should not blind us to the fact that, as a mere musician, independent of everything else, he is far behind many who, in the opera, are not (to use a popular phrase) "fit to hold a candle to him."

An excellent point of this concert was its very moderate length. The whole programme occupied just two hours. There is no greater mistake than long concerts; the later pieces invariably fail of their effect. The true policy is to send the audiences away hungry.

BACH'S 'CHRISTMAS ORATORIO.'

THE success which has attended the revival by Mr. Barnby of Bach's great 'Passion according to Matthew' has been so great, that it is not surprising that attention should have been drawn by it to other compositions of the old Leipzig cantor. The first result was the performance of his 'Passion according to John' last spring at the church of St. Anne's, Soho; and we have now to record the production of his 'Christmas Oratorio' by the Royal Albert Hall Choral Society on the 15th ult. Though announced as the first time of performance in England, the work had in fact been given in 1861 by the now defunct Bach Society, under the direction of Sir (then Mr.) Sterndale Bennett, and subsequently by the students of the Royal Academy of Music, in December 1870, on which occasion it was conducted by Mr. John Hullah. The oratorio had, however, so far remained unknown to musicians in general, that this may virtually be regarded as its first introduction to a London public.

It is impossible within the limits of this article to speak of so important a composition with the detail which its merits warrant. Those who are interested in the subject will find a full and excellent analysis of the entire work in the second volume of C. H. Bitter's 'Life of Bach.' All that can be done here is to make a few general remarks on the more important points suggested both by the music and the performance.

The 'Christmas Oratorio' was composed in the year 1734, five years later than the great 'Passion according to Matthew,' and is therefore a work written at a time when its composer's powers were most fully matured. Instead of being an "oratorio" in the sense in which we are accustomed to understand the word, in connection with the works of Handel, it is a collection of six sacred cantatas written for church festivals: the first three being composed for Christmas Day, and the two following days; the fourth for New Year's Day; the fifth for the Sunday after New Year's Day; and the sixth and last, for the Festival of the Epiphany. There is a curious analogy (yet with how great a difference!) between this method of Bach's, of performing his work by instalments, and that proposed by Wagner for the rendering of his great drama, 'Der Ring des Nibelungen.'

Though the oratorio consists of six separate cantatas, it must not be therefore inferred that there is no artistic connection between the various parts of the work. On the contrary, the connection is a very intimate one, and the means used for producing it is the employment of the "choral." It is almost impossible for us in England to realise the full effect which these chorals would produce on a German audience; nor is the reason far to seek. In Germany nearly every hymn has its own special choral wedded to it; so that when the music is heard, the hearer is at once reminded of the hymn belonging to it. In England no such connection exists, and in consequence much of the point of the introduction of these old church melodies is lost to us. And yet the poetic, nay, even religious feeling, with which Bach treats the choral is too remarkable to escape the notice of anyone familiar with his works. A very striking

example of this occurs in the early part of the oratorio now under consideration. After the summons to Zion to meet her Lord, "Prepare thyself, Zion, with tender affection," a choral is introduced,—

"How shall I fitly meet thee,
And give thee welcome due?"

The music to which these words are set is that of Paul Gerhardt's well-known Passion Hymn, "O Haupt, voll Blut und Wunden." At first sight nothing would appear more incongruous than the introduction of this mournful and solemn melody in the midst of the Christmas festivities; but on further consideration, its deep and religious appropriateness will be seen. Bach selects this choral to remind us through its music that the object of our Lord's coming to earth was his Passion. It is this same choral which, with different harmonies, producing a total change in its character, becomes at the end of the work a shout of exultation, proclaiming the victory of Christ over Sin, Death, and Hell.

Another choral which we find in various parts of the work differently harmonised and accompanied, according to the feeling of the words and the mental impression intended to be produced, is Luther's Christmas hymn, "Vom Himmel hoch da komm' ich her." The illustration given above will, however, sufficiently explain Bach's method of procedure, and show in what way the chorals are employed to give artistic unity to the different parts of the oratorio.

As in the 'Passion Music,' so in this work is to be found a mixture of the lyric and dramatic styles. The Scripture narrative, taken from the Gospels of Matthew and Luke, is given as recitative by the "Evangelist," occasionally interspersed with short dramatic choruses, such as that of the shepherds, "Let us even now go to Bethlehem," and that of the Wise Men, "Where is the newborn King of the Jews?" In the pauses of the narrative didactic and religious reflections are given as airs, duets, &c.; and each part, excepting the second, where we find an instrumental symphony, opens (after the manner of the Church-cantatas) with an amply developed chorus.

An interesting point in connection with this work is that no fewer than eleven numbers are taken from earlier secular pieces by the composer. The complete list is given in the preface to the Bach Society's edition of the score, and the fact will account for the light, almost secular, tone to be found in one or two places in the work. Handel, it will be remembered, was in the constant habit of doing the same thing, but examples in Bach are comparatively rare.

Much might be said on the remarkably interesting orchestration of this and other works by the same composer. Anyone who compares Bach's scores with those of his contemporaries, such as Handel and Graun, cannot fail to be struck by the wonderful difference between them. While in Handel we find, with occasional exceptions, great uniformity of tone-colouring,—by far the larger part of his music being accompanied, either by strings alone, or by strings and oboes,—in Bach we meet with a constant series of experiments; indeed, one may almost say that there is hardly a device of modern instrumentation of which the germ at least is not to be found in his scores. Thus the modern effect of accompanying florid passages for the strings by sustained harmonies for the wind is to be seen in the chorus "Glory to God in the highest;" while an idea of which Beethoven is generally considered the inventor—that of treating the drums as solo instruments and giving them the theme of the movement—has been anticipated by Bach in the opening chorus of this work, which commences (like Beethoven's violin concerto) with a drum solo. Among the most delicious pieces of Bach's orchestration are the 'Pastoral Symphony' with which the second part of this work opens—which, by the way, might with considerable advantage have been taken somewhat faster at the recent performance;

and the no less beautiful cradle song, "Sleep, my beloved," in the same part: a piece which leaves one at a loss which most to admire,—the charming melody, exquisite harmony, or tasteful instrumentation.

The performance of this interesting and by no means easy work was, on the whole, a highly successful one. The chorus attacked the difficult polyphonic music with much decision, and many of the pieces sung by them were most effective. If others were not so, this was hardly the fault of the singers. The fact is that Bach's music was designed for a small chorus and orchestra. In an interesting document preserved in the archives of the town council at Leipzig, we learn from Bach himself of what his chorus and orchestra consisted. He says he requires three voices to each part, and a band of at least eighteen instruments. Elaborate and complex music designed for such a small force as this can hardly be also suitable for a choir and orchestra of a thousand performers; and the result was that one or two pieces—especially the chorus "Glory to God in the highest"—sounded confused, and failed to produce the impression that was intended. The soloists, Madame Otto-Alvsleben, Madame Patey, Mr. W. H. Cummings, and Signor Agnesi, were, one and all, excellent. Great praise is also due to Mr. Barnby for the respect shown to Bach's intentions in making the needful alterations in the orchestration. Bach's scores contain parts for instruments now no longer to be met with, and some of the passages for those still in use (notably the trumpets) are no longer practicable. The substitution of the *corni inglesi* for the obsolete "oboi da caccia" was a most judicious one; and the allotting of some of the impossible trumpet passages to the organ was no less happy. Mr. Willis's instrument in the Albert Hall is emphatically an orchestral one, and the quality of the trumpet stop on the organ was so close an imitation of the original instrument as to render it sometimes difficult to detect the difference.

Another point deserving of all commendation was the accompanying the recitatives on the organ, instead of with the usual miserable grunt on the violoncello and double-bass. Dr. Stainer's treatment of the instrument, both in the recitatives and in other portions of the work, was always judicious, and never obtrusive.

In so long a work as this oratorio, it is self-evident that large excisions would be necessary. If performed in its integrity, the piece would occupy some four or five hours. As regards the numbers omitted, great judgment was exercised; but it is at least an open question how far it is justifiable to shorten individual movements by cutting out particular portions, such as passages of sixteen bars in the middle of a song.

Having said thus much in praise of the performance, it would be shirking one's duty as a critic not to add that there was one great blemish, against which the strongest possible protest should be entered. This was the performance of many of the chorals without accompaniment. In Bach's score it is expressly indicated that the orchestra is to be used in every instance, and it is truly incomprehensible how a good musician like Mr. Barnby could have brought himself to allow such a caricature of the music to be given. Instead of the grand bursts of harmony which Bach designed, these splendid old tunes became degraded to mere namby-pamby part-songs, the effect being simply detestable. And Mr. Barnby was not even consistent with himself; for while some of the chorals were subjected to this emasculation, others, without any apparent reason for the difference, were given with their full accompaniments, and with the grand effect contemplated by the composer. It is much to be hoped that at future performances Mr. Barnby will remove this one "dead fly in the apothecary's ointment."

In conclusion, the best thanks of musicians are due to Mr. Barnby for affording a hearing of one of Bach's greatest works. Is it too much to hope

that he will still further increase their obligations by producing the great Mass in B minor, the 'Magnificat,' and some of the 'Kirchen-cantaten' ?
EBENEZER PROUT.

'LE MARIAGE DE FIGARO' AT THE HOLBORN THEATRE, AND 'THE SCHOOL FOR INTRIGUE' AT THE OLYMPIC.

BEAUMARCHAIS said that there was one thing in the world even more difficult than to write his comedies; and that was, to get them acted. It is no wonder that he had to say so, since Napoleon said that Beaumarchais' work was the "Revolution in motion." And again, it is no wonder that Napoleon said this, for what is *Le Mariage de Figaro* if not a satire on all authority?—a satire directed alike at the lord, who remembers the *droit du seigneur*, but forgets *Noblesse oblige*, and at the diplomatist, who talks of *nothing*, "with closed doors," and at the counsellor, who darkens counsel. And if *Le Mariage de Figaro* rested on this satire alone for its success, the play would always be popular, because Authority *never* is. But in truth its satirical power is by no means its only claim to long life. It has the merits of strong and ingenious construction and of strong and individual characterisation. Its constructive power is unequally distributed; for there is most of it in the first act. That business of the covered-up arm-chair, which hides master behind it, and page in front, is, in its own way, second only to the screen-scene in the *School for Scandal*, and nothing can possibly be more facile and ingenious than the manner in which the discovery is led up to. But in the second act the construction is not so good, and in the third and fourth I doubt if it be good at all: while in the fifth its excellence reappears, and the French play, on Spanish ground, catches the Spanish genius of intrigue. As far as regards the progress of the plot, it is scarcely too much to say that the third and fourth acts of *Le Mariage de Figaro* are as superfluous as the middle volume of a second-rate novel. But then, with Beaumarchais, when one great quality is absent, another is in its place; and when that in which he resembles Scribe ceases to be visible, it is only in order that there may be visible instead that in which he resembles Molière. In other words, there is sometimes most room for dramatic characterisation where there is least attempt at ingenuity of construction; and so it is that we are made acquainted with that wise counsellor Don Gusman Brid'oison—as competent a man as Dogberry—a man who has only contentedly to say "J'entends bien," for you to know quite surely that he understands *nothing*.

The English play at the Olympic is not a mere untouched translation of the French play now acted at the Holborn. Mr. Mortimer has wisely omitted the substance of the third and fourth acts. The play is long enough without them, and the story hardly less complete. They depend for their success so greatly upon skill in characterisation, that they would tax somewhat too heavily an English company even stronger than the average. Also, they are so full of *jeu de mots*, destined only for Frenchmen, that in translation they would lose half of their force. Altogether, then, the large use which Mr. Mortimer has made of his liberty is amply justified. He has produced a play of strong and concentrated interest; "imitated," as he prefers to say, from the great French comedy, and possessed certainly of more than the common virtue of "imitations." Here, at the Olympic, the greatest defect is a defect of arrangement: the page's part being given to a stalwart gentleman who plays it under every possible disadvantage, though with all possible tact. Not merely is the stage effect to some extent destroyed by the appearance of Mr. W. Fisher as the playful singing-boy, who is alike the favourite of countess and waiting-maid, but all that is pleasantest and most natural in the conception of

this part, and its relation to the other parts, is marred and distorted. We lose not only Beaumarchais' page, but Beaumarchais' idea. But this is not the only mistake in what actors call the "cast" of the piece. Mr. Righton is admirable in a burlesque, and would be a good officious barber of modern English serio-comedy; but he is not the barber of Seville. Figaro, it must be remembered, is a distinctly Spanish type: one of the two great typical Spaniards (Gil Blas, of course, is the other) whom French genius—so apt at comprehending Spanish character—has added to imaginative literature. And imaginative literature is not rich in typical Spaniards. Spanish genius, occupied with intrigue, has only furnished two, itself, say some who have a right to an opinion: Don Juan, of the comedy which gave a key-note to Molière, and Don Quixote, of the novel. At the Olympic, Mr. Henry Neville is Almaziva. And here we are driven to comparisons. M. Dalbert, at the Holborn, though he lacks courtliness, appears in some respects the truer Almaziva of the piece now represented. Mr. Neville has more in common with the Almaziva of the *Barber of Seville*: though much of his always intelligent and forcible acting is in accordance with the French traditions, his appearance can hardly be. As husband or lover, he is never without a touch of chivalry. And Spain, he may retort, is *par excellence* the land of chivalry. But Almaziva,—with his *droits du seigneur* over other men's brides,—where is the chivalry, one asks, in him? Thus M. Dalbert's conception appears to be the truer one, though the execution undoubtedly falls short of it. Self-indulgence unredeemed even by such grace as there may be in strength and ardour of feeling—an icy habit, not a momentary lapse—this is what M. Dalbert tries to pourtray, and he is at all events right in the attempt. M. Didier is very skilful and competent as Figaro; M. Sehey is no less competent and of course more ludicrous as Brid'oison, the counsellor. These two actors do much to make the piece successful; but, with the present resources of the company, we doubt the wisdom of the effort to play it. The ladies are not satisfactory. Madlle. Tholer is not light enough as Cherubino; and Madlle. Wilhelm, the best of the others who are prominent in this piece, being a good *grande dame*, is naturally, though not at all necessarily, a bad *soubrette*. She plays the sparkling Suzanne carefully, but without liveliness or force. There is one well-found expression on her face, as Cherubino is singing—it is that of a kindly, almost tender curiosity. One admires it at first, and then remembers that it is too thoughtful, too meditative for Suzanne. Here, again, the sensitive fine lady is too visible. The true Suzanne is without doubt at the Olympic, where a hitherto little-seen actress—Miss Emily Fowler—is suddenly discovered to be a somewhat brilliant light *comédienne*; if, indeed, such discoveries are ever made—that is to say, if the performance of a single part can ever be accepted as a sufficient test of power. The Suzanne of this lady is here, there, and everywhere, guiding the course of the intrigue, with alacrity, vivacity, and energy. At no moment does Miss Fowler seem unequal to her part; yet the moments themselves are not equal, for there is one when she is matching herself with old Marcelline, and dipping with mock courtesy at that "madam," with accent and gesture perhaps a little too marked, when there seems a chance, that is hardly a fear, of the performance passing into farce. But that disappears: the performance gains and ripens as it proceeds; and when Suzanne emerges from the dressing-room with a laugh of triumph over her mistress's persecutor, and a speech of mock heroics, there is the spirit, tone, and gesture of a genuine and vigorous actress of comedy. But though it is pleasant to praise a good effort, it is wiser to hold out no sanguine expectations; wisest of all, when dealing with the stage, where even reasonable expectations seem disappointed every month, because

good spirits and natural fitness for a particular character are readily enough mistaken for good art and acquired aptitude for many.

FREDERICK WEDMORE.

'HEART'S DELIGHT' AT THE GLOBE THEATRE.

"WOMEN," said Goethe, talking to Eckermann—it was about the time of his passion for Fräulein von Lewezow, at Marienbad, when the Poet was seventy-three and the beauty was twenty—"Women are the only vase into which we moderns can pour our ideality. We can do nothing with the men." And many a modern novelist and dramatist, whose heroes are not heroic, might take shelter under that saying, though Goethe only stated a fact, and did not account for it. Dickens himself, if he had accepted that position, might have found it to the advantage of his work, though not of his popularity. His young heroes are probably his weakest creations, Septimus Crisparkle and Walter Gay being perhaps the only ones whom we at once believe in and respect; and of these, the muscular minor canon of Cloisterham is certainly the better in a book. But Walter Gay, the young hero of *Dombey and Son*, is not open to many of the objections that may be urged against his brethren; and in Mr. Halliday's generally judicious stage-setting of much of the plot of this novel for the Globe Theatre, Mr. Montague gives to the character some additional life and reality. His scene with Mr. Dombey, when, accompanied by Captain Cuttle, he begs the merchant's assistance for his uncle, Sol. Gills, is acted at the beginning with many natural and delicately-found touches, and at the end with becoming abandonment. But in the last scene, in the parlour of the Wooden Midshipman, he puts on too completely for the character the sailor's manner with the sailor's garb. Rejoiced to be at home again, and at home, too, with Florence ("Heart's Delight," as Captain Cuttle christens her), he jumps about overmuch, and is a good deal too boisterous.

It is not in that way that Walter Gay would evince (especially with Florence) his joy at his return. Quiet Florence sits by, a little subdued, as is natural. There is some incongruity in the scene, and the curtain falls on a situation less effective than that which is presented at the very moment of the return. But the piece, like *Arkwright's Wife*, which it displaced, is on the whole exceedingly well acted; and this one blemish in Mr. Montague's performance is not a great thing where so much is good. But there is, it must be said, a want of harmonious effect in Mr. Fernandez's representation of Carker; though this may be in part owing to the adapter, whom stage necessities, it is supposed, have compelled to make Carker take poison at the inn at Dijon, when the pursuing Dombey is battering at the door. A somewhat unmoved person, Dickens, no doubt, meant Carker to be, and this is what Mr. Fernandez represents throughout the greater portion of the piece. But then, this somewhat unmoved person, with the gleaming teeth, would never have taken poison at all; still less would he have been as amply and regularly provided with it as the alchemist in Mr. Browning's *Laboratory*. We are deprived, of course, necessarily, in an acted drama, of Dickens's description of Carker's night-flight—one of the most powerful pieces of descriptive writing in all our literature—but it would have been well if Mr. Halliday could have arranged an end to this bad business of the elopement not out of harmony with the character of the man who proposed it. The poisoning-scene is a ludicrously weak one, so devoid of detail as to be scarcely credible. We can faintly fancy what such a scene would be in the hands of Mr. Irving. But earlier in the play Mr. Fernandez is more real, and here, as we have said, he is struggling with a difficulty.

Mr. J. C. Cowper has many negative merits,

but not many positive ones, in the part of Mr. Dombey. He acts as if he understood the part, but does not quite look it. He is excellent in his second part—a small one—that of the stupid sailor, whose utterances, few and oracular (not to say confusing), are waited for by Captain Cuttle with intense and faithful anxiety. No better representative of Mrs. Dombey than Miss Helen Barry could now be found upon our London stage. That is not necessarily saying much, yet it means to say something. Miss Barry's indignant defiance of Mr. Dombey is not without force and thought. Her colder, more contemptuous defiance of Carker at the inn at Dijon is somehow less effective in representation, though here too the right note is undoubtedly struck. And if, in the main, Miss Barry is well suited with her rôle of Edith Dombey, Miss Carlotta Addison is thoroughly suited with a rôle in Florence. It is the best part for her that she has played for a long time, and as such it reminds us of her Bella in *School*.

Thus there is something bad, something indifferent, and much that is good. But there is one thing that is supremely good, and that is Mr. Emery's performance of Captain Edvard Cuttle. There is the freshness of the sea itself about it. Jaded London will lose much if it neglects its opportunity of seeing it. There are so many good points here, besides so fine a general conception, that it is almost hopeless to particularise them, and one falls back upon one's objections as more easily mentioned. That lifting of the watch from the long pocket, as if it were an anchor, fathoms deep, is characteristic at first, but is carried too far; and the Captain's description of himself as "mariner of Hingland" might more than once be dispensed with. But, on the whole, the playgoer may go to admire, and may admire wisely, with enthusiasm. Let him notice that deep sea-voice, that knows the freedom of the deck; that gait that has been learnt on pitching seas; that naïve delightful hopefulness with which the Captain hangs on every stupid word of his good, stupid friend; that humorous fear of his landlady; that humorous pleasure when he has got the better of her; that pathetic outburst as to how much goodness and valour has "gone down with Waller;" and, lastly perhaps, the excited, eager tone and gesture with which he tells Florence the happy story of how "Waller" did not "go down," after all.

FREDERICK WEDMORE.

NOTES AND NEWS.

WE have received from the Holbein Society Part I. of *The Triumphs of the Emperor Maximilian I.*, by Hans Burgkmair, containing 68 engraved pages of these famous woodcuts. The title-page of the volume is headed "Fac-simile Reprints" and contains the notification, "Edited by Alfred Aspland;" but no sort of editorial text accompanies the engravings. The paper on which the woodcuts are printed is too white and smooth, detracting from the general "keeping" of the designs. But, anyhow, the volume is one which ought to be and will be welcome to many; the gorgeousness of the subject-matter and force of design exciting fresh surprise and delight every time one turns the pages over.

MAGAZINES for the young are not so numerous in France as they are in England. An important Paris publishing house, Messrs. Hachette & Co., are endeavouring to make such a periodical acceptable to French families. They have started this year (1873) a *Journal de la Jeunesse*, which agreeably comprises novels and familiar causeries on history, travels, physical or natural sciences, and events of the day, with beautiful engravings. It is intended for quite young children, and would not prove useless in many of our British families.

THE *Illustrated London News* states that Mr. Crittenden has just completed a bust of Thomas Carlyle; that Mr. R. Jackson also has completed the model for a marble bust of Mr. Irving, the actor; and that Mr. Adams-Acton has completed the model for a marble bust of the Rev. Mr.

Spurgeon; and that a number of new water-colour drawings, comprised in the "Ellison Gift," are on view in the South Kensington Museum.

THE *Edinburgh Courier* reports the discovery of ancient British coins on the estate of the Earl of Haddington, in the west of Berwickshire, by a labourer, while in the act of cutting a drain, of a decayed horn containing over 200 British silver coins of ancient date. The most of them are English coins, evidently of the reign of Edward I., the legend on one side being '*Civitas, London.*' and on the other '*Edw: R. Angle Dns. Hyb.*' A few of the others seem to be Scotch coins of the reign of Alexander III., and bear the inscription '*Alexander Dei Gratia, Rex Scottorum.*' Some of these relics of olden times have been secured by antiquaries, and the remainder have been taken possession of by the authorities, to be sent to the Exchequer. The horn was found within three feet of the surface, and at a distance from any habitation.

THE *Athenæum* states in its last number (December 27th), that "Mr. Newton sailed from Marseilles on the 12th, on his way to Troy, to see the objects dug up by Professor Schliemann." The fact is, that the objects in question are not at Troy, but at Athens, whither Dr. (not by any means Professor) Schliemann conveyed them some time since, with a view of offering them as a gift to the Greek Government, on the simple conditions, it is said, of their being housed, and of permission being granted him to excavate Olympia and Delphi. For some reason this did not happen as he desired. If, then, Mr. Newton has gone to Troy, it must be to see where the treasure had once been; but, seriously speaking, he has gone to Athens. As to the photographs of which the *Athenæum* speaks, we suppose Mr. Gladstone is not the only person who has seen them, and we shall ourselves shortly review them.

Six new rooms have just been opened to the public in the museum of Les Invalides. They are wholly devoted to a show of arms. From the rude weapons of the stone age, to the destructive refinements of modern warfare, the progress of the science of homicide is traced. The few objects beyond actual weapons that are to be found in these rooms, are destined, we are told, to form the foundation of a new Historic museum of war, which shall comprise all that concerns the equipment and harness of soldiers of all nations of the world, from the remotest times to the present day.

THE Belgian Government has recently purchased for the National Museum an important painting by Teniers, representing the Archduke Leopold William in his picture gallery.

TWELVE works by Titian were recently advertised for sale at the Hôtel Drouot. The surpassing merit of these works may be judged from the fact that they fetched, one with another, from 15*l.* to 80*l.* each. "I do not pity the buyer," adds Philippe-Gille in his account of the sale, "because of the frames."

THE *Portfolio* for January contains a long historic account by R. N. Wornum, and an appreciative criticism by Fred Burton of 'The Triumph of Scipio' as it is called, the picture by Mantegna recently purchased by Sir W. Boxall for the National Gallery. In addition to the full information supplied in these articles, the *Portfolio* munificently gives us a very large and powerful etching by W. Wise of the picture itself; so that this might appropriately be called a Mantegna number, but that such a title would be unfair to several other excellent articles and illustrations in it. Of the latter we must notice four beautiful little woodcuts of English scenery that certainly point the truth of the teaching of Basil Champneys, in the article in which they appear; namely, that "one more acre of the field of æsthetic cultivation lies within easy reach of us in the landscape and architecture of our own country."

A pretty, soft etching by Leleux, and another

by Hamerton in illustration of 'The Sylvan Year,' which is still continued, and an etching by Jacquemart from the Wilson catalogue, complete the pictorial attractions of the number.

THE annual prize-giving of the Académie des Inscriptions et Belles-Lettres took place in December. Three medals were bestowed on this occasion for works relating to the antiquities of France. The first was awarded to M. Demay for his 'Inventory of the Seals of Flanders;' the second to M. Gérard for his 'Artists of Alsace in the Middle Ages;' and the third to M. Aubert for his 'Treasure of the Abbey of Saint Maurice d'Aganne.' After the prize-giving, M. Naudet, a veteran Academician, who celebrated his fiftieth Academic year in 1867, and who is now in his eighty-eighth year, read an interesting paper on the 'Roman Empire in the Third Christian Century.'

THE following, as yet we believe unpublished, Latin inscription is incised on what appears to be the blade of a knife with a serrated edge, in the British Museum,—

ME PETIT PENVS ERIT AMATO ME FECIT,
the interpretation of which is a puzzle.

THE *Pall Mall Gazette* states that the executors of the late Mr. Charles Dickens, with the sanction of the Dean and Chapter of Rochester, have just erected to his memory in Rochester Cathedral a handsome brass tablet on the wall of the south-west transept, under the monument to Richard Watts, a local benefactor.

WE learn from the same paper that copies of two of Mr. Holman Hunt's pictures, executed in stained glass, have just been inserted as windows in a church at Camberwell; but in the picture of Christ as 'The Light of the World' the lantern has been omitted.

M. EMILE PERRIN is to succeed M. Halanzier as director of the Paris Opera.

THE first portion of a translation of Ferdinand Hiller's new book on Mendelssohn appears in this month's number of *Macmillan's Magazine*. On its completion in this form the work will be published in a volume.

THE first edition of the little book entitled 'Goethe and Mendelssohn' having been exhausted, the publishers, Messrs. Macmillan & Co., have just issued a second edition, enriched by fourteen hitherto unpublished letters from Mendelssohn to the members of the family of the late Mr. William Horsley.

JOHANNES BRAHMS is expected to visit Leipzig early in the present year, having been invited to conduct his 'Triumphlied' at a concert for the benefit of the pension-fund of the Gewandhaus orchestra. The recent successful performances in that town of his 'Deutsches Requiem' cause his visit to be expected with more than ordinary curiosity.

KING ALBERT OF SAXONY has granted his Royal patronage to the Dresden Conservatory of Music.

A LIFE-SIZED bust of Beethoven has just been issued by the firm of Schroeder in Berlin, which is said by the *Musikalisches Wochenblatt* to be of more than ordinary excellence.

SCHUMANN'S 'Genoveva,' his only opera, is to be produced early in the present year at Dresden. Its production is said to be at the suggestion of the new Hofcapellmeister Schuch, who since his induction into his office has already distinguished himself by the production of Berlioz's 'Symphonie Fantastique' and Liszt's *Heilige Elisabeth*—works which had previously been regarded as impracticable.

THE CONDUCTOR Ed. Strauss has been giving a "Wagner Evening" at Vienna. From the same city great things are reported of a young Russian pianist, Frau Annette Essipoff; the musical papers speak of her performances as being equally remarkable, technically and intellectually.

THE subject of this year's *Winckelmannsfest-Programm*, which has just appeared, is the well-known marble bust in the British Museum, generally known as Clytia, a long-exploded denomination which was originally suggested by the calyx of a flower, from which the bust appears to issue. The countenance is clearly that of a Roman lady, but of what lady it has not yet been positively ascertained. For a time we had the suggestion of its being Antonia, the daughter of Antony and Octavia. At present the likeness to Agrippina, the daughter-in-law of Antonia, is perhaps more frequently recognised. But whichever it be, or if it be neither, it is highly satisfactory to find that Professor Hübner, the writer of the *Programm*, entirely disagrees with those who of late have raised scruples as to the antiquity of the work. It would be sad indeed to have our household favourite, Mr. Towneley's treasure, the one object which he could not part with when his house was in danger during the Popish riots, stamped as a work of the Renaissance. Next to the question of likeness, the thing which requires explanation in the bust is the use of the calyx of a flower to connect it with its support, a proceeding which is shown, by the list of illustrations furnished by Hübner, to have been less infrequent than might be thought in ancient art. It is true that these illustrations are all drawn from inferior works, mostly such as had been applied for decorative purposes. But perhaps it is right to found on this an argument that well-known models must have existed in the higher walks of art.

UNDER the title of 'The Louvre Saved,' *Le Figaro* tells us of a wise decision arrived at by the members of the Institute. A certain inventor of a new process for cleaning pictures went to them and offered to restore the most blackened and ruined picture that they might choose to deliver to him, to its original purity and beauty. "Seal up," he said, "one half of the picture submitted to my experiment, and I will undertake to show you the other half as fresh as when it left the easel of the artist."

The learned Council "smiled benevolently."

"Then," continued the inventor, "if you are satisfied with the result, accept my method."

"But what is it?" demanded the wary Academicians.

"Impossible to reveal it, except under the seal of secrecy."

Under this seal the Institute refused to have anything to do with the inventor and his process, which possibly might have proved more ruinous to the poor blackened old masters than even the time-honoured processes of smoke, dirt, and ill-treatment to which they have become tolerably well inured.

STAGE NOTES.

ON Saturday, December 20, a special performance of *As You Like It* was given at the Haymarket Theatre, in aid of the Theatrical Fund, Helen Faucit supporting the part of Rosalind. As far as we can remember, this is her first appearance on the London stage for some ten years, and her reappearance was looked for with the greatest possible interest by all lovers of the stage. The performance having been fixed for 2 P.M., a large body of actors and actresses were able to be present; in fact, the stalls were very largely occupied by members of the theatrical profession. The part chosen was one in which nothing but talent of the highest order could have been expected to mitigate the difficulties against which Miss Faucit obviously had to contend. The impression produced was that of perfect intellectual realisation of the character, and complete understanding of the appropriate expression and action. On the other hand, a slight want of spontaneity, an infinitesimal deliberation in the action, gave a certain sense of self-consciousness to her performance. Whether this

slight imperfection is a radical characteristic of her acting, or whether it is the merely temporary result of being out of practice, can only be determined by those who had the advantage of studying her constantly in her best days. Her reappearance, which everyone who saw her must earnestly hope is not the last, must have been even a greater boon to the profession than it was to lay spectators, in reviving the higher standard as well as the many interesting recollections of the better days of the stage.

If a pantomime can ever be important, there are at least four important ones this Christmas in London, and one that is important out of it. That, of course, is at the Crystal Palace: the rest are those at Drury Lane, at Covent Garden, at the Princess's, and at the Surrey. The number has decreased since the time when Mr. Thackeray used to breakfast in bed the morning after Boxing Night, that he might read about them in the newspaper, entirely undisturbed.

LAST-CENTURY fashions have spread to the theatres; to our infinite advantage, probably. At all events, it is satisfactory to be able to see such a performance as that of Holcroft's *Road to Ruin* at the Vaudeville—we spoke of it at greater length, and therefore possibly with less incompleteness, in our last issue—and many an evening at the theatre may be spent worse than in seeing *Wild Oats* at the Royalty, or the *Belle's Stratagem* at the Strand. It is at the Strand, however, that the cast as a whole is least equal to quite do justice to the comedy.

At the Haymarket they have revived *Raymond and Agnes*—a melodrama, which in the year 1811 was a popular play. It appears, then, that our grandfathers were sometimes foolish.

Two or three theatres are occupied with the works of novelists. For the Gaiety, Mr. Dickens has arranged one of his father's least known Christmas stories—*The Battle of Life*—while the Queen's enjoys the use of the material of two of Mr. Charles Reade's novels. *The Wandering Heir* is the *pièce de résistance*; but *Kate Peyton's Lovers* (from the romance of *Griffith Gaunt*) would be notable even if it were not almost the only one-act drama of serious interest which has been presented on the English stage for many years. An influential critic has claimed for it a unique position in this respect. But he has forgotten Dr. Westland Marston's *Put to the Test*, which was played successfully at the Olympic about a year ago.

SOME account of the present performances at the Parisian theatres we unavoidably postpone until our theatrical columns are less crowded than to-day, but we must not allow to go quite unrecorded in these pages the death of Beauvallet, the tragedian. His death happened a fortnight ago at Passy. He was seventy-two years old. Many of his most famous parts had been played by him with Rachel for a comrade.

POSTSCRIPT.

LANDSEER EXHIBITION AT BURLINGTON HOUSE.*

THE death of Sir Edwin Landseer was an event which properly called for some special mark of the honour in which he was held by brother artists, and especially by his colleagues of the Royal Academy. The Academy has recognised this obligation by the very marked step of suspending for a year its series of exhibitions of the works of old masters at Burlington House, and substituting a Landseer Exhibition. This is to open to the public on Monday next; a private view for the press was held yesterday.

The exhibition fills ten rooms in Burlington House, and comprises no less than 532 works:

* This arrived as we were going to press. Next week we shall insert Mr. Rossetti's criticisms in detail.

those which belong to the nation, and are kept on view at South Kensington, are not added to the collection. Two of the works are sculptural—a bust of Landseer by Marochetti, and 'The Stag at Bay,' a painted bronze statuette by Landseer himself. The first room contains sketches, drawings, &c., to the number of 146, and the tenth is filled with engravings, 71 items; the other rooms are occupied by oil pictures.

We may here follow the career of Landseer from the age of ten years to the rapidly darkening close of his productive and brilliantly successful life. To the former age belongs the specimen in sepia, No. 12, "Sketches, 1812; 1. A Dog; 2. A Cat; signed, 'Done at Maldon by the little boy Edwin when ten years old, now Sir E. Landseer, the old boy 1866.'" To the latter age belongs the oil picture No. 348, 'The Baptismal Font, 1872,' which we all remember as appearing in the Academy Exhibition of that year. The present collection will no doubt sustain—it cannot enhance—the popularity of Landseer; and will recall to the eye and mind of the critical, many genuine triumphs of the pre-eminent painter, and reinforce the verdict which they have pronounced regarding him for several years past—that while other painters, one here and another there, have indisputably excelled him in depth of study, in force of drawing action and realisation, and in range or speciality of subject-matter, none has entered with quite the same acuteness and geniality of sympathy into the drama and humour of the few beasts that are Landseer's by predilection, and most particularly of the dog. That friend of man has here found a response to his affection, dumb or clamorous, and might (were he not most befittingly excluded from the galleries of Burlington House) crouch down and be content, with meaning eyes and wagging tail.

W. M. ROSSETTI.

PUBLISHERS' ANNOUNCEMENTS.

(From the *Athenæum*.)

PROFESSOR CAIRNES will shortly publish a work on which he has been for some time engaged, and which will contain new expositions of some of the leading principles of Political Economy. Amongst other subjects treated of in the volume will be the doctrine of Value, the relations of Labour and Capital, with an investigation into the power of Strikes to influence Wages, the functions of Trades Unions, &c. The volume will also contain an examination of the principles of International Trade, and, in connection with this, a criticism of protectionist theories as advanced by American writers.

PROFESSOR A. W. WARD's forthcoming book on the *English Drama*, to be published before long by Messrs. Macmillan, is to be a full account of the *Origines* of our Drama; and a section is devoted to each of the more important names among our dramatic writers.

A CONTINUATION of the *Diary of Henry Cockburn*, one of the Judges of the Court of Session in Scotland, down to the year of his death in 1854, is now in the press, and will be published by Messrs. Edmonston & Douglas before Easter.

MESSRS. WILLIAMS & NORGATE will publish shortly the *Reports to the Trustees of the British Museum on the Utrecht Psalter*, by Mr. Bond and Mr. Thompson, of the MS. department, and also by Canon Swainson, the Rev. H. J. Coxe, of the Bodleian, Mr. Digby Wyatt, Professor Westwood, and others. Several fac-similes of the Psalter, taken by the autotype process, will accompany the work.

THE new edition of Dr. Whitaker's *History of Whalley*, which was under the editorship of the late Mr. John Gough Nichols, will be completed by the Rev. Ponsonby A. Lyons. At the time of Mr. Nichols's decease, more than 300 pages of the second and concluding volume, were in type.

SATURDAY, JANUARY 10, 1874.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

LITERATURE.

The Early History of Woodstock Manor and its Environs, in Bladon, Hensington, New Woodstock, Blenheim; with later notices. By Edward Marshall, M.A., formerly Fellow of C. C. C. Oxford. (Oxford and London: James Parker & Co., 1873, pp. 16 & 473, cr. 8vo.)

SOME forty years ago or thereabouts a prospectus was issued of a work, described as "preparing for immediate publication," on *The History and Antiquities of the Town and Honour of Woodstock*. In this prospectus the writer, a Mr. J. Graves, remarked that "it has often been a matter of surprise that a place possessing in itself such stores of information" (we presume he meant such subjects for stores of information) "should not hitherto have met with its local historian," and promised to supply this deficiency by bringing together all the records and memorials of everything that was interesting and curious. But his promise failed in fulfilment, for the work never appeared; and, in spite not merely of its widely-reaching historical associations, but of the added charm with which it had been enriched by the genius of our great novelist, this favourite resort of so many of our kings has remained without its historiographer until now that Mr. Marshall, not knowing of his precursor's abortive proposal, has given, in the volume before us, a very complete summary of all the occurrences and particulars which the most painstaking diligence could collect. It is strange that not only the whole county of Oxford itself, but such a place as Woodstock, has never yet found its historian; that the brief notices written (we believe by Dr. Ingram) for Skelton's *Illustrations of the Antiquities of Oxfordshire*, afford the only approach to a history of the county which we possess. From the large amount of landed property owned in it by many of the colleges at Oxford, of which the title-deeds for many centuries back are safely preserved in their muniment rooms, the materials for manorial, parochial, and family history are probably as abundant as in the case of any other shire, although perhaps not as easily accessible; but doubtless the day is not far distant in which these documents, so valuable to every searcher into local or personal history, will be carefully calendared as well as carefully preserved.* Probably the very wealth of existing material has assisted in deterring, and will still deter, writers from undertaking a task which, for any satisfactory accomplishment, would occupy a lifetime; and it is therefore a welcome contribution towards such an accomplishment when a competent writer like Mr. Marshall

completes a monograph of a particular place. Three such monographs have already been published by him, in the histories of Iffley, Sandford St. Martin, and Church Enstone; and several others have been published, or are in contemplation, by other writers, with reference to parishes in which they are specially interested. Such local records have, in the fulness of details in which they can indulge, an advantage over general county histories, which, unless written on the plan of that marvellous work Nichols' *Leicestershire*, and with the same disregard of pecuniary recompense, must necessarily be more compendious.

The first portion of Mr. Marshall's book gives the general history of the manor and town with considerable fulness to the year 1694, and then, more briefly, to the present time. The ecclesiastical history follows, which includes notices of the various chapels and chantries, as well as of the parish church of Bladon and its incumbents. It is remarkable that the town of Woodstock is simply a chapelry, under somewhat disputed conditions, to this small adjoining parish of Bladon; while Blenheim Park was constituted a parish of itself in 1858. Notices of collegiate and monastic estates, of almshouses and charities, of the municipal charters, and of the parliamentary history of the borough, conclude the volume, with an appendix of additional notes, and that boon to all careful readers, a very full index. For all the varied branches of his subject Mr. Marshall has collected information from every source within his reach; but the minuteness of the information prevents him from working up his accumulated particulars into the form of a continuous narrative; and they are consequently given, in a rather disjointed manner, in the form of annals. But the history of Old Woodstock, in whatever form it be given, is full of interest. The place which contained Fair Rosamond Clifford's hiding-place (whose story, sometimes unreasonably doubted, is, as Mr. Marshall remarks, with most persons regarded as the historical starting-point, although he carries that point far higher); which was the birthplace of the Black Prince; the supposed dwelling-place of Chaucer's son; the prison-place of Elizabeth in 1554; a favourite visiting-place of all its royal owners from Henry II. to Charles I.; and the death-place of the Earl of Rochester; is by these very names and by the scenes which they suggest, invested with an interest which is here well illustrated and sustained; although the author's strict regard to the precise boundaries of his subject (as well, perhaps, as the exigency of limited space) restrains him from digressions. Otherwise he might have told more of the legends relating to Fair Rosamond; e.g. of the fossilised tree which (as Rudborn relates) attested, by the fulfilment of her prediction of its change, that she died in a state of salvation; or of the visit of Henry II. to her tomb, when he himself composed, as vouched for in the dialogue called 'Dives et Pauper,' printed by Pynson in 1493, her traditional epitaph, which, however, appears by Mr. Marshall's quotations to have been used in Italy many centuries before. But he does not refer to the earliest (because contempo-

rary) allusion to the well-known play upon her name found in any English writer, namely, that which occurs in the treatise of Girald Barri *De Instructione Principum*, where she is described as being "non mundi quidem rosa juxta falsam et frivolum nominis impositionem, sed inmundi verius rosa vocata."

The pranks played by an ingenious royalist upon the Parliamentary commissioners who visited Woodstock in 1649 for the purpose of surveying the manor, and who destroyed a famous oak on account of its being called the king's oak, might also have been noticed a little more fully, considering that they were so entirely regarded as the work of diabolical visitors as to be included by Professor George Sinclair in his collection of manifestations of *Satan's Invisible World*; and that they have been rendered of world-wide fame by the novel of *Woodstock*, to which, singularly enough, Mr. Marshall only makes the barest passing reference in a foot-note.

We have noticed a few misprints which have passed uncorrected in the additional notes. For instance, the catalogue of Blenheim library was not published in 1872, as stated at p. 278, but privately printed; and at p. 144 it is said that King Charles was represented in the tapestry which decorated some of the rooms in the manor-house in the time of Henry VIII.

We ought to add that there are several lithographs from rare prints of the old manor-house and park, &c.

W. D. MACRAE.

The Dramatic Works of John Crowne. With Prefatory Memoir and Notes. Vol. I. (Edinburgh: William Paterson. London: H. Sotheran & Co., 1873.)

JOHN CROWNE is the author of nearly a score of plays, all of which (with one dubious exception) the world has very willingly let die. He has a niche in Disraeli's *Curiosities of Literature*, but is remembered chiefly by the mention made of him in Scott's *Life of Dryden* as the object of the capricious patronage of Wilmot, Earl of Rochester. That eccentric profligate had quarrelled with his old friend Mulgrave, Earl of Sheffield, with whom Dryden was on confidential terms; and as his "nerves proved unequal to a personal conflict with his brother peer," he determined to revenge himself "on those men of literature whom his antagonist cherished and patronised." To mortify Dryden, he recommended Elkanah Settle to royal favour, and when Settle had obtained an unmerited popularity he introduced Crowne as Court poet, to mortify both Settle and Dryden. In 1675 Crowne received the king's commands to write the masque of *Calisto*, and the epilogue proffered by the laureate was rejected. *Calisto* was successful, and its author was forsaken and lampooned by Rochester, though he retained the personal regard of the king.

On the discovery of the Popish Plot, Crowne ridiculed the Whigs in his comedy of the *City Politiques*, in which Shaftesbury, Oates, and Sir William Jones are exhibited. The affected pronunciation of the last-mentioned (under the name of Bartoline) is reproduced in the passages quoted by

* Mr. Marshall has had the advantage of the good example which Magdalen College has set herein, and is able, therefore, to give abstracts of several early deeds amongst its early muniments.

Disraeli. The Lord Chamberlain, Arlington, was secretly a Whig partisan, and tried hard to suppress the piece, but Crowne induced Charles to order its immediate performance. The editors have given the date of this play as 1675, the year in which *Calisto* was produced. But the Popish plot was not invented till 1678, and the correct date of the first edition of the play is 1683.

Charles promised Crowne that if he would but write one more comedy he should be provided for; and on Crowne's protesting his inability to devise a plot, good-naturedly gave him one in a Spanish piece, and heard him read his adaptation thereof, scene by scene as it was written. It was called *Sir Courtly Nice, or It Cannot Be*. The second title was ominous. On the very day of rehearsal Charles was seized with his last illness, and with him died Crowne's hopes of preferment. The comedy continued to be a stock piece "for upwards of a century," say the editors. The last edition in the British Museum Catalogue is 1735, but there is one of 1753, and possibly one yet later. Subsequently to the death of his royal master nothing more is known of Crowne, except the dates of his plays and poems, and the facts that he was alive in 1703, and that he is buried in St. Giles-in-the-Fields. Of his personal characteristics only one little trait is preserved, that he was called "Starch Johnny Crowne," from the "stiff unalterable primness of his long cravat." Jacob Tonson "used to say that Dryden was a little jealous of rivals. He would compliment Crowne when a play of his failed, but was very cold to him when he met with success. He used to say that Crowne had some genius, but then he added always that his father and Crowne's mother were very well acquainted."

The first of the three plays in this volume is "Juliana, or the Princess of Poland." It is preceded by a list of characters, giving so much of the history of each personage as may afford some clue to the confusions of a dull though extravagant plot—turning on a marriage in the dark of Demetrius, a Russian prince, to Paulina, the daughter of the Czar. She had been promised by her father to Demetrius as a reward for taking prisoner the Polish General, Ladislaus, Duke of Courland. On the news of the death of the King of Poland, the Czar, hoping to place his daughter on the vacant throne, offered her to Ladislaus. The Duke declined the proposal, but Demetrius, to avenge the slight put upon himself, contrived to make the lady believe that Ladislaus had repented his refusal and was ready to marry her—but in the dark,

"Because he would not trust, as he pretended,
The priest himself with such a dangerous secret."

The crazy superstructure is worthy of this foundation. There are mad scenes, and fightings, and cries of murder in nearly every act; songs without rhythm, and almost without sense; and a dance of two queens, two nuns, two ghosts, and two angels—an odd set. To relieve this weight of tragedy is the function of a comic land-lord whom Geneste considers as "amusing," and the present editor as a "facetious personage on whose clever acting so much

depended." A very slight taste of his quality will be sufficient for most readers:—

"Shall I keep the cloak-bag? or shall I cry the cloak-bag? or shall I sell the cloak-bag? Nay then I may chance to stretch for the cloak-bag; so I may if I should keep the cloak-bag, if the right owner should come with an officer, and find the cloak-bag: why then the devil take the cloak-bag, for never was anyone so plagued with a cloak-bag. Well, if nobody come to claim the cloak-bag, I'll sell the cloak-bag, buy land, and marry a lady with the cloak-bag, and then be dubbed a knight of the order of the cloak-bag."

The editors have given some interesting particulars concerning the actors in this play, which was very strongly cast, and we may remark that the majestic composure of Betterton is probably reflected in the lines assigned to Ladislaus—which are as rational and lofty as the vicissitudes of the plot and the abilities of the author would admit. A few passages from the rest of the play may be quoted as specimens of the dialogue—and of the bathos.

Joanna, Paulina's attendant, watches by her sleeping mistress, who suddenly starts up and flourishes a dagger:—

Joanna. How came she by that fatal instrument?
She stabs at something; oh! she makes me tremble:
I'll snatch it from her!

Paul. Oh, ungrateful man!
And dost thou then deride at my misfortunes?
Is this the recompense of my too fond
Unfortunate love? die in thy mistress' arms!
Bleed! fall! Ha! gone! whither? Where am I?
Was it a dream?

Joanna. She's had some frightful dream,
I see."

Colimsky tells the Princess of Poland:—

"Well, madam, I've had fortunate success,
And rais'd a force very considerable
For the small time I had to do it in."

Paulina (in whom the editors consider that the interest of the piece mainly resides) continually speaks in a strain of exaggerated distress; e.g.:—

"I view the angry ocean o'er and o'er,
And see a thousand waves, but not one shore."

In one scene she receives "some strange intelligence," to which she as strangely answers.

Alexey. Poland's in a blaze, all's in confusion,
And millions of reports fly to and fro;

The Duke lies sick of an envenomed wound,
But more of jealousy; I listen'd at his chamber
And heard him groan of both; his soul is bubbling,
A little heat would boil him to a height.

Paul. I'll go, I'll go. I'll sting his poison'd soul,
Put fire under his heart, I'll boil him, boil him,
Till in his rage he runs and kills his friend,
His mistress, and himself; then we'll be merry,
Be jolly, carouse, drink healths in their blood."

Theodore, the attendant of Ladislaus, thus replies to his master's pathetic and parting injunctions:—

"My lord, be sure I shall do this and more
Ten thousand times, if I'm not dead before."

The Princess, bent on vengeance, is thus admonished by her confessor:—

"Oh! madam, rule your haughty passions;
There is a ring of angels made about you,

To see how you'll come off in this great combat.

Jul. And let 'um make a ring—they to themselves
The pleasure of revenge would not deny,
Were they but flesh and blood as well as I."

There are not wanting sallies worthy of Drawcansir. Demetrius, threatened with death, replies:—

"Come, villains, level me right against the clouds,
And then give fire, discharge my flaming soul
Against such saucy destinies as those
As dare thus basely of my life dispose;
Then from the clouds rebounding I will fall,
And like a clap of thunder tear you all."

"This is Ercles' vein—a tyrant's vein—a lover is more condoling"—*videlicet*:—

Paul. Heavens! I walk about here in the dark,
And hear the labours of departing souls;
A thousand airy forms fly round about me,
And fan me into cold and dewy sweats."

"The History of Charles the Eighth of France," full of what the author, intending to be ironical, calls

"The whining noise of a dull rhyming play,"

is not worth reading. It is an imitation of the heroic repartee of which the fashion had been set in *Tyrannic Love* and *The Conquest of Granada*, but lacks the vigour which palliates the inflated absurdity too often recurring in those works. Charles and Ferdinand exchange the inevitable verbal carte and tierce; a magician duly summons spirits to sing and dance; and a ghost haunts an unhappy princess till "she raves—her reason is mislaid." When she is stabbed, "*She dies, and the Ghost goes off*."

The masque of "Calisto" was chiefly remarkable for the rank of the performers, and followed therein the traditions of that princely diversion. The parts of the heroine and her friend Nyphe were taken by the ladies (afterwards Queens) Mary and Anne, of Juno by the Countess of Sussex (daughter of Charles II. and Barbara Palmer, before the separation of the latter from her husband), and of Mercury by "Mrs. Jennings." The last-named has been identified by the editors with Sarah, afterwards Duchess of Marlborough, but it is probable that Frances, the elder sister, mentioned in Pepys as Mrs. Jennings, is meant. The editors' remark that she was a "very suitable representative for the envious nymph Psecas" is an oversight. That part was assigned to Lady Mordaunt. If, according to their conjecture, Lady Henrietta Wentworth, the Jupiter of the piece, then first saw the Duke of Monmouth, one of the dancers, it was the beginning of a real tragedy that ended with her death, broken-hearted, the year after his execution.

The masque itself is a curious compromise between indelicacy and prudery. Ovid's story of the nymph betrayed by Jupiter under the form of Diana is a singular subject for representation by ladies of the blood-royal—not to speak of Evelyn's religious heroine, Mrs. Godolphin (then Miss Blagge), who sustained the part of the divine huntress. And the oddity of the selection is heightened by the ingenious expurgation by which Crowne attempts to reconcile mythology with decorum. In his version there is no betrayal at all. Jupiter is struck moral by the invincible Calisto; and

to prevent any future mischief from her charms, he begs her to

"Accept the small dominion of a star."

Compared with the masques of Ben Jonson, "Calisto" is tedious and insipid. There is no beauty in the language, which is often that of flippant dulness trying to pass itself off as vivacity.

This dramatist of the Restoration finds congenial editors in the staunch Cavaliers who execrate the "infamous" General Assembly of 1638 and the "murder" of Charles I., and who regard with courtly complacency the follies of his son. They have evidently taken pains with their work, notwithstanding a few typographical errors—one or two affecting what sense there is in the passages wherein they occur. The accounts given of persons who came into contact with Crowne, or who acted in his plays, are interesting, though sometimes rather diffuse and episodic. From Lord Orrery (Crowne's patron) the transition is easy to his play of "Mustapha," and "by this declension" a passage in Evelyn relating thereto introduces us to a short notice of four actresses who married noblemen.

No specimen of Crowne's comedy is given in this volume, so that we have no opportunity of judging for ourselves whether, as alleged, he therein far excelled Dryden. His tragedy was thought "not contemptible" by his contemporary Langbaine, and even this praise "suffers under probation." The editors, however, assure us that the "Princess of Poland," with a little alteration, would still make a good acting play, far better than the ephemeral sensational dramas of the present time. Those who can contrast their memories of Downton and Liston with the performances of our day, may be allowed to be *laudatores temporis acti*. But do they not forget that the "Princess" was a sensation drama in the taste of that time, and, not being successful, was more "ephemeral" than many modern pieces, even allowing for their longer "runs"?

Besides, it is to be remarked that rubbish, such as is quoted above, cannot well acquire any additional value from the circumstance that it has been forgotten for nearly two centuries.

R. C. BROWNE.

Descriptive Sociology, or Groups of Sociological Facts. Classified and arranged by Herbert Spencer. Compiled and abstracted by David Duncan, M.A., Professor of Logic, &c., in Presidency College, Madras; Richard Scheppig, Ph.D., and James Collier. English: compiled and abstracted by James Collier. (London: Williams and Norgate.)

THIS is the first instalment of an enormous work projected by Mr. Spencer for the benefit of students of social science. He gives in the Provisional Preface the following account of its origin and design:—

"In preparation for 'The Principles of Sociology,' requiring as bases of induction large accumulations of data, fitly arranged for comparison, I, some five years ago, commenced by proxy the collection and organisation of facts presented by societies of different types, past and present; being fortunate enough to secure the services of gentlemen competent to carry on the process in the way

I wished. Though this classified compilation of materials was entered upon solely to facilitate my own work, yet after having brought the mode of classification to a satisfactory form, and after having had some of the tables filled up, I decided to have the undertaking executed, with a view to publication; the facts collected and arranged for easy reference and convenient study of their relations being so presented, apart from hypotheses, as to aid all students of social science in testing such conclusions as they have drawn, and in drawing others.

"The work consists of three large divisions. Each comprises a set of tables, exhibiting the facts as abstracted and classified, and a mass of quotations and abridged extracts, otherwise classified, on which the statements contained in the tables are based. The condensed statements, arranged after a uniform manner, give, in each table or succession of tables, the phenomena of all orders which each society presents,—constitute an account of its morphology, its physiology, and (if a society having a known history) its development. On the other hand, the collected extracts serving as authorities for the statements in the tables, are (or rather will be, when the work is complete) classified primarily according to the kinds of phenomena to which they refer; and, secondarily, according to the societies exhibiting these phenomena: so that each kind of phenomenon, as it is displayed in all societies, may be separately studied with convenience."

The divisions referred to are, (1) uncivilised societies; (2) civilised societies, extinct or decayed; and (3) civilised societies, recent or still flourishing. On each of these groups Mr. Spencer has had a gentleman employed for some time, who is responsible for the statements as extracted and condensed, Mr. Spencer being himself responsible for their classification and arrangement.

It is clear at a glance that the work thus undertaken is one of great magnitude and difficulty; and when one considers the high reputation Mr. Spencer has acquired by his sociological theories, it acquires a peculiar interest, as it will serve to show the nature and value of the material which he has used for constructing or testing his speculations. It is perhaps fortunate therefore that the first result of their labours which Mr. Spencer and his assistants have published, is the part that relates to England; as nearly everyone has sufficient knowledge of some part or other of English history to estimate the value of similar labour on less familiar fields.

Assuming that Mr. Spencer has not set his assistant Mr. Collier to an impossible task, and that Mr. Collier has executed his work with sufficient care and intelligence, we have here condensed into seven tables "the phenomena of all orders" presented by English society, "an account of its morphology, physiology, and development." The tables are followed by seventy folio pages of extracts, containing (at least in most cases) the authority on which the statements are made. Probably such an instance of compression has never yet been exhibited to the public: unless indeed in the case of school catechisms and other works of no scientific pretension.

It is quite impossible to give an adequate idea of the general effect of Mr. Spencer's design. No description could fully depict the extreme brevity and multifarious character of the contents of the tables, and still less would it be possible to convey a notion of the bewilderment that is caused by a consecutive perusal of the extracts. It will be enough

to present a few examples from different parts of the tables which may perhaps give a sufficient notion of their character and execution. Before however meddling with the tables, something ought to be said of six short paragraphs which stand at their head, in which the characteristic condensation is carried to the utmost. The first of these is entitled "Inorganic environment," and contains apparently the geographical and geological data required by the student of social science. This is followed by the "Organic environment," divided into Vegetal and Animal, the latter of which runs thus:—"Animals: Elk, bison, wild horse, wild boar, bear, wolf, tiger, hyæna (elephant), fox, wild cat, beaver, hare, whale. Fowl: eagle. Fish: pearls. Reptiles. Roman. Mule and pigeon. Large numbers of swine (fed on beech-mast) bred in early English period. Thirteenth century. Fish (eel, grayling, carp, and perhaps trout) naturalised." Mr. Spencer ought really to explain what interpretation is to be put upon his environments. The list of native animals is apt to suggest the contents of Kirkdale Cave, and might perhaps tend to mislead a foreign sociological student who was unacquainted with the natural history of more modern times. The "Sociological environment," and the physical, emotional, and intellectual character of the inhabitants, are disposed of with equal brevity and precision; and we are then in a position to commence the study of the tables, the first of which contains the British and Roman periods. This obscure period of our annals seems to have tasked Mr. Collier's learning and ingenuity considerably, and has no doubt mainly caused an allusion in Mr. Spencer's preface to the inadequate accounts at present attainable respecting many orders of facts.

Mr. Spencer's classification is of an exceedingly comprehensive character. The whole table is divided into the heads of Structural and Functional, each being subdivided into Regulative and Operative. The Regulative structural heading contains under it political, ecclesiastical, and ceremonial phenomena, with their various subdivisions; the Regulative functional contains sentiments, ideas, and language; while the Operative functional contains under the head of Processes columns for distribution, exchange, production, arts, rearing, &c.; and under the head of Products for Land-works, habitations, food, clothing, implements, weapons, and æsthetic products. It must be admitted that it would be rather hard on Mr. Collier to expect that he should fill all these columns with judiciously selected facts about the ancient Britons; but he has certainly tried very hard, and has occasionally avoided blank columns by inserting statements that can scarcely be of much use to the sociological student. In the first column (marital), for instance, he has an exceedingly confused paraphrase of a passage of Cæsar, which opens with the statement, "Polyandry: ten or twelve families lived under the same roof, and had wives in common." And he follows up this in the corresponding Roman section by the entry, "Right of *conubium* (legitimate marriage) acquired as part of privileges of citizenship." This looks as if Mr. Collier had come to the conclusion, that the provincial subjects of Rome could contract no legitimate marriage until the edict

of Caracalla. Four brief entries give us the political organisation of the Britons, commencing with the statement that the tribe was the unit (though of what, Mr. Collier does not state), and ending with an assertion (followed, it must be said, by a point of interrogation) that the Druids made the laws and administered justice. Under the head of Laws of Intercourse, we have a solitary fact that torques (of gold and bronze) were worn by the chiefs. But this is compensated under the head of Religious Ideas and Superstitions, where the information is unusually abundant; commencing with a list of gods (one of whom is equal to Mercury and Hercules), and proceeding thus: "Local genii and nymphs, sun elves. Worshipped planets; some traces of fetichism; oak and mistletoe sacred; neighing of horses and cries of birds ominous. Serpent worship (?). Fowl, hare, and goose held sacred," &c. Unfortunately, however, there is not to be found in the extracts a single scrap of authority for this indiscriminate adoration, except in so far as the oak and mistletoe are concerned; but instead, we have a valuable glimpse into the state of Mr. Collier's mind by this entry in brackets at the close of his authorities for the British and Roman periods: "We find a singular mixture of Eastern deities and gods from Africa, Germany, Gaul, &c." Every column in this period would afford satisfactory basis for comment, if not for sociological theories; but perhaps it is as well to follow the course of "development" which lands us first amongst the Anglo-Saxons, who are disposed of in the next table, and then in English history since the Norman conquest, which occupies the remaining five.

As a fair average example of the style of work in periods where facts are numerous and easily accessible, we may take Mr. Collier's account of general public affairs during the busy time from the defeat of the Armada to the meeting of the Long Parliament:—

"Ranks: Dignity of Baronet created. Compulsory acceptance of Knighthood compounded for. *Executive*: 1597. Forty-eight bills out of ninety-one vetoed. 1606. None vetoed. 1601. Royal Secretary, now called Principal Secretary of State. 1630-1640. Drew up reports at conclusion of sittings of Privy Council, but still subordinate there. 1603-1605. Royal prerogative limited (1) by power of King to interfere with parliamentary elections, and to bind the subject by proclamation being successfully disputed; and (2) by specific growth of power of House of Commons. Cabinet Council exists apart from main body or Privy Council. *Judicial*: 1603. Intervention of King in Courts. Tendency to limit jurisdiction of Chancery. Power of Star Chamber increased, exercising arbitrary jurisdiction, and inflicting severe punishments. Torture declared illegal, but the pillory, &c., in use. *Legislation*: 1625-1640. Struggle between King and Parliament. Petition of Right asserts the illegality of arbitrary detention, of compulsory loans, of tonnage and poundage levied without consent of Parliament."

The authorities for this statement are four extracts from Fischel's *British Constitution*; one from a *History of British Commerce*; and one from Hallam's *Constitutional History*. Two of these extracts relate to facts omitted in the table, and the greater number of the points contained in the table are not to be found in the extracts. But the passage itself contains nearly as many

errors as it does sentences. The Clerk of the Council and not the Secretary of State drew up the reports at the close of the Council sittings, if indeed Mr. Collier refers to the reports which are entered in the Council Registers. The Cabinet Council had no separate existence at this time, except in the rudimentary form of temporary committees—usually on foreign affairs. The power of the Star Chamber was not increased, although it was exercised with greater frequency and severity. The Petition of Right makes no mention of tonnage and poundage, and Charles asserted afterwards, with much apparent probability, that neither party had any thought of including it under the word "taxes." On other points, like "tendency to limit jurisdiction of Chancery," "Intervention of King in Courts," Mr. Collier has probably escaped error by avoiding detail. We must, however, admit that in one respect Mr. Collier's errors are of little consequence, as any student of sociology who was willing to construct theories on such a foundation could probably have come to the same conclusions, although Mr. Collier's details had been wholly different. Mr. Collier's statement of religious ideas during the same period forms a good companion to his political history, and he has decidedly signalled himself in a brief paragraph relating to literature, by omitting all mention of dramatic poetry. It is really impossible to speak well of any part of Mr. Collier's work. The statements made are frequently erroneous, and sometimes absurd; many of them are unsupported by the extracts which serve as authorities; and very often even when an extract is found corresponding to the statement in the table, Mr. Collier has condensed it in such a fashion as to make the condensation bear no resemblance to the original statement. A droll instance of this last vice will be found under "Religious Ideas and Superstitions from 1640 to 1660," where the odd-looking statement appears, "Puritan conception of Deity said to be Arabian." The "authority" for this is a harmless rhetorical passage, apparently from Craik's *English Literature*, to this effect, "The Oriental conception of the Hebrew God had stamped itself on the minds of a Western people like the English, until it wielded as omnipotent a sovereignty over the conscience of the Puritan farmers, as it had exercised over the acts of the Hebrew people among the deserts and mountains from which it sprang." These kinds of inaccuracies are certainly bad enough, but Mr. Collier's work appears even worse when one takes a column at a time, instead of a detached statement of fact. There is no clear trace that he has any perception of the relative value of the different facts he has come across in the 170 volumes which he has consulted. Even in legal and political history, where one would have thought he could not have gone far wrong, he is constantly putting trifling incidents on the same level with important changes; but the main fields of his exploits in this way are certainly those columns where he has had no further guidance than his own instinct and the directions of his employer. "Habits and customs," "Religious ideas," "Morals," &c., are all fertile with instances in point. The moral and religious columns for the present

century, for example, may enable anyone to judge of his capacity in this way. Most of the information under the head "Morals" ought to be transferred to the heading of "Law and Politics;" but amongst the few statements that remain (three or four at most), we find one for which Miss Martineau is made responsible, that in 1830 there were "instances of practice of poisoning for the gratification of selfish passions"! The religious column is equally good, as after a little information about Irvingites, the spread of transcendentalism, Anglican and liberal movements in the English Church, and the Gorham controversy, it winds up with the two following entries:—"1849. Consciousness arises in the Established Church of the spread of free thought;" and "Considerable survival of pagan superstitions and usages, especially in remoter districts; worship of fire and of the moon; passing children through trees, &c., to cure disease. In less accessible districts witches still believed to live." No doubt much of Mr. Collier's confusion must, in justice to him, be attributed to the exigencies of Mr. Spencer's classification, as some of the columns could scarcely be very easily filled up, without trenching on the province of others. The column headed "implements" has evidently been a sad source of trouble to Mr. Collier from the beginning, as he has been obliged to use some of the most obvious resources under other heads. His list from 1688 to the present day has entries relating to these matters:—House furnishings, marine chronometers, buttons, snuffboxes, carpets, rosewood furniture, &c., agricultural implements, locks, steel pens, lucifer matches, steam ploughs, reaping machines, composite candles, and electric clocks.

But putting aside any further discussion of Mr. Collier's capacity to do Mr. Spencer's work, and only remarking that Mr. Spencer, to judge from the Preface, is perfectly satisfied on this point; one is forced to ask, what possible good can result from this scheme, supposing it to be decently carried out? It must be clearly kept in view that Mr. Spencer's aim is no less lofty than to supply the student of social science with "data standing towards his conclusions in a relation like that in which accounts of the structures and functions of different kinds of animals stand to the conclusions of the biologist." He has no mere wish to aid the historical student by an abstract of facts and an index of authorities, and indeed the work in its present form is quite useless for that purpose. His design apparently is to present the student with a work taking the place of other histories, and which may by itself be sufficient for the purpose of drawing and testing sociological conclusions; and it is therefore necessary to suppose that Mr. Spencer considers these seven tables, with their accompanying seventy pages of scraps, to be such a comprehensive and detailed statement of the complicated social phenomena of England from the earliest times, as may form part of a trustworthy foundation for the construction of a sociological superstructure. It would be much nearer the truth to say that they are of no use for any purpose whatever. There is no chance of anyone using them who is already acquainted with the history

to which they relate; and to one who is unacquainted with it, they would either be misleading or unintelligible. Even supposing that Mr. Spencer got them done with as great accuracy and intelligence as possible, they would still be useless or even mischievous for the purpose he has in view. It would be the merest impertinence for Mr. Spencer's sociological student to draw conclusions from such miserable data as, for example, are afforded in the case of English religious ideas and superstitions, from the Druids to the Gorham controversy, within the limits of seven columns of an inch wide; or, in the case of English law, from a table which is on the same scale as a table of contents to Reeves' History. We have had too much already of the tendency on the part of framers of social and other sciences to deal superficially with history; and it is a serious misfortune to the public, and a serious discredit to Mr. Spencer, that he should lend his reputation to such a pretentious encouragement to superficial study. Neither Mr. Spencer nor his assistant seems to have dreamed for a moment that anyone could wish to go beyond the class of authorities cited, and yet these are not, in the historical sense of the word, authorities at all. No doubt the 'Pictorial History of England,' for example, is a very admirable book, infinitely superior in every way to the present work, but then it, or rather a little bit of it, is scarcely the authority one would wish for data that are to form the basis of some important conclusion. What Mr. Collier and Mr. Spencer, if they continue the task in the same style, are to make of the (in some respects) less accessible history of other European countries, is only a matter of respectful conjecture; but there is at least the hope that, if the authors are not made wiser by the appearance of their first part, the public may be.

ALEXANDER GIBSON.

Mission from Cape Coast Castle to Ashantee, with a Descriptive Account of that Kingdom. By the late T. E. Bowdich, Esq. New Edition, with Introductory Preface by his daughter, Mrs. Hale. (London: Griffiths & Farran, 1873.)

MRS. HALE tells us in her introductory preface that she has been encouraged to republish this work of her brave and talented father chiefly on the earnest recommendation of Mr. Andrew Swanzy, whose recent letters in the *Times* show him to be thoroughly conversant with the affairs of the Gold Coast. In his letter to Mrs. Hale, quoted at the end of the introduction, he writes:—"The enquiry excited fifty years ago by the defeat and death of Sir Charles McCarthy is again awakened, and every one asks, Where and what is Ashantee? At such a crisis we turn for an answer to the few books written on the subject, and especially to the able work of your late father, copies of which cannot be found to supply even those personally interested in Africa, and the public are deprived of the useful and reliable information to be derived from Bowdich's *Mission*, information as applicable now as when first offered to the public half a century since." It is interesting to learn that Mr.

David Morier and Professor Owen had before suggested its republication. The merits of this able work have indeed always been recognised by naturalists and geographers, and it deserves a better fate than to be republished as a book for an occasion, to serve the passing popular interest in the generally little known kingdom of the Ashantees. It is a proof of its high value as a work of enduring authority that the French translation of it is esteemed on the Continent as a standard work on North-Western Africa.

Indeed Bowdich was no ordinary explorer of unknown lands. He was the author of an excellent work on Conchology, published in Paris in 1820. In 1821 he published in London his *Geography of North West Africa and An Essay on the Superstitions, Customs, and Arts common to the Ancient Egyptians, Abyssinians and Ashantees*; in 1824 *The Discoveries of the Portuguese in Angola and Mozambique*; and in 1825 the work by which he is best known and esteemed amongst naturalists, *Excursion to Madeira and Porto Santo*, which was translated the same year into French, with the addition of valuable notes by Cuvier and Humboldt.

In the present republication of his *Mission* in octavo, the first part (the account of the Mission) takes up from page 1 to 177; and the second part (the description of the kingdom of Ashantee) from page 178 to 292. The edition is not a "reprint," as Mrs. Hale terms it. The narrative of the mission is given as it stands in the original work; but in the second part some chapters have been omitted ("which were hardly suitable to the present time"), and also the extract in the appendix from Meredith's *Account of the Gold Coast*—omissions which destroy the value of the present edition as a standard work of reference. Besides this, no attempt has been made to edit the edition.

According to Bosman (*Description of Guinea*, from the Dutch, 1721) and Barbot (*Description of Guinea and Angola*, Churchill, vol. iv. 1744-46), the Ashantees were first heard of by Europeans about 1700; and an Ashantee army for the first time reached the coast in 1807. The Ashantees invaded Fantee again in 1811, and for the third time in 1816, inflicting the greatest miseries on the Fantees.

"Famines, unmitigated by labour, succeeded the wide waste of the Fantee territory, the wretched remnant of the population abandoning itself to despair; and the prolonged blockade of Cape Coast Castle in the last invasion engendered so much distress and hazard that the government, having averted imminent danger by advancing a large sum of gold on account of the Fantees, earnestly desired the committee (of the British African Company) to enable them to venture an embassy to deprecate these repeated calamities, to conciliate so powerful a monarch, and to propitiate an extension of commerce. By the store ship which arrived in 1817 the African committee forwarded liberal and suitable presents, and associated scientific with the political objects of the mission in their instructions."

The embassy was composed of Mr. James Governour of Accra, Messrs. Bowdich and Hutchinson, and Assistant-Surgeon Tedlie; was well received in Coomassie by the King and his people; and in the end succeeded in gaining all it was sent to obtain; which was principally such a knowledge of Ashantee as

Bowdich succeeded in acquiring, and has given us in his account of the mission. The direct political results of the mission were the acknowledgment by the African Company of the subjugation of the Fantees by the Ashantees, and consequently of the Ashantees as the ground landlords of our own possessions on the coast, hitherto leased of the Fantees. At the same time a vague British protectorate over the Fantees was admitted by the Ashantees, and most probably in the sense of our natural obligation as powerful neighbours of the Fantees and virtual delegates on the Coast of the paramount power of Ashantee.

The account which Bowdich gives of the public entrance of the mission into Coomassie can only be compared with the scenes in the City of the Moon in *Babil and Bijou*, but it is too long to extract here. The following is the description of a dinner-party given to the embassy by the King:—

"Monday, August 25, we started soon after seven o'clock, and proceeding in a N.E. direction, crossed the marsh close to the town, where it was about two feet deep and one hundred and fifty yards broad. We travelled the path to Sallagha, through a beautiful country, abounding in neat crooms (villages), of which we passed through seven, and environed by extensive plantations. The path was wide and so nearly direct that the eye was always in advance through beautiful vistas varied by gentle risings. The iron-stone still prevailed. The king received us in the market-place, and inquiring anxiously if we had breakfasted, ordered refreshment. After some conversation we were conducted to a house prepared for our reception, where a relish was served (sufficient for any army) of soups, stews, plantains, yams, rice, &c. (all sufficiently cooked), wine, spirits, oranges, and every fruit. The messengers, soldiers, and servants, were distinctly provided for. Declining the offer of beds, we walked out in the town and conversed and played draughts with the Moors, who were reclining under trees. The King joined us with cheerful affability, and seemed to have forgotten his cares. About two o'clock dinner was announced. We had been taught to prepare for a surprise, but it was exceeded. We were conducted to the eastern side of the croom to a door of green reeds, which excluded the crowd and admitted us through a short avenue to the King's garden, an area equal to one of the large squares in London. The breezes were strong and constant. In the centre four large umbrellas of scarlet cloth were fixed, under which was the King's dining-table, heightened for the occasion, and covered in the most imposing manner; his massive plate was well disposed, and silver forks, knives, and spoons (Colonel Torrane's) were plentifully laid. The large silver waiter supported a roasting pig in the centre; the other dishes on the table were roasted ducks, fowls, stews, peas-pudding, &c., &c. On the ground on one side of the table were various soups and every sort of vegetable; and, elevated parallel with the other side, were oranges, pines, and other fruits; sugar-candy, Port and Madeira wine, spirits, and Dutch cordials, with glasses. Before we sat down the King met us, and said that as we had come out to see him, we must receive the following presents from his hands: two ounces four ackies (an ackie equals five shillings) one sheep, and one large hog to the officers, ten ackies to the linguist, and five ackies to our servants. We never saw a dinner more handsomely served, and never ate a better. On our expressing our relish, the King sent for his cooks, and gave them ten ackies. The King and a few of his companions sat at a distance, but he visited us constantly, and seemed quite proud of the scene; he conversed freely, and expressed much satisfaction at our toasts—The King of Ashantee and King of Eng-

land, the Governor, the King's captains, a perpetual union (with a speech, which is a *sine qua non*), and the handsome women of England and Ashantee. After dinner the King made enquiries about England and retired, as we did, that our servants might clear the table, which he insisted on. When he returned, some of the wine and Dutch cordials remaining, he gave them to our servants to take with them, and ordered the table-cloth to be thrown to them, and all the napkins. A cold pig, a cold fowl (with six that had not been dressed), were despatched to Coomassie for our supper. We took leave about five o'clock, the King accompanying us to the end of the room, where he took our hands, and wished us good night. We reached the capital again at six, much gratified by our excursion and treatment."

Again:—

"The most entertaining *délassement* of our conversation with the chiefs was to introduce the liberty of English females, whom we represented not only to possess the advantage of enjoying the sole affection of a husband, but the more enviable privilege of choosing that husband for herself. The effect was truly comic; the women sidled up to wipe the dust from our shoes with their cloths, and at the end of every sentence brushed off an insect, or picked a burr from our trousers; the husbands, expressing their dislike in a laugh, would put their hands before our mouths, declaring that they did not want to hear that palaver any more, abruptly change the subject to war, and order the women to the harem."

The Ashantees, judged indeed by their ruling classes, are a remarkably courteous, dignified, frank, and hospitable people; jealous of their honour, proud, and warlike. They are, however, remarkably licentious and superstitious, and when their passions are roused, violent, cruel, and oppressive. But all who have had any practical experience in the controul of half savage and barbarous people will agree in holding them a contemptible enemy in the face of the smallest force of disciplined Europeans, and a people once subdued most easy to govern in content and peace by civil administration alone. It is to be hoped, therefore, that we shall not hastily withdraw, on the conclusion of the present expedition against Coomassie, from the Gold Coast, but rather that we may see our way to include Ashantee within the British protectorate. The surrender of British sovereignty on the Gold Coast will certainly not sever our commercial connection with it, dating from the sixteenth century. The Messrs. Swanzy alone, who rent the fortified posts from which the French have temporarily withdrawn, have a fleet of forty steamers engaged in the trade of the Asseni and Tando rivers. The commerce of Europe with the Gold Coast must grow with the increased demand of the world for tropical products, and it will be to our profit that it should grow in our hands; and nothing would develop it so rapidly as the annexation of Ashantee. To withdraw from our protectorate altogether would be to leave our merchants—if they were not driven out by the Germans and French and others—exposed to the temptation of constant quarrels with the natives, involving us from time to time in petty savage wars, which in the end would cost far more than the permanent occupation of the country. It is quite idle to talk of the exhaustion of the empire by foreign conquests, whilst emigration to America and Australasia con-

tinues unabated; and as Europeans can neither colonise the tropics nor afford to leave them undeveloped, we ought not to be careless of confirming and extending our dominion over them whenever and wherever we have the opportunity, as now, in North-Western Africa. But the negro will never be governed by a Parliamentary Minister sitting at the head of an office in London; he can only be ruled by the personal force of character of men like John Swanzy, Thomas Bowdich, and Governour George Maclean.

GEORGE BIRDWOOD.

The Religious History of Ireland, primitive, Papal, and Protestant, including the Evangelical Missions, Catholic Agitations, and Church Progress of the last Half-century. By James Godkin, Author of 'Ireland and her Churches,' &c. (Henry S. King & Co.)

OF late years we have had much talk about Ireland, both in Parliament and in the newspapers; but the facts of Irish history have been too little taken into account. An impartial examination of the condition of Ireland in past times, and especially of its religious history, is at the present day more desirable than ever. But we cannot say that the volume before us does anything to supply this desideratum. It bears not the slightest trace of original research, and the author has not even availed himself of the copious stores of new information supplied by the Record publications. For his facts he gives us the authority, sometimes of Dr. Todd, and sometimes of Mr. Froude or Mr. Prendergast. Hardly once in the whole book do we light upon a reference to an original source of information. Yet it is upon this flimsy and unsatisfactory study of second-hand authorities that Mr. Godkin has undertaken to be our guide in a subject on which, as he himself informs us at the outset, impartiality is not easily to be attained. If the history of Ireland had been long since thoroughly sifted and freed from all sorts of party and religious prejudices, there might have been some value in a compendium of well-ascertained facts compressed within the limits of little more than 300 pages. As it is, Mr. Godkin's book is in no wise to be relied on. While professing to be a history, and rebuking in lofty terms the partiality of other writers, it is really quite as bigoted and as prejudiced a production as we remember to have met with anywhere. In point of fact, the aim of the work is not historical at all, but political and partisan.

Yet the fault is not, certainly, that Mr. Godkin does not go far enough back. St. Patrick and St. Columba are both introduced to the reader. It is true they lived some centuries apart, and Mr. Godkin treats of the later before the earlier. Still both of them are tolerably early, and there they are in Mr. Godkin's pages, with a good deal of what Dr. Todd has said about the one, and the Duke of Argyll about the other. Then we have a disquisition upon those wonderful Round Towers that have puzzled so many antiquaries; after which we come to the Reformation. For our own part we shall pass by entirely these matters of remote antiquity, and come at once to the great central facts of the religious history of Ireland.

Nothing, certainly, is more grossly misconceived in our day than the manner in which the Reformation was established in that country in the days of the Tudors. We hear it constantly said that Henry VIII. and Elizabeth imposed their own religion on an unwilling population; that they set up a new Church of their own and endowed it with the spoils of Roman Catholic foundations. It is not, perhaps, surprising that this view should have gained currency with the many who are not readers of history; but as a matter of fact it is utterly unfounded. Mr. Godkin, however, accepts the ordinary fallacy, and adds to it other fallacies peculiarly his own. According to him there had been two Churches in Ireland from the very first, and when the one turned Protestant the other turned more distinctly Catholic. "Until the time of the Reformation," he tells us, "there had been the Papal Church of the Pale, which came in with the English colony, and kept up its communion with Rome and Canterbury; and there was the national Church of the Irish, which never could be brought into complete subjection to the Papacy." It is very unfortunate that we are left in the dark as to the sources from which Mr. Godkin derived this extraordinary piece of information. Of course we are aware that at an early period Irish Christianity was for a long time independent of Rome; but that, after the English conquest, the Papal Church of the Pale was a totally different communion from the Church outside the Pale is a statement for which we should like to have other authority than Mr. Godkin's.

Mr. Froude, perhaps, is answerable for having misled our author on this point. On any statement of Mr. Froude which reflects upon the Irish people Mr. Godkin is always ready with an indignant answer; but where his remarks go to flatter Irish prejudices Mr. Froude's facts are invariably taken for gospel. A most unhappy argument used by that historian in answer to Dr. Mant is quoted by Mr. Godkin as perfectly conclusive evidence that the majority of the Irish bishops did not accept the Reformation. The bishops of Kildare and Meath were deprived for refusing the oath of supremacy to Elizabeth. The rest, Dr. Mant inferred, must have taken it, else they would have been deprived likewise. But this, Mr. Froude maintains, is altogether a fallacy. "The Archbishop of Dublin, the bishops of Meath and Kildare were alone under English jurisdiction when Adam Loftus was made Archbishop of Armagh." In short, Mr. Froude seems to be of opinion that English jurisdiction did not extend beyond the Pale at all,—a theory strangely at variance with innumerable facts both in civil and in ecclesiastical history. The simple truth is that for centuries before the Reformation the bishoprics in every part of Ireland were as much at the King's disposal as they were in England, nor would any of the English sovereigns have allowed his prerogative to be systematically set aside by the Roman pontiff. To say that the Pope invariably bestowed benefices according to the King of England's expressed desire would no doubt be an over-statement; but that this was the general rule must be apparent to any one who is acquainted with the collection of

papal bulls relating to Ireland in Theiner's *Monumenta*. And as to the particular era referred to by Mr. Froude, Mr. Brewer has given in his Introduction to the third volume of the *Calendar of Carew MSS.* (pp. xlii.—xlv.) not one or two, but a host of instances at the commencement of the reign of Queen Elizabeth of the exercise of royal supremacy both in ecclesiastical appointments and in other matters in places beyond the Pale. Mr. Godkin might also have seen a complete answer to Mr. Froude's view on this subject in an article by Mr. Nugent in the *Contemporary Review* for April 1867.

With this totally wrong conception of the state of matters before the Reformation, of course Mr. Godkin has not the smallest comprehension of what the Reformation itself really was. He will have it that the native religion was persecuted, and that it was as a relief from persecution that the native chieftains were glad to accept the aid of the Pope and Philip of Spain against Elizabeth. On what authority we are asked to believe this Mr. Godkin does not tell us. The Poet Moore, who as a Roman Catholic Irishman might have been expected to sympathise with his oppressed fellow-countrymen, gives a very different account of the matter in his *History of Ireland*. Taking notice of a stipulation for the free exercise of religion by the Irish chiefs in 1596, towards the end of Queen Elizabeth's reign, he quotes the authority of a writer of that period for the statement that "never before had this free exercise of religion been either punished or inquired after." And that this was the plain and simple fact we have no doubt every candid inquirer will confess. It was not on account of religious persecution that the Irish people hated the English Government. Religion was not to them a matter of such great importance. Least of all was it a matter of vital moment whether the Pope or the English sovereign were called supreme head of the Church. In the days of Henry VIII. the Irish chieftains had to a man made their submission to the King and abjured the usurped supremacy of "the Bishop of Rome." In England there were martyrs for the old faith—men like Sir Thomas More and Bishop Fisher and Friar Forest. There were also martyrs for Protestantism under Mary. But in Ireland there were no martyrs either on the one side or on the other. No Irishman, so far as appears in history, ever sacrificed his life for a doctrine; nor did even Irish rebels at first think of mixing religion with their quarrel. They were not more quiet under Mary than they had been under Edward VI., but a good deal less so. They lived in comparative tranquillity under Elizabeth for nearly twenty years. It was only when the Catholic powers of Europe leagued together—when the Pope sent Dr. Sanders into Ireland as his legate to stir up rebellion—when consecrated gifts from his Holiness were used to seduce the Irish chieftains from their loyalty, or confirm them in their disaffection, and when a crusade was proclaimed in her own dominions against an excommunicated sovereign,—it was only then that the people began to exhibit a devotion to the Pope they had never shown before. It was not that they were embittered against

England on account of their religion, but they eagerly embraced a religion which lent its sanction to rebellion. Thus, after clergy and people had for many years quietly accepted the Reformation, they at last revolted and formed themselves into a Roman Catholic Church.

Facts like these, attested as they are by an amount of evidence which it is impossible to gainsay, ought, one would think, to have occupied a prominent position in any work professing to be a "religious history of Ireland." But to Mr. Godkin these facts are evidently quite unknown, and a number of baseless theories fill their place. In short, it is sufficiently obvious that history is a region in which Mr. Godkin is not at home; and we may as well forbear to follow him further, especially as he might lead us into the dangerous practice of mixing up the politics of the present day with matters purely historical. Politics, as we have said, are the real object of the book, and political sympathy may create for it an interest not due to its intrinsic merits. For us the inquiry into recent legislation is simply forbidden ground. The author may or may not be justified in believing, with many others, that Protestant ascendancy has been the bane of Ireland, and in looking for the best possible results, in religion as in other things, from Mr. Gladstone's policy of Disestablishment. But this is a question which must be left to the future historian to determine. It will certainly not be set at rest by such historians as Mr. Godkin.

JAMES GAIRDNER.

CURRENT NOVELS.

Florence; or, Loyal Quand Mème. By Florence Armstrong. (Samuel Tinsley, 1873.)

Not to be Broken. By W. A. Chandler. (Samuel Tinsley, 1874.)

The Heir of Reddesmont. (Samuel Tinsley, 1874.)

Tower Hallowdeane. (Samuel Tinsley, 1874.)

WITH one exception, the novels in this list must have fulfilled the end of fiction, and given what pleasure they can bestow before they reached the public. It is impossible to suppose that even the most confirmed novel reader can derive any amusement or excitement from these masses of bad taste, bad grammar, stilted language, and incredible incidents. Absurd as their plots are, there is scarcely anything in them that seems so remote from probability as the fact that they have reached the dignity of print, and of orthodox red and green covers. There is, however, one exception. *Florence; or, Loyal Quand Mème*, is a domestic tale that nearly rises to mediocrity. It is described as "a book for girls, &c., &c." meaning, we suppose, boys. The author writes *virginibus puerisque*. Whether it is altogether good for maidens of fourteen to learn "that, though a child, Miss Florence had a heart," at that early age, and was an object of tender interest to a young gentleman who had passed the first examination for the Indian Civil Service, is a question for the mothers of England to decide. The scenes in which Florence's first love affair is described are very pretty, and

she only resembles Blanche Amory in the rapid growth, not the erratic development, of her passions. When her father interferes, which he does not do at all in a truculent way, she resigns herself like a good girl to nursing an invalid cousin, and gently, yet firmly, rejecting all the young men, and some of the old ones, in the story. There are no incidents in the narrative, except that the heroine falls into a pond when skating, but her "skill in swimming" is naturally of great service here, and the reader is not long left in anxiety about her fate. In the end Florence's loyalty is rewarded, and she accompanies her civil servant "deep into the rising day," to our oriental dependencies, where he is a collector. The book is quite innocent, and free from defects of taste.

Not to be Broken is mainly remarkable for its extraordinary vulgarity. *Tower Hallowdeane* is madder, and *The Heir of Reddesmont* is more wonderful in its stupidity; but for mere offensive coarseness *Not to be Broken* is unsurpassed. The son of a middle-class family "keeps company," as the author would say, with a girl supposed to be the daughter of the landlord of a low coffee-house near Spitalfields Market. The society of the coffee-house, and of the milliner's shop in which the girl is employed, is described with a grossness which we trust is not true to nature. The girl turns out to be the child of a man who ruined himself on the turf, and she marries her lover, Herbert Chimpainter. At first he has little to find fault with, except that she is careless in her use of the subjunctive mood, but he soon finds reason to suspect that she has been guilty of graver improprieties. He is consoled by his father, who tells him that what he suspects of his wife is true of his mother, and is really a matter of very little importance. The girl's character is afterwards cleared in a kind of way, and the hero is left to enjoy the position of husband of *la grisette mariée*. The delicacy of the ideas is equalled throughout by the style, and the heroine sometimes speaks with a *naïveté* worthy of the days when *Astræa* is reported to have trod the stage so loosely.

It will be enough for most readers to know that *The Heir of Reddesmont* is a kind of parody of the Tichborne case. Given a true heir, a false heir, a number of Jesuits, an old herbalist suspected of sorcery, a mysterious stranger, a French maid who supposes *Camille* to be French for a camelia, and an heiress who wears light-blue satin and diamonds at luncheon, the problem is, to make an absolutely unreadable novel. This problem is ably solved. The only novelty in the plot is that the true heir turns out to be a Jesuit. The characters sometimes speak in blank verse; in the entire absence of reason it would be a relief if they would talk in rhyme.

This solace to the critic is provided by the author of *Tower Hallowdeane*. His characters, who say *zounds*, and drink "canary" in the nineteenth century, almost always express themselves in blank verse, and occasionally in lyric metres. Here is a specimen. Mr. John Scott, who is, we think, the hero—but as *all* the persons speak in verse, and as *all* are killed at the end, it is not easy to be certain—thus addresses his home:

"I speak the words, yet where's the warmth of joy?
Home! why, I sigh, and surely seem to hear
The far winds mourning with an ocean freedom,
The near rolling with silver beat and plash,"

and so on. Mr. Scott was the son of a poacher, who had beaten out the elder Mr. Hallowdeane's brains, at the instance of Mr. Hallowdeane the younger. This gentleman, who is what Sydney Smith called a "squarson," sometimes "mixes with wild sparks of lineage and condition, drops the reverend, and calls himself squire." He does not conceal from himself that he has "wild and wayward moments," but he tries to expiate these by praying in the open air and preaching at picnics. On his wedding tour he yields to a wild and wayward impulse, kills his wife, and burns the house in which he lodges. It then flashes across him that "the Germans will drag me before one of their strange, severe tribunals," and he flees in search of a British jury, or of the extenuating circumstances of French criminal procedure. On reaching England he poisons himself along with Mr. John Scott, who had been his rival, and Fern Hallowdeane, a lady whom he had once loved with all the passionate vigour of his wild and wayward nature. He is a striking character, and in his repentant moments is something like what Mr. Bulstrode in *Middlemarch* might have been, if he had gone mad after reading all the novels in the penny weekly papers.

The words in which he proposes to his cousin—not the lady he killed in Germany, but the one he poisoned in England—are well worth quoting:—

"I talked of marriage, Fern; I was about to say that every marriage is the supportress of a cloud that may pavilion cares, showered sadly down amid babes' shrieks and spillings of hot broth, and snarls of tin trumpets terrible. Sit down; why are you colouring? Of what sort are your thoughts on wedlock?"

"I think it must be a very potent philosophy that can stay us from it," said Fern, gently. Perhaps she had heard of Arthur Schopenhauer. At all events, she gave an evasive reply to her passionate lover."

We hope we have said enough to show that these novels are books to be avoided; we are certain that remonstrance would be thrown away upon the people who have had the hardihood to write them. There is one possible excuse for such performances as *Tower Hallowdeane*, and it would not be a valid excuse in the eyes of the moralist. A wild and wayward character, like Hoarsute Hallowdeane, might have composed such a work to be afterwards pleaded in proof of insanity, when one of his trifling eccentricities caused him to be dragged before a "strange, severe tribunal."

A. LANG.

MINOR LITERATURE.

Arlon Grange: a Christmas Legend. By William Alfred Gibbs. (Provost & Co.) We are puzzled to tell what reason Mr. Gibbs has to exist: he manages to sell his poems, which looks as if he were a good man of business, but then he has invented a plan for drying wet hay and wheat which all the newspapers praise, and which even the experience of the autumn of 1872 could not get practical farmers to try. He advertises for artists to illustrate his new book, which consists of a wildly improbable and uninteresting story, with a would-

be heroic idyll in black-letter lugged in at the end. The story is aggressively moral in intention if not in tone or tendency, and is overlaid with a great deal of coarse ornament; applied with a certain knack to produce effects which satisfy a certain section of the public and choke their nascent desire for something really good. Mr. Gibbs' art, to call it so, bears about the same relation to Mr. Tennyson's that Sheridan Knowles' art bears to Shakespeare's. Like Sheridan Knowles, Mr. Gibbs is the poet of heroic domesticity, though in an idyllic, not in a dramatic form, and he is not a stranger to the mystical inspirations of the late Lord Lytton, and still we wonder whether Mr. Gibbs has a sufficient reason to exist. On the whole, we think he has—he exists to make work for bookbinders; the outside of *Arlon Grange* is really elegant.

Progress, and other Poems. By M. S. (Russell Smith.) This book has no other merits but earnest good will, and occasionally a faint, very faint, reflection of the grace of Miss Procter.

Thoughts in Verse. By E. B. (H. S. King & Co.) All who are interested in devotional verse should read this tiny volume. The writer's literary training is, as she confesses, very incomplete, but she has enough literary instinct to be quite worth training, as is shown by the five charming triplets beginning:

"For other men when I am clay."

Nearly everything in the book except the last two poems, written ten years ago, has unction enough to make it a real contribution to the question how far piety is dependent on creed (the author is a theist, i.e. neither a Comtist nor a Christian). "Tired" is almost worthy of F. W. Faber.

English Sonnets and Selections. Edited by John Dennis. (H. S. King & Co.) Mr. Dennis expects us to take his anthology a little too seriously when he recommends it to students of poetry who will always wish to go beyond anthologies. Idle readers will be glad to have specimens of writers like Hartley Coleridge and Julian Fane, whose complete works have hardly a claim to a place in a good general library. The editor has been too apt to insert things because they have been overpraised by distinguished writers.

Lyrics of Love, from Shakespeare to Tennyson. By W. D. Adams. (H. S. King & Co.) We do not see that Mr. Adams has gained much by trying to substitute an ideal arrangement based on the successive moods of the passion for the obvious plan of grouping his authors in rough chronological order, and he exposes the reader to at least one inconvenience,—he has to guess at the dates of anonymous poems, with no clue but the style to help him. Still, the anthology is a very full and good one, and represents the robust school of Carew and Suckling better than any other that we know.

In the Camargue. By Emily Bowles. (Smith, Elder, & Co.) Writers who go far afield for their subjects are apt to be rather tantalising: they get up some remote bit of scenery like the half-African delta of the Rhone, with a solid completeness that gives a welcome sense of freshness and power, and then when we are taken into a strange world we are disappointed at the commonness of the things that happen there. Miss Bowles is terse if not inventive, and the English part of the story is carried out so crisply and thoroughly that we hardly notice how hackneyed it is at bottom. A Provençal girl is put out of conceit with an heroic cattle-driver by a travelling artist, who abandons her to marry a rich cousin. The heroine founds a hospice. The authoress thinks this proves

"What was good shall be good, with, for evil,
so much good more."

We prefer her descriptions, which are certainly admirable, to her logic.

Not a Heroine. Two vols. By Mrs. Brookfield. (Smith, Elder, & Co.) Mrs. Brookfield has not

had the good fortune to be the first who hit upon the device of a man's forgetting his marriage, but it is not yet as hackneyed as bigamy; it is less unladylike, and leads to quite as much complication. As the central event in the plot is wildly improbable, and the characters are in the dark about it all through the first volume, it is not surprising that they show a total want of common sense in dealing with it. They are conceived not without insight, but the writer has not force enough to convince us that their conduct in the abnormal circumstances in which she places them is natural. The story never flags for a moment, but most of it would be unpleasant even if it were not meant to be edifying. It is to the credit of a goody writer that her worldly woman neither improves nor deteriorates in the course of the story.

Llanaly Reefs. By Lady Verney. (Smith, Elder, & Co.) Lady Verney is to be congratulated on having got back to her earlier manner. *Ferniehurst Court* was as insipid and conventional as possible. *Llanaly Reefs* is at least ingenious and true, though hardly as graceful as *Stone Edge*. The book may be recommended to readers who are curious about the manners and customs of Welsh farmers, and the kind and degree of intelligence which enables a conscientious skipper in the lower grades of the merchant service to set up as a prig. The character who comes nearest to being amusing is a village Mrs. Malaprop, who considers herself a fine lady on the strength of her habit of buying fine clothes every year to put away unworn and give away when old enough. Otherwise we feel that we are making the acquaintance of a very tiresome set of people, quite as tedious and not as quaint as the Dodsons, Foggies, and Pullets in the *Mill on the Floss*.

Sketches of Modern Paris. Translated from the German (of A. Ebeling) by Frances Locock. (Provost & Co.) This is a fair English translation of a very fair German imitation of the better sort of French *feuilleton*. The avowed reproductions of some of "Timothée Trimm's" contributions to the *Petit Journal* (the paper with the largest circulation in the world) are, perhaps, the most readable portion of the volume, which is, as the author says, "unpretending;" so we will not suggest that it is rather meagre as a result of the united wit and wisdom of three writers of different countries.

EDITOR.

NOTES AND NEWS.

WE hear that Mr. J. A. Symonds is preparing for publication a series of essays on places in Italy, Sicily, and Greece. They are intended to illustrate local characteristics in art, history, and landscape. The book will be announced shortly.

THE *Times* states that an English translation of Victor Hugo's new novel will appear in February in the *Graphic*.

MR. DAVID KER, late Khivan correspondent of the *Daily Telegraph*, is about to publish, through Messrs. Henry S. King & Co., a work entitled *On the Road to Khiva*. It will contain various hitherto unpublished particulars respecting the Khivan expedition, as well as a minute description of the whole country between the Russian frontier of Europe and Afghanistan. The book will be illustrated by photographs taken on the spot, and will be further enriched by a copy of the Russian official map of Captain Leuslin, who accompanied the Russian forces. We hope that this book will furnish a sufficient explanation of the unfortunate coincidence pointed out by the *Pall Mall Gazette*.

THE Oratorians have resumed their series of translations of lives of Saints (published by Messrs. Washburne), based upon the process of canonisation, or drawn up in view of it. They disclaim any attempt to explain or interpret their

subjects, such as was made with more or less success in Dr. Newman's Series of English Saints and in the Quarterly Series. They intend to deal chiefly with saints posterior to the Council of Trent, but they have begun with St. Bernardine of Siena. The simple matter-of-fact narrative gives with sufficient clearness the outline of his busy and unromantic career. At twenty his devotion called him to re-organise the service of a hospital in time of plague; at twenty-two, after great private austerities, he entered the Franciscan order; at twenty-four he began to preach, at thirty-eight his preaching began to tell; at sixty-four he died. The period of his greatest activity was a monotonous round of wonderful cures, of reconciling factions, persuading his converts to burn their dice and false hair and other vanities, and founding Observantine convents for men and women. He induced the Sieneese to complete the front of their cathedral; he introduced the veneration of the monogram of the most Holy Name of Jesus, which was attacked as idolatrous by the partisans of one Brother Manfred, whom St. Bernardine had opposed for teaching that wives might leave their husbands without their consent on the ground that Antichrist was already born (for this last he had the authority of St. Vincent Ferrer), and that his persecution would soon begin. There are two or three good anecdotes—how the saint, while still a boy, conspired with pious friends to pelt a man who had offended his modesty; how at seventeen he confided to a pious widowed cousin his shy devotion to a picture of our Lady, which filled the same place in his life as calf-love in the lives of less saintly youths; and how a pious lay brother exhorted him to decline the Bishopric of Siena, the Archbishopric of Milan, even a Patriarchate, but was dazzled when the saint pretended to have the offer of a cardinal's hat.

Italian lends itself easily to a tame inflation of style, and the translator has rendered Father Amadio Maria with an intelligent fidelity admirably adapted to mortify any sense of the ridiculous which he or his readers may possess.

Among the "auncient playz" of the great "Captain Cox," the renowned mason of Coventry,—the man "right skilfull, very cunning in fens, and hardy az Gawin," who led the country actors in their play of *English and Dames*, before Queen Elizabeth, at Kenilworth, in 1575,—was the play of *Impacient Poverty*. This play was licensed to John Kynge "y^e x of June a^o 1560," as we learn from leaf 48 of *The First Register of the Stationers' Company*. It is also mentioned in the play of *Sir Thomas More*, edited by that late admirable scholar, Mr. Dyce, for the Shakespeare Society, from the Harleian MS. 7368; it is noted, too, in Stephen Jones's edition, in 1812, of D. E. Baker's *Biographia Dramatica*, but no copy of *Impacient Poverty* could be found either by Mr. Dyce in 1844, or Mr. Furnivall in 1871, for his edition of *Captain Cox, his Ballads and Books*. Mr. J. O. (Halliwell) Phillipps has now, however, found a copy of this play, though unluckily it wants the end, so that we cannot be sure whether it is a copy of John Kynge's edition or not, though the different spellings of the words from Baker's entry, and the "playe it" for Baker's "playe this Interlude," on the title-page, lead us to suppose that this newly-found book was not Kynge's. The present copy bears the title *A New Enterlude of Impacient Poverte, newly Imprinted*. "Foure men may well and easily playe it. Peace, Coll Hassarde, and Conscience for one man. Impacient Poverte, Prosperyte, and Poverte, for one. Envy and the Sommer for another man." We hope that the library of Sir Charles Isham, or some other rare treasure-holder, may yet produce a complete copy of the play, if not of Kynge's edition of it.

With reference to the hint in the New Shakespeare Society's *Prospectus*, as to the formation of Shakespeare reading parties in every town and

village of England, an American lady, Mrs. Downes, writes:—

"I thought it a most excellent suggestion, and know it can be carried out. There is hardly a village of any size in New England but has its Shakspeare Club. I belonged to one for several years. We have also had a Chaucer Club for two or three winters in the town I live in. I know of another Chaucer Club founded at Minneapolis in the State of Minnesota, one of our frontier States. This club is wonderfully successful, working men and women stopping on their way home, after a day of toil, to hear and read Chaucer."

THE New Shakspeare Society's Committee has received a most welcome addition of strength by the accession to it of the Rev. F. G. Fleay, of Trinity College, Cambridge, now head-master of the Grammar School, Skipton, Yorkshire, and for many years past a steady worker at the very mechanical test of Shakspeare's lines, which the Director desired to find men to investigate and apply, and which he thought would take more than the Society's first year to accomplish. Adverting to a slightly inaccurate account given of his labours in the *Daily News* last week, Mr. Fleay writes in the same journal of January 8:—

"What I really claim to have done is to have settled the authorship of the plays passing under the names of Beaumont, Fletcher, and Massinger, and to have assigned the share of each in plays written jointly by more than one author; to have determined for the first time rightly the share of Shakspeare in *Timon*, *Pericles*, and *The Taming of the Shrew*; to have adduced new evidence as to the authorship of *Henry VI.*, in the First Part of which one scene is certainly Shakspeare's; to have gathered some evidence adverse to Mr. Ellis's conclusions as to Shakspeare's pronunciations; and finally, by the application of four distinct metrical tests to every line of his plays, to have produced a plausible scheme of the chronological order of their production. This order coincides more nearly with that of Gervinus, which is based solely on æsthetic grounds, than with any other yet proposed; and differs much from that of Bathurst, which is founded on 'the unstopped line test'—a test ambiguous and delusive in my opinion, and liable to serious error through subjective bias."

As two of our contemporaries, the *Saturday Review* and *Athenæum*, have lately reviewed a trade-reprint of the well-known collection of the *Roxburghe Ballads*, without even a hint of the existence of Mr. William Chappell's edition of these Ballads, for the Ballad Society, we think it only due to that gentleman, the author of the famous *Popular Music of the Olden Time*, to quote the account of the matter contained in the just-issued *Report* by the director of the Ballad Society:—

"My attention has been called by some of our members to a reprint of the *Roxburghe Ballads*, published in parts—of which the first appeared last summer—by Messrs. Reeves & Turner, of the Strand. Having had no previous notice of the intention of anyone to repeat (almost) our Society's work—a notice which I should have expected any literary man to give Mr. Chappell or me—I was led to inquire into the circumstances of the new publication, and was informed that it was a matter of trade undertaken by the son of a bookseller at Brighton, who, having previously modernised some old printed texts,—spoiling correct sentences occasionally, altering good words like 'dung' (perf. of *ding*, batter down) to 'dug,' and introducing into one text, at least, passages written by himself* as the original author's,—had resolved to discontinue these reprehensible practices, and adopt the better one of reprinting old texts as he found them;† and that he had resumed a formerly-entertained scheme of taking the *Roxburghe Ballads* as his to-be-let-alone texts. While applauding the resolve not to modernise

* "This was confessed by the writer—much to his credit—to the editor of *Notes and Queries*, and the confession was made public by an editorial 'Notice to Correspondents.'"

† "A like course would have removed the temptation to other editors to compose those interesting additions to Dulwich Letters, Revels at Court, &c., from which Shakspeare students so long suffered."

old spelling, and spoil old words and sentences, and while recognising the soundness of the trade-judgment which took advantage of the fresh publicity given to the worth of the *Roxburghe Ballads* by our Society's edition, and the notices in the Percy Folio Romances, one would still have been glad if the new reprinter had thought the Bagford or some other collection likely to pay, and so cleared it out of the Society's way. But, as it would doubtless not have paid so well,—and as the *Roxburghe Collection* was and is, of course, open to anyone to reprint,—the members of the Ballad Society can only rest well content that the readers of the *Roxburghe Ballads* are largely increased in number by the new reprint, and can only hope that the interest created in them by that publication will make them want to know more about the Ballads than they find in the reprint, and thus induce them to buy the Society's edition, by that most competent ballad-editor Mr. William Chappell."

PROFESSOR BERNHARD TEN BRINK, of Strassburg, hopes to finish his *History of English Literature* this year. It will be of un-German brevity, in two volumes.

It is hoped that Professor Delius, of Bonn, will repeat his last year's visit to England in the spring, and that he will then read his promised paper to a meeting of the New Shakspeare Society.

THE forthcoming Report of the Chaucer Society is a satisfactory one. Last year the Society printed and paid for three years' work in one; raised, by the Duke of Manchester's help, an Extra Fund of 270*l.*; finished its "*Sir-text*" of the verse part of the *Canterbury Tales*; found out who Chaucer's father, mother, grandfather, and uncle were; where the boy-poet spent his young days—in Thames Street, London, close by his future workplace, the Custom House—how he was ransomed from the French with the help of Edward III.'s 16*l.* (less by 13*s.* 8*d.* than the price of a squire's horse); how he kept his counter-rolls at the Customs, tried to carry off Miss Alice Chaumpaigne, &c. &c. We are glad to hear too that the Master of the Rolls and Sir T. Duffus Hardy have ordered an official search for Chaucer records throughout the National Record Office. The whole of the Society's printed texts are in the hands of concordancers, in preparation for the Society's Glossarial Concordance to Chaucer's works. It contains, too, a new classification of the *Canterbury Tales* by Mr. Furnivall, into their three great classes of Pathetic (early), Humorous (middle), and Serious (late).

The Society's publications for 1874 will be:—

"1. Part II. of the *Originals and Analogues of Chaucer's Canterbury Tales* (which ought to have been issued last October).

"2. Part V. of Mr. Alexander J. Ellis's great work on *Early English Pronunciation, with special reference to Shakespeare and Chaucer*.

"3. The *Rhyme-Index to the Ellesmere MS. of the Canterbury Tales*. (Will be ready by May.)

"4. Francis Thynne's *Animadversions*, in 1599, on Speght's edition of Chaucer's Works in that year, re-edited by Mr. Furnivall (with notes and a further account of William Thynne, the old Chaucer editor of 1532, 1542), from the autograph MS. in the possession of Lord Ellesmere. This tract, as well as Mr. Ellis's Part V., the Chaucer Society will publish in conjunction with the Early English Text Society. It contains much interesting information about William Thynne's editions, such as the destruction of the sheets of the first edition at Wolsey's instance, because it contained a (spurious) poem attacking fiercely the Papist bishops. The tract is a necessary portion of a Chaucer Library."

At the end of the report Mr. Furnivall says:—

"A talk with a great novelist lately on the curious variation in the history of opinion in England concerning Shakespeare, brought more vividly to my mind than ever before, the fact that Chaucer's fame, though it drooped for a time with Shakspeare's, yet never died. Hoccleve, James I., Lydgate, Gawan Douglas, Henderson, Hawes, Thynne, Spenser, Leiland, Puttenham, Daniel, Drayton, Fletcher, Selden, Milton, Denham, Dryden, Pope, Urry, Gray, Tyr-

whitt, the Wartons, Wordsworth, Coleridge, Mrs. Barrett-Browning, and all the great among our moderns, have rejoiced, as we do, in singing or saying his praise."

A CORRESPONDENT calls our attention to the fact that the difficulty of finding in England publishers for any considerable Sanskrit texts, is to a great extent accounted for by the activity of native publishers, on which we remarked in our last number. These native gentlemen take the texts published by European scholars, and simply reprint them. The edition of the *Unādi-sūtras*, lately published at Calcutta, is simply a reprint of the same work, published by Dr. Aufrecht, at Bonn, 1859. It there sells for two rupees. It is, no doubt, extremely difficult to establish a copyright in an edition of a classical author. But the rule, sanctioned in some cases by judicial decisions, has hitherto been, that the reprinting of misprints establishes a *prima facie* evidence of piracy. The Calcutta edition repeats several misprints of Dr. Aufrecht's text, while there is very little evidence in it of a new critical revision. As the original edition was published in Germany, it would probably be difficult to prevent its being reprinted in India; but the grievance remains the same, and naturally discourages the publication of Sanskrit texts in Europe.

HERREN P. C. ASBJÖRNSSEN and Moe's *Norske Folkeventyr* (Norse Popular Tales), so well known in Mr. Dasent's translation (*Tales from the Norse*), have just reached a fifth edition in the original, but do not include those later stories of Herr Asbjørnsen's which Mr. Dasent has presented us with this winter. This noble work takes a high place already in the literature of Scandinavia.

A book lately published here in England, professing too to speak with authority, talks with a kind of patronising scorn of the prospects of literature in Denmark. It takes for granted that so small and so unfortunate a country must of necessity offer no advantages to literary men. Everyone who knows Copenhagen knows how false that is, but we have a most eloquent repudiation of the charge in the very existence of the three little volumes now before us. Professor Christian Molbech has published a selection of his leading articles contributed to the well-known newspaper *Dagblad*, under the title *Fra Danaidernes Kar* (Hegel), "Out of the Jar of the Danaides," the ever-fed, never-filled pitcher of daily journalism. It is really a noteworthy thing that articles so elegantly worded, so rich in thought, and so scholarly can be daily read in the leading Danish papers. Some of these essays—that, for instance, on the Augustenborg episode—are of real historical value, and hardly anything of merely ephemeral interest has been preserved. The literary section of the work is delicate and discriminating rather than very deep and far-seeing. Indeed, the temper of Professor Molbech's mind would seem to be a typically Danish one, more ready to skim the surface than to explore the depths, but harmonious and refined to the point of fastidiousness. Molbech is already favourably known to his countrymen by his translation of Dante.

Two of the younger Danish poets have sent us volumes published this winter. Carl Andersen's *Liv i Lænker* (Life in Links) consists of two poems: the first on a Polish subject, which we find conventional and tame enough; the second, *Markos Botsaris*, a study from the war of Greek independence, written in lyrical measures, which is in parts very fine indeed, and an advance on all the previous work of the poet. The other volume, Bergsøe's *I Nu og Næ* (Now and Then), shows cultivation and grace, but is wanting in spontaneity. The Danish poets sadly need a dauntless Childe Roland to blow the slug-horn of modern thought at the door of their enchanted castle.

We have received from Portugal the first contribution to Sanskrit literature. Candido de Figueireda, a popular poet and essayist, has

started a series under the title of *Litteratura da India*. The first number contains the classical episode from the *Rāmāyana*, the Death of Yajna-datta, rendered into Portuguese. The translation is free and poetical, and has attracted much attention in Portugal.

OUR valued French contemporary, the *Revue Critique*, which strives to represent in the weekly press the higher culture of its country, gives in its last number an address to its readers, in which it states its present position. It has recovered from the rough shock of war, and, thanks to the energy of its editorial secretary, M. Stanislas Guyard, has resumed its regular weekly issue. It cannot yet pay its contributors, though their love of learning and patriotism keep its pages regularly filled with learned and impartial reviews. It has strengthened its editorial staff by the addition of MM. Bréal and Monod; its reviewers by the following recruits:—In History, Ancient, MM. Nicole and Bouché-Leclercq; Middle-Age, MM. Grandmaison, Giry, S. Luce, Molinier, Tuety; Modern, Albert Sorel: in Geography, M. Longnon: in Archaeology, M. Albert Dumont: in the History of Law and Institutions, MM. Thévenin and Rivier: in Oriental Languages, MM. Barth, Garrez, and Senart; for Indian; MM. J. Derenbourg, Neubauer, Berger, M. Vernes, for Semitic; MM. Barbier de Meynard and Fagnan for modern Oriental Literature; MM. Gréban and Pierret for Egyptology; M. Specht for Chinese; in Ancient Philology and Literature, MM. Gantrelle and Le Coultre: in the Neo-Latin Languages, MM. Bonnardot, A. Darmesteter, Morel-Fatio, Pannier: in German, MM. Bauer and Joret: in Comparative Literature, M. de Puymaigre: in Philosophy, M. Thurot. These, combined with the well-known old contributors, R. Reuss, Tamizey de Larroque, Gaidoz, Maspero, Weil, &c. &c., make a staff of which the *Revue Critique* may well be proud. We wish it all success.

At their meeting on the 7th instant, the Council of the Camden Society resolved on the following books for the issue of the year 1874-5:—

"1. *Documents relating to the Quarrel between Oliver Cromwell and the Earl of Manchester*. Edited by the late John Bruce, F.S.A., Director of the Camden Society.

"2. *The Wills of Richard Gravesend, Bishop of London, and Thomas Button, Bishop of Exeter*.

"3. *The Camden Miscellany*, vol. vii., containing—(i.) 'Accounts of the Building of Bodmin Church,' edited by the Rev. J. Wilkinson; (ii.) 'Two Sermons of the Boy Bishop,' edited by the late J. G. Nichols; (iii.) 'Papers relating to the Life of W. Prynn,' edited, with a fragment of a biographical preface, by the late John Bruce, F.S.A.; (iv.) 'An Unpublished Letter of Gustavus Adolphus,' edited by S. R. Gardiner."

All new members subscribing 1*l.* within the year of issue will be entitled to the above-mentioned publications.

PROFESSOR TH. MOMMSEN is expected to lecture at Leipzig, chiefly on law. He began his professional career at Leipzig, as Professor of Jurisprudence, in 1848. After being dismissed from Leipzig, he accepted the professorship of Roman law at Zürich. In Breslau, too, where he established himself in 1854, he was Professor of Law. In returning to the university in which he began his career, he also returns to his *premiers amours*—Roman law.

We understand that Mr. James Gairdner has completed the second volume of his edition of the *Paston Letters*, and that it is now passing through the press.

We have received the first part of a work entitled *Numismata Cromwelliana; or, The Medallie History of Oliver Cromwell, illustrated by his Coins, Medals, and Seals*. By Mr. W. Henfrey. (John Russell Smith.) Autotype illustrations of the Dunbar Medal, the "Lord General" Medal, the Pattern Farthing of 1651, &c., with appropriate letter-press explanations, form its principal contents. The more extended notice which such

an undertaking seems to deserve may be fitly deferred until the entire volume is in our hands.

THE first volume of a new edition of Ranke's *History of the Popes* has just appeared as vol. xxxv. of his collected works. The title has been altered from *The Roman Popes, their Church and State during the Sixteenth and Seventeenth Centuries*, to *The Roman Popes during the Four Last Centuries*. We may, therefore, promise ourselves the pleasure of seeing eventually, from the hand of a master, a sketch of Papal history continued to the present time. The spirit in which it is written may be gathered from the following note in the preface to the first volume, the volume itself being otherwise unaltered:—

"Thus I wrote in 1834, at a time when there was, or at all events appeared to be, peace between Rome and Germany. The preface, which I reproduce, and the book itself, express the disposition prevailing at that time. But how much everything is changed; since, forty years after the first publication of the book, the contest which seemed to have subsided has broken out again in its full fury. It is evident that not a word in my book needs on that account to be changed. Yet I cannot deny that a new epoch of Papal history has begun. I have only been able to give a general view of its progress, judging it objectively according to the method to which I have adhered from the beginning, and preserving the same mode of writing even in my account of the present pontificate. As I could not repeat the original title by which the book was known when it formed part of another publication (*Fürsten und Völker von Süd-Europa*), and was limited to the sixteenth and seventeenth centuries, I have had to choose a more general one."

WHEN Hermann Reuchlin, who was one of the warmest friends of the Italian cause in Germany, died suddenly on the 14th of May, 1873, he left behind him in a complete state the fourth volume of his *Geschichte Italiens von der Gründung der regierenden Dynastien bis zur Gegenwart*. It has now been published in Hirzel's collection, *Staatsgeschichte der neuesten Zeit*, and includes the important period from 1860 to 1870. Very few foreigners were so intimately acquainted with the leading Italian statesmen as Herr Reuchlin, or so deeply read in the polemical literature of that country. His account, therefore, of Garibaldi's expeditions in 1860 and 1861, of the changing ministries which followed, of the Prussian alliance, and of the war of 1866, with its enduring consequences, has almost all the merits of the report of an eye-witness on one of the grandest periods of modern history.

THE tenth portion of the *Historical Atlas*, by Spruner Menke, which left the press a few weeks ago, is again of more than usual interest for the student of mediæval history. Nos. 31—33 are very instructive maps of the ancient *gaue* (shires) of some parts of Germany, of the Lotharingian, Frisian, Saxon, and Thuringian districts, the entire lowland country between the rivers Schelde and Elbe. They had to be reconstructed after a minute inquiry into the early lives of saints, the annals, charters, and ecclesiastical documents, from which alone the boundaries, the orthography of local names, and the geographical terminology in general could be obtained with any degree of certitude. In these researches Dr. Menke acknowledges the assistance of the leading antiquaries of Belgium, Holland, Westphalia, and Northern Germany. Some special maps in the corner illustrate Northallbingia (Limes Saxonicus), Slavania (the country between the Elbe and Oder), and the shires of the diocese of Verdun. The fourth map (No. 42) shows ecclesiastical Germany between the eleventh century and the Reformation, and is vastly improved in correctness and detail since the former edition. Three small maps in the corner represent, for the sake of comparison, the German dioceses about A.D. 752, 840, and 1000.

THE *Daily News* states that, in excavating earth at Box-hill, Milton, near Sittingbourne, some labourers have found a Roman coffin of great age. It contained a few bones, a gold wire ring, and some wooden square-headed nails.

NOTES OF TRAVEL.

A CORRESPONDENT, writing from Stockholm, states "that grave fears were entertained for the fate of the last Swedish scientific expedition to Spitzbergen, which was obliged to stay up there over the winter with a much larger number of men than was originally intended, or even provided for, as one of the ships ought to have returned with its crew before the fall of the winter. But through the excellent discipline of the men, and the intelligent leading of the commanders, they were all brought safely home, though nearly twenty Norwegian fishermen who were shut up by the cold in a much more southern place, and in a house built specially for such an occasion, and provided with stores of every kind, were all found dead from scurvy in this very house, evidently from want of a commander who could have compelled them to take exercise, and from want of knowing how to use the preserved meat and vegetables, which they had scarcely touched."

WE understand that the Secretary of State for India has authorised the publication of a most interesting historical memorandum of Forestry and Forest Management in France, by Lieutenant-Colonel Pearson, of the Bengal Staff Corps. This will supplement Captain Campbell Walker's recently published pamphlet.

THE Russian scientific expedition to the river Olenek has made considerable progress during the past season. Several of its members have returned to Irkutsk preparatory to continuing their explorations next year in an entirely new region of the Olenek basin. They have already collected a great many specimens to illustrate the paleontology, zoology, and botany of this region, and have mapped 2,000 versts of itinerary, besides taking a number of observations for latitude and longitude, and measurements of altitudes.

Some interesting and important geographical discoveries have also been made in another part of Asia, viz. on the banks of the Upper Irtysh, by two enterprising travellers, Messrs. Matusofsky and Miroschnichenko, under the direction of Poltoratsky, the governor of Semipalatinsk. Not confining his observations to the immediate valley of the river, Matusofsky penetrated into the Altai mountains, so as to include within the radius of his survey the Altai lakes of Marko-kul and Kanass (4,600 feet), the town of Tulta on the river Krana, and the sources of the Irtysh, collecting particulars of the population of the S. Altai region, and the banks of the Black Irtysh, as well as of the Russian trade in those parts. The astronomical positions and altitudes of the towns visited by these travellers, and of lake Uliungur, and the Saura range of mountains, were determined by the observations of Miroschnichenko. The Saura mountains confine the basin of the Black Irtysh on the south; some of the peaks of these mountains rise to a height of 12,000 feet, i.e. above the level of the snow line. A desiccated watercourse was discovered to connect lake Uliungur with the Irtysh, by means of which the overflow of the lake, during the spring floods, escaped to the river. The distance separating the lake from the river does not exceed $3\frac{1}{2}$ versts, and the fall in the river, in its course towards the west, is so inconsiderable that shallows are frequent, and navigation difficult. The left bank is sandy, while the right is composed of hard soil. It is probable that lake Uliungur (2,300 feet above sea level) is the depressed centre of a great Central Asian plateau which extends eastwards as far as the confines of Manchuria.

General Kauffmann has communicated to the Russian Geographical Society some important facts about Khiva. The state of agriculture in that Khanat has been ably and fully treated by Krauze, while the indefatigable Stebnitsky continues to supply the Society with the results of his observations in the plains of Turkomania. The latter officer has also compiled a map of

Seistan, based on the English surveys of that region, which will be found in a new edition of Ritter's *Iran*, translated into Russian by Khani-koff. A. L. Kun also has contributed some valuable information regarding the population of the oasis of Khiva, and the mode of levying taxes by the Khan; while General Kauffmann has still further extended our knowledge of that region by a collection of photographs taken on the spot.

WE would warn our readers that in many instances the valuable maps of Central Asia lately published under the superintendence of Colonel Walker cannot be considered correct. The boundary line of Cashmere, for instance, given therein may be looked upon as wholly erroneous; and when the map of Persia now being constructed at the India Office by Major St. John is published, it will be found that Colonel Walker's map contains many inaccuracies with regard to the Persian Empire. Many of the details, indeed, appear to have been filled in by cartographers without any evidence.

A VERY interesting paper will be read at an early meeting of the Royal Geographical Society, on "Railway Communications in Peru," by Mr. Thomas J. Hutchinson, who can certainly boast of an intimate acquaintance with the land he writes about.

THE account of Lieutenant Cameron's expedition, which was given in a letter to the *Times* of the 3rd instant, written by Lieutenant Murphy, R.A., was so gloomy in some of its details as to present a marked contrast to the more cheerful story published in *Ocean Highways* for this month, and in our own columns of the 3rd of January. Mr. Murphy, however, describes chiefly the beginning of the expedition, during which time everyone was, more or less, suffering; but later details, which have been published regularly in *Ocean Highways*, prove that the travellers have now made an excellent start, and that their health is singularly good. All ground for Mr. Murphy's somewhat gloomy prognostications has, we trust, long since been removed.

WE understand, from private sources, that the Sultan of Zanzibar has by no means relinquished his intention of visiting England in the spring or summer. His highness has, we believe, sent home an order for a steamer of considerable size, that is to cost some 40,000*l.* This looks as if the long-predicted ruin of Zanzibar, consequent on the stoppage of the slave trade, might still be deferred for a time.

COLONEL FRASER TYTLER, who was Quarter-Master-General in Sir W. Nott's army during the Afghan war, has long had in his possession some valuable manuscript maps of the upper valley of the Helmand and of the country round Kandahar, which were drawn at the time by Lieutenant Cooper, Sanders, and other officers of his department. They have now been placed in the hands of Mr. Clements Markham, and will at last be utilised in the compilation of future maps of these important regions.

MR. ASHTON WENTWORTH DILKE, brother of Sir Charles Dilke, has, we understand, recently returned from a most interesting journey in Central Asia. He travelled from Omsk into Kulja and thence by Tashkend to Samarcand. He leaves immediately for Moscow, and it is hoped that in April next he will read a paper before the Royal Geographical Society on the results and experience of his travels. We shall be glad to hear what may be the views of Mr. Dilke as to the projected Russian advance from the Oxus to Merv. We ourselves venture to prophesy that before very long Merv will be occupied by Russian troops.

COLONEL VALENTINE BAKER has also returned to London from his travels in Persia, and is expected at an early date to read a paper before the Royal Geographical Society on the Valley of the

Atrak, which may be yet destined to play an important part in Oriental history.

It is generally believed that that enterprising traveller Mr. Hopkins, of Cambridge, has recently made a careful inspection of Tashkend, in the guise of a native.

WE learn from private sources that the Netherlands Steam Navigation Company have just renewed for a period of fifteen years their contract with the Netherlands Government, which would have expired in 1874. The contract is a large one, and a curious feature in the arrangement is that the Government lend the successful competitor a sum of 120,000*l.* for five years without interest.

WE understand that a survey of the Oxus from Khiva towards the Caspian Sea has been commenced under the auspices of Baron Kulbers and Colonel Tirwatski. Colonel Scobolof has been detailed to survey the route direct from Khiva to Ikdo, beyond which Colonel Morkosoff's column, proceeding from Krasnovodsk, could not penetrate.

CAPTAIN BURTON writes to the *Pall Mall Gazette*:—

"I read in your impression of December 24, 1873, 'The Cataracts of the Congo are known from native report to form a remarkable feature of the interior, but have never been yet visited by any European.' It so happens that I have just finished a volume giving an account of my visit to the Yellala, or Great Rapid. And I need hardly remind African travellers that in 1816 Captain Tuckey, R.N., marched beyond all the cataracts to the Upper Congo, before it begins to burst through the basin rim."

MESSRS. L. REEVE & Co. have in the press a volume on St. Helena, comprising a physical, historical, and topographical description of the island; with its geology, fauna, flora, and meteorology. The author is Mr. J. C. Melliss, C.E., F.G.S., F.L.S., late Commissioner of Crown Lands, Surveyor and Engineer of the colony.

DR. GEORGE BIRDWOOD, in a letter to the *Times*, in drawing attention to the want of a *catalogue raisonné* of the yearly publications of the United Kingdom—which the *Times* had pointed out as having reached the enormous number of 5,000 works last year—makes the excellent proposal that the authorities of the British Museum should undertake the work, as a duty naturally devolving on them, and which they alone can efficiently discharge. Dr. Birdwood truly says:—

"The British Museum only can prepare the catalogues required. The Museum receives a copy of every work published in the kingdom, sent to them gratis, and all that the trade gets in exchange is a receipt, and, excepting that a few students living within the precincts of the Museum—for this is what it comes to practically—have the free use of the reading-room, the public gets no benefit from all the books sent to the Museum for the national use. The great mass of students all over the country derive no benefit from the National Library. But were the British Museum authorities to assume the responsibility of publishing every year a systematic catalogue, according to authors and subjects, of the year's publication, republishing them in the manner above indicated every five years and every twenty-five years, in a handy form, and at a nominal price, they would make a becoming return to the trade for the favours they receive, confer an inestimable boon on all students, and discharge an obvious duty, too long overlooked, to the nation—assuming, that is, that this is a practicable, useful, and fair proposal."

THE AMERICAN PALESTINE EXPLORATION SOCIETY.

THE Second Statement of the American "Palestine Exploration Society" carries us to the threshold of the trans-Jordanic country, which was fixed upon by agreement with the English society as the scene of their future researches. The members of the exploring party seem to have

been tried with the usual obstacles incident to scientific expeditions, but they have triumphed over them with the zeal and energy to be expected of our American cousins. First of all there was the want of a competent engineer, which after many months of waiting was supplied by the selection of a graduate of West Point College, Lieut. Steever. Then there was the long period of detention in Beirut, compensated for to some extent by the experienced advice of the Beirut committee, of which the well-known Dr. Thomson, author of "The Land and the Book," is a member. In this period falls an excursion to the Nahr-el-Kelb, or Dog River, near Beirut, described in the first paper in the Statement. In the course of this visit Professor Paine discovered three Greek inscriptions, one of which may turn out to be of some value. It is in a bombastic imitation of the epic style, and is dedicated to one "Proclus, friend (ἰσιος) of Tatianus," and ruler of Heliopolis (Baalbek). Professor Paine thinks that Proclus was a young Phœnician prince, but Dr. Crosby, with more plausibility, that he was a Roman governor who repaired the Antoninian road. The explorers also succeeded in taking perfect plaster casts of the four Hamath stones, just before they were removed to the Imperial Museum at Constantinople. An ample remittance at length arrived, and the march to Moab commenced in the middle of last March. The Jordan was crossed on March 28. The expedition remained in Moab till the end of August, busily engaged with the trigonometrical survey of the country. The details of the expedition are reserved for the Third Statement of the Society.

The most important paper in this Statement is undoubtedly that by Dr. W. Hayes Ward on the Hamath inscriptions. It is unnecessary to enter into a description of these now celebrated stones, an account of which may be found in Burton and Drake's *Unexplored Syria*. Dr. Ward has presented us with the first absolute fac-similes, taken from the first-rate squeezes and casts obtained in Beirut by Lieut. Steever and Professor Paine. As Mr. Dunbar Heath has already pointed out, in a paper which Dr. Ward justly characterises as "acute," the inscriptions on the three smaller stones are almost identical. The study of the variants in these parallel inscriptions will, it is to be hoped, furnish a clue to their decipherment. With the view of exhibiting their parallelism, Dr. Ward has arranged them one under another, and then added a fourth parallel inscription, which occupies the unutilized portion of the first line of No. 5. He has also given a list of the characters, amounting to 50. Probably some of them are ideographic; they cannot all be alphabetic.

On the problem of decipherment, Dr. Ward expresses himself in the following sober terms:—

"It seems to me, at present, not very hopeful. We are quite at sea about their age, and the language or race of those who inscribed them. It would seem that the people using these characters occupied considerable territory, for one or two inscriptions, badly preserved, are still in existence in Aleppo, the ancient Helbon; and some gems from Babylonia, in the British Museum, of which I have given a copy, seem to carry similar characters. Accurate copies of the Aleppo stone or stones are very desirable, as those published differ, and are evidently inaccurate. It seems a mark of antiquity that the characters are not in simple rows, but in successive tiers of two or three. The cameo form would seem to indicate a very high antiquity, but the British Museum possesses one quite old Hymyaritic inscription, which in its raised letters and its raised spaces between the lines is exactly the counterpart of these (*Himyar. Ins. of Br. Mus.*, Plate xv., No. 30)."

The Statement also contains an interesting account of the grand but mysterious ruins of Husn Sulayman, at the distance of two days' ride on horseback from Tripoli, and a paper on the Nosairites or "modern Canaanites," as the author styles them.

PARIS LETTER.

4 Place Wagram, Jan. 8, 1874.

The controversy respecting the identity of Mérimée's "Inconnue" seems likely to resolve itself into an action at law. The question is at present receiving piquancy from an unwarrantable infusion of slander and libel. The *Presse* announces that the "Inconnue" is an Englishwoman "well known in London literary circles"—Jenny Dacquín or Dakin—whose name was carefully concealed by a blot of ink in the manuscript letters confided to Michel Lévy. A chemical process removed the flimsy veil; and the *Presse* does not scruple to charge Mérimée's publisher with this breach of confidence. Michel Lévy denies the assertions categorically, and disclaims all knowledge of the recipient of the late Academician's letters; and the *Presse* still persists in its version. Between these positive assertions and denials literary society is still divided into three camps—upholding severally the names of Jenny Dacquín, Madame de Montijo, and Madame Blase de Bury. The letters appear to be addressed to an Englishwoman, and the three ladies mentioned are all more or less remotely connected with England by birth or breeding. Arsène Houssaye, one of Mérimée's intimate friends, has wisely avoided the profitless discussion. His essay on Mérimée is more critical than biographical. It analyses the *conteur's* bitter scepticism, and gives as the final reason of his vexed and unhappy life the famous definition that depicted Fontenelle: "His heart is another brain." Mérimée was a frequent and favoured guest at Compiègne, where, M. Houssaye says, he called himself "the Empress' Fool," and spoke as frankly and fearlessly as in his own villa at Cannes. The Emperor did not always escape his satire, and one of Napoleon's mild retorts is cited by M. Houssaye: "Vous avez bien de l'esprit, mais je sais quelqu'un qui en a encore plus que vous. C'est moi—parceque je suis bon."

Another "Inconnue" has died this week. France is conventionally regarded as the cradle of indiscreet "interviewing," the glass house of Europe, yet it contains many Hôtels de Rambouillet of which the gazetteers have never heard, many unknown Lauras and Bettinas like Madame Bérard. A tranquil *bourgeoise*, living at Passy, this lady, whose death is just announced, had kept during the last forty years one of the most refined literary salons of Paris. Her own definition, pronounced in the course of a conversation with M. Thiers, describes epigrammatically the society of the little suburban club: "A *salon* should be less an assembly than a sieve." Chateaubriand was her constant guest, together with Thiers, Lamartine, Dumas, Casimir Périer, Méry, &c. To her Béranger addressed his famous quatrain, beginning—

"Vous vous vantez d'avoir mon âge—
Sachez que l'amour n'en croit rien."

Madame Bérard has left memoirs which picture Thiers before his first ministry, the Rochefort of the *Constitutionnel*, Chateaubriand in his later years of misanthropy, Lamartine in his prime—all the forgotten greatness of 1830. Madame de Saman has already published memoirs of a somewhat analogous character. But the *Enchantements de Prudence* are not eminently instructive in a pedagogic sense. The authoress avowedly began life with an absolute aversion to marriage, and, it seems, a decided tendency to hero-worship. At fourteen she proposed to go out to St. Helena to

nurse Napoleon. Her *Enchantements* are simply the history of her relations with Chateaubriand, an "English prelate," and a member of parliament—Henry Warwick. But it is a history recounted by a sober and scholarly writer. The daughter of an important political functionary of the Directory and Empire, the friend of Babbage, Sainte-Beuve, Thiers, Béranger, the King of Holland, Madame de Saman was herself, in her day, an esteemed historian and political economist, the author of several weighty political pamphlets and an excellent history of Florence. Whatever the theories put forward in the *Enchantements* may be worth, they are neither trivial nor objectionable; but their different realisations do not furnish the matter of a very edifying volume.

There is a promise of scandals of a baser kind in the future. We are told, for instance, to expect the history of M. Roch, the *exécuteur des hautes œuvres*—Monsieur de Paris—with a summary account of his most important missions. The author of this delectable trifle is M. Léopold Laurens, a journalist, whose peculiar occupation has been during the last ten years to accompany the executioner in all his peregrinations and describe the results. The journalist has become the friend of the headsmen, and piquant revelations are expected from their collaboration.

Revelations are also forthcoming by the hundred, respecting the fortunate author of the *Merveilleuses*. M. Albert Wolf, the clever satirist of the *Figaro*, has just produced an entire volume consecrated to M. Sardou, and containing the history of his early days of doubt and poverty, his first juvenile efforts—which were all tragedies! On the other hand, M. Sardou has himself made public his method of composition with regard to the *Merveilleuses*. He appears strangely proud of the fact that that archæological spectacle was produced with historical accuracy—ostentatiously citing in proof of his erudition well-known works on the Revolutionary period like Mercier's *Nouveau Paris*, the *Miroir Historique Politique et Critique* of Prudhomme, Kotzebue's *Souvenirs*, &c. The enumeration is rather ungenerous. The *Histoire de la Société Française* by the brothers De Goncourt is cited last; and it is impossible to witness a performance of the *Merveilleuses* without detecting that M. Sardou owes the primary idea of his piece and nearly all its most picturesque details to the excellent historical studies of MM. de Goncourt.

Charles Blanc, the recently superseded Director of Fine Arts, is writing *ab irato* an account of his three years' administration. He is the brother of Louis Blanc, and for this unique reason his resignation has been demanded by the Bonapartist press almost daily since the 24th of May. Another ex-Minister, M. Jules Simon, is also preparing a new work on public instruction.

Mme. Georges Sand has in preparation a new comedy—for the Odéon. It appears that the Château de Nohant contains many pieces denied to the Parisian public, and reserved by Georges Sand for her private circle of friends. They are played at Nohant every evening by marionettes carved and dressed by Maurice Sand, the novelist's son, and himself the writer of three or four excellent books of travel and *romans de fantaisie*. It is, I believe, one of these pieces written for marionettes that will be performed in Paris in the spring.

Literary *matinées* are at present about the only entertainments left to the juvenile or bourgeois

public which *L'Oncle Sam* and *Monsieur Alphonse* offend or terrify. M. André Lemoinne, the poet, has taken a small lecture-room on the Boulevards, and is reading Ratisbonne, Méry, and other writers for children. Mme. Ernst, the author of some remarkable patriotic war-songs, is about to give readings of a rather more vehement and political character.

EVELYN JERROLD.

CORRESPONDENCE.

SHAKESPEARE'S PASTORAL NAMES.

MR. C. ELLIOT BROWNE, in a contemporary serial, discusses the origin of Shakspeare's pastoral name, or rather of one of Shakspeare's pastoral names, of *Melicert*. It is possible enough, as Mr. Browne suggests, that the name may have been attached to Shakspeare before the publication of Chettle's *England's Mourning Garment* in 1603; though no instance of such an attachment is, I believe, at present known; and it is also possible that the name may have been drawn by Chettle, or whoever first used it, as a poetic *alias* for Shakspeare, from Greene's *Menaphon*. But whencesoever drawn, I think there can be little doubt that its application to Shakspeare arose from a supposed derivation of the word from the Greek *μῆλς*, and perhaps *κηρὶς*. Observe Chettle's own words:—

"Nor doth the silver-tongued Melicert
Drop from his honied muse one sable tear
To mourn her death that graced his desert,
And to his lays open'd her Royal eare."

And Mere's famous criticism: "As the soul of Euphorbus was thought to live in Pythagoras, so the sweet witty soul of Ovid lives in *mellifluous and honey-tongued Shakspeare*." And many other illustrations of this contemporary regard of Shakspeare's style—how "sweet and honeyed" his "sentences" were held to be—might easily be quoted.

How the name Melicertos came in the first instance to be adopted by pastoral writers is quite another question. It is worth noticing that Spenser uses the later name of the old sea-god in a like manner. See *Colin Clouts Come Home Again*, 396-9:—

"And there is old Palemon free from spight,
Whose careful pipe may make the hearer rew;
Yet he himself may rewed be more right,
That sung so long untill quite hoarse he grew."

where it is supposed Churchyard is meant. It is by no means impossible that no connection at all is to be looked for between the old deity and his namesake in the *Arcadia* of the sixteenth century. The name, derived as suggested above, was adopted on account of its meaning, not because of any antecedent appropriation of it.

This last remark applies also to another pastoral name given, in all probability, to Shakspeare—to the name Aetion. See *Colin Clouts Come Home Again*, 444-7:—

"And there, though last not least, is Aetion;
A gentler shepherd may nowhere be found;
Whose Muse, full of high thoughts invention,
Doth like himself heroically sound."

This name, too, is found in ancient biographies. There was a sculptor who bore it, and also a painter; see e.g. Smith's *Class. Dict.* But it was not of either of these artists, nor of any other Greek, that Spenser was thinking. The name was adopted for its own intrinsic significance, as Spenser interpreted it. He has in his mind the Greek *αἰών*; and, seeing in the rising Shakspeare a poet whose imagination was to soar aloft, he styled him *The Eaglet*. J. W. HALES.

DEMOLITION OF CITY CHURCHES.

MANY of your readers are doubtless aware that a great number of the city churches are threatened with destruction, and that several of them, which

until recently adorned that portion of London, have within the last few months actually disappeared, and their sites are now occupied by shops or warehouses. Who, for instance, that has been in the habit of wandering about the city can have failed to miss the pretty little church of St. Mildred in the Poultry or the graceful spire of St. Bennet's, Gracechurch Street? It is with the hope of rescuing some fourteen other city churches from the fate which has befallen the two last named that I ask you to exert the influence of your valuable paper. That this matter should have called forth so little attention and sympathy from the public of this metropolis fills me with astonishment. If we Londoners read in one of our newspapers devoted to art news that some relic of antiquity, some old church or palace in Germany or France, is about to be "improved" off the face of the earth, our virtuous indignation is unbounded. Art critics and dilettanti rush to the rescue. All the great daily journals send their special correspondents to furnish them with minute and correct descriptions of the monument devoted to destruction. Who does not recollect the howl of indignation which went up from the English press when the Baden Railway Company proposed to cut a tunnel under the ruins of Heidelberg? But now, while there is a proposition being considered by the Ecclesiastical Commissioners to destroy fourteen most interesting churches in the very heart of the city of London, I hear of no expressions of "virtuous indignation." There appear to be no art critics or dilettanti to rush to the rescue; and if one is so foolhardy as to express a wish that the Ecclesiastical Commissioners would pause before executing their ruthless plan of destruction, one is met with such unanswerable arguments as "increased value of land in the city, sir," "exigencies of the time, my dear fellow." Now when these arguments are reduced to their simple and plain import, they can only mean one thing, *i.e.* that the London people care so little for their public monuments that they grudge the very ground upon which they stand.

Now let us for a moment consider what is proposed by the Ecclesiastical Commissioners. It is simply to destroy fourteen of the most beautiful and interesting churches in London. They are as follows:—

1. St. James, Garlick Hill, Thames Street.
2. St. Nicholas Cole-Abbey, Old Fish Street Hill.
3. St. Bennet, Paul's Wharf, Thames Street.
4. St. Mary Magdalen, Old Fish Street Hill.
5. St. Michel, Queenhithe.
6. Allhallows, Thames Street.
7. St. Mary at Hill.
8. St. George, Botolph Lane.
9. St. Mary Abchurch.
10. Allhallows, Lombard Street.
11. St. Edmund the King, Lombard Street.
12. St. Michel, Royal Paternoster, College Street.
13. St. Mary, Aldermanbury.
14. St. Anne and St. Agnes.

I have not included in this list the church of St. Martin Outwich in Bishopsgate Street, which is in course of destruction, because, as a monument, that church is of no value; or the beautiful churches of St. Mildred in the Poultry and St. Bennet, Gracechurch Street, already destroyed; but I have included the church of St. Mary Magdalen, Old Fish Street Hill, because, although the body of the church has been destroyed within the last few months, the quaint tower is still standing, owing, I believe, to the exertions of a gentleman who interested himself in the matter.

Now out of the fourteen churches named in this list no less than twelve are works of Sir Christopher Wren, all are good examples of English Renaissance architecture, and most of them are interesting for the great excellence of their design. So that what is really proposed is, to destroy a dozen of about the finest works of England's greatest architect. What would be said if there was a proposal on foot to destroy a dozen of Sir Joshua Reynolds's finest pictures? I am convinced

that if people would only take the trouble to examine these churches of Wren's they would at once see how appropriate they are to their position and requirements, and what wonderful elegance and fancy are displayed in details with which they are adorned. I venture to think that a more charming piece of design than the lantern crowning the tower of St. James, Garlick Hill, is scarcely to be seen in this country.

If I were proposing that the inhabitants of London should tax themselves for the erection of some grand national "art monument," such arguments as "expense" and "value of land" might well be advanced; but all that I am asking is that, having these national "art monuments," you should not destroy them for the sake of the few miserable acres of ground they occupy; I ask that even in "the city" something should be sacrificed to that which is sacred and that which is beautiful. Is this asking too much of a people who pretend to a love of art?
H. W. BREWER.

The EDITOR will be glad if the Secretaries of Institutions, and other persons concerned, will lend their aid in making this Calendar as complete as possible.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Jan. 10,	2 p.m. Royal Horticultural Society (Promenade).
	3 p.m. London Ballad Concert, St. James' Hall.
MONDAY, Jan. 12,	3.45 p.m. Royal Botanic Society.
	1 p.m. Sale of Rare Liturgical Tracts at Puttick & Simpson's.
TUESDAY, Jan. 13,	8 p.m. Monday Popular Concert: Santley and Von Bülow. British Architects.
	8.30 p.m. Geographical; Despatches from Mr. Forsyth; Mr. Levi on Paraguay; Mr. Hutchinson, &c.
WEDNESDAY, Jan. 14,	1 p.m. Sale of Engravings at Sotheby's.
	3 p.m. Royal Institution. First of five Lectures by Prof. Rutherford "On Respiration."
THURSDAY, Jan. 15,	8 p.m. Civil Engineers; Photographic; Anthropological.
	8.30 p.m. Medical and Chirurgial.
FRIDAY, Jan. 16,	1 p.m. Sale of Portraits and Raphael Prints at Sotheby's.
	3 p.m. Royal Literary Fund.
SATURDAY, Jan. 17,	8 p.m. Society of Arts; Graphic; Archaeological.
	First night of <i>Guy Rakes</i> at the Gaiety Theatre.
SUNDAY, Jan. 18,	8 p.m. Royal Institution. First of Six Lectures by Prof. Duncan "On Palaeontology."
	4 p.m. London Institution. Concluding Lecture of Prof. Armstrong's "Holiday Course."
MONDAY, Jan. 19,	6 p.m. Royal Society Club.
	7 p.m. Numismatic.
TUESDAY, Jan. 20,	8 p.m. Linnean; Chemical; Society for the Encouragement of Fine Arts (Conversazione).
	8.30 p.m. Royal; Antiquaries (Mr. Howarth on the historical deeds of St. Quentin).
WEDNESDAY, Jan. 21,	1 p.m. Sale of Canon Benson's pictures at Sotheby's.
	8 p.m. Royal Institution. Lecture by Prof. Tyndall "On the Acoustic Transparency and Opacity of the Atmosphere."
THURSDAY, Jan. 22,	8 p.m. Philological. Mr. A. J. Ellis "On the Physical Theory of Aspiration."

SCIENCE.

The Logic of Hegel. Part I: Of the Encyclopædia of the Philosophical Sciences. Translated, with Prolegomena, by William Wallace, M.A. (Oxford: At the Clarendon Press, 1873.)

THIS volume is the most considerable contribution to the knowledge of the later German philosophy that has appeared in this country, with the exception of the works of Dr. Hutchison Stirling. It consists of a translation of the first part of Hegel's *Encyclopædie*, including the general introduction and the outline of the Logic which immediately follows; and it is introduced by prolegomena in which a very able and, I think, successful attempt is made to put the

reader in the right attitude of thought for understanding Hegel. The Introduction to the *Encyclopædie* is the nearest approach to a popular explanation of his position which Hegel ever made. In it he explains his relation not only to Jacobi and Kant, but also to the previous stages or "attitudes" of thought through which Kant passed in his way to the *Criticism of Pure Reason*—namely, the metaphysics of Wolff (which he takes as the type of the metaphysics of the natural understanding), and the Empiricism of Hume; and he prefaces this criticism of his predecessors with a short but luminous exposition of the relations of philosophical thought in the proper sense of the term to the inaccurate and semi-pictorial conceptions of the ordinary consciousness on the one hand as well as to science on the other. In his Prolegomena Mr. Wallace has gone over the ground of this Introduction, and has added numerous illustrations and explanations, which bring the thought much closer to the English reader, and show its relation to the prevailing systems of philosophy in this country. Of this part of his work Mr. Wallace speaks very modestly. He has "no intention" of expounding the Hegelian system, but "merely seeks to remove certain obstacles, and render Hegel less tantalisingly hard to those who approach him for the first time." He has done at least all he promises, and with his aid no tolerably prepared reader should find much difficulty in making his way through Hegel's Introduction and understanding its bearing as a whole, even though a few phrases and allusions may still remain dark to him. Of the originality and clearness of his exposition we could not refer to a better example than the eleventh chapter of the Prolegomena, headed "From Sense to Thought." Mr. Wallace has also, in the last chapters of his Prolegomena, given a short summary or running commentary on the Logic, which is so excellent, so far as it goes, that we could wish it had been fuller. Probably students may complain that he becomes most meagre in his commentary just at the point where the difficulty of Hegel reaches its maximum.

With regard to the translation, it is on the whole excellent. Great ingenuity is displayed in finding terms in ordinary English to render the various philosophical terms for which there is no excellent equivalent to be had. Some loss of precision is of course inevitable when such words as "Vorstellung," "Auschauung," "Setzen," "Aufheben," are translated in a dozen different ways to give the exact shade of meaning in each passage, but the translator might defend himself in most cases by Hegel's words (Proleg. p. 14), that "so long as a nation does not know a noble work in its own language it is still barbarian, and does not regard the work as its own." In the translation of the Introduction considerably greater liberties are taken of paraphrasing and practically commenting upon the original, than in the Logic. Probably Mr. Wallace considered that the paragraphs of the Logic were of the nature of exact formulæ which must be given as literally as possible, but the result is sometimes rather to increase than to lessen the difficulty of the German. He has also deprived himself very often of the aid

which Hegel borrows so freely from the printer, by accenting the words upon which the argument turns. In some places, this, coupled with the want of exact correspondence in the English rendering of the philosophical terms, obscures that antithetic structure of the sentences which so much helps us in understanding Hegel; but no one who has ever attempted to translate such an author will undervalue the measure of success which has been attained. After comparing a considerable part of the translation with the original, I have nowhere been able to find any substantial inaccuracy in the rendering.

The great difficulty in understanding Hegel in this country is that he does not fall under any of the received classifications of possible opinions. He is no believer in innate ideas or intuitions, and as little does he hold that the growth of knowledge is due to the association of ideas. Yet this alternative is constantly presented to us as in itself an exhaustive division of systems.* Either our ideas, metaphysical, moral and religious—all our ideas that go beyond the data of sense—are given immediately in intuition, or they are developed from given sensations by association, or on principles derived from association. But this supposed alternative seems to involve the untoward result that the highest convictions of man on all subjects are either inexplicable or unjustifiable. Those who believe in innate ideas or intuitions are unable to point out any criteria by which they may be distinguished from prejudices. As Mr. Mill says: "Every inveterate belief or intense feeling of which the origin is not remembered, is unable to dispense with the obligation of justifying itself to reason, and is erected into its own evidence and justification." Those who believe in the development of the ideas, e.g., of causality or of right and duty by means of association, if they explain sufficiently how we come to have such ideas, by the very same process explain them

* In speaking above of the twofold classification of philosophical theories usual in this country, I should have referred also to the view of Mr. Herbert Spencer, who has discovered a *via media*, which in his opinion unites all that is true in the doctrine of Intuition, with all that is true in the doctrine of Association. The Intuitionists are, according to him, right in saying that there are certain original beliefs or necessities of thought underlying all our knowledge. But those principles which to us are intuitive and independent of experience and the associations it creates, are really derived from the experience and associations of our ancestors. Our intellectual structure is the concentrated result of the experience of ages. Ultimately therefore all our mental necessities are resolvable into arbitrary and empirical combinations of ideas, i.e. combinations not necessarily involved in the nature of the ideas combined, although we may be unable so to analyse our thoughts as to break the link of association. It seems to me that in developing this theory Mr. Spencer reasons in a circle. He starts with the principle that there are necessities of thought, and that such a necessity is the criterion of truth. He freely uses this criterion in the course of his investigations, and finally, by the aid of it, he explains how the mind itself was constituted and developed, i.e. how his first principle and criterion was produced. Even if we allowed him to have been successful in explaining the process of psychological development, on which point much might be said, all he would then have shown is how certain connections of thought, presupposed to be necessary, become necessary to the individual consciousness under certain conditions. And if this were all, the principle of Association could not be put forward as an ultimate explanation of Knowledge.

away. For, obviously, the connections of thought produced by association are arbitrary, not involved in the nature of the ideas associated, and therefore the explanation of them does not justify them, but is rather apt to destroy them. It is curious how clearly this was discerned by Mr. Mill in that period of dissatisfaction with his own philosophy which he has described so vividly in his *Autobiography* (p. 136). At a later time he thought he had escaped the force of this logic by what are really two inconsequences,—in Science, by holding that the truth of the principle of Causation is proved by an experience which presupposes it; and in Morals, by holding that Happiness which is really the ultimate end of action, yet can only be attained by him who does not aim at it or practically recognise it as his end. In other words, we escape from the effects of our theoretic assumption that association is arbitrary by practically assuming it is not arbitrary.

Now Hegel rejects both of these alternatives. In opposition to the Intuitionists he attempts to develop the truths of reason from each other and connect them with each other in a system, to show they have a filiation which is their proof; and in opposition to the school of Association he shows that this filiation and connection is not arbitrary, but involved in the nature of the ideas connected. Hegel does not seek either simply to justify, or simply to controvert, the ordinary beliefs of man. He justifies them in so far as he shows that there is a logic under the succession of thoughts in the mind of the individual or the race, a logic hidden in the first instance under the appearance of accident from those whose minds are ruled by it. On the other hand, he acknowledges that just because this logic is hidden from the ordinary consciousness of man the accidental results of association become mingled in it with the necessary sequences of reason, and therefore philosophy has to criticise and reconstruct the intellectual life of man, and to separate the husks of prejudice and misconception from his beliefs and thoughts. Logic, as he understands it, undertakes the first, the most simple and the most abstract part of this task. We may best understand its work if we ask how we gradually come to know and define the objects around us, how we gradually pass from opinion to science about them. We begin by the simple apprehension of something that is; our first judgment expresses simply that something, defined to us only by a simple sensation, is before us. We go on to separate it by this its quality from other objects, to determine it as having a certain quantity in comparison with them, to discern a relation between its quality and quantity whereby it has a definite measure that it cannot pass over. Then we begin to reflect on it, to contrast its transitory phenomena with the permanent reality or essence, to consider how its existence manifests the essence, to conceive it as under a law, as the expression of a force, as the effect of a cause, and so on. In all this movement of thought Hegel discerned that we are really transforming the immediate object as it is to the sensuous consciousness, by the successive application to it of categories that are continually increasing in complexity. Thus ordinary

opinion passes into Science as the forms of thought employed become more adequate to the ends of intelligence. Now Hegel asked the question whether this continuous progress of the mind from simpler to more complex categories, from Being and Quality to Quantity and Measure, and from these again to Essence, Existence, Force and Expression, Substance and Accident, Cause and Effect, Action and Reaction, &c., is a mere accidental process, or one that has an order and a necessary order; whether the changing categories and forms which thought uses at different stages of its progress to complete science are to be treated as so many isolated facts, or whether they are all related together, and evolved from each other, and in their completeness show the very constitution of the mind that uses them. Whether they are so related in themselves, we shall best, he thinks, be able to discover if we drop out the matter of experience and consider the succession of categories by itself. We shall then see whether there is any law of filiation in the categories from each other, a law given along with the categories themselves, and apart from which their real meaning cannot be understood. If we can discover such a law, we shall be able to trace the normal movement of thought from its first apprehension of objects to its complete exhaustion of them, and to separate that normal movement from the dross of accident and individual association which mingles with it in the ordinary growth of individual Experience. This is the thought that inspires the *Logic* of Hegel. Hence he tells us that Philosophy takes up and explains the categories of ordinary reflection, the categories used by common sense and the sciences. In two points only does it differ from such reflection. In the first place, it traces the connection between the elements which reflection leaves isolated and unconnected; in the second place, "it introduces new categories and gives them an authoritative place in the sciences" (Introd. § 9). Apart from philosophy the mind only accomplishes the first two stages of intellectual life,—the stage of simple perception or apprehension of objects as qualitative and quantitative, and the stage of reflection in which is discerned the relativity of objects in themselves and to each other; but when philosophy enables us to understand these two stages in their relation and connection, it by that very fact enables us also to see that there is a third stage of thought, in which we comprehend objects and the world as a whole in the unity of their differences,—the stage of the Notion, or as Mr. Wallace etymologically translates it, the stage of "grasp of thought" (*Begriff*=comprehension). This return into unity out of the differences discovered by science (which "murders to dissect"), is the peculiar work of philosophy, and in that work it is guided by a special set of categories in the use of which it completes the work of Science and dissolves the externality of things into their unity with thought. So far the *Logic*. It is a further question, which however takes us beyond the strict limits of *Logic*, whether the categories so evolved have merely to be externally applied to the matter of outward and inward experience. The Hegelian system

has sometimes been supposed merely to supply us with a more complete and subtly arranged collection of abstract points of view for the analysis and estimate of experience. But if so, the categories of the notion would have no real applicability to an experience to which they were merely externally related. If Hegel has proved that there are categories of the notion, he has at the same time proved that there cannot be a dualism or absolute division between the form and matter of thought.

EDWARD CAIRD.

DR. SCHLIEMANN'S BOOK ON TROY.

Trojan Antiquities; Report of Excavations in Troy. [*Trojanische Alterthümer, Bericht üb. die Ausgrabungen in Troja.*] *Atlas to the Same, containing 218 Photographic Plates, with explanatory Text.* [*Photographische Abbildungen zu den Bericht.*] By Heinrich Schliemann. (Leipzig: Brockhaus.)

THE discoveries of Dr. Schliemann at Troy have hardly met, as yet, with that recognition which they deserve. Without entering into any question as to the exact date or origin of the monuments which it has been his good fortune to bring to light, the fact remains that a most perfect collection of antiquities has been disinterred, which, from the locality in which it was found, may throw some light on Troy and its legendary cycle, and which, even if it should prove to be something very different from the "treasure of Priam," would always retain its place by the side of the most valuable treasures rescued during our century from the soil of Greece, Egypt, or Nineveh. It is quite true that their mere value in gold and silver does not raise the historical importance of these Trojan antiquities, but neither should it excite the envy of less fortunate explorers. If every vessel that is of pure gold and silver were made of copper or bronze, the whole collection would still have exactly the same archaeological value; the problem that has to be solved would lose nothing of its interest, and Dr. Schliemann would still deserve the thanks of all archaeologists for his persevering labours in the neighbourhood of Troy.

It was in the beginning of July of last year that Dr. Schliemann, while digging at a depth of 8½ metres along the wall which runs in a north-westerly direction from the Skæan gate, discovered, close to what he calls the house of Priam, a curious flat copper shield (see *Augsburger Allgemeine Zeitung*, Aug. 5). It was covered by a thick and firm layer of red ashes and calcined fragments, about 1½ to 1¾ metres in depth, on which runs a wall, 6 metres high, and 1 metre 80 centim. wide. That wall consists of large stones and earth, and is referred by Dr. Schliemann to the time immediately succeeding the destruction of Ilium. It is covered by about 1 metre of surface soil. The shield (*δίσκος ὀφθαλμοειδής* or *ἀσπίς ὀφθαλμοείσα*) had the shape of a large tray, with a knob (*ὀμφαλός*), 6 centim. high, and 11 centim. in diameter in the centre; and a furrow (*αὐλαξ*) 1 centim. in depth, and 18 centim. in diameter round it. It is 49 centim. in diameter, and surrounded by a rim 4 centim. high.

Close to this shield a copper kettle was found, with two horizontal handles, a $\lambda\epsilon\beta\eta\varsigma$, 42 centim. in diameter, and 14 centim. in height, the flat bottom measuring 20 centim. in diameter.

The third object found was a copper plate, 1 centim. thick, 10 centim. broad, and 44 centim. long, with a rim 2 millim. high. At one end of it there are two wheels on an axle, which, however, do not move. Fastened to this plate, as it would seem by the effect of heat, was a silver vase, 12 centim. high and 12 centim. wide.

Then followed a copper vase; 14 centim. high, and 11 centim. in diameter.

The next find was a globe-shaped bottle, 15 centim. high, 14 centim. in diameter, weighing 403 grammes, the whole of pure gold, with an unfinished zigzag ornamentation.

Next came a goblet, again of pure gold, 9 centim. in height, $7\frac{1}{4}$ centim. in breadth, weighing 226 grammes.

Then followed another goblet, 9 centim. high, $18\frac{1}{2}$ centim. long, $18\frac{1}{4}$ centim. broad, weighing exactly 600 grammes, all of pure gold. This had the shape of a ship, with two large handles. On each side there is a mouth for drinking, one small, the other large, a true $\delta\epsilon\pi\alpha\varsigma\ \alpha\mu\phi\iota\kappa\upsilon\pi\epsilon\lambda\lambda\omicron\nu$, as Dr. Schliemann imagines, the smaller mouth intended for the host, the larger for the guest. The vessel has a small stand, $3\frac{1}{2}$ centim. long, 2 centim. broad, and only 2 millim. high. What is most important is that this vessel is of cast, not of wrought gold, while the other vessels are worked with the hammer.

The treasure contains another smaller goblet, 70 grammes in weight, 8 centim. high, $6\frac{1}{2}$ centim. broad, the gold being mixed with 25 per cent. of silver. It has a stand 2 centim. high and $2\frac{1}{2}$ centim. broad, but so contrived that the goblet could not have stood on it, but would have had to be reversed.

A similar mixture of gold and silver occurs in six large blades, wrought by the hammer, one rounded at the end, the other in the shape of a half-moon. Two of them weigh 184 grammes each, two others 173, the two smallest 171 grammes each. They vary in length from 17 to 21 centim.

Next follow three large silver vases, the largest 21 centim. in height, 20 centim. in diameter, with a handle 14 centim. long and 9 centim. broad; the second, $17\frac{1}{2}$ centim. in height, 15 centim. in diameter, with fragments of another silver vase adhering to it. The third is 18 centim. in height, and $15\frac{1}{2}$ centim. in diameter, its base being covered with molten copper. All three vases are rounded at the bottom, and could not have stood on a table.

Besides these, there is another silver goblet, $8\frac{1}{2}$ centim. high, and 10 centim. in diameter at its mouth.

The next is a silver dish, 14 centim. in diameter, and two small silver vases, the workmanship of which Dr. Schliemann calls magnificent (*herrlich*). The larger one has on each side two small tubes for strings to pass through. With its hat-shaped cover it reaches a height of 20 centim. The smaller one, with but one tube on each side, is 17 centim. high, and 8 centim. wide.

Then follow 13 lances of copper, mea-

suring $17\frac{1}{2}$, 21, $21\frac{1}{2}$, 23, and 32 centim. in length respectively, and reaching, where they are largest, a breadth of 4 to 6 centim. On one side they have a hole, and in some cases the nail is still there with which the lance had been fastened to a wooden handle.

After these we have 14 axes, according to Dr. Schliemann, battle-axes, from 16 to 31 centim. in length, $1\frac{1}{2}$ to 2 centim. in thickness, and 3 to $7\frac{1}{4}$ centim. in breadth. The largest weighs about 1365 grammes.

Next come seven large double-edged daggers of copper, with bent handles, 5 to 7 centim. long, evidently intended to be inserted into wooden handles. The largest is 27 centim. long, reaching to $5\frac{1}{2}$ centim. in breadth. Some of these daggers are much injured.

There is one knife with a single edge; it is $15\frac{1}{2}$ centim. long. There are besides fragments of swords and similar implements of war.

All these objects were originally placed, as Dr. Schliemann supposes, in a wooden box, which was destroyed by the conflagration. In confirmation of this Dr. Schliemann appeals to a large key, made of copper, exactly like our own modern keys of a safety-box, which was found with the treasure. It was $10\frac{1}{2}$ centim. long, with a bolt 5 centim. in length and breadth. As not very far from the spot where all this lay together, a helmet was found and another silver vase and a goblet, Dr. Schliemann conjectured that the helmet may have belonged to the person who deposited the box, and who was himself overtaken by the conflagration or the fall of the royal palace, though no hint is thrown out how he happened to be in possession of the silver vase and goblet, which he ought to have left with the rest of the treasure.

But this is not all. In examining the largest silver vase, Dr. Schliemann discovered in it two magnificent golden head-dresses, a head-band, four splendid and highly artistic ear-rings of gold; besides fifty-six golden ear-rings, thousands of small rings, dice, buttons, six golden bracelets, and the two small golden goblets mentioned before.

One of the head-dresses is 51 centim. in length, consisting of a golden chain, on each side of which hang eight chains, 39 centim. long, covered with small golden leaves, and ending each in an owl-headed idol, $3\frac{1}{2}$ centim. long. Between these chains there hang 74 smaller chains, 10 centim. long, likewise covered with leaves, and ending each in a larger leaf. The whole is of gold, and gives the idea of advanced workmanship.

The second head-dress is 55 centim. long and 12 millim. broad; on each side there are seven chains, each covered with leaves, and ending again in owl-headed idols, each 25 millim. in length. The length of each chain with the idol is 26 centim. It is said that these idols have almost a human shape, but that the owl's head with two large eyes is unmistakeable. Between these chains, which were meant to cover the temples, hang 47 smaller chains, each covered with leaves, and with the same idols at the end. The same idols occur also in the ear-rings.

The head-band is 46 centim. long, and 1 centim. broad. It has three holes on each side, and is rudely ornamented. The ear-

rings are said to have no similarity with Greek, Roman, Egyptian, or Assyrian ear-rings. Their ornamentation consists of leaves, serpents, buttons, &c.

Add to all this, thousands of small objects, such as rings, small stars, gold beads, prisms, leaflets, sticks, buttons with rings to fasten them, sleeve-links, &c., and we may well make allowance for Dr. Schliemann's raptures in describing his treasure.

After this first find had been secured, Dr. Schliemann went on removing the upper wall, and clearing some rooms of what he calls the royal house. He there discovered a piece of red slate, possibly a hone, which promised to be the greatest treasure of all, for it contained an inscription. He also found there some terra-cotta vessels, and on the Trojan wall itself three more silver vessels, of which two are broken, but may be restored.

If Dr. Schliemann had been satisfied with placing this treasure before the world, without saying anything about it, he would have earned nothing but gratitude. As he has ventured, however, on certain theories, and as, more particularly, he has at once assigned this treasure to Priamos and Hekabe, thus drawing these mythic personages and the Trojan war into the domain of authenticated history, it could not be otherwise but that he roused at once both opposition and incredulity. It is well known that even the site of Ilion is a sharply contested point among ancient and modern archaeologists. Dr. Schliemann's arguments in favour of his own site at Hissarlik were stated by him in the *Augsburg Gazette* (September 26). Wherever there has been an old town, he writes, our excavations always yield us potsherds, nothing being so indestructible as baked clay. No town can be older than the oldest, nor more recent than the most recent potsherds found in its ruins. At Bunarbashi, on the Balidagh, where Welcker and other scholars suppose Ilion to have stood, excavations have never yielded any potsherds of a higher date than the sixth century B.C. Sir John Lubbock, who had the so-called tomb of Hektor on the Balidagh excavated, found no terra-cotta there older than the third century. Bunarbashi, therefore, cannot be the site of Ilion, but is the site of Gergis, as proved by an inscription found there. The late Austrian Consul, Von Hahn, who likewise explored that territory, stated that in spite of careful search on the northern side of the Balidagh, between the Akropolis (of Gergis) and the springs of Bunarbashi, not one single sign was detected there of a former settlement, no potsherds or fragments of bricks—the never-absent witnesses of ancient towns—no stone, no quarry, no artificial level; nothing but the natural soil, never touched before by the hand of man. The hills of Chiblak, too, where Clarke and Barker Webb placed the ancient Ilion, and the high ground near Atzik-koi, where Ulrichs thought he had discovered Trojan ruins, have been carefully examined, without yielding any evidence whatever of human life and workmanship. The village of the Ilions (*Ἰλίων κώμη*), where Strabo, following the theory of Demetrios of Skepsis, placed Troy, was thoroughly ransacked, but produced nothing beyond potsherds of the first century B.C. The place, on the contrary, where Dr. Schlie-

mann looked for the ruins of Ilium, and where he found his wonderful treasure, swarms with the vestiges of former life.

If it be asked, why the treasures found in that place should be ascribed to Priamos, Dr. Schliemann's chief argument is, that he finds everywhere images in marble, slate, bone, ivory, and gold, of an owl-headed deity; that the same owl-headed deity occurs on vases and goblets, and that this can be no other but the Athene of Ilium, the patron-goddess of Troy; in fact, the Homeric *θεὸς γλαυκῶπις Ἀθήνη*. This argument will hardly carry conviction. Whatever *γλαυκῶπις* may mean, it cannot mean owl-headed, unless we suppose that *Ἡερβοῶπις* was represented as a cow-headed monster. Though we may be surprised at Homer assigning Athene as a patron-goddess to Ilium, so much, I suppose, is certain, that when the poet (Il. vi. 311) said, *ἀνέρεε δὲ Πάλλας Ἀθήνη*, he did not mean that the idol of the goddess shook its owl's head in token of its non-acceptance of the prayers and offerings of the Trojan matrons, assembled in the temple of Pallas Athene. Whatever goddess may be assigned to the Trojans in the Homeric poems, the real deities of that country were not Zeus or Athene, but the Kabeiroi, the Idaean Daktyloi, and the Mother of the Gods. Those who dig in the ruins of Troy will never find there remnants of the life which the mythology of the Greeks and the poetry of Homer transferred to that spot, but remnants of pre-Hellenic and half-Asiatic culture, among which even an owl-headed deity would not be too incongruous. To look for the treasure of the Homeric Priamos at Hissarlik would be like looking for the treasure of the Nibelunge at Worms, or for the bracelet of Helle in the Dardanelles. The only intelligible explanation would be this. If an owl-headed deity was once worshipped at Troy, this very fact may account for the otherwise most anomalous proceeding on the part of Homer in venturing to assign to the barbarous, or at least non-Hellenic Trojans, Athene as their tutelary deity, at the time when the myth of Helen and Paris and Achilles was localised at Troy.

Unfortunately the inscriptions found by Dr. Schliemann, which might have been expected to fix once for all the date of his treasure, are most disappointing. One inscription on a terra-cotta vase is no inscription at all, but rude ornamentation, consisting of simple crosses, and crosses surrounded by a line, the former reminding one at first of a Phœnician *t*, the other of a *th*. Another inscription, consisting of six or seven letters, arranged in a circle, contains certainly Semitic letters, but they belong to no definite series: some of them appear in a comparatively modern form, and the whole inscription requires careful verification. The most important inscription is that found on a hone or a piece of red slate in the Royal Palace, close to the Skæan gate. Here we discover among the eight or ten signs of which the inscription consists some decidedly Phœnician letters in their earliest form. But nowhere were Phœnician letters ever arranged as they are in this inscription; and as the migrations of the Phœnician alphabet are matter of history, great care will be required before allowing to this inscription a really historical value.

There is one other inscription which occurs on a seal, found seven mètres below the surface. This one feels strongly tempted to read *Ἰλιον* or *Εἰλιον*, if only there was any precedent for the arrangement of the letters, and particularly for the horizontal position of the *Van*.

If, without having seen the actual treasures which Dr. Schliemann has safely conveyed to Athens (his Trojan collection is said to consist of more than 20,000 articles), one may venture to express an opinion of their real character, they would seem to belong to that large class of pre-historic antiquities which has of late attracted so much attention. With the exception of two or three, most of the works of art seem to be of rude workmanship, and not such as Homer describes when he indulges in descriptions of armour or goblets or ornaments. If the head-dress which Dr. Schliemann calls a *κρήδεμνον* had been worn by Hekabe or Helen, would not Homer have described it, instead of speaking of the *κρήδεμνα* as simple veils tied round the head? Dr. Schliemann says himself: "Pre-historic times begin in Ilium just below the ruins of the Greek colony, at an average depth of two mètres, and from that depth down to the virgin rock, fourteen to sixteen mètres deep, the soil is full of rough stone implements and splendidly polished axes, together with implements and weapons of pure copper, sometimes silver ornaments, rarely ornaments of gold." He distinguishes four pre-historic nations preceding the historic period, which at Troy begins with the Greek colony established there not later than 600 B.C. The first, two to seven mètres in depth, seems to have had frame-houses; the second, four to seven mètres in depth, had buildings of small stones, joined with clay; the third, seven to ten mètres in depth, lived in houses of dried brick; the fourth, ten to fourteen mètres in depth, built houses of huge stones. The idols with the owl's head or the helmeted owl's head are found in all the four strata. The destruction of the city, if city it can be called—for it does not seem to have been larger than Trafalgar Square—took place during the second period; but why that period should be considered coincident with the events related in the Homeric period, has never been shown. If there is on the spot where the Greeks supposed Troy to have stood, evidence of a great catastrophe, of the destruction of an ancient fortress, and the conflagration of a royal palace, this may explain to us how the Greek bards came to localise there their ancient legends of the war about Helen, and the destruction of the castle in which she was kept by Paris. No one in his senses has ever supposed that these were truly historical events, although it was imagined that, after removing from the Iliad all that was clearly mythological, there would still remain the historical foundation of some war or other carried on for some reason or other by Greek tribes against the inhabitants of Troy. It is true that it would be impossible to prove that there never was a raid of Greeks into Troy; but if history is to be distilled out of mythology by simply leaving out what is impossible, we might with equal right claim the destruction of the palace of Attila by the

Burgundians, or the conquest of Jerusalem by Charlemagne, as historical events. The fact is that if we take away from the Iliad all the miraculous and impossible elements, the whole poem collapses and vanishes. Helen is purely mythological: she is the daughter of Zeus (though not yet a swan) and Leda; she is the sister of Kastor and Polydeukes. She was carried off, not only by Paris, but by Theseus also, although the mother of Theseus, Æthra, was one of the companions of Helen, when she went to see the fight between Paris and Menelaos. She was even represented as the wife of Achilles. All this is intelligible as mythology, but discloses not one atom of historic reality. Paris—who, like many mythological heroes, had been exposed as a child and rescued by shepherds—is what he is and does what he does only because he has acted as judge of the beauty of three goddesses, one of whom allowed him to carry off Helen. Achilles is the son of a goddess, and but for his mother Thetis the whole Iliad would be impossible, for it was she who obtained from Zeus the promise to avenge her son and to grant victory to the Trojans. Let anyone read the Iliad, and try to suppress all those deeper motives; let him remove the constant interference of the gods and the goddesses on both sides, on the Trojan side as well as on the Greek, and the whole Iliad becomes impossible. The locality of the war, as described by the poet, may have some amount of reality, but that is perfectly compatible with the mythological character of the war itself, and the ruins of an old fortress, as laid bare by Dr. Schliemann, would fully justify the ancient poets in transferring their version of the old struggle for the conquest of Helen to that very spot. But if this be so, it will be seen that to expect to find the *δέπας ἀμφικύπελλον* of Priam among the ruins of Hissarlik is not less sanguine than to look there for the *δέπας ἀμφικύπελλον* which Hephaistos presented to Here and the other gods. The diggings at Troy will no more yield the treasures once possessed by the Homeric heroes, than the armour of Uter Pendragon will ever be brought to light from the ruins of Tintagel, or the imperial crown of Friedrich Barbarossa from the caves of the Kyffhäuser.

MAX MÜLLER.

NOTES AND NEWS.

MR. DARWIN is engaged in the preparation of a revised and extended edition of the *Descent of Man*.

IN his address to the Sheffield Naturalists' Club on Monday, the 5th inst., Mr. H. B. Sorby, the president, described some of the results to which he had been recently led by applying physical methods to the study of the evolution of plants. He had studied the changes that occurred in the colouring matters in leaves and flowers during their development from a rudimentary to a perfect state, and the connection between them and the action of light, and had found that there was apparently a most remarkable correlation. When more and more developed under the influence of light, coloured compounds were formed which were more and more easily decomposed by the action of light and air when they were no longer parts of living plants, but dissolved out from them. There was thus apparently some condition in living plants which actually reversed these reactions.

He had also found that in the more rudimentary state of the leaves of the highest classes the colouring-matters corresponded with those found in lower classes, and in the case of the petals of flowers their more rudimentary condition often corresponded with some other variety, which thus appeared as if due to a naturally arrested development of a particular kind. This principle would perhaps serve to explain the greater prevalence of flowers of particular colours in tropical or colder regions and at different elevations. Now, since the effect of the various rays of light was different, it became a question of much interest to decide whether an alteration in the character of the light of the sun would produce a somewhat different effect in the case of other classes of plants in which the fundamental colouring-matters differed; for example, whether light, with a relatively greater amount of the blue rays, might not be relatively more favourable to the cryptogamia than to the flowering plants. So far this was a mere theoretical deduction; but, if proved to be true by experiment, it might, at all events, assist in explaining the difference in the character of the vegetation of our globe at an earlier epoch, when perhaps our sun was in a somewhat different physical state, and the light more similar to that of Sirius and other stars of the highest and bluer type.

DR. VOGEL has communicated to the *Astronomische Nachrichten* the results of his spectroscopic observations at Bothkamp on the motion of stars in the line of sight. The proper motions of stars in the transverse direction have been determined in a very large number of instances with considerable accuracy; but until the application of the spectroscope to this enquiry by Dr. Huggins, it was impossible to say whether a particular star was moving to or from the spectator, though a general drift had been recognised. The principle on which this investigation depends is, that the "pitch" of the wave of light (to borrow a musical term) is altered by the motion of the luminous body to or from the spectator; and the observation, which is an extremely difficult one, consists in determining how much a ray of known pitch is displaced in the spectrum, where rays are arranged according to their pitch (or colour).

In the bright star Vega, Dr. Vogel finds a motion towards the earth of fifty-two miles a second; whilst another star, α Aquilæ, would appear to be moving at the rate of forty-eight miles a second, also towards the earth. It is highly satisfactory to find the results which Dr. Huggins obtained some years ago thus fully confirmed, and the agreement is really remarkable, considering the delicate nature of the enquiry.

Dr. Vogel has also applied the same method to the great nebula of Orion, but with doubtful results, though he considers a slight motion of about fifteen miles a second from the sun to be probable; we prefer, however, with Dr. Huggins (who has devoted much time to this very nebula) to regard the question as still open. Owing to the vague contour of such bodies, which are apparently nothing but floating masses of very rare nitrogen gas, it is highly improbable that any change of position would be detected for some centuries to come, so that the spectroscope affords us the only means of determining their motion.

WE learn from a letter of Dr. B. A. Gould to the editor of the *American Journal of Science*, that the important survey of the Southern heavens in continuation of Argelander's Zones, which has been undertaken by the Argentine Government and placed under Dr. Gould's superintendence, is nearly completed; 50,000 stars having been already observed out of an estimated total of 65,000: but, alas! the most laborious part of this spirited undertaking still remains to be accomplished, as none of the heavy computations necessary for the formation of a catalogue have even been commenced.

Those who are anxious to see our Universities

take a more prominent position in science than they do at present, will be glad to hear that a large sum of money has been devoted by the University of Oxford to the establishment of an Observatory for Astronomical Physics, where the Savilian Professor will have an opportunity of making good use of the splendid instruments presented by Mr. De La Rue. Besides these, there will be, as appears from the account given by Professor Pritchard to the Royal Astronomical Society, a fine refractor of twelve inches' aperture provided with a powerful spectroscope, so that we may hope for a most valuable series of spectroscopic and photographic observations from this University, and, what is perhaps even more needed, the formation of a scientific school, in which sound training and original research will go hand in hand.

A STANDING reproach to gravitational Astronomy has at length been removed by the publication of Professor Newcomb's Tables of Uranus. The planet Uranus has a special interest arising from the fact, that the anomalies of its motion led Adams and Leverrier to the discovery of a new planet, Neptune; and it is satisfactory to have these anomalies fully accounted for by this elaborate discussion of the large mass of observations accumulated since the last century. We shall probably have to wait for the lapse of some hundreds of years before finally deciding on the degree of accuracy of these tables.

THE latest contribution to the theory of the moon's motion, by the Astronomer Royal, is calculated to disturb the satisfaction expressed on the appearance of Hansen's Lunar Tables. It appears that after rejecting an irregularity of long period, which Delaunay and Newcomb agree in showing to be inappreciable, such large outstanding errors are left as cannot be referred with any degree of plausibility to mere roughness of the observations used, and Sir G. B. Airy is therefore forced to the conclusion that there is still some serious defect in the Lunar theory. Evidently the moon was placed in the heavens as a thorn in the side of mathematicians.

DR. NYRÉN has discussed various observations of the elevation of the pole at Pulkowa, with a view to determining whether a movement of the pole on the surface of the earth in a period of ten months, which is theoretically possible, actually exists. From his investigation, it would appear that the pole of the earth moves on the earth's surface in a circle of about twelve feet diameter, but the determination of such a minute quantity is beset with so many difficulties, that all we can conclude with certainty is, that the movement, if there be any, is excessively small, and may safely be neglected even by astronomers.

In the *Annales de Physique*, M. Peaucellier gives an account of his mechanism for the exact conversion of circular into rectilinear motion, called by Dr. Sylvester the "Peaucellier cell." A very slight modification of the apparatus solves a practical problem of great importance, whose solution has been long desired; namely, the construction of an arc of a large circle whose centre is at an inconvenient distance from the place of operation. Professor Tchebichef suggested what he believed to be an approximate solution of this; the bending of a uniform rod of length equal to the required arc, so that its extremities are in the direction of the tangents to the arc. It has been shown by Dr. Klein that this solution is exact if the rod is exactly uniform. The Peaucellier cell also solves the problem exactly, but in a manner far more easy of practical application. In the hands of Dr. Sylvester, it has become the starting-point for a series of investigations of the highest importance both in mechanism and in pure mathematics.

An extension of Peaucellier's theorem to three dimensions supplies a means of making a point move accurately in a plane by means of a universal joint. If the mechanical connections can be so

made as to enable this construction to be actually used as a planing machine, it will supply a simple solution of a problem in mechanism, whose approximate conquest has already made an era in the accuracy of iron and steel work. By a combination of two cells, Dr. Sylvester describes conic sections; a combination of three solves the famous old questions of the multiplication of the cube and the trisection of an angle. Further combinations make it possible to describe all curves up to the ninth species (having nine less than the maximum number of nodes). Finally, as all roads lead to Rome, this investigation lands us ultimately in the general theory of the functional relation of quantities, supplying an extension of Abel's classification of algebraic irrationals. Dr. Sylvester will give an account of his discoveries at the Royal Institution on the evening of Friday, January 23.

In a review in the *Gardener's Chronicle* of De Candolle's *Prodromus*, which was commenced by the elder De Candolle forty-one years ago, and after having been extended to seventeen volumes has now been brought to an untimely end by his son, Dr. Hooker thus appraises the different contributions to this gigantic work:—

"The great inequality in the value of the matter contained in the *Prodromus* renders any attempt to draw general conclusions with respect to it very unsafe. Thus omitting the three De Candolle's memoirs, and selecting the largest families of the principal other contributors, we may take as instances of excellent and conscientious work, involving visits to the principal European herbaria, the monographs above mentioned—of Bentham and of Müller and Meissner's Proteaceæ, and as examples of execrably bad work the Solanaceæ of Dunal, and the Convolvaceæ of Choisy—between these extremes are examples belonging to every intermediate grade of good and bad work, amongst which it would be invidious to particularise."

THE same periodical states that the Society of Arts has organised a standing committee for the purpose of bringing under parliamentary responsibility the National Museums and Galleries, so as to extend their benefits to local museums, and to make them bear on public education. The following are the several objects in view for effecting this purpose:—

"All museums or galleries subsidised by Parliament to be made conducive to the advancement of education and technical instruction to the fullest extent, and to be made to extend their advantages to the promotion of original investigations and works in science and art.

"To extend the benefits of national museums and galleries to local museums of science and art which may desire to be in connection, and to assist them with loans of objects.

"To induce Parliament to grant sufficient funds to enable such objects to be systematically collected, especially in view of making such loans.

"For carrying out these objects most efficiently, to cause all national museums and galleries to be placed under the authority of a Minister of the Crown, being a member of the Cabinet, with direct responsibility to Parliament; thereby rendering unnecessary, for the purpose of executive administration, all unpaid and irresponsible trustees, except those who are trustees under bequests or deeds, who might continue to have the full powers of their trusts, but should not be charged with the expenditure of parliamentary votes.

"To enter into correspondence with all existing local museums and the numerous schools of science and art, including music, now formed throughout the United Kingdom, and to publish suggestions for the establishment of local museums.

"Also, to cause the Public Libraries and Museums Act (18 & 19 Viet. c. lxx.) to be enlarged, in order to give local authorities increased powers of acting."

WE take from the same well-informed source the following abstract of the second paper sent to the Admiralty by Mr. Moseley, the first naturalist of the *Challenger*. It described the vegetation of Bermuda and the surrounding sea, and was read before the last meeting of the Linnean Society.

"About 160 species of flowering plants were gathered on the island, but of these not more than 100 were certainly native. Those of West Indian origin were probably brought, as Grisebach had suggested, by the Gulf Stream or by cyclones, there being no winds blowing directly from the American coast which would be likely to carry seeds, which might, however, be conveyed from the continent by migratory birds. A note by Professor Thiselton Dyer, appended to the paper, stated that 162 species sent over by Mr. Moseley had been determined at the Kew Herbarium, of which 71 belong to the Old World, while two, an *Erythraea* and a *Spiranthes*, were plants hitherto unknown as confined to single localities in the United States."

PROFESSOR AGASSIZ said to a friend, only the evening before he was stricken down, in reply to that friend's admonition that he ought not to work so hard: "Give me four years more, and I shall have so far accomplished the task which I have set myself to do, that I shall be willing to leave it."—*The Index*, Boston, December 25.

THE Emperor of Brazil has appointed Dr. Wm. Huggins, F.R.S., a Commander of the Order of the Rose. The appointment was made some months since, but the notification of it has been accidentally delayed.

Land and Water reports the following arrivals at Jamrach's:—

1 pair Harnessed Antelopes (*Tragelaphus scriptus*).
Two Bonnet Monkeys (*Macacus radiatus*).
One Laponda Monkey (*Macacus nemestrinus*).
Three Arabian Baboons (*Cynocephalus hamadrias*).
One pair Plantain Squirrels (*Sciurus plantani*).
One Sumatran Porcupine (*Hystrix longicauda*).
One Pair Hoffmann's Sloths (*Choloepus Hoffmannii*).
Two Cock Reeves' Pheasants (*Phasianus reevesii*).
Ten Ruddy Sheldrakes (*Tadorna rutila*), from Africa.
Four Ruddy Sheldrakes (*Tadorna rutila*), from India.
One Goliath Heron (*Ardea Goliath*).
One Grey Pelican (*Pelecanus lacteus*).
One Pair Hanging Parakeets (*Loriculus sclateri*).
One Mealy Amazon (*Chrysotis farinosa*).
One pair New Parakeets (India).
Twenty-eight Grey Parrots (*Psittacus erithacus*).
Four small Cockatoos (*Cacatua sulphurea*).
Twelve Rosa Cockatoos (*Cacatua roseicapilla*).
One Black Cuckoo (*Eudynamis orientalis*).
Three New Java Sparrows from Japan.
One Indian Starling (*Lamprocolius contra*).
Five pair Whithats (*Munia penelope*).
Six Learned German Bullfinches.

MR. FRANK BUCKLAND contributes the following obituary of Mr. E. Blyth to *Land and Water*:—

"Blyth was originally educated as a chemist, but at an early age took a great fancy to natural history, spending most of his time in the country, studying the habits of birds, &c. He contributed much to *London's Magazine* and other works, and was appointed curator to the then existing Ornithological Society, which held its meetings in Pall Mall. He resigned this appointment on being elected curator of the Asiatic Society of Calcutta—a position which he occupied for twenty-two years. Returning to England with a vast fund of natural history knowledge, he contributed many exceedingly valuable papers under the *nom de plume* of 'Zoophilus,' both to *Land and Water*, and afterwards to the *Field*. His series of chapters on 'Wild Types' in *Land and Water* is acknowledged by all naturalists to be a most valuable contribution to modern zoological literature. I therefore sincerely trust that they may shortly be published in the form of a book, in which should also be included his writings on the *Fishes of Calcutta*, *Our Horn Gallery*, and other able essays. He was almost a daily visitor at the Zoological Gardens, and continually attended the meetings at Hanover Square. Blyth was remarkable as having a most remarkable memory, especially as to scientific names of mammals and birds; he was also a first-rate botanist. He knew geology and shells, both fossil and recent, quite

well; and I do not recollect any man who united in himself such a vast various knowledge of natural history. By the death of Mr. Blyth science has lost one of her most able professors, and natural history circles a kind-hearted and generous-minded friend."

In the notice of Mr. Alexander J. Ellis's researches in the comparative phonology of the English Dialects, which appeared in last week's ACADEMY, we referred to the importance of good specimens of Warwickshire vernacular, as illustrating the presumed dialectic character of many Shakespearean phrases. May we also point out the importance of good Worcestershire specimens, in illustration of the older dialect of *Piers Ploughman*? We see that Mr. Skeat, in the preface to his recently published C text of this great poem, comes to the conclusion that the MSS. from which his B and C texts are published may be taken to represent satisfactorily the dialect of the writer himself. This is a *Mixed Dialect*, meaning, we presume, not that the author mixed the words and grammatical inflections of different dialects into a *lingua franca* of his own, but that he used the dialect of a district, in which, from its border character, such a mixed dialect was in everyday use. Now according to Prince L. L. Bonaparte's classification of the existing English dialects, Worcestershire still preserves such a mixed dialect, being the county in which Northern (Mercian), Eastern (Middle Anglian), and Western (Saxon) phases of speech all meet. Among the points noted by Mr. Skeat, we find the use of both endings, *-en* and *-eth*, in the plural indicative of verbs. The Mercian dialect still uses *-en*, *we knave'n*, at least occasionally; in Saxon or Devonian varieties we find *-eth*, *we think'eth*; but the Anglian dialect seems to have dropped the terminations. What is the case in Worcestershire? In the pronouns Mr. Skeat finds both *hwe* or *heo* and *sche*; *hoo* is still Mercian. In many instances also the *f* is found to alliterate with *v*, showing the well-known Somerset pronunciation of *v* for *f*, as in *vire vishes*, which was within a few centuries common to Kent, Surrey, and the country south of the Thames generally. Of this we have no doubt Worcestershire still retains traces, as it is common in Hereford, and occasional even in West Northamptonshire. So also *Piers Ploughman* often shows the past participle in *y-*, now represented in the *a-*, of *a-zung*, *a-wore*, = *y-sunge*, *y-frore*; and the infinitive in *-i-ye*, as in the modern Dorset to *zingy*, to *laughy*. It does not seem to have been noticed that a similar mixed dialect, though on the whole much less South-western, is contained in the Shropshire poems of *John Awdelay* (edited in part by Mr. Halliwell for the Percy Society, 1844). Here we have the plural indicative both in *-en* and *-s*, and more rarely in the southern *-eth*, though *thei beth* and *thei bene* are about equally common, the imperative *prays!* and *prayeth!* the second person thou *has* and thou *hast*, the past participle in *y-*, *i-*, *i-lost*, *y-take*. The southern consonants *v* for *f*, &c., do not seem to occur. All these border or transition phases of English are very interesting, and we learn from Mr. Ellis that he is still in want of good specimens of many of these, in particular Warwick, Worcester, Cheshire, Stafford, North Hereford, and Lincolnshire.

We have received a copy of "The Dialect and Archaisms of Lancashire," being the first report of the Glossary Committee of the Manchester Literary Club," written by Mr. J. H. Nodal; also a few pages extracted from the transactions of the same club, relating to the same subject. It is very satisfactory to find that the dialect of this county has thus been taken in hand, and that there is every prospect of the ability of the club to give a good account of it. They have wisely resolved to make the 'Glossary' as full and exhaustive as possible, for which they will receive the thanks of all careful students; it would indeed be a disheartening matter if it had to be done all

over again from any failure of theirs in this respect. It is also most satisfactory to find that they have established friendly relations with the English Dialect Society, and have adopted the same size of page and form of publication. The only drawback which we observe is in the matter of the pronunciation. Instead of adopting Mr. Ellis's system of glossic notation, the completeness of which has been proved by the fact that it has already been used for collecting provincial sounds from almost every dialect in England, Mr. Nodal reports that the Manchester Literary Club "have resolved to construct a simple table of sounds and symbols" for the express purpose of representing the Lancashire dialect. They do not say what this "simple" system is; but we may confidently predict that it will break down, and be worse than useless, from the fact that writers who find the glossic system too difficult must have everything to learn in phonology, and be quite unable to appreciate those minute shades of sound which make all the difference between the pronunciation of Lancashire and that of the adjoining counties. A far better plan would be to adopt the glossic system partially; that is, to insert the pronunciation, according to that system, of such words as they can record, and to leave it out otherwise. Or, again, the pronunciation might be inserted by some one who has paid special attention to it. If neither of these plans be adopted, the last remaining plan would be to omit it. Such omission would be a trifling inconvenience in comparison with the adoption of a new "simple table of sounds." The first part of the 'Lancashire Glossary' will contain all the words from A to E, and it will be completed in three parts. In addition to the three sections of the 'Glossary' proper it is proposed to publish a fourth part, containing essays and papers elucidating various phases of the dialect. Altogether it is an important work.

In addition to the Glossaries mentioned in our last (p. 16) the English Dialect Society will issue the following two series, both edited by Mr. Skeat:—

Series A. Bibliographical. A List of Books illustrating English Dialects. Part I. containing a General List of Dictionaries, &c.; and a List of Books relating to the Counties of England.

Series C. Original Glossaries. Part I. containing a Glossary of Swaledale words, by Captain Harland. Mr. Clough Robinson is completing his Glossary of Yorkshire words used near Leeds, &c., for the Society, and many other local Glossaries are in course of compilation for it. The Society has begun work just in time to save the provincialisms existing in the mouths of the present school-less aged poor.

THE Secretary of the Society of Biblical Archaeology sends us the following summary of papers read last Tuesday, January 6:—

"1. *The Sallier Papyrus containing the Wars of Rameses Meriamun with the Khita*. Translated, with Annotations, by Professor Lushington.—This well-known text was supplemented by a fragment from the Raitet Collection; it contains perhaps the most vivid picture of a pre-Homeric battle extant; the king himself, the chief actor, frequently speaking in the first person. The two finest passages, the prayer of Rameses to his father Amun, and the defeat of the Hittites, possessing peculiar beauty, in addition to the interest attaching itself to a people who, about 1200 B.C., were formidable enemies to the Egyptians themselves. The value of the translation was enhanced by philological notes.

"2. *On some Illustrations of the Book of Daniel from the Assyrian Inscriptions*. By H. Fox Talbot, F.R.S.—In this paper is produced corroborative evidence of the extreme forms of punishment by a Fiery Furnace and the Lion's Den, as related by Daniel, from the Annals of Assurbanipal, who states that, having conquered his brother Saumugina, he executed him by throwing him into a burning fiery furnace, together with many of his adherents, about the seventh century B.C."

FINE ART.

NEW MUSICAL PUBLICATIONS.

Hymn for Advent. Written by Fr. Rückert. Set to Music for Solo Voices, Chorus, and Orchestra, by Robert Schumann. Op. 71. Vocal Score.

Requiem for Mignon. From Goethe's *Wilhelm Meister*. For Solo Voices, Chorus, and Orchestra. Composed by Robert Schumann. Op. 98b. Vocal Score.

Requiem für Chor und Orchester. Composit von Robert Schumann. Op. 148. Clavierauszug.

Lurline. Poem by W. Müller v. Königs-winter. Set to Music for Solo Voices, Chorus, and Orchestra, by Ferdinand Hiller. Op. 70. Vocal Score.

Spring-time. Poem by Immergrün. Set to Music for Chorus and Orchestra by Ferdinand Hiller. Op. 119. Vocal Score.

Requiem. The Words selected from the Holy Scriptures, for Solo, Chorus, and Orchestra, composed by Johannes Brahms. Op. 45. Vocal Score. (London: Stanley Lucas, Weber & Co.)

THOUGH in many respects differing widely from each other, this interesting series of reprints may appropriately be classed together, and noticed in the same article, as being all in various ways representative of the school of modern German musical thought, which is more and more attracting the notice of connoisseurs and amateurs in this country. The enterprising publishers have conferred a substantial benefit on English musicians by presenting these works, for the first time in a form available for our choral societies, with an English text. The translations, which in the case of several of the pieces are from the experienced pen of Madame Natalia Macfarren, are on the whole excellently done; and the same praise can, without reserve, be given to the piano-forte arrangement of the orchestral parts, that of Brahms's *Requiem* being particularly remarkable for richness and fulness without unnecessary difficulty.

Though Schumann has already taken a place, which few will deny him, among the "classical" masters, he may also be justly ranked as belonging to the new German school, of which, indeed, he was in many respects the pioneer. Just as in him we trace the influence of Beethoven and Schubert, though modified by his own striking individuality, so in his successors, such for example as Brahms and Raff, we find abundant indications that their style is in a large measure founded upon his. No disparagement is intended in saying this. Every powerful intellect must leave a distinct impression on its age; and in no art is this more clearly to be seen than in music. The influence of Handel on the musical productions of this country is unmistakeable, while in Germany Mozart and Mendelssohn have had imitators who may be numbered by scores. Even Beethoven, the greatest and most original composer that the world has yet seen, clearly shows in his earlier works the trace of the Mozart spirit. So with Schumann himself. In him we find the further development of the various novel harmonic and rhythmic combinations which were first introduced by Beethoven in his

later works—those of his so-called "third style"—especially his last quartets and sonatas. As a melodist it is impossible to rank Schumann with Beethoven and Schubert; but he frequently, by his exquisite harmonies, produces a mental effect which prevents our feeling the comparative poverty of his melodic invention.

With the exception of the *Paradise and the Peri*, which has been several times performed in this country, Schumann's larger vocal compositions are but little known here, even by name. Many of our readers will probably be surprised to learn that no less than eighteen large vocal works by him of various kinds are published in Germany, and they will doubtless be glad of the opportunity of making the acquaintance of some of the best of these in the present edition.

The *Hymn for Advent* (*Adventlied*), which stands first on our list, is as characteristic an example of its composer's peculiar style as any work from his pen, and it affords an excellent illustration of what has been said above as to Schumann's reliance for effect upon his harmony rather than his melody. With the single exception of the opening soprano solo, "The King of kings is hither faring," there is hardly a phrase which dwells in the memory after hearing or reading the work; yet such is the truth of the expression and the perfect harmony of the composer's thought with that of the poet that the idea of a want of melody scarcely presents itself. The general tone of the work is devotional, in parts one might almost say mystic, and the frequent use of contrapuntal contrivances gives it an ecclesiastical colouring well suited to its subject.

Even more charming than the *Hymn for Advent*, and quite as remarkable for the great effect produced without having recourse to "naked, absolute, ear-tickling melody," is the *Requiem for Mignon*. Readers of the *Wilhelm Meister* will doubtless remember the scene of the obsequies of Mignon, with the beautiful and touching song beginning "Wen bringt ihr uns zur stillen Gesellschaft?" The music with which Schumann has illustrated this scene is conceived with wonderful appropriateness to the situation, but it relies for its effect entirely on the mental condition it produces on its hearer. The solemn opening, with its dialogue between the chorus and the solo quartet of sopranos and altos, the chorus, "From your sorrow weave soul-stirring song," and the final chorus, "Come, oh children," are most impressive; but their beauty is of a kind which language cannot describe; because as Wagner has so happily remarked, "Just where speech ends, music begins." It is doubtful how far such music as this would appeal to popular sympathy here; there is probably not enough "tune" about it to catch the public ear; but by cultivated musicians it cannot fail to be appreciated.

The *Requiem*, Op. 148, belongs to a different category from the two works just noticed. It is one of Schumann's later compositions, and was written in the year 1852, a period at which signs of the mental affliction which overshadowed his later years were already beginning to appear. Hence it is a more unequal work than many of the master's

earlier productions—in many parts being of extreme beauty, as, for instance, in the opening chorus, "Requiem æternam," the alto solo, "Qui Mariam absolvisti," and the too short "Benedictus;" while in other parts of the work, such as in portions of the "Dies iræ" and "Domine Jesu Christe," the effect is somewhat heavy, laboured,—*gesucht*, as the Germans say; the ideas seem forced, instead of flowing naturally. This peculiarity to a larger or smaller extent characterises all Schumann's later works. Like beams of sunshine in the pauses of a thunderstorm, glimpses of his earlier and more natural style break at intervals through the clouds by which his intellect was being gradually enveloped.

Ferdinand Hiller is one of that large class of most "respectable" composers (using the adjective in its etymological sense, as "worthy of respect") who possess every qualification for their work except that high attribute of genius which is allotted to but few. Equally distinguished as composer, pianist, and conductor, he occupies a prominent place among living German musicians. His music is always thoroughly good, clear in form, highly finished in detail, often very graceful and pleasing; but he never produces the impression of great genius, though he may fairly claim a good position among the *dii minores* of music. Of the two works before us, the *Spring-time* is the more pleasing; and it affords a very good example of its composer's style. It is a chorus in two movements—a graceful *andante*, succeeded by a very bright and spirited *allegro*. There are occasional reminiscences, without absolute plagiarism, of Mendelssohn, but not sufficient to detract from the interest of the work. The *Lurline*, though more extended and ambitious in form, being a cantata in six movements, is on the whole less interesting, being, to tell the truth, in parts slightly dry. Some of the movements, however, especially the opening, and the "Chorus of Nixies" No. 3, are excellent. Hiller's music is comparatively so little known in this country, that the publication of these two little pieces in a cheap form is heartily welcome, even though they may not rank among the masterpieces of our art. Were no music written or published except that which displays genius of the highest order, our concert *répertoires* would be indeed limited.

Brahms's *Deutsches Requiem* is a work which, to have justice done it, would require a far longer notice than our limits will allow. With the single exception of Wagner, Brahms probably at this moment occupies in Germany the highest place of all living composers; and with Wagner comparison is almost impossible, as the latter is pre-eminently a dramatic composer, whereas Brahms has, so far as we are aware, written nothing for the stage, but has attempted nearly every other branch of composition. He possesses great originality and true poetic feeling, and his music, though frequently very difficult and complex, is rarely if ever obscure; but, in common with most of the "new German" school, he is sadly wanting in conciseness. The diffuseness to be met with in most of his larger works is not with him, as with some composers, a cloak to

cover the weakness of inventive power; for he certainly has no lack of ideas. In his case it seems rather to be intentional: he lays out his work on a very large scale; but, inasmuch as average hearers cannot take more than a certain quantity of music at a dose, he in places becomes tedious rather than impressive. To him might sometimes be applied the words addressed to the old clergyman, "Sir, you first preached me into a good frame of mind, and then you preach me out of it again!"

It is this diffuseness, probably, which in a great measure explains the comparatively cool reception given to the present work on its first public performance in England at one of last season's Philharmonic concerts; for in all other respects the *Requiem* is a masterpiece. Originality of idea, perfect appropriateness of music to words, complete mastery of all technical and contrapuntal resources—such are the impressions produced by reading or hearing it. It should be stated that the work is not a setting of the funeral service, as might be imagined from the title. The text consists of a selection of passages from the Scriptures, appropriate to a funeral, such as "Blessed are they that mourn," "Behold, all flesh is as the grass," &c. Of the seven movements contained in the piece it is difficult to say which is the finest; perhaps the funeral march "Behold, all flesh is as the grass" is the most impressive number, and the solo and chorus "Ye now are sorrowful" the most purely beautiful; while special mention should also be made of the wonderful fugued pedal-point on the words "But the righteous souls are in the hand of God," and of the bold chorus "When the last awful trumpet." But the whole work is so full of interest that the only possible advice to musicians is to get it, and study it for themselves. It is indeed—after making all deduction for its, in places, too great length—one of the most remarkable of modern German compositions.

EBENEZER PROUT.

THE LANDSEER EXHIBITION AT BURLINGTON HOUSE.
(Second Notice.)

IN the few preliminary remarks which we made on this collection in our last number, we pointed out the chief distinction of Landseer amid animal-painters—a distinction which has been very accurately and generally recognised of late years. While other artists have distanced him in qualities proper to representative art, he has exceeded them in sympathy and discrimination. To take two of the most celebrated and powerful masters who ever dealt with brute life—Snyders and Jan Fyt: one finds in these men next to no traces of fellow-feeling or affection for the creatures they depict. Let the wild boar gore and maul ever so many hounds, it is of no consequence to Snyders. All he has to do is to put as much force as his very vigorous temperament and pencil enable him to get into the sprawling, howling, convulsed creatures, and to give them as much variety of distortion and of pain as he can. The more the merrier. Jan Fyt presents the most solid, robust, distinct portraits of his dogs; but after all they are, and remain, specimens of the canine race, not individuals having a personal relation to human masters and friends, and hence a claim on the painter himself and the spectator. With Landseer the case is very different; partly because he was a genius, and an individual having his own way of looking at things, and partly because he

belonged to these modern times. His painting is that of a man who has been trained to read books of "Anecdotes about Animals"—the marvels of instinct, and the urgent necessity on which the Society for the Prevention of Cruelty to Animals was established. The feelings of the sportsman in a country where sporting is so much identified as here it is, with the privileges and delights of the upper classes, and where it is attended with comparatively little of danger or adventure, are also a prominent ingredient in the spirit of Landseer's work. His animals are mostly trained and civilised, or else such as, being assailed and overmastered by the training and civilisation of the former class, are of equal interest to the sportsman. Dogs, horses, and deer make up, probably, two-thirds of his *personnel*. The lion has not been neglected: sometimes he has been studied with an eye to the bronze-cast lions in Trafalgar Square, or with retrospective glance at that undertaking; sometimes he figures under the quelling hand of Van Amburgh. Monkeys, bears, boars, foxes, sheep, cats, rabbits, squirrels; parrots, eagles, and other birds,—make not infrequent appearances. But horned cattle are treated very sparingly, while such creatures as an elephant, rhinoceros, gnu, walrus, or giraffe, or a boa-constrictor, were not in Landseer's line. He did not travel in remote regions for his pictorial purposes, nor work up into compositions such material as he could watch and examine at a menagerie. Of the hippopotamus he did, indeed, note down a very clever little record: this consists of two *Sketches* (No. 126), "done in a few minutes at Buckingham Palace, to give the Queen an idea of the animal which had just come over to the Zoological Gardens, in 1850." *A Pike, Pencil Outline* (131), is one of the very rare instances in which fish received any measure of his professional attention.

The position of Landseer in art was something like that of Lord Palmerston in politics: there was, indeed, a sort of resemblance in their faces. We could all see that Sir Edwin's range was limited; his knowledge general and readily available, rather than profound; his originating energy, as distinguished from fertility of resource, not large. But he was always in good humour with himself, and on pleasant terms with others: sturdiness and ingenuity went hand in hand in his performances; health and fine spirits abounded in them. He was perpetually plausible; but, if we tried to reduce his talent to mere plausibility, we soon found that that was its surface, not its core, and that the innate faculty was both large and fine. He understood and hit the taste of every class in the British nation, and reigned with unquestioned sway. After he had performed his one memorable feat of introducing into art, or at any rate defining and fixing therein, that important personage—the intelligent and semi-human beast, amenable to and interpretable by the nineteenth century,—he produced, not much indeed in the way of innovation, but a deal of quick, unanxious, and yet permanent work. In adaptability of mind he far excelled all other animal-painters, and also in pointedness of suggestion. We read his canvases like books, constantly with relish and admiration, sometimes with keen delight and a thankful spirit to so gifted and kindly an intellect—so direct, disciplined, and masterful a hand. Certainly, in fineness and richness of knowledge—the knowledge of a zoologist, and of an artist too—Landseer could not be pitted against such a man as James Wolf; and it may even be said that Wolf has shown powers of ingenious combination and dramatic presentment not unworthy to be named along with those of Landseer: the latter, however, had the birthright, and always retained it unimpaired. All the opportunities that Wolf offered to the British public of finding out that a second great (in some qualities unequalled) animal-painter was among them, produced little result. Their glance reverted to another Skye terrier by Landseer, painted with eyes

of more than human significance dimly discernible through pendent shagginess of hide, and all gleanings of Wolf from all departments of the vertebrated kingdom failed to divide their suffrages; though, indeed, the merit of this excellent artist has been amply recognised by the best qualified observers whether in the walks of science or of art.

In the Landseer Exhibition at Burlington House we can study the progress of our master's style from first to last. His childish works are more than promising: the *Alpine Mastiff*, for instance (133), "drawn when he was a boy," though it may be a little heavy-handed, is a signally strong and most successful study. The pictures of his early period show rather prominently the influence of James Ward. They are firm and somewhat "stringy" in manner, with considerable action and much realisation, and a tendency to more bright and positive tints of colour than prevailed in Sir Edwin's later practice. Already there is much anecdotal sprightliness, and what may be called a witty treatment of the subject, which, however, becomes more salient in the works of the middle period. An excellent example is No. 326, *Bull-baiting, an early Study*; in fact, this is among the most grand and perfect things, in essentials, that the artist produced. *The Boar Hunt*, 1821 (381), is a remarkable success, combining Snyders and Ward in some degree. Young as he still was in 1824, we find him already in full possession of his powers, and wielding them with the fullest mastery: the widely-known picture of *The Cat's Paw* (281) demonstrates this, and ranks among his finest achievements. The visitor should observe, also, as characteristic of Landseer at his choicest, and therefore as marking about his best period, one of the works of 1835 (No. 200), *Odin—Mastiff-bloodhound*, "painted at a single sitting within twelve hours, with the object of showing the superior effect of one continuous effort over more elaborated work."

Two of Landseer's most popular pictures and engravings are the *Bolton Abbey in the Olden Time*, and *The Return from Hawking* (214 and 207), painted in 1834 and 1837 respectively. These, however, are by no means of his finest manner. Both betray excessive facility of the sort intended to secure the applause of the multitude, or more especially of the *beau monde*. *The Return from Hawking* is particularly open to this objection; the *Bolton Abbey*, though somewhat too dexterous and got-up, being, after all and indisputably, a very able performance. In the *Return from Hawking* we see strong symptoms of that fashionable influence which did much to attenuate and damage his style; paring away peculiarities, prettifying the young ladies, the children, and even the pet animals, of aristocrats, and stroking down his strength, as one polishes the glistening fur of a cat. This regrettable process got a great deal worse when Sir Edwin had to work for the Queen and Prince Albert. Whatever may be the cause of this degeneration, it is certain that most of the pictures turned out to their order are eyesores in executive respects, although of course, in some of them, the same cleverness of portrayal and of expression as in other works shines forth, and attests the hand of the master. Specimens of the defect we are adverting to are Nos. 173 and 258, both painted in 1842, and singularly dear, in the form of engravings, to the insatiable eye of loyalty. The former of these is *Windsor Castle in Modern Times—the Queen with the Prince Consort and the Princess Royal; dogs, dead game, &c.*; and the latter, *The Queen with the Princess Royal and the Prince of Wales*. But Landseer could go far lower even than these works, when frippery had to be painted for sovereign patronage. No. 211, *The Queen as Queen Philippa, and the Prince Consort as King Edward III.*, 1842, is truly deplorable. When it comes to the small canvas, No. 226, *The Queen in a Fancy Dress*, 1845, the knightly pencil is found to have descended to the style of a penny theatre; one would fain consign the gewgaw

to the fire, or to what most domestic privacy Windsor Castle or Buckingham Palace can provide for it. The big affair, No. 203, *The Queen Landing at Loch Muich*, is only a few shades better than these last two: the sorry stagey method of it may be probed in this gallery by comparing some of the heads of Scotch attendants in the picture with the broad sketches made from the same persons as preliminary studies. But enough of this. It was Landseer's misfortune to be employed by the Court; and the like favour becomes a cruelty to any artist who, not having an unusual degree of bluntness of character, feels that his patrons expect him to "prophecy smooth things, prophecy deceits," concerning them, in the language of art. Grimalkin pats the mouse with a lightsome but not a benevolent paw. Yet we may point to the *Eos*, 1841, the *Prince Consort's Favourite Greyhound* (323), as a proof that Landseer could paint a dog consummately well, even though the Prince Consort was its owner. Possibly, his Royal Highness's hat, which appears in the picture, may be a little flattered; but his Royal Highness himself is not included in the composition, and has, therefore, not affected it detrimentally.

One of Landseer's grandest and most operose works is the famous picture painted in 1838, entitled *There's Life in the Old Dog yet*. A subject of the animal life proper to our country, more full of drama and scenic magnificence, and of powerful appeal to the feelings, could hardly be devised. The two exceedingly forceful subjects of stag life and death, named *Night and Morning*, 1853 (Nos. 295 and 287), are remarkable for the strength and even brilliancy (rare with Landseer) of their colour and tone, not to speak of general handling, in which he always excelled for speed and deftness. This was one of the years when the rising "pre-Raphaelite" school of painters was compelling all sorts of old practitioners to work with greater stress of faculty and of study, or else to be left behind in the race of art; Landseer was doubtless not unconscious of this incentive when he painted the two pictures in question. Four of the specially interesting works in the collection are those numbered 181, 413, 419, and, above all, 434, showing as they do the high aptitude which he possessed for landscape-painting, of suggestive and poetic effect: these pictures are named *Hunter and Bloodhound*, *Landscap*, *Poachers*, and *Evening in the Highlands*. Other three may be pointed out as being masterpieces of a consummate kind, such as his reputation may be left to rest upon, fearless of the future:—*The Otter Hunt*, 1844; *The Random Shot*, 1848; and *The Sick Monkey*, 1870 (Nos. 191, 217, 190). As long as these works exist, Landseer must always rank as not only a talented and admirable, but truly a great, painter of animal life; a master of the vitality and motion, the expression and excitement, the comedy and tragedy, the pathos and beauty, of his subject-matter. We only select these three from a multitude, naming them, not as exceptions to the ordinary range of the painter's power, but as first-rate examples of it, companioned by many, absolutely rivalled by few, surpassed by none.

All London will be looking at the Landseer Exhibition, and feeling how vastly more there is to linger over and enjoy in it than we could speak of in detail in several pages of the ACADEMY. Here, therefore, we may be content to close, and leave aught else to the eyes of the exhibition-goers. They will not fail to look upon the works with that personal regard in which Landseer was deservedly enshrined by his countrymen, and with that sympathy in the joys, sorrows, and humours of brute life which his pictures are so especially qualified to quicken and intensify.

W. M. ROSSETTI.

THE *Pall Mall Gazette* states on the authority of an Italian paper, that Dr. Hillebrand will give during the spring a course of lectures in French at the Institute of Florence on *Faust*.

"JEAN DE THOMMERAY" AT THE THÉÂTRE FRANÇAIS.

M. EMILE AUGIER has broken his silence, though he has broken it but timidly, in concert with M. Jules Sandeau. The two have dramatised for the Théâtre Français a story which one of them (M. Jules Sandeau) contributed to the *Revue des Deux Mondes*. It was called in the magazine *Jean de Thommeray*, and it retains that name at the theatre. It is an unusual thing for M. Emile Augier to work with anyone else. Hitherto his efforts have been chiefly his own, and that will probably continue to be true of his successes. *Jean de Thommeray* was a thoughtful, descriptive novel, of the sort to which the readers of M. Sandeau are no strangers. But, as a play, it seems wanting in subject—lacking both briskness of incident and the struggle of passions. Its style is naturally too good to allow of its being a failure: and the end, if it does not crown the work, at all events redeems it. But certainly it is not a triumph. It will not live with the *Fils de Giboyer*, with *Les Effrontés*, and the rest.

Jean de Thommeray is a young Breton, who has had his earlier education at the family castle in Finistère, whither, when the piece opens, his soldier brothers are returning, escorted by the Breton peasants, marching *au son du biniou*. He is moved somewhat by the incident, one supposes, for they cry, "Vive la France!" and that is the key-note of the drama. Presently the young man goes to Paris, more or less under the patronage of the Baronne de Montlouis. He learns the worst side of Paris life, such love as he has for the Baronne not interfering with this. He is known at gaming-tables. He loses money. He proposes to put himself right by marriage with the daughter of a great financier, whose methods of business can only be made respectable by a family connection with the *grand monde*. But this is not carried out; and as incidentally Jean has established relations with Blanche de Montglars—a lady of the Bois—he loses yet more money and credit, and falls upon evil days. The Baronne dismisses him with the information that he is already forgotten. But her own constancy seems to be a matter of doubt.

Jean is ruined some weeks after the declaration of war with Prussia. Finding Paris invested, it is one of his first ideas to speculate in provisions. But for the son of a Breton noble perhaps a better fate may be in store. Walking quietly one night by the quay-side in Paris, he hears again the melancholy strain of Breton music. Here are the volunteers of Finistère; and his father is at their head. He moves towards them, and his father, affecting not to recognise him, says only—

"Comment vous nommez-vous?"
 "Je m'appelle Jean."
 "Qui êtes-vous?"
 "Un homme qui a mal vécu."
 "Que voulez-vous?"
 "Bien mourir."

So they give him a gun, and he marches off with the rest. . . . "Vive la France!"

The play has been considerably altered from the novel, and not, it is thought, by any means improved. The fine style prevents its being quite a failure; but even this last scene—so effective at the theatre—does not make it quite a success. The characters are not happy ones, and there is little opportunity for very exceptional acting. But the *ensemble* is generally good—as, indeed, it ought to be, when it is remembered that comparatively unimportant parts are played by such finished and admirable comedians as Got and Coquelin. Mounet-Sully represents Jean de Thommeray with scarcely the effect that was expected from him. Mdlle. Favart (whose approaching retirement from the stage has more than once been hinted at) is an adequate exponent of the character of the Baronne. Mdlle. Reichenberg plays the daughter of the financier, and Mdlle. Croizette plays "the Lady of the Bois," whose appearance at

the Théâtre Français is a questionable advantage. Maubant and Madame Guyon are considered very satisfactory representatives of the old Breton nobleman and his wife.

MR. GILBERT'S "CHARITY" AT THE HAYMARKET THEATRE.

IN one's literary maturity one may sometimes atone for the errors of one's literary youth. Maturity comes all at once in some cases. It has come to Mr. Gilbert with *Charity*.

A few years since, in *Randall's Thumb*, Mr. Gilbert, dealing with a modern story as distinct from a modern subject, produced a work which showed us several excellent scenes and several effective stage characters—such, perhaps, as he might have contributed to a drawing-room entertainment, ensuring thereby its liveliness, not its unity. Later, in *The Palace of Truth*, the satirical power which had been distributed over many an isolated sketch was concentrated on a leading idea. Afterwards, in *Pygmalion and Galatea*, a certain element of tenderness and poetry, which was not wholly Miss Robertson's, claimed recognition, and received it. Then, in *The Wicked World*, a train of thought, which had been previously presented, suffered from infelicitous illustration. And now, in *Charity*, the author, wisely returning to modern story, has done so apparently on the condition that he is not only to amuse—that he may teach not only incidentally. Crediting his audience with something of that capacity to bear the discussion of grave subjects at the theatre which is known to belong to the playgoers at the Gymnase and the Français, he has grappled with a difficult social theme, and has treated it with a fearless vigour and an unrestrained freedom. The effort is, at the same time, serious and bold; and the result of it is a work which has all our sympathy and much of our admiration.

To put before us in the strongest light the common social cruelty of a refusal to forget in a woman one error of youth, however amply atoned for, and the uncommon personal cruelty of an individual hypocrite's determination to benefit by this woman's exposure, may, perhaps, be said to be the aim of *Charity*. An extreme but still possible case is selected as representative; and this case—that of Mr. Gilbert's Mrs. Van Brugh, the now earnest and anxious helper of many a social outcast—is presented with all the ability of a writer who is something of a master of stage effect; with every aid of well-knit story, keen dramatic characterisation, and terse, sharp dialogue. Never before was Mr. Gilbert so fully "master of his means;" never before was the *possession* of the means—not to speak of the *command* of them—so apparent. And the result is a work of high interest, fine teaching, and strong emotion; a popular play which may be also a useful one—useful, perhaps, even by reason of its exaggerations; for a public without sensibility must be hit hard. That one supposes to be the reason for the extreme strength of colour which Mr. Gilbert has put into his picture. Though, no doubt, he agrees with Sir Peter Teazle that "we live in so wicked a world that the fewer we praise the better," he can hardly seriously believe in the existence of so stony a monster as the smug Mr. Smailey, who remorselessly hunts down his Mrs. Van Brugh: to do that would argue a profound and cynical distrust of humanity, almost as pitiable as the creed of Smailey himself. The figure is coloured for the stage, and the actual stage demands high colour—that is its excuse or justification. And, after all, it is perhaps not coloured much more highly than *Tartuffe*. Subtle and delicate analysis of evil is immensely rare—much rarer than one thinks—upon the stage; where the work must be rapid and the effect immediate. Perhaps, within living memory, only one supreme novelist has accomplished it. Balzac knew the whole of humanity, and exhibited it. He was not popular at the theatre.

If the portrait of Mr. Smailey were the only

highly coloured and seemingly improbable thing in Mr. Gilbert's *Charity*, one would assign its exaggeration to a wholly deliberate intention, formed on the conviction that the stage requires such colour. But one or two other points occur to us. When Mrs. Van Brugh has lost her reputation, she receives several despatches bearing on her change of circumstances. That from the popular photographer, who respectfully solicits her to sit for her likeness, is a witty hit—which no doubt the facts justify. More than this, it is even possible that the "wider sphere of usefulness" afforded by a country living might induce here and there a clergyman to accept at her hands a benefit which he would otherwise decline. But the respectful remonstrance of the almshouse-women and the school-children, drilled by their teacher, is a touch beyond truth, in which Mr. Gilbert, strongly possessed by his theme, has forgotten Talleyrand's maxim—quite as good for artists in literature as for artists in diplomacy—"Above all, no zeal!" The same zeal may possibly be traced in another matter. Mr. Gilbert has ignored the fact that there is occasionally some insincerity even in those who do not profess to be more religious than their neighbours. Any writer who was more exclusively an artist would have been somewhat more restrained. But Mr. Gilbert has not only presented a satire; he has launched an invective.

The ingenious construction of the earlier scenes—which are full of sharp turns and new situations—affords opportunity for much delicate acting; and the third act gives occasion to Miss Robertson (Mrs. Kendal) for the greatest display of power which she has yet enjoyed. That occasion is seized to the full. The author's outline is so filled up by the actress as to give every evidence of study—study so sympathetic, vivid, and personal that there are many points where interpretation stops and creation begins. No one could enter more fully than Miss Robertson does into the character Mr. Gilbert has sketched—a hearty, noble-minded, and impulsive woman, with sense and intellect keenly and finely alive, no longer idly lamenting over that one fault of her youth which is explained eloquently and touchingly enough by Mr. Gilbert, but which two lines in *The Blot on the 'Scutcheon* may here sufficiently summarise:—

"I was so young: I loved him so: I had
No mother: God forgot me; and I fell."

It would be unreasonable to say that each detail is accurately perceived and rendered. Here and there, in the quieter passages, a more entirely satisfactory reading of the part is conceivable. And once, at a critical moment, there is, or seems to be, some failure to realise the importance of that crisis: it is where the actress has to say to her friendly detective the commonplace words, "Mr. Fitz-Partington, pray explain yourself." In view of the circumstances, is it not a mistake to say those words, commonplace though they be, in so unmoved a fashion? And again, at the moment of greatest indignation against the man who will expose her, does not the actress become a little too deliberate—a little too obviously impressive? It may be so. If these are faults, it is well to point them out; but it is doubly well to remember that they are very insignificant in comparison with the great qualities of impulse and emotional power which Miss Robertson, in moments more distinctly pathetic, does so notably display. The sudden pause in the telling of the dreadful story, as she sits in Mr. Smailey's room, while that worthy maintains a terrible composure, as pitiless as if he were the very *bric-à-brac* around him, is one of these. And another moment as fine, the finest, perhaps, of the whole piece, certainly the most moving, is that in which, stung to desperation by the coldness of the threats, Mrs. Van Brugh calls frantically for her daughter, and pours out before the assembled circle the tale of her disgrace.

There is a good deal in the acting of the other characters that the playgoer would find it interesting to analyse with care. Here there can only be room for one or two general comments.

Mr. Howe plays Smailey with much intelligence and a commendable abstinence from the already familiar stage effects of honeyed voice and eyes raised constantly to heaven or the drawing-room ceiling. Mr. Kendal shows discretion in representing the younger Smailey as a not too obvious scoundrel. Indeed, he puts so much feeling into the last act, that his "releasing Eve from her engagement" is, as it should be, a surprise to the audience as well as to the persons of the drama. Mr. Teesdale's hand-shake of silent congratulation—hearty because the lover is his friend, and bitter because he is Eve's lover himself—is a significant detail, of which the significance is fully appreciated and given. But the same actor's subsequent threat of vengeance and righteous indignation has not quite the required earnestness and self-abandonment. Mr. Buckstone, as the ill-used private detective, is full of unctuous humour; Mr. Chippendale is a placid colonial bishop; and Mrs. Alfred Mellon, as Ruth Trudget, a tramp, who is very useful to the conduct of the fable, gives us a character-sketch with peculiar vigour and individuality. The gentle part of Eve, Mrs. Van Brugh's daughter, is played by Miss Amy Roselle with much grace, tenderness, and freshness. *Charity*, of course, is well worth seeing. But it is to be hoped that we have implied that too plainly all along to need to state it explicitly as we end.

FREDERICK WEDMORE.

SIGNOR GIULIO PERKIN.

HAYDN'S *Creation* was performed by the Royal Albert Hall Choral Society, under the direction of Mr. Joseph Barnby, on Thursday evening. As we write at the moment of going to press a detailed criticism would be impossible, were it not fortunately superfluous. A word of mention must, however, be given to the first appearance in London of a new singer rejoicing in the singularly hybrid appellation of Signor Giulio Perkin. The new candidate for public favour, though suffering under the disadvantages inseparable from a first appearance, and that too in the largest concert-hall in London, created a decidedly favourable impression. His voice is a genuine *basso profondo*, of at least two octaves in compass, reaching down to the lower D, and of good quality, particularly in the lower register; he pronounces his words with great distinctness, and sings with considerable taste. In the earlier part of the work, his intonation was occasionally a little at fault; but this may fairly be set down to nervousness, more especially as it disappeared later in the evening. It is to be hoped that he will guard against too great an indulgence in the singer's most common vice—the *tremolo*. If not led astray by bad example, he ought to have a good future before him, and prove a useful addition to the number of our bass singers. The other vocalists were Madame Sherrington, Mr. Cummings, and Mr. Raynham, all of whom acquitted themselves (it is needless to say) most satisfactorily; while the band and chorus left nothing to be desired in their performance of Haydn's familiar music. The recitatives, as at the recent production of Bach's *Christmas Oratorio*, were accompanied on the organ with admirable effect, and we heartily congratulate Mr. Barnby on the reform he has carried out in discarding, we trust for ever, the old-fashioned style of accompaniment.

EBENEZER PROUT.

THE PARTHENON SCULPTURES.

Baywater, Jan. 5, 1874.

The remnant of Philhellenes who still execrate Lord Elgin for having removed the sculptures of the Parthenon to London, will learn with regret that one of their familiar arguments has failed them, inasmuch as the air of Bloomsbury, however bad it may be in other respects, has just been proved to be infinitely less deleterious to sculpture than that of Athens. An opportunity of ascertaining this fact was lately presented on the occasion of making new casts from the slabs of the

frieze which still remain on the Parthenon, it being then found that the surface of the marble had become so thoroughly undermined by the weather that even the tender process of moulding with gelatine imperilled its scaling off. It is unnecessary to say that the sculptures carried away to Bloomsbury are in a very different condition from this. So far the elements alone are culpable for bringing about what *Gothi (et Scoti) non fecerunt*. But what is to be said of custodians who, fully aware of the universal homage paid to the works under their charge, permit them to be wantonly and maliciously defaced? A moment's comparison of the new casts as they stand in the British Museum side by side with the casts taken from the same marbles by Lord Elgin, will show the extent to which this species of Vandalism has been carried. It is no answer to such a charge to say that damage of this kind is less likely to have been done by natives than by foreign visitors actuated by the "chipping" passion, which is not unfrequently accompanied by a degree of cunning capable of baffling the most rigorous guardians, and let us add, of astonishing the otherwise worthy persons who succumb to it.

These remarks, sufficiently warranted by the state of things in Athens, are rendered the more justifiable at present, first by the increased care which is being taken of the Parthenon sculptures in the British Museum, and, secondly, by the revived interest in these noble monuments of art, which is implied by the publication within two years of two exhaustive books, one entirely and the other mostly devoted to the Parthenon. On the first point it is not enough to say that the whole frieze has been covered with glass, and thus effectually protected from the grimy atmosphere, though by this means withdrawn more than could be wished from the naked eye. Fragments which used to be seen in forlorn places, and casts obtained from fragments found in recent years on the Acropolis, have been adjusted to their places, so that the whole procession is now presented as far as possible in a continuous line. Meantime the question is raised again and again, what procession is it?

Two explanations have been offered—the time-honoured one in which the procession is identified with that in which, on the occasion of the Panathenaic festival, a splendid new robe for the ancient image of Athene was conveyed through the town spread like a sail on a mast; and, secondly, Büttcher's explanation, which leaves nothing to be desired except facts in the place of inferences to support it. According to him, we are to begin by believing that the Parthenon was simply a great treasure-house devoted exclusively to worldly affairs, and in no sense a religious building. But this is obviously too sweeping, because the object of the Greeks in storing the public treasures in a temple was undoubtedly to cover them with a certain odour of sanctity. Of course the sanctity in this case may have been merely theoretical, as the absence of all mention of a priesthood connected with the Parthenon would seem to imply. Next we are told that the vessels, dresses, and other gala objects enumerated among the treasures of the Parthenon in the lists which we possess, used to be lent out for public processions, and that it is precisely one of those occasions on which the temple authorities provided a procession with utensils and other articles for a sacrifice which Pheidias has chosen to represent on the frieze. The key to the entire composition is to be found in the frieze of the east front, which serves as a sort of title-page to the purposes of the building. The centre is occupied by a number of persons seated, long known as divinities, but now to be regarded as officials or distinguished visitors, male and female, disposed in two groups, between which on the left are two maidens receiving sacrificial objects, on the right an old man handing over a folded robe to a youth.

* Michaelis, *Der Parthenon*, Leipzig, 1871; and Petersen, *Die Kunst des Phidias*, Berlin, 1873.

Both objects are from the treasury of the Parthenon, and the scene constitutes the last act of the procession as far as that building is concerned. Clearly, however, these distinguished visitors are not here expressly to witness an every-day act of this kind. They have come to see the distribution of wreaths to the victors in the great Panathenaic games, a ceremony which is just over. Now it is not to be denied that to crown victorious athletes within the Parthenon, in presence of the majestic statue of the goddess holding out Victory in her right hand, would be an impressive ceremony. But at present this is only surmised to have taken place from an ingenious combination of two facts, of which the first is, that on certain Athenian stelæ occurs a representation apparently of the colossal statue in the Parthenon, holding out a wreath towards a mortal, and the second that in the inventories of the treasures in the Parthenon is mentioned an ivory table on which, it is assumed on the analogy of a similar table in the temple of Zeus at Olympia, the victors' wreaths were placed. However disposed one might be to accept this theory in general, there are several points of detail in which it is impossible to follow its author. One of these is his explanation of the seated figure on the east frieze, usually called Demeter from the torch which she holds, as a man holding the rods of his office; in fact, the central figure of the whole ceremony. The head of the figure is now wanting, but seems to have existed in Stuart's time, and to have been drawn by him as bearded. Still most people would rather question Stuart's accuracy than admit the breasts, dress, and attitude of that figure to be those of a man.

The palm for ingenuity belongs in this case to Bötticher. His opponents labour far behind, occupied rather in demolishing the fabric raised by him, than in producing conclusive arguments in favour of their theory, or even removing satisfactorily the obstacles to it. If the procession is, as they believe, that in which the new robe for the ancient image of the goddess was conveyed, some indication of the ceremony would naturally be expected. But such there is none unless we suppose, as used to be done, that the folded robe which the old man on the east frieze hands over to a youth in a manner which does not suggest any importance in the act, is really the robe which formed the central object of the procession. Nor is it easy to see how a procession which had for its goal the temple of Athene Polias, should form a fitting subject of decoration for the Parthenon. But the chief and perhaps the most vulnerable point in the popular theory is that which regards the seated figures on the east as deities towards whom the procession advances from either side provided with victims and all the apparatus for a sacrifice. Unfortunately the only absolute symbol of divinity which has been recognised among them—the wings of the boy called Eros—is not in a condition to be beyond question. Moreover the attitudes of some of them are scarcely godlike. But be they gods or mortals, it is evident that they are the central figures of the whole composition, and that in their presence a great sacrifice is to take place, but whether or not to celebrate the conclusion of the Panathenaic games remains as yet undetermined. In a subsequent letter I hope to deal with the interpretation of the pediment sculptures.

ALEXANDER S. MURRAY.

NOTES AND NEWS.

WITH regard to the dice inscribed with Etruscan numerals to which the Rev. Isaac Taylor appeals in his theory of deciphering the Etruscan language (see review of his paper in our last number), it should be stated that all Corssen's searching to discover them has hitherto been in vain, and that they are suspected to be in private possession somewhere in this country. It is highly important that they should be brought to light just at this moment, so that their genuineness may be tested.

STUDENTS of Greek art will be glad to learn that the Venus of Falerone is now placed in the Louvre, and that with it are exhibited several plaster casts of other variations of the celebrated Venus of Milo, that have been found in various collections. This statue was discovered, as some of our readers may remember, among the ruins of the ancient Faleria (now Falerone) in 1836. The left foot, which is wanting in the Milo Venus, is perfect in the Venus Falerone, and is placed on a helmet—a circumstance which M. Ravaisson considers as strongly in favour of the view that he had previously taken of the Venus of Milo—namely, that it originally formed part of a group representing the goddess disarming Mars. On this point, however, Parisian authorities disagree; M. Claudius Tarral asserting that in the original motive the Venus stood leaning upon a Term, and was accompanied by no figure whatever. The Venus Falerone is of life-size, and is executed in Parian marble.

Besides the Venus Falerone the Louvre has recently added to its collection of antiquities the sculptures and architectural remains brought by M. Rayet from Asia Minor, and presented to the Museum by MM. de Rothschild. These remains were discovered near the site of the ancient city of Miletus, and are supposed to have formed part of a temple dedicated to Apollo. There are fragments of a frieze, capitals of columns, mouldings, and winged figures in foliage, "that seem," writes a French critic, "as though they were executed yesterday, so well is the surface of the marble preserved, and so sharp are the ridges."

THE catalogues of the Louvre are increasing so rapidly in number and bulk, that it will soon be necessary for the visitor to the museum to take a portmanteau with him in order to bring them away. M. Barbet de Jouy has just added another to the already overwhelming supply, by publishing a second edition of the *Catalogue of Sculptures of the Middle Ages, Renaissance and Modern Times*. In this second edition, which includes the Campana collection, the matter has been found too much to compress into one volume, and the *Catalogue of Modern Sculpture* has been left for future publication.

A pleasing indication of the growth of artistic taste in this country may be seen in the fact that the Goldsmiths' Company offered in March last to give a series of annual prizes "with a view to the encouragement of technical education in the design and execution of works of art in the precious metals." These prizes were thrown open to general competition, but seven out of the nine, of the value of 210*l.*, were won by students who were now or had been formerly trained in the Government Schools of Art. Certainly no branch of artistic manufacture has more need of improvement in its "design and execution" than our modern goldsmith's work. Nothing can well be more tasteless than most of the jewellery and so-called "plate" of the present day. When we think of the lovely works of the goldsmith's craft in the fifteenth and sixteenth centuries, it is distressing to see dinner-tables groaning under such a hideous representation of modern taste and wealth as the conventional silver or plated épergne, and to behold directors of public companies and others rewarded for their honourable labours by receiving from their grateful admirers a monstrously ugly presentation piece of plate. A lesson in artistic fitness and beauty might be early given to the child by its godfather's gift of a mug at its christening; but the modern mug usually well deserves its fate of being bitten by the discerning teeth of its youthful possessor. How we should now prize the "six silver mugs" given by Philippe le Bon at the christening of the child of his *varlet*—the painter Jan van Eyck. But even in goldsmith's work a great improvement has recently taken place, and it is open to purchasers at many London shops to buy bracelets, earrings, and other ornaments of elegant and artistic design. Such ornaments, however, it

must be admitted, are mostly copied from ancient works of like kind.

WE are somewhat prone to abuse our Government for its mean economy in matters relating to art, but even Mr. Ayrton would scarcely venture to shut up part of the National Gallery for the sake of saving the wages of the attendants. Yet this is what has been done in art-loving France. English visitors to the Louvre have lately often been exasperated at finding the rooms containing the Dutch and Flemish pictures closed during three days in the week, but few of them have imagined that this was done merely to save the expense of twenty extra custodians who would be required if the rooms were kept constantly open to the public. It is now announced, however, that all the rooms of the Louvre will be open to the public as heretofore on every day of the week except Monday, the Commission des Beaux Arts having at last accorded the nomination of the necessary custodians.

THE Municipal Council of Fine Arts in Paris has recently appointed a commission of four of its members to organise a plan of artistic decoration for the parks, squares, boulevards, and streets of the city. Up to the present time the chief commissions given to artists since the war have been for religious and allegorical subjects for the churches to replace those destroyed during the siege; but it is now proposed that statues of all the great men of every epoch and every class who have made Paris illustrious shall be set up in her midst, and that on all the principal promenades groups of sculpture shall be placed representing the chief events in the history of Paris from the earliest times to the present day. The idea is one worthy of a great Republic. Let us hope that the great Republic will last long enough to carry it out.

THE Antwerp journals state that the celebrated *Descent from the Cross* by Rubens in Antwerp Cathedral and his *Elevation of the Cross* in the same place are both being slowly ruined by the effects of the damp and cold to which they are subjected in their present position. The Belgian artists are clamorous in demanding that they shall be removed to the Antwerp Museum, which is beyond doubt the proper place for them, but there is a difficulty of course with the church authorities, to whom the exhibition of the *Descent from the Cross* has long been a rich source of income.

THE Queen is the largest contributor to the Landseer exhibition now open at the Royal Academy. In her Majesty's collection are to be found some of the painter's best, as well as some of his worst works.

A NEW artistic society called "La Société des Amis des Arts" has recently been formed in Paris. *La Chronique* gives its programme as follows:—

"A private exhibition shall be opened at a chosen locality every year. The funds arising from subscriptions shall be devoted to the purchase of unpublished works of art or to stimulative rewards (*encouragements*).

"The works acquired by the society shall be distributed among the members by lot. The annual subscription shall be 50 francs, and the number of members unlimited.

"The *encouragements* shall consist of sending artists to study at Rome, Venice, or Amsterdam, according to their desire."

The committee of the society is thus composed:—

President: M. le Marquis de Montesquieu. *Vice-President*: M. le Marquis de Saint-Gènes. *Treasurer*: M. de Valleroud de la Fosse.

Members:

Le Baron Finot.	Le Comte Azmar de La
Le Baron Creuze de Lesser.	Rochevoucauld.
M. Moreau.	Le Marquis de Varennes.
Le Marquis de Mun.	Le Baron Gustave de
Le Baron de Foucaucourt.	Rothschild.
Le Comte du Passage.	Le Comte de Vogüé.
	M. L. Martinet.

MR. STORY, the well-known American sculptor in Rome, has come forward in the December number of *Blackwood*, to make those uneasy who firmly believe that the Elgin Marbles are the work of Pheidias. But this belief has been long given up by archaeologists, if, indeed, it ever was seriously entertained. What they contend for is, that these sculptures reflect the style of Pheidias, under whose direction, Plutarch tells us, the sculptures of Athens were executed. It is left as a possibility that, with all his other engagements, Pheidias might still have found time even to model, say on a small scale, or at any rate to sketch, the designs for the sculptures of the temple in which one of his two greatest masterpieces was to stand. One thing is certain, that all the existing sculptures from Athens that can be assigned with certainty to the period of Perikles bear, in common with the Elgin Marbles, but one stamp, and that must be the stamp of the master-mind who then ruled the art of Athens. What harm is there, then, if, for ordinary purposes, we still speak of Pheidias as the sculptor of the Elgin Marbles, when we admit that what we say cannot be proved, but equally deny that the opposite can be maintained?

THE death is announced of Mr. William Telbin, the well-known scene-painter. He had been an invalid for some time, and had never recovered the depressing effect of his son's death, which occurred through an accident in the Alps by a fall of an avalanche, about six years ago. Mr. Telbin was in his sixty-first year.

HENRI-PETROS BLANCHARD, one of the best known and oldest designers for the French journal *L'Illustration*, died recently in Paris. He was born in 1805, and studied under Chasselat and Gros. In spite of his frequent journeys to all parts of the world, Blanchard was a constant exhibitor at the Salon. He received a third class medal in 1836, and was decorated with the cross of the Légion d'honneur in 1840. His death is a great loss to the *Illustration*.

M. DE CHENNEVIERES, Conservateur of the Luxembourg Museum, has been appointed president of the Administration des Beaux Arts, in place of M. Charles Blanc, who, after having rendered many services to art in his public capacity, now retires into private life,—"pour se consacrer désormais," *La Chronique* informs us, "à ses études favorites sur l'esthétique de l'Art."

THE *Gazette des Beaux Arts* for January contains—1. A long paper, the first of a series, by Paul Mantz, on English goldsmiths' work. The author does not profess any great learning on the subject, but gives us the benefit of his notes and critical observations made at the Manchester, South Kensington, and Paris Exhibitions. He deals in this first article with mediæval work only, and we have as illustrations the ring of Ethelwulf, preserved in the British Museum, and supposed to be the earliest English work of the kind extant; the so-called jewel of King Alfred, and the well-known coronation spoon of the regalia.—2. An admirable etching by Rajon of Rubens's celebrated *Chapeau de Paille*, now in the National Gallery. The etcher has caught the singular expression of the eyes of Mlle. Lunden, the lady of the hat, with great felicity; but how is an engraver to give any idea of the glorious carnations of Rubens, especially remarkable in this beautiful portrait? A history of the picture and its vicissitudes, by Alfred Michiels, accompanies the etching. It is the first time, strange to say, that this celebrated work has been engraved.—3. M. Champfleury finishes his interesting papers on satiric prints for and against the Reformation.—4. The Wilson Collection receives a final notice by M. Charles Tardieu. One of the etchings of the catalogue, Decamps' *Intérieur à Cour en Italie*, is given as an illustration.—5. The ceramic works of the Oriental exhibition at the Palais de l'Industrie are described by Albert Jacquemart.—6. A review of the first part of a series of lithographs lately published by M.

Lecomte, from the drawings of Géricault. Several examples of these spirited drawings are given.—7. The question of the statue of the child borne by a dolphin, said to be by Raphael, is discussed by J. Aquarone. The side taken is made apparent by the title of the article, "Prétendues découvertes de l'enfant sculpté par Raphael."—8. Pan and the Satyrs as treated by art, is the subject of an article by René Menard.—9. Hachette's magnificent publication of the Gospels, illustrated by a hundred and twenty-eight etchings from designs by Bida, is criticised. Besides the *Chapeau de Paille*, the number contains an effective and beautiful etching by Gustave Greux, from a painting by Lieve Verschuur, *A View on the Meuse at Dortrecht*.

THE theatrical week has not been a fertile one. The leading production—Mr. Gilbert's *Charity*—receives notice in another column. At the Vaudeville they have produced a new burlesque, by Mr. Reece. It is called *Ruy Blas Righted*, and occasion is taken to vindicate the claim of the stage to present political caricatures—a claim which, as most of our readers know, the Lord Chamberlain has more than once disputed. Messrs. James and Thorne are the chief supporters of the burlesque; in which Miss Kate Bishop, who is well known at the Court, has made her first appearance at this theatre. The burlesque is accounted a successful one.

MONSIEUR SARDOU's last piece—the *Merveilleuses* at the Variétés—is not to be reckoned among his successes. The caricature of the manners of the Directory has not taken with the public. Not even the acting of Madame Chaumont can give the piece a long life. Meanwhile, at the Vaudeville, *L'Oncle Sam* proceeds on its course. The weekly receipts exceed those known in days when Paris was outwardly more prosperous.

EVEN Paris has sometimes to lament over good days for the theatre, which are now passed. That at least is the tone that is taken when the revival of the elder Dumas's *Henri Trois* is the theme of conversation. The play itself, they say, has not aged so much as might have been expected; and the decorations at the Porte Saint Martin are new and costly—always a recommendation on that part of the Boulevard.

Tricoche et Cochelet—the favourite and laughable piece from the Palais Royal—has been played successfully during the past week, at the Holborn Theatre; Messieurs Didier and Schey sustaining the principal characters, as on the occasion of the first performance here.

THE keen observer and smart writer who, in the columns of the *Pall Mall Gazette*, is treating of "The Great World in France," took occasion on Wednesday to discuss the "Influence of the Theatre in Paris." He dwelt chiefly on the lighter aspects of the question, and described amusingly a visit paid by two *grandes dames* to the Foyer des Artistes—a high-class sort of drawing-room green-room—at the Théâtre Français. Incidentally he made what will be to many persons something of a revelation, in stating that the authority of the leading actress at the Français is so undisputed that the manager cannot, without her consent, strengthen his troop of actresses by the addition of popular favourites. The article allows us to infer, if it does not expressly state, that in this way actresses of the position of Mlle. Delaporte and Mlle. Desclée have been prevented from joining the company of the "House of Molière." "The Français," says the writer, "prefers recruiting its company from performers caught young at the Conservatoire, and trained by slow stages to the customs of the house." In the main this is no doubt correct; but it may be noted that from the company of one Paris theatre the Français is very apt to recruit itself. We mean the Odéon—the "second Théâtre Français," as it loves to call itself. Within the last twelve

months the Odéon has given to the Français some of the best of its own company; Mlle. Sarah Bernhardt and M. Pierre Berton having both crossed the Seine.

THE Monday Popular Concerts will be resumed, after the usual Christmas recess, on Monday next, when Dr. Hans van Billow will appear for the first time since his return from his recent visit to the Continent.

THE British Orchestral Society, which gave its first very successful series of concerts last year, has announced a second series, the first concert of which will take place at St. James's Hall, on the 22nd inst. Mr. Carrodus will be the leader, and Mr. G. Mount the conductor.

KING LUDWIG II., of Bavaria, has conferred upon Richard Wagner and Johannes Brahms the order of Maximilian for arts and sciences.

HERR POPPER, the violoncellist, and Madame Sophie Menter, the pianist, have been making a professional tour through Holland, with brilliant success.

CARL DRECHSLER, the celebrated performer on the violoncello, has recently died at Dresden.

THE *Tonhalle*, one of the Leipzig musical journals, ceased to exist at the end of last year.

A SERIES of articles is at present in course of publication in the *Neue Zeitschrift für Musik* on the late Henry Hugh Pierson's music to the second part of Goethe's *Faust*. The general tone of the criticism is very favourable; and the fact deserves record, as it is but seldom that any notice is taken by German writers of works by English composers.

THE Paris Correspondent of the *Pall Mall Gazette* says that M. Gounod's wrongs in England have awakened the interest of the French Society of Artists to such an extent that they mean to agitate in favour of a new international law of copyright.

POSTSCRIPT.

PUBLISHERS' ANNOUNCEMENTS.

(From the *Athenæum*.)

MESSRS. MACMILLAN will publish early in May, under the title of *The Russian Power*, a work from the pen of Mr. Ashton Wentworth Dilke, who has spent between two and three years in Russian Central Asia, the Caucasus, Siberia, and European Russia. The work, which will be illustrated by maps, and by ethnological and other plates, will be in part a book of travels, and in part a survey of the political position of Russia, especially in regard to the relations between the Russian and subject races.

MR. WILLIAM ROSSETTI is editing for the press a new edition of *The Poems of William Blake*. This collection of poems will be the first complete one. It will comprise some hitherto unpublished compositions.

A NEW work is being prepared by Capt. J. H. Lawrence-Archer, entitled *Monumental Inscriptions of the West Indies, from the Earliest Date, with Genealogical and Historical Annotations from Original, Local, and other Sources*.

THE third and concluding volume of Mr. Forster's *Life of Dickens* is advertised to appear at the end of this month.

THE Letters and Journals of Lord Macaulay are in the hands of Lady Holland and Mr. Trevelyan, with a view to publication.

PROF. GEIKIE is making rapid progress with the *Life of Sir Roderick Murchison*, and the work will, in all probability, be issued in the spring.

JOHN PEARSON'S FAC-SIMILE REPRINTS. ALL NOW READY.

OLD HISTORICAL BALLADS. 45 Copper Plates, 3 vols. 30s.; large paper, 3l. 3s.

"This reprint (from the rare edition of 1725-5) appears to have been executed with great care, and will supply, at a far less expense, the place of the original in a very satisfactory manner. As far as we have examined it, it can hardly be said to have undergone any further editing than that required to insure a correct copy, which was what was chiefly wanted. It contains upwards of 150 of the best and most valuable of our old ballads, and is certainly a boon, for which all our students of the old national literature of England ought to be thankful to the publisher, Mr. Pearson."—*Athenæum*.

MRS. BEHN'S PLAYS, HISTORIES, and NOVELS. 6 vols. 52s. 6d.; large paper, 4l. 4s.

"Mrs. Behn was a woman of so celebrated a fame while she lived, and so esteemed, that to give a perfect draught of her one must write like her."—*Charles Gibbon*.

"We may regard her, indeed, as our earliest English female comic writer of any worth."—*Retrospective Review*.

"Mrs. Behn, besides her plays, was the authoress of novels and tales which contain some ingeniously contrived incidents."—*Dr. George L. Craik*.

"When writing her best, this unmentionable poetess has a vigorous grace and a noble sense of metre, to be found in no other song-writer of her time."—*A. C. Steinbock*.

"Of smart writing and racy plotting there is never any lack in this clever woman's plays."—*Examiner*.

"The writings of Mrs. Behn form a valuable link in our literary history."—*Bookseller*.

MRS. CENTLIVRE'S DRAMATIC WORKS. 3 vols. 30s.; large paper, 2l. 12s. 6d.

"It is astonishing to find the traces of so much reading and learning as we meet with in many of her pieces. If we do not allow her to be the very first of our female writers, she has but one above her, and may justly be placed next to her predecessor in dramatic glory, the great Mrs. Behn."—*Baker's Biographical Dramatic*.

GEORGE CHAPMAN'S TRAGEDIES and COMEDIES. Now first Collected. 3 vols. 30s.; large paper, 2l. 12s. 6d.

"Mr. Pearson has done excellent service in reprinting all the fifteen comedies and tragedies of which Mr. Chapman is known to have been the sole author, and perhaps the exactness with which he has done so is not to be commended. Here the old texts are reproduced with scrupulous precision."—*Examiner*.

"The addition of Chapman to the list of dramatists whose plays are available to the student is a matter for rejoicing; and the three attractive volumes which constitute the collected dramas will find their way to the shelves of most lovers of literature. Chapman's right to a place in the front rank of our oldest dramatists is conceded."—*Athenæum*.

"Chapman well deserves such a tribute of respect, the best that can be paid to his memory—the present handsome edition of his plays. The editor has done his work well. In a graceful memoir he has told us all that is known of the poet's life, and added a selection of the best criticisms on his plays. The notes are to the point, and give in many instances really valuable information. The edition ought to find a place in every well selected library."—*Westminster Review*, April 1873.

"Of all the English play-writers, Chapman perhaps approaches nearest to Shakespeare."—*Charles Lamb*.

"Chapman, where he lays aside the gravity of the philosopher and poet, discovers an unexpected comic vein, distinguished by equal truth of nature and lively good humour."—*William Hazlitt*.

"He has more thinking than many of the old dramatists; and the praise of one of his critics, though strongly worded, is not without foundation, that we seldom find richer contemplations on the nature of man and the world."—*Henry Hallam*.

"That full and heightened style of Master Chapman."—*Webster*.

RICHARD BROME'S DRAMATIC WORKS. Now first Collected. 3 vols. 30s.; large paper, 2l. 12s. 6d.

Richard Brome lived in the reign of Charles I., and was contemporary with Dekker, Ford, Shirley, &c. he was servant to Ben Jonson, and wrote himself into high repute. See the Verses prefixed to his "Northern Lass," by Ben Jonson.

THOS. DECKER'S DRAMATIC WORKS. Now first Collected. 4 vols. 42s.; large paper, 3l. 13s. 6d.

"Dekker had poetry enough for anything."—*Charles Lamb*.

"Of the dramatists hitherto unedited, Dekker is the most poetical, and the appearance of a complete edition of his works is the greatest boon remaining to be conferred on lovers of the Elizabethan drama."—*Athenæum*.

"Had all Dekker's plays been as good as 'The Honest Whore,' he would have had no superior but Shakespeare."—*Examiner*.

Nearly ready.

THOS. HEYWOOD'S DRAMATIC WORKS, with Illustrative Notes, and a Memoir of the Author. 6 vols. 3l. 3s.; large paper, 5l. 5s.

Just published, fcap. 8vo. 6s.; demy 8vo. 12s.

SAMUEL TAYLOR COLERIDGE'S OSORIO,

As originally written in 1797, never before published.

JOHN PEARSON, York Street, Covent Garden.

SAMUEL TINSLEY'S NEW PUBLICATIONS.

THE PHYSIOLOGY of the SECTS. Crown 8vo, cloth, price 5s.

"Abounds with nuts to crack and bones to pick for all those whose peculiarities are assailed. The writer endeavours to summarise the outward and visible signs distinguishing the various religious denominations."—*Northampton Mercury*.

"Really a clever book, and well repays perusal."—*Cheshire Observer*.

"An amusing and somewhat extraordinary book."—*Cheltenham Chronicle*.

HARRY'S BIG BOOTS: a Fairy Tale, for "Smalle Folke." By S. E. GAY. With 8 Full-Page Illus- trations and a Vignette by the Author, drawn on Wood by Percival Skelton. Crown 8vo, handsomely bound in cloth gilt, price 5s.

From the DAILY NEWS.

"Harry's Big Boots' is sure of a large and appreciative audience. It is as good as a Christmas pantomime, and its illustrations are quite equal to any transformation-scene. . . . The fun about deep-sea dredging and the 'fashionable wagonette,' which the sea-people make out of the scientific gentleman's dredger, will no doubt amply compensate for anything the young readers do not quite understand; while the pictures of Harry and Harry's seven-league boots, with their little wings and funny faces, leave nothing to be desired."

From the PALL MALL GAZETTE.

"Some capital fun will be found in 'Harry's Big Boots.' Wonderful are the events that happen in dreams, and Harry's adventures in his seven-league boots, which carry him over the world more swiftly, and it needs scarcely be said, more safely than a railway train, are told with considerable vivacity. The boots, moreover, convey the boy through the air and under the water; and so strange are the feats they enable him to perform that the child-reader will be reminded sometimes of the adventures of the most delightful little lady that ever appeared in a story book—Alice, in 'Wonderland.' The illustrations in 'Harry's Big Boots' are excellent, and so is the story."

EPITAPHIANA; or, the Curiosities of Churchyard Literature. Being a Miscellaneous Collection of Epitaphs; with an Introduction. By W. FAIRLEY. Crown 8vo, cloth, price 5s.

"Entertaining."—*Pall Mall Gazette*.

"A capital collection."—*Court Circular*.

"A very readable volume."—*Daily Review*.

"A most interesting book."—*Leeds Mercury*.

"Interesting and amusing."—*Nonconformist*.

"Particularly entertaining."—*Public Opinion*.

"A curious and entertaining volume."—*Oxford Chronicle*.

"A very interesting collection."—*Civil Service Gazette*.

SECOND EDITION.

KITTY'S RIVAL. By Sydney Mostyn, Author of "The Surgeon's Secret," &c. 8 vols. 31s. 6d.

CRUEL CONSTANCY. By Katharine King, Author of "The Queen of the Regiment," &c. 3 vols. 31s. 6d.

From the SPECTATOR.

"When we observe a lady novelist making steady progress, and profiting by the remarks of her critics to cultivate the qualities and avoid the defects which they have described in her first efforts, we watch her career with interest and expectation, and are happy to put its steps in advance on record. Miss Katharine King is among the small number of novelists who do not disdain advice. Her present work is a much better novel than 'Lost for Gold.' . . . The plot is very original, and the atmosphere of the story is healthy, full of breezy, open-air life, of cheerfulness, and harmless fun."

TOO LIGHTLY BROKEN: a Story. 3 vols. 31s. 6d.

"A very pleasing story. . . . very prettily told."—*Post*.

IS IT FOR EVER? By Kate Mainwaring. 3 vols., 31s. 6d.

FLORENCE; or, Loyal Quand Meme. By FRANCES ARMSTRONG. Crown 8vo, 5s. cloth.

"It is impossible not to be interested in the story from beginning to end."—*Examiner*.

THE HEIR of REDDESMONT. 3 vols. 31s. 6d.

TOWER HALLOWDEANE. 2 vols.

'TWTX TUP and LIP. By Mary Lovett- CAMERON. 3 vols. 31s. 6d. [Next week.]

SAMUEL TINSLEY, 10 Southampton Street, Strand.

JUST PUBLISHED.

1. BLACKWOOD'S MAGAZINE,

For JANUARY, 1874. No. DCXCIX. Price 2s. 6d.

Contents:

The PARISIANS. Part the Last.
The STORY of VALENTINE and his BROTHER.
INTERNATIONAL VANITIES—
No. II. FORMS.
JOHN STUART MILL: An Autobiography.
The STORY of the MISSING BILLS.
A PIECE of HEATHER. By H. C. Merivale.
The INDIAN MUTINY: SIR HOPE GRANT.
The NEW YEAR'S POLITICAL ASPECT.

2.

Complete in 4 vols. crown 8vo, price 26s. cloth; or 24s. in paper covers,

THE PARISIANS.

By EDWARD LORD LYTTON.

With Illustrations by Sydney Hall.

3.

In crown 8vo, with Map and Plans, price 12s. cloth,

INCIDENTS IN THE SEPOY WAR OF 1857-8.

Compiled from the PRIVATE JOURNALS of General
Sir HOPE GRANT, G.C.B.

Together with some Explanatory Chapters

By Captain HENRY KNOLLYS, R.A., Author of
"From Sedan to Saarbrück."

4.

In post 8vo, price 5s. cloth,

FANTI AND ASHANTI:

Three Papers on Ashanti and the Protectorate of the Gold Coast, with an Outline of the Causes that have led to the War.

By Captain H. BRACKENBURY, Royal Artillery, Assistant Military Secretary to Major-General Sir Garnet Wolseley;

And Captain HUYSHIE, Rifle Brigade,
Deputy Assistant Quartermaster-General.

These Papers were prepared and read to their comrades on board the steam-ship *Ambriz* on the passage to Cape Coast, at the special request of the commander, Sir Garnet Wolseley. The volume contains a Sketch-map of the Gold Coast, and Plan of Coomassie, by Captain Hayshe.

5.

In crown 8vo, price 9s. cloth,

ROME OR DEATH!

By ALFRED AUSTIN.

6.

In 3 vols. crown 8vo, price 25s. 6d. cloth,

MYSIE'S PARDON.

A Novel from Australia.

By JAMES WALKER HAY.

7.

Now complete, in 8 vols. and Index Volume, price 3l. 3s. cloth, the Second Edition of

THE HISTORY OF SCOTLAND,

From AGRICOLA'S INVASION to the EXTINCTION of the
LAST JACOBITE INSURRECTION.

By JOHN HILL BURTON,

Historiographer Royal for Scotland.

8.

In 4 vols. fcap., price 21s. cloth,

MIDDLEMARCH.

By GEORGE ELIOT.

9.

In fcap. 8vo, Roxburgh binding, price 6s. 6d.

A HAND-BOOK OF WEATHER FOLK-LORE.

Being a Collection of Proverbial Sayings in Various Languages relating to the Weather,

With Illustrative and Explanatory Notes.
By the Rev. C. SWAINSON, M.A.,
Vicar of High Hurst Wood.

Wm. Blackwood & Sons, Edinburgh and London.

SATURDAY, JANUARY 17, 1874.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

LITERATURE.

Archibald Constable and his Literary Correspondents. A Memorial by his Son, Thomas Constable. 3 vols. (Edinburgh: Edmonston & Douglas.)

It is scarcely too much to say of Archibald Constable that he created the publishing trade of Scotland and revolutionized the business of publishing throughout Great Britain. Before his time the Edinburgh booksellers were spiritless, petty traders, little more than agents for the booksellers of the South, who published few works and only such as involved little risk, were quite content to let Scottish authors carry their manuscripts to London, and but rarely ventured so far as to become partners in the speculations of their Southern correspondents. The London publishers were still to a great extent a clique organised for purposes of business, living on familiar terms with one another, publishing works of importance in concert, and, through their good understanding with each other, having authors very much at their mercy. Constable brought to his business a combination of enterprise, intelligence, and liberality previously unexampled in the trade of bookselling. He created in Edinburgh a publishing establishment comparable for its extent with any in the kingdom, unequalled for the value and popularity of its publications. He gave the death-blow to the London monopoly. His prices, almost from the first, became a standard to which London publishers had to approximate. Such men as Murray and Longman were soon vieing with him in liberality as well as in enterprise, and monopoly gave way to keen competition. Men of letters, of course, found their advantage in the change, and if the multiplication of works of merit be a boon to the public, the public was still more benefited.

But Constable was also the pioneer of cheap literature, and that he was so is, after all, perhaps his best claim to remembrance. During the greater part of his career, new books of any mark or pretension were usually published in the quarto form, and for a very select class of readers. Towards the end of his life he conceived the idea of publishing good and cheap books for the million, and embodied it in his valuable *Miscellany*. This idea was quickly caught up by the trade, and Murray and Longman did far more in carrying it out than Constable was able to do. But probably it had never crossed a human brain except his own, when Constable, in introducing it to Sir Walter Scott and Lockhart, made them stare with a magniloquent prologue in which he set forth that, whether literary genius had done its best or not, "printing and book-selling, as instruments for enlightening and entertaining mankind, and of course for making money," were still "in mere infancy—

the trade in its cradle." Simple and easily appreciated as the idea was when explained, the man who first propounded it could scarcely be an ordinary person. And "the grand Napoleon of the realms of print"—so Scott dubbed the publisher on the occasion referred to—as described in this work and elsewhere, is undoubtedly a figure of high interest, and worthy to be handed down to posterity. It is not because he has hitherto wanted a *vates sacer* that this *Memorial* has been published; Lockhart, in his *Life of Scott*, has bestowed only too much pains upon him. The motive of this work has been to clear the great publisher's memory from stains cast upon it by alleged misrepresentations of Lockhart; and it may be said at once that the son of Archibald Constable has in a great measure succeeded in his pious labour. His work, though giving much biographical detail, does not profess to be a *Life*, nor does it give anything like a full record of his father's publishing career. Of the personal characteristics of Archibald Constable his son has very little to tell us; and probably anything he could have said must have failed to modify the impression of them already given by a master-hand. Lockhart's sketch of Constable as he appeared in his day of prosperity is so striking and life-like that the world will always be apt to accept it as a likeness.

Constable was a native of Carnbee in Fife-shire, and was born in 1774, the son of a farmer and land-steward, who had a local reputation for skill in his calling. After a parish-school education, he was sent, in his fourteenth year, to Edinburgh, to become an apprentice to the bookselling trade in the shop of Mr. Peter Hill. In an autobiographic fragment left by him he has told us that the choice of this trade was entirely his own, and also how his mind became fixed upon it. A bookseller's shop had been opened in the little town of Pittenwee, and the novel sight of its windows, "adorned with picture-books and halfpenny prints," filled the boys from the neighbouring parishes with wonder. Here was an occupation full of interest, and, as the new bookseller was "a braw-dressed man," it must be profitable—certainly it must be preferable to going to sea or following the plough, to do one or other of which was the lot of most boys like Archibald Constable. Archibald pressed his friends to try whether they could not make a bookseller of him, and, fortunately, they were able to indulge him. He served an apprenticeship of six years with Mr. Hill, and remained a year more in his employment. During those years he was unwearied in his efforts to acquire a knowledge of books; his opportunities, many of which he made for himself, were excellent, and at their close he appears to have been extremely well versed in bibliography. He now resolved to set up for himself as a dealer in old books; and, though he had no resources except his knowledge and the credit which he had gained with a few friends, and though, moreover, barely one and twenty, he also resolved to marry. The young lady on whom he had set his heart was a Miss Willison, the daughter of a well-to-do printer. That Mr. Willison, though he never formally assented to the

marriage, made no objection to it, and gave substantial help to the young couple, may be taken as showing that now, as at subsequent periods, Constable was making a great impression of capacity upon the people he came in contact with. He had been acquainted with his wife for less than a year before his marriage, but he tells us that he had been "desperately in love" with her for several years before, and he ascribes much of his subsequent success to the "feelings, anticipations, and honourable contrivances" which, in connection with his passion, filled his mind during this period. His hasty marriage—but, to be sure, people in middle life were in more haste to marry at the end of the last century than they are now—is the only premonition to be found in his early life of recklessness such as afterwards became habitual with him. His marriage over, he set himself most soberly to work to prepare for opening his old-book shop; and in a visit to London, and a journey which he afterwards made through some parts of Scotland—his resources consisting of a loan of 150*l.* and 300*l.* worth of books which he got from his father-in-law—he got together a stock which, if not large, was choice, and which was probably worth many times what it cost him. A catalogue which he forthwith published almost at once brought him into correspondence with all the book-hunters of Scotland. Indefatigable in searching for rare books of every sort, he especially laid himself out for collecting works relative to the history and literature of Scotland—of which no bookseller had previously made a speciality—and he found profit in his speciality, as men usually do. By and by, on the advice of Sir John Leslie, he laid in a stock of foreign scientific works, and this brought him a new *clientèle*, which was not restricted to Scotland. His retail trade was soon considerable, and it need not be said that it was very lucrative. At this stage of his career, he was attention itself, and whether a correspondent wanted a new book or a new wig, or a governess, or a supply of strawberries, his requisitions were promptly complied with.

Almost at his outset, he became, though in a very small way, a publisher; at first, a very cautious one, running no risks; then venturing upon small sums for editing. His courage rose with his capital and his opportunities; and in 1802, when he had been six or seven years in business, we find him Longman's partner in several undertakings—notably Scott's *Minstrelsy of the Scottish Border* and Bruce's *Travels*—and looked upon by the great London publisher as the rising man of the trade in the North. His selection to be the publisher of the *Edinburgh Review* in the same year was even a more unequivocal recognition of the position he had made for himself, and the *Review* greatly raised his position. The prices he paid for articles got him nearly as much *éclat* as their articles got for Brougham or Jeffrey. It was in connection with the *Edinburgh Review* that he first showed that liberality in payments which soon made him the hope of authors in the South as well as in the North, and secured to him for many years the first offer of nearly every literary work produced in Scotland. He strengthened his busi-

ness at the beginning of 1804 by taking a partner, who put some capital into it; and that this partner, Mr. Hunter, was an advocate, the eldest son of a Forfarshire laird, and the connection of some of the most respectable families of Scotland, to those who know what Scotland then was, shows, better than anything else could, the very high estimation in which by this time Constable was held.

The new copartnery went on successfully. The business was largely extended; and the firm was soon known for its unexampled liberality to authors—one instance of which, the payment to Scott of a thousand guineas for *Marmion*, made a vast impression upon authors, upon booksellers, and upon the public. Mr. Hunter was a little apt to quarrel with the correspondents and clients of the firm; for example, he seems to have been to blame for a rupture with Longman and Co., which produced consequences very injurious to his own house, and also for a rupture with Scott, which was unfortunate, possibly for both sides, and certainly for Scott; but he and his partner worked together very amicably. He threw himself heartily into the business, and was undoubtedly an able and energetic man, though unfortunately a trifle too much of the squire and a trifle too much of the lawyer. He was never so useful, however, or so much pleased to be of use, as when a London correspondent, like Longman or Murray, having come to Scotland, it became necessary to give him a Scottish welcome. Mr. Hunter was a *bon vivant*, and a man of taste; he equally understood a picture and a dinner; he had a considerable knowledge of books, old and new; being a Forfarshire man, he was a seasoned toper; being a man of wide connections, he had it in his power to show his visitors some aspects of Scottish life which otherwise might not have been accessible to them. To show them everything there was to be seen, to talk to them about everything that could be talked of, to make them eat the greatest possible variety of food, and drink the greatest possible variety of drinks, above all to carry them into his native county and introduce them to the high jinks of Brechin Castle—where his friend Mr. Maule, afterwards Lord Panmure, kept at this time a sort of Court of Misrule—seems to have been thorough enjoyment to him. But what was life to him was always almost death to them. Mr. Longman came barely alive out of one of these Forfarshire visits; and Mr. Murray did not fare much better. These hospitalities, dangerous as they were, were doubtless favourable to good business relations; but the strain of opposing interests is sure to be too much for mere civilities, and Constable and Co., while Mr. Hunter was a partner, had their quarrels or coolnesses with both the great London publishers. On quarrelling with Longman they betook themselves to Murray; and on a coolness with Murray arising, they established in London a branch of their own house, which seems to have lost them a good deal of money. Mr. Hunter retired from the firm in 1811, on succeeding to his father's estate, which was a very considerable one, meaning to devote himself to its improvement; but constant residence in Forfarshire proved too much

even for him. He soon fell into a low state of health, and, either tired of the country or feeling change essential for him, was making proposals for his re-entry into the publishing firm when he died suddenly in March 1812.

The profits of Constable and Company during the seven years of Mr. Hunter's partnership were estimated at 5,000*l.* a year. Mr. Hunter's interest in the firm was bought for 17,000*l.* by Mr. Cathcart, who, along with Mr. Robert Cadell, entered it in 1811. Unfortunately, Mr. Cathcart died about the end of 1812; and his capital was withdrawn from the firm, which could much less afford the loss of it than it could have done eighteen months before, at the retirement of Mr. Hunter. During this period Mr. Constable had made the heaviest investment he had yet ventured upon—he had bought the *Encyclopædia Britannica*, and had spent large sums in improving it and the Supplement to it, and in preparing them for publication. Henceforth, till 1826, the firm of Constable and Co. consisted of Mr. Constable and Mr. Cadell; and henceforth the firm was carrying on its large business with an extremely inadequate capital—adding greatly year by year to the extent of its transactions, and adding, it would seem, comparatively little to the cash basis upon which those transactions rested. Instead of more cash they used more accommodation bills. The booksellers of Edinburgh had always, we are told, settled their transactions with each other, not by cash, but by bills and notes, and habitually resorted to those instruments of credit when they had no corresponding dealings whatever. The bankers were accustomed to this mode of doing business, and let it go on. Mr. Constable was accustomed to it, and, relying on the large property possessed by his firm, it gave him no concern; Mr. Cadell, though much exercised by it in early years, especially when money was scarce, got accustomed to it too; and, indeed, they both had no choice but to go on with it or let a flourishing business go to ruin. To be sure, their numerous undertakings having generally been successful—and some of them, for example the earlier *Waverley Novels*, extremely profitable—economy in personal expenditure, moderate drafts upon profits, might have brought them right in time. But Constable had grown magnificent and expensive in his ways, and economy had become impossible to him. He believed himself rich, and lived like a man of wealth, regardless of the ruin which a collapse of credit might bring upon him.

The pecuniary condition of Constable's firm being as above described in 1812, in the following year there was a renewal of its relations, which had been for four years interrupted, with Walter Scott. Scott had been secretly a partner with his friends the Ballantynes in the printing business of James Ballantyne and Company, and in the publishing business of John Ballantyne and Company. The publishing business had been unlucky, and in 1813 the partners found themselves with a heavy stock of excellently printed books which would not sell, and liabilities also heavy, which they had no available means of meeting. To avoid ex-

posure, it became necessary to seek assistance, and Scott sought the assistance of Constable. So far as could be done, it was readily given. Constable seems to have helped the publishing house to get rid of some part of its stock, and he negotiated for Scott a loan of 4,000*l.* on the security of the Duke of Buccleugh. Their connection now became more friendly than it had been at any former period. Constable again became Scott's publisher, and nearly all Scott's subsequent works, poems, and novels, published up to 1826, were issued by Constable and Company. Acceptances by the publishers on behalf of Scott or of the Ballantynes were, towards the end of 1814, causing much anxiety to Mr. Cadell; but the wonderful success of the *Waverley Novels* put things right, and Mr. Cadell was by and by as anxious as his partner to retain the Scott connection. Scott's requirements of money, however, for the purchase of land and the building and furnishing of Abbotsford, were not satisfied even by the large amounts which the novels brought him; and a steady run of accommodation bills for the Ballantynes, on Scott's account, went to swell the liabilities of Constable's firm. With the lapse of time, the amount of those bills seems to have increased rather than diminished. In 1823 it was about 20,000*l.*, though, in addition to the profits of the original issue, Scott had received 22,500*l.* from Constable for the copyright of his novels, and had been paid by him 10,000*l.* more for novels of which not a line was written.

Scott, in truth, was quite as familiar with accommodation bills as Constable, treated them with equal unconcern, was equally ready to take his chance of the risks which such transactions involved for both of them. When the crash came, in 1826, the result of a financial crisis, they were involved in a common ruin. When it did come, too, there was a double set of accommodation bills running, and Sir Walter was therefore liable for twice the amount he had received upon the bills. Lockhart has stated that the duplicate bills were set afloat by Constable at the last moment in his frenzied efforts to save himself. But this is highly improbable; and, at any rate, it appears that Constable was at liberty to use the bills. A statement by Sir James Gibson-Craig, who knew more than anyone else of his affairs, shows that Constable, apparently a considerable time before his failure, had told Scott he must be free to make use of the duplicate bills—that Scott, in fact, must undergo for him the same risk that he was undergoing for Scott. This being so, it is useless to enquire very strictly when the bills were issued. Men who are partners in such transactions as had gone on for years between Scott and Constable should not expect each other to be very scrupulous as to using in their emergencies such documents when fairly at their disposal. It is well known that Scott, though for reasons of prudence he made Constable's partner, Cadell, his publisher, after the fall of the firm showed no lack of friendly feeling to Constable.

Constable did not long survive the ruin of his firm. He died in July 1827. He has been described by Lockhart as inflated with vanity, so that he believed himself half the author of the *Waverley Novels*—he certainly

had suggested some of them—haughty, crafty, despotic, and, in his later years, a crazed projector. But whatever his failings, there was a touch of something like greatness about him. He liked to publish the best books; to be paymaster to the best authors, and to pay them prices which would astonish the world. His busy head was always devising schemes. But though big schemes may have unduly attracted him, his sagacity is as well vouched for as his liberality. He seems to have been a capital judge of an author or of a book. "While I live," said Scott, "I shall regret the downfall of Constable's house, for never did there exist so intelligent or so liberal an establishment. They went too far when money was plenty, that is certain; yet if every author in Britain had taxed himself half a year's income, he should have kept up the house which first broke in upon the monopoly of the London trade, and made letters what they now are." The publisher's appearance matched his character. Scott once said he was "a grand-looking chiel," who reminded him of what Fielding said of Joseph Andrews—"That he had an air which, to those who had not seen many noblemen, would give an idea of nobility."

Of the correspondence given in these volumes, apart from some letters of Scott, there is not much that calls for notice. The business letters and the friendly little notes of literary men are very like those of ordinary persons, and to one or other of those categories belong most of the letters of literary men to Constable, which have here been published. There is a letter from the historian Niebuhr, but it is about the purchase of a library. There are several letters from Campbell, but they are all either about money or about work undertaken and making no progress. The letters from John Leyden are good friendly letters, but add nothing to our knowledge of a man who interests us through the impression he made upon his contemporaries; those of another Orientalist, Dr. Alexander Murray, are weary, weary reading. There are pleasant little notes—mostly about visits or sent with books—from Dugald Stewart and his wife; and many letters of William Godwin, one or two of which have some real interest. As might be expected, several of the great publisher's best correspondents are ladies; and there are letters of Anna Seward, Lydia White, Maria Edgeworth, and Amelia Opie, some bits of which would bear quotation. Perhaps the most curious of these is a letter of Mrs. Opie (whose letters Constable had a trick of not answering), in which she vindicates herself against the charge somebody had made against her, of having kissed Horne Tooke on his acquittal of high treason. Of all Constable's correspondents, however, his partner, Mr. Hunter—who, though not a man of letters, was a lively letter-writer—is decidedly our favourite. There is a ludicrous "next-morning" tone, half repentant, half boastful, about his faithful descriptions of Forfarshire festivities; and in his letters from London, where he saw as much of life as he could and duly reported all he saw, he shows a diverting knack of finding out resemblances between London celebrities and friends of his in the North. He was a

true provincial; but this book could better spare many bigger men—whose letters are full of nothing. Too many letters with no matter in them are, indeed, the weakness of these volumes. While a great portion of them can only be of interest to members of the Constable family, a considerable portion more cannot, so far as we can see, be of interest to any person whatever.

D. MACLENNAN.

Poems. By Robert Bridges. (London: Pickering, 1873.)

INQUIRING minds, which cannot rest without finding a good reason for everything, have been greatly puzzled in the attempt to discover a *raison d'être* for minor poetry. Perhaps the most plausible answer the optimist can give is to say that the minor poet is a useful index of the *wrong* directions in which the tides of verse may be setting, that he invariably follows an example *vitiis imitabile*, and so teaches his masters what to avoid. A profusion of anapestic music, a superabundance of kisses, a choice of remote subjects, make the note and burden of the minor singers of the day. Mr. Bridges' poems have the merit of escaping all these errors, but they have a higher value than that merely negative one—namely, a ring and a quality of their own. It could scarcely be gathered from his book that he has ever read Mr. Tennyson or Mr. Swinburne; and he sees things as clearly, speaks as simply, feels as truly, as if the modern demand for research and subtlety had never been heard. His teachers are of an elder and simpler time. Without copying, and without the use of affected quaintness and archaic words, he stirs old impressions of Spenser, of Herrick, or of Waller. To do this seems to be his conscious aim, and in his success lies the charm of his poetry, as far as so volatile a thing can be fixed at all. Faint memories are awakened, a music long silent is revived—a careless music, rough, and full of sudden breaks of melody and sweet surprises. With the old melody there is the old repose of healthy imagination; these lyrics are "plain, and dally with the innocence of love;" they show at once true feeling and reticence.

In securing these effects—purity, music, pathos—some of the songs fall a little into the manner of Heine, as, for instance, xxxiv. :—

"I found to-day out walking
The flower my love loves best;
What, when I stooped to pluck it,
Could dare my hand arrest?

Was it a snake lay curling
About the roots' thick crown?
Or did some hidden bramble
Tear my hand reaching down?

There was no snake uncurling,
And no thorn wounded me;
'Twas my heart checked me, sighing
She is beyond the sea."

The early freshness of Wyatt, the exploring passion of "And wilt thou leave me thus?" live again in xxxii. :—

"I will not let thee go.
Ends all our month-long love in this?
Can it be summed up so,
Quit in a single kiss?
I will not let thee go."

"I will not let thee go.
If thy words' breath could scare thy deeds
As the soft south can blow
And toss the feathered seeds,
Then might I let thee go."

"I will not let thee go.
The stars that crowd the summer skies
Have watched us so below
With all their million eyes,
I dare not let thee go."

"I will not let thee go.
I hold thee by too many hands:
Thou sayest farewell, and lo!
I have thee by the hands,
And will not let thee go."

Much in the same manner is xxx., where the thought is prettily handled, and a delicate motive is duly set forth in two exquisite verses. The conclusion of xix. is no less excellent, so light at once, and so adequate in its statement of the half-confusion, the memory, and regret of waking :—

"And I cannot tell
Rising, when the morn
Wrestles with the mist,
Whether she has sworn,
Whether we have kissed,
Whether all is well,—
Ah! I cannot tell."

The sonnets and rondeaux in Mr. Bridges' collection satisfy the technical rules of these kinds of verse, but the sonnets at least retain too much of the roughness of their earliest English originals, and the merit of a rondeau is a slight thing at best. One of them contains a pleasant fancy, a conceit born out of due time; it ought to have had birth in the brain of Crashaw. The venom of Love's shafts,

"that fresh he dips
In juice of plants that no bee sips,"
is rendered harmless,

"if a maiden with her lips
Suck from the wound the blood that drips."

A more weird and remarkable fancy is that of the sonnet numbered xiv., where the evening shadow of one making a sad journey from a joyous to a joyless place reminds the poet of

"how Odysseus saw
Tityos in Hades; bulk incredible,
Covering nine roads he lies."

Perhaps the best poem in the book is the "Elegy on a Lady, whom grief for the death of her Betrothed killed." This elegy nearly approaches to that success which a friend of Sainte-Beuve's was so eager to achieve. "Oh! rien s'ajouterait à cette richesse des âges, à ce trésor accumulé qui déjà comble la mesure." Mr. Bridges' *denier* is worthy of the Silver, if scarcely of the Golden Treasury. In this "epitaph to be an epithalamy," the solemn hymn turns to no sullen dirge; it is not Death, or Hades, that awaits the bride, as he awaited Clearesté, for whom Meleager sang; but the shade of the lover is to be the bridegroom. It is a pity to quote only a part, but one verse will serve to show the tone and character of the measure :

"Let the priests go before, arrayed in white,
And let the dark-stoled minstrels follow slow,
Next they that bear her, honoured on this night,
And then the maidens, in a double row,
Each singing soft and low,
And each on high a torch upstaying :
Unto her lover lead her forth with light,
With music, and with singing, and with praying."

A fancy that can be strange when it chooses, and has always a power of delicate surprise, simplicity, courtliness, feeling, music of no vulgar order,—these are Mr. Bridges' qualities. His defect is to exaggerate the antique roughness of his models. Properly used, this roughness gives just the tone he wants, the tone of one whose tastes turn back to times of fresher inspiration and less conscious effort. We think he is unsuccessful in a few pieces which aim at being humorous. "Robbers" and "Zopyrus" are not very fortunate efforts, and one must have been a musician and an Etonian to appreciate the "Epitaph on a Gentleman of the Chapel Royal," which is not very amusing to readers whose "education has been neglected." These are trifling blemishes. Mr. Bridges has produced a very charming volume of verses,—verses which actually give pleasure, and a peculiar kind of pleasure. That they will ever "reach the land of matters unforget," it would be rash to predict. But it is a hopeful sign that the poems written between the summers of 1872-73 are greatly in advance of the earlier productions. They are verses with a distinct artistic aim, and that both a novel and a simple one.

A. LANG.

The Black Book of the Admiralty, with an Appendix. Edited by Sir Travers Twiss, Q.C., D.C.L. Published by the authority of the Lords Commissioners of Her Majesty's Treasury, under the direction of the Master of the Rolls. Vol. I. 1871, Vol. II. 1873. (London: Longman & Co., and Trübner & Co.; Oxford: Parker & Co.; Cambridge: Macmillan & Co.; Edinburgh: A. C. Black; Dublin: A. Thom.)

THE Black Book of the Admiralty is now for the first time printed, which is somewhat surprising, considering the frequent reference made to it in juridical controversies and legal history; and Sir Travers Twiss has furnished it with a valuable critical introduction, and with an appendix containing documents not inferior in interest to the book itself. Thus much appears on the surface, but full justice cannot be done to what we here have before us, without entering, as to the nature and literary history of that famous book, into many details, which we trust will also possess an interest of their own.

The Black Book was intended as a kind of encyclopædia of all things pertaining to the office of admiral, whether with regard to his administrative functions, in which he is now represented by the Board of Admiralty, to his duties as an actual commander of the fleet at sea or in harbour, or to his judicial functions, in which, so far as they are not merged in those of the ordinary Courts of Common Law and Equity, he is now represented by the Court of Admiralty. Over all these branches the king in council was supreme, at least down to the beginning of the fifteenth century, and made ordinances not only concerning the administration and discipline of the fleet, but concerning the law which the admiral was to administer as a judge; for the distinction between

executive and legislative functions had not then been well developed, while a distinction between the powers that ruled on sea and land, now entirely obsolete, was regarded as fundamental. The law of the land was the province of Parliament, or, to speak more strictly, of the king in Parliament; there only could it be altered, and the Parliament also meddled freely with its administration, whenever it dared. But the law of the sea, as well criminal as civil, was the province of the king in council to ordain and alter, as well as to superintend its administration; and the early statutes passed on the subject by Parliament, as 13 Rich. II., c. 5, and 15 Rich. II., c. 3, were merely to secure that the exercise of the admiral's jurisdiction should really be limited to facts that happened at sea, or on large rivers below the lowest bridges on them, not at all to regulate the law or procedure of the Admiral's Court within those limits. The matter, then, of the Black Book either emanated originally from the king in council, or was adopted directly or indirectly by royal authority. A few of the ordinances contained in it are dated, and extend from one (part C, art. 17) on the manner of outlawing and banishing persons indicted before the admiral for trespass, which purports to have been "made at Ipswich, in the time of King Henry I., by the admirals of the north and west, and other lords thereat assisting," to one (part D, arts. 1-18) which embodies the answers given at Queenborough, in 1375, by certain sworn mariners to commissioners appointed to ascertain certain points as to mariners' wages and allowances, and the shares in prizes. Another (part D, art. 20) must be later still, since it ordains that the admiral make enquiry concerning all those who victual or refresh the king's enemies or the rebels of Wales, which, as Sir T. Twiss observes, refers to Owen Glendower's rebellion, when England was at war with France and Spain, and the French landed in Wales and joined the rebels at Tenby. But the great majority are not dated, nor do they often contain any formal words of establishment as ordinances, such as "we have caused to be ordained" (part B, preface before art. 1). No doubt, when they were written into a book for the admiral's use and guidance, such formal words were omitted, as the enacting words of Acts of Parliament would be omitted in turning them into chapters of a code; and, indeed, many of the articles may have first assumed the precise form in which we now see them, only in the process of being written into the book which was approved for the admiral's use.

The date at which this process of codification commenced can be fixed with some precision, for parts A and B, which, from the preface to part B already referred to, appear to have been written at one time, mention under-admirals, who, so far as is known, were first appointed in 1337; and while they provide for the increase of the admiral's pay in case of his being of any rank up to that of earl, they do not provide for the case of his being a duke, which first happened in 1351. Between these limits two very remarkable naval expeditions occurred, in 1338 and 1340, and Sir T.

Twiss conjectures that parts A and B were drawn up with a view to one of these. Naval administration and the discipline of the fleet are the main subjects of these parts, but part C deals with law, criminal and civil, as generally applicable to merchants, mariners, and others, within the competence of the admiral's court. M. Pardessus, who had not the advantage of being able to refer to the Black Book in print, believed that we had here the result of a consultation which Edward III., in 1338, directed to be had with the judges on the subject of the maritime laws; but Sir T. Twiss, from internal evidence, dates the compilation of part C between 1360 and 1369. Some of its matter, however, is of far older date, for it includes the famous laws of Oleron. Part D has already been referred to as coming down at least to the time of Glendower's rebellion. Its language, as well as that of all the preceding parts, is French, but it is followed by a Latin treatise on judicial procedure, which, from the illustrations used, and the repeated references to the statutes and customs of Bologna, appears to have been written by a civilian of that university, and is believed by Sir T. Twiss to have been adopted in the reign of Henry IV. as an improved procedure for the Court of Admiralty, the business of which is stated by Spelman to have been much increased under the Admiralty of the Earl of Somerset in that reign.

Sir Thomas Beaufort was admiral from 1408 to his death in 1426, and Sir T. Twiss considers that it was for his use that all the portions hitherto mentioned were written into a beautifully illuminated book, now preserved among the Cottonian MSS. in the British Museum, for they are followed in it by a number of documents in Latin relating to his Admiralty, which would have been of little interest to a successor; experts in palæography place it between 1420 and 1425. The book which was afterwards preserved in the registry of the Admiralty under the name of the Black Book appears to have been similarly designed for the use of the Duke of Exeter, since the documents relating to the Admiralty of Sir T. Beaufort are replaced in it by others, also in Latin, and relating to the Admiralty of the duke, down to his death in 1446; and it is remarkable that immediately before these documents there was inserted in the Black Book a set of articles on the judicial branch of the admiral's duties, selected from the French articles of the old parts, and translated into Latin by one Thomas Rowghton. In the reign of Henry VI. the use of French was rapidly giving way in England, but it seems that while English was taking its place in the proceedings of Parliament, Latin was the official successor in those of the Court of Admiralty. In the Bodleian Library, among Selden's MSS., is another book, described by that learned writer in his *Vindicie Maris Clausi*, which contains the parts A, B, C, and D, and the Latin treatise on Procedure, that are common to the Cottonian MS. and the Black Book, but no documents relating to any particular Admiralty, nor Rowghton's Latin articles; and from the last mentioned omission, and the fact of the French text of the parts A to D being less debased than in the Black Book,

Sir T. Twiss dates it as prior to the latter, while from the writing, and a more exact agreement with the Black Book in the matter of the parts B, C, and D, he dates it as later than the Cottonian MS. It would appear, then, that the Black Book was but the last of a series of similar books which were prepared from time to time with a noticeable care, shown by the minor variations, to bring each book down to its date as a body of actual law; and we would suggest that the Cottonian MS., though the first known, may not really have been the first of them, and that the work, though done officially in the registry of the Court of Admiralty, was not necessarily attended with any express sanction by the king in council for each of the minor variations from time to time introduced.

Of the contents of the Black Book it only remains to say that the documents relating to the Admiralty of the Duke of Exeter are followed by two of the reign of Edward IV., and these by three treatises on subjects belonging to the department of the High Constable and Earl Marshal, which were, no doubt, written into the already existing book of the Admiralty, owing to the fact that the eighth Duke of Norfolk, whose signature is appended to each of those treatises as well as to Rowgton's articles, held both the offices of High Admiral and Earl Marshal.

But the Black Book was lost apparently about the end of the last century, and has never yet been found; a copy of it, in writing of the last century, which Mr. Luders saw in 1808 at the Admiralty in Whitehall, was missing when Sir T. Twiss commenced his investigations, though it has since been discovered: the Cottonian MS. was first examined in modern times by Sir T. Twiss, though there is some evidence that Selden had seen it, and M. Pardessus had observed the notice of it in the catalogue; Selden's MS. was believed by Mr. Luders and M. Pardessus to be the lost Black Book itself; and nothing of all these three books had appeared in print, except Selden's quotations from his own MS., and some extracts from the Black Book made by writers in comparatively uncritical times. Sir T. Twiss has presented us with the complete text of the Black Book, from the eighteenth century Whitehall copy, recovered through the further search which his investigations provoked, accompanied by a collation of the Cottonian and Selden's MSS. throughout, and by the documents which are peculiar to the Cottonian MS.; and his labours have thus not only made us acquainted with a mass of curious and previously unpublished detail, but have for the first time made it possible to obtain a clear and connected view, resting on a certain foundation, of the general nature and growth of the Admiralty Law.

The learned editor's first volume further contains some appendices more or less closely connected with the Black Book, but the appendices contained in his second volume, and the introduction which he has prefixed to them, travel into a wider sphere, and are of an importance to demand a separate notice.

J. WESTLAKE.

A Whaling Cruise to Baffin's Bay and the Gulf of Boothia. By Commander A. H. Markham. (Sampson Low, Marston & Co.)

COMMANDER MARKHAM'S narrative is the latest addition to Arctic literature, and the first account that has been published of the successful application of steam to that very important branch of our national industry, the whale fishery. He gives a terse and graphic account of the various incidents in a whaler's cruise, from the first encounter with the ice off Cape Farewell when outward bound, to the final extrication from the Pack, when homeward bound with the largest cargo of whale oil that has ever been brought to Great Britain from Baffin's Bay. Towards the end of the cruise the lengthening nights, heavy gales of September, and the knowledge that, with a full ship, collision with ice might prove fatal, add much to the anxieties and cares of a whaler's life, knowing as he does that, in losing his ship, even if his life is saved, the money earned by hard work and perilous achievement will be lost to his wife and little ones, with whom he was looking forward to spend a happy and comfortable winter. Great indeed must be his relief when Cape Farewell is rounded, and the ship's head is turned fairly homeward, and, to use a nautical expression, "the girls at home have hold of the tow-rope."

Commander Markham shared with the crew the perils and labours attendant on whale fishing, which he describes as only an actor in such scenes can do. He narrowly escaped, on one occasion, from the blow of the tail of a dying whale, which stove the boat and gave him a taste of the pleasures of immersion into freezing water.

Although he had few opportunities of landing, the interests of science were not neglected, as will be seen from the note in the Appendix, by Dr. Hooker, on the botanical specimens he procured.

To those who look forward, however, to future Polar exploration, the most interesting portion of the narrative is the chapter containing particulars collected from the survivors of the *Polaris*, who were his shipmates for two months. For the credit of the American Admiralty it is to be hoped that its secretary was in no way responsible for the despatch of an expedition so thoroughly unfitted for the work it was expected to perform. The *Polaris* went from Cape Shackleton, up Smith Sound, to 82° 16' N., without encountering any difficulty, or, as Dr. Bessels expressed it, "without touching a piece of ice;" and Commander Markham gathered, from Mr. Chester and others of the crew, that, at their farthest point, there were no greater difficulties to encounter than are met with and overcome, every year, in Baffin's Bay. The people of the *Polaris* declared that, if such a steamer as the *Arctic* had been employed, with an experienced and resolute commander, a further advance to the north might have been made. The *Polaris* wintered at a point farther north than any winter quarters of previous Arctic expeditions, yet the average temperature was warmer than that experienced by Austin

off Griffith Island, by Parry at Melville Island, or even by Ross far to the south on the coast of Boothia. In the spring the *Polaris* was safely drifted out into Baffin's Bay, a further proof that the ice up Smith's Sound is constantly in motion, and that it is navigable at one time or other during the working season. Had a well-organised naval expedition reached Hall's farthest, more satisfactory results would have been obtained. It is evident that the *Polaris* certainly could have reached latitude 83° N., most probably 84° or 85° N., perhaps farther, and in that autumn and the following spring they might have discovered 4,000 miles of new coast, for every foot travelled would have been on land never previously visited by civilised beings. In 1852-53, in the *Resolute* and *Intrepid*, more than 8,000 miles were traversed by our English sledge-parties, and our journeys will be surpassed, as we surpassed our predecessors. That Smith's Sound is the portal to the unexplored Polar region, no unbiassed person can now doubt. Since Inglefield first visited it in 1852, Kane and Hayes, in wretched sailing vessels, have added considerably to our knowledge; and now we have the account of the *Polaris*. Steady progress has been made in that direction, and there has been no failure; while our knowledge of the Spitzbergen seas has increased but little in a century of far harder and more perilous work. Retreat from Smith's Sound is also a certainty, should the vessels be frozen in.

As an old Arctic sailor, I have derived much pleasure from the perusal of the *Whaling Cruise to Baffin's Bay*, reviving as it does reminiscences of nearly a quarter of a century ago, and of the happiest year and a half I ever spent at sea.

There will most assuredly be no lack of volunteers, as full of energy and determination as their predecessors, for the Arctic expedition which, sooner or later, will be sent out from this country. Amongst them will doubtless be Commander Markham, who has acquired, under the skilful guidance of the energetic Captain Adams, that experience in navigation amongst ice so essential to the command of an Arctic exploring ship, and the want of which cannot be supplied by any amount of energy and determination.

R. V. HAMILTON (Captain R.N.).

NEW EDITION OF JOINVILLE.

Jean Sire de Joinville, Histoire de S. Louis.

Texte original du XIV^e. Siècle, accompagné d'une Traduction en Français moderne par M. Natalis de Wailly, de l'Institut. (Paris: Firmin Didot, 1874.) 8vo.

THE Life of St. Louis by the Sire de Joinville, like the account of the Conquest of Constantinople by Ville-Hardouin, marks an epoch both in French literature and in the development of historical writing in the Middle Ages. Instead of history in the form of a chronicle written in the depths of a cloister, it is history recorded by a man who has seen and shared in the action. The narrative of Ville-Hardouin is more epic; one still feels in it the inspiration of the battle: that of Joinville is more familiar, like the reminiscences of a greybeard,

pleased to go back to the days when he shared the life of his master, St. Louis, and, even in his picture of the Crusade, dwelling by preference upon the virtues of the good king. M. N. de Wailly, who has devoted his whole life to the study of mediæval MSS., has expended all the treasures of his erudition upon the publication of these two memorials of the past; we have only to speak here of the splendid edition of Joinville which he has just brought out.

Joinville wrote the Life of Saint Louis at the request of the Queen, Jeanne de Navarre, wife of Philippe le Bel; it was not completed till after the death of that princess, and in 1309 he offered it to her eldest son Louis, afterwards Louis X., as at once an homage to the memory of the pious king, then newly numbered amongst the saints, and a model to be emulated by his successors. Certainly no nobler example could be set before those called to preside over the destiny of nations. The frank grace of the narrative itself makes it worthy in every way of its subject, and preserves all the interest and the charm that belong to the union of a great reign and an exquisite character.

M. N. de Wailly has aimed at meeting the wants of readers of every class, and has accordingly had a double task to perform: first to restore the text to the original language of Joinville, and then to reproduce it in modern French.

The text of Joinville was published for the first time in the fifteenth century, the style, as the editor, Pierre Antoine de Rieux, proclaimed, having been altered so as to make it "plus poli." In 1761 it was printed more faithfully after the MSS. by Capperonnier, and still more recently by Daunou in the great collection of the Historians of France. But the MS. which these editors had made the principal basis of their publication, was not, as they believed, the original manuscript of the work; and, though belonging to the middle of the fourteenth century, the copyist had already modified the language considerably. M. N. de Wailly has laboured first to rediscover Joinville's language in its purity, by studying the original charters of the author himself, and applies the rules thence deduced to the restoration of the text. Having re-established the original text, he proceeds to translate it into modern French, carefully preserving all the words and terms of speech that have not become obsolete; there are thus two parallel texts, one for the learned, and one for the ordinary reader, to whom the parallelism offers the opportunity of becoming learned if he pleases.

Besides the Preface, which contains a judicious and appreciative estimate of Joinville, and the Introduction, which records the vicissitudes to which the text of the author has been exposed, the book includes explanatory discussions of every point likely to arrest the attention of the reader, and furnishes simple and categorical answers to all the most interesting questions relating to mediæval history, which present themselves *à-propos* of every narrative of the period. We may instance the notes upon the monetary system of St. Louis; upon armour, offensive and defensive; upon the different articles of clothing of the age. The monetary

system which M. de Wailly has treated at length in the *Mémoires de l'Académie des Inscriptions et Belles Lettres*, and in the preface to the 21st volume of the "Historians of France," is here described in a few lucid pages. It was known already that the *livre parisien* stood to the *livre tournois* in the relation of 5 to 4; that is to say, very much in the relation of English gold and silver money to French. If the reader wishes to form an approximate idea of their respective value by a familiar comparison, he may say that the *livre tournois* is worth about 20 francs, and the *sou tournois* about one franc, taking the mean intrinsic value. As to the coins *parisiens*, the analogy with English money is much more complete, and we may say, without much inaccuracy, that the *livre* was equal to the pound sterling, the *sou* to the shilling, and the *denier* to the penny. The editor supplements his descriptions of the coins, arms, and dress by figures taken from MSS. and seals of the period, which is certainly the most efficacious way of making them known.

These figures are not the only illustrations of the book. M. de Wailly, assisted by the enlightened taste of his publisher, M. Firmin Didot, like himself a member of the Institute, has sought to make this edition a *chef-d'œuvre* of typography. The vignettes and ornaments with which it is embellished are anything but commonplace, whatever may be the limits to the distinction which an artist can hope to attain by work of this kind; they are not fancy designs, but vignettes taken from contemporary sources, and especially from MSS. devoted to the history of St. Louis, such as the oldest manuscript of Joinville, from whence we have the scene that serves as frontispiece to the volume—in all the wealth of colouring of the miniatures of the fourteenth century—representing Joinville in the act of offering his book to the Queen; or from one of the MSS. of the "Confessor of Queen Margaret," one of the other historians of St. Louis. We have thus a Joinville illustrated as he would have been by artists of his own date. To this must be added one thing which the age of St. Louis would have been unable to produce: a map representing Feudal France in the thirteenth century, and especially at the date of the Treaty of Abbeville (1259), which fixed by common consent the boundaries between the possessions of the King of France and the King of England, the greatest feudatory of the Crown. Such a map had not been made before with the same degree of accuracy, and it will be of use not merely in reading Joinville, but for the study of the general history of France and England at this period.

M. de Wailly has thus produced at once an excellent and a magnificent edition, earning a double title to the gratitude of his author, or at least of his reader.

H. WALLON.

Two Girls. By Frederick Wedmore. (King & Co.)

A Princess of Thule. Third Edition. By William Black. (Macmillan.)

In Coleridge's account of the three phases of the intellectual revolution of the age—the falling away of the professions from the

Church, of literature from the professions, and of the press from literature—"the press" meant chiefly the newspapers; but it is an open question whether journalism as a rule is further than novel-writing from the consciousness of literary aim or the observance of literary restrictions. The presence of an artistic intention in the two above-named works, which have nothing else in common, is enough to distinguish them not merely from the mass of vapid fiction produced in simple obedience to a commercial demand, but from the better class of realistic novels of society which often succeed in reproducing the outside of life with photographic accuracy, and a completeness that leaves no opening for criticism, except upon the general issue whether photography itself is an art or a manufacture. Neither Mr. Black nor Mr. Wedmore is content with representing the scenes and characters before him exactly as they appear in nature. There is selection and arrangement in both, though in the one case applied rather to images, in the other to ideas; Mr. Wedmore being more anxious to analyse and interpret his conceptions, Mr. Black to idealise and give form to his impressions. Both too are somewhat apt to fall back upon traditional assumptions and conventional artifices to fill in the canvas between the incidents that are really vividly conceived, and, in a somewhat tantalising manner, write with least originality just when originality, or the power of representing a character, a passion, or a situation from within, would have brought the work up to a high level in imaginative fiction.

The attraction of *Two Girls* is to be found chiefly in a certain freshness of subject and manner, due not so much to any striking originality of plan as to the selection of types of character that are real and familiar, but have not become hackneyed by too frequent literary treatment. The hero, Oscar Weltertree, is the representative of a class, but his adventures are not made the vehicle of any special theory or more direct moral than the unobtrusive reflection that the existence of such a class is a social fact worth perpending. At four-and-twenty he has left Oxford, carrying away a little desultory culture, but no pronounced beliefs or impulses; he has the prospect of a competence, and his most serious trouble is a blank uncertainty as to what he shall do with it or himself. "He looked forward to what seemed a wider life, with larger duties. It gratified him to think that his duties might be large; they would become pleasures then. As for him, there was something in his heart that made duty very hard when it was not pleasure too." He is somewhat inclined to reproach "God or Society," because they do not help him to the discovery of obligations or responsibilities towards themselves. "All that Society asks of me is that I shall have a well-made coat, and wear clean linen, and have a fair manner, and behave as a gentleman when her eyes are upon me;" and he has dim moral and æsthetic aspirations which are not to be contented by the prospect of a life spent in satisfying such moderate demands as these. Yet he is able, just because he has no strong convictions or wishes, to take his doubts and difficulties with leisurely resignation, in proof of which he proceeds

to spend his long vacation at "Montreuil, wrongly called *sur Mer*, which he had read about in Sterne." The description of his small travelling adventures has the same air of quiet realism, and just as much novelty as belongs to the perception that the taste for travelling in search of strong sensations is beginning to wear out, and that slow progress through dull country has a charm of its own, in the placid, disinterested contemplation of the embodied prose of another kind of everyday life than the traveller's own.

At Montreuil Welvertree finds an English resident who has a daughter. Mr. Aucott is perhaps the most successfully finished character in the book; and if he is slightly tedious in the exposition of his views, it can only be said that the writer intends him to be tedious, as well as intelligent, weak, and with a system of coherent prejudices, logically based on his own personal experience. A love marriage, which had turned out ill, and the loss of his fortune, had shattered his faith in things human and divine, while his natural irresolution, fortified by a long residence in France and an instinctive admiration for Napoleon III., had crystallised with age into a philosophy of practical scepticism, against which reasoning was powerless, but which, in virtue of its very unreasoning tenacity, was not without a kind of dignity, and remained unshaken, even by the prospect of impending death. The two articles of his creed which affect the story, are that artists and men of letters are professional firebrands, personally innocent, but addicted to practising against the peace of society, as guaranteed by the establishment of governments and churches; and that it is the duty of affectionate and prudent parents to arrange marriages of convenience for their children. He settles that Welvertree would be a suitable husband for his daughter Cecily, but Welvertree has more romantic notions on the subject, and moreover receives at the critical moment a letter from England to say that the bank in which he is a sleeping partner is in difficulties, and that its failure is probable. He returns home, and, as a ruined hero should, takes to writing for the press, remembering Cecily only as a girl he might have fallen in love with, if time and circumstances had permitted. The acquaintance is renewed when Mr. Aucott comes to London to consult a doctor, and arrange about another *parti*,—this time a docile young Frenchman, with whom everything would have gone smoothly, if Cecily had not in her turn raised the same romantic objections as Welvertree had done. The next move in the story takes Welvertree, as the correspondent of a newspaper, to Paris, where he meets the second of the "two girls," Irma Flaubert; a beautiful, unintellectual, and affectionate young actress, to whom he had been introduced in London. The idea of the situation, which is scarcely worked out with sufficient care to disguise the wild improbability of some incidents, is that Welvertree, in his desire for a duty that might be a pleasure too,—believing Cecily to be engaged, finding the drudgery of his profession intolerable, and seeing no way to any considerable success in life,—proposes to marry Irma, and to sacrifice his future to her happiness and security, while he disguises to himself the weakness of the

impulse to which he yields, by dwelling on its disinterested generosity. A journey to England, and a meeting with Cecily in the Luxembourg Gallery, break the spell; but a—quite impossible—attack of brain fever puts him in Irma's power, who nurses him devotedly, and then tries to persuade him that they are married already, only that he has forgotten the fact. He escapes to England in some alarm as to his sanity, and is of course ultimately united to Cecily, whose father has died meanwhile, and who has also opportunely inherited her mother's fortune. As to Irma: "She was a child of impulse, untrained, untaught. And what had abstract duty got to say to her?" With such characters, the petted playthings or the victims of society, it is circumstances that decide what impulses will be followed, and whether they lead to the Seine or to a less tragic goal. The criticism which this episode suggests is that the introduction of tragic elements merely as a part of the machinery of the plot, is apt to disarrange the proportions of the whole. It may be true to life, but it is hardly true to art to represent the character and future of a hero of romance as practically unaffected by a suicide of which he is the occasional cause, unless the intention were to represent him as exceptionally unimpressible, instead of, as we gather to have been the case here, impressionable to the point at which weakness begins. Ordinary novelists can introduce the most tragic incidents with impunity, because there is no danger of their exciting more than a languid curiosity as to what is to happen next; but Mr. Wedmore is not an ordinary novelist, and therefore we are disappointed at any failure in the imaginative consistency of his conceptions. His strength lies in the representation of character and dramatic little scenes, quiet but brightly coloured; and though the novel-reading public naturally cares little about artistic intention, we do not believe that his popularity would suffer if he were to pay it the compliment of believing that those merits will make themselves felt without the help of more startling incidents than follow spontaneously from his characters and the relations in which they display themselves.

Mr. Black's Sheila reminds us a little of Madeleine, the heroine of Mr. Wedmore's *A Snapt Gold Ring*, though the scenery is so different, and the motive so much more elaborately developed, that the coincidence would be unimportant even if not, as is probable, quite accidental. *A Princess of Thule* is a very pretty book, that leaves behind it a pleasant, dreamily provoking impression, like the curiosity excited by a painting of which we do not know the subject, or a riddle to which the answer is wanting. Perhaps the book would have been less pretty if it had been condemned to be quite satisfactory, as the difficulty of inventing a good riddle is materially lessened if the existence of an answer to it is left to the imagination of the ingenious. Sheila is a pretty riddle, but we are not quite sure whether Mr. Black has guessed the answer to it,—or even whether there is one to guess; and in any case he has not succeeded in revealing the answer to his readers. A Highland girl who looks poetry, talks prose,

and acts like the most delightful of spoilt children, is a puzzle to superficial observers, who cannot tell which aspect of her outer self corresponds most nearly to the way she thinks and feels; but we are given to understand that Sheila does not think, and what she feels is always veiled in a vague mystery of poetical silence that has the effect of discouraging all merely intelligible explanations of her history. Why she marries Lavender, why all the magic of her personal charms vanishes in London drawing-rooms, why she leaves her husband, why he had become indifferent to her, why her absence had the power of turning him into a great painter when her presence only made him flirt with and paint fans for another charming and incomprehensible young lady, or finally, why the reconciliation which ends the third volume should happen when it does rather than sooner or not at all—all these are points into which we must not inquire too closely if the illusion is to be kept up, without which our interest, even in a series of pretty pictures, is apt to flag. We feel inclined to ask, Has the writer ever known a Sheila? If not, his invention lacks realism, for she is rather a phantom creation; if he thinks he has, we are inclined to say, as Mr. Ingram does to his friend Lavender, that he has only half known her, or his descriptions would not have that air of being made from the outside which is fatal to their being felt as true. The fact seems to be that Mr. Black was anxious to create a character more original and poetical than the materials supplied by his knowledge of human nature could quite suggest; and that, instead of inventing the missing features and connecting links, he left the space for them blank, trusting that the omission would pass unnoticed, or be unconsciously supplied by the reader, or charitably accounted for as a deliberate representation of the truth that people may fail to understand the character of their nearest and dearest friends. Only as the story turns upon the result of such a misunderstanding between husband and wife, and as the author means the husband (who is certainly a foolish youth) to be altogether in the wrong, in the interests of poetical justice, the problem which he had to interpret ought not to have been represented so as to make it seem insoluble by wiser heads than his.

The author's descriptions have received so much well-deserved praise that he will require some strength of mind to resist the temptation to work this vein to exhaustion; for after all it is exhaustible, and the facility that at first looks like talent is liable to become mechanical, and finally degenerate into trick. He says of Lavender, looking out upon the Borra hills: "He could put down on paper the outlines of an every-day landscape, and give them a dash of brilliant colour to look well on a wall; but how to carry away, except in the memory, any impression of the strange lambent darkness, the tender hues, the loneliness, and the pathos of those northern twilights?" Mr. Black puts into words what many excellent water-colour artists put in grey and green and crimson,—the scene that arrests the eye and stays in the memory of any ordinary cultivated traveller; but the pleasure which the

sketch gives afterwards to those who recognise its subject, or are reminded by it of some similar scene that they can imagine reproduced in the same manner, is not to be confounded with the intrinsic merits of the sketch as a work of art; and it is only in some, not all, of the finished and graceful descriptions which abound in these volumes, that the author rises beyond literal to imaginative truth. Mr. Mackenzie, Sheila's father, the king of Borra, and Mrs. Lavender, an old aunt of the hero's who reads Marcus Aurelius devoutly as a preparation for death, and doctors herself murderously as a preservative against it, are amusing, and not by any means improbable in their eccentricities. The picture of life at the Lewis and the sketches of Highland character are excellent in their way; and, indeed, the readability of the book as a whole is scarcely affected by the inadequacy already referred to in the conception or execution of the central figure. It is ungrateful to complain because what is after all nearly or quite the best novel of the past year is not ideally perfect in design and form; but Mr. Black's merits are of a quality particularly intolerant of the companionship of imperfection. Greater artists have given us one or two perfect novels, but it is a serious blank in English literature that it has no perfect *Novellen*; perhaps he will some day take away that reproach.

EDITH SIMCOX.

Chess Problems. By James Pierce, M.A., and W. Timbrell Pierce. (London: Longmans, Green & Co.)

In the *Carmen ad Pisonem*, commonly attributed to Lucan, there is an interesting passage, which, as it is impossible that it could refer to chess, not at that time invented, shows that the Roman game of *Latrunculi* partook in a great measure of the nature of chess, and was not destitute of its more hidden mysteries. No collection of subtleties in the Roman game has survived, but that the game had subtleties these lines addressed to the Lord Lyttleton of the period clearly show:—

To si forte iuvat studiorum pondere fessum.
Non languere tamen, lusumque movere per artem,
Callidiora modo tabulâ variatur aperta (a)
Calcealus, et vitreo peraguntur milite bella,
Ut niveus nigros, nunc et niger adliget albos.
Sed tibi quis non terga dedit? quis te duce cessit.
Calcealus? aut quis non periturus perdidit hostem? (b)
Mille molis acies tua dimicant: ille petentem
Dum fugit, ipse rapit; (c) longo venit ille recessu,
Qui stetit in speculis: (d) hic se committere rixæ
Audet, et in prædam venientem decipit hostem. (e)
Ancipites subit ille moras, (f) similisque ligato
Obligat ipse duos: (g) hic ad maiora movetur,
Ut citus et fractâ prorumpat in agmina mandrâ,
Clausaque deiecto populetur mœnia vallo. (h)

At the present day it requires a chess player to appreciate the full force of the above lines. The chess player alone understands the combination of science and courage necessary to play "the open game" (a), the charm of the successful sacrifice (b), the strength of the move attacking, while necessarily defensive (c), the force of the check by discovery (d), the luring the enemy into false attack (e), the subtlety of the *coup de repos* (f), the strength of the check given by a piece interposed to ward off a check (g), and the culminating rapture when all the enemy's

defences are broken through and the final mate effected (h).

There is at the present moment no public character, whom like Calpurnius Piso his panegyrist might extol for his skill in the fashionable scientific game of the period, but chess is more generally studied, almost as a science, than at any previous time, and its votaries are to be found in all classes in this country. Mr. Blackburne, an English player, in the recent European contest for chess supremacy, was only defeated by, after making a tie with, Herr Steinitz, an Austrian certainly by birth, but a naturalised Englishman and an English player. Mr. Bird, a London player, came out fourth in the contest. Without any disparagement of our English representatives at the Vienna Tourney, there are probably at least twenty English players not perceptibly inferior to Messrs. Bird and Blackburne, while in the ranks of the second class, no country could produce so wide a phalanx of strong and steady players to whom those of the first class could with difficulty concede the pawn.

And in the rival branch of chess science, the construction of problems as opposed to actual play, England takes no less prominent a place. After the German Conrad Bayer, and the American Loyd, the Englishman Healey's name would recur the first to a chess-player's memory for skill in this branch of his art, and the book now under notice may be fairly placed beside any other collection of problems by a single author of any country.

In the art of problem composition far greater strides have been made during the last century than in play over the board. We believe that were Philidor now alive, with the knowledge of the openings acquired in his own time, he would be beaten at the pawn and move by Herr Steinitz, the acknowledged leading player of this day, though there are many *laudatores temporis acti*, who would be indignant at the idea that any man of any period could surpass Philidor, and doubtless his chess power was equal to that of Steinitz, although his knowledge was necessarily far inferior. Chess problems are out of the range of theory or knowledge, and their composition would appear to be a happy accident, yet here the advance is so striking that Philidor and his contemporaries would be startled by the difficulty and complexity of the productions of this day, while the few problems of their time are now left as examples of rudimentary skill that would hardly puzzle a beginner.

We are not, however, of opinion that difficulty constitutes the true art of the problem composer, and of the masters of the present day we assign the highest place to the American Loyd, in whose productions beauty both of idea and construction is generally remarkable. The most difficult problems yet made are by the German, Conrad Bayer; his worst specimens are without beauty altogether, and the difficulty is created by the multiplicity of the variations, to go through which, in some German compositions, life is too short. A mate is to be effected in five moves. The first move is almost impossible to discover, for it is the least probable one on the board, and leaves a dozen different moves to the defence. To

half these replies a totally different attack is necessary, and a problem of nominally five moves may require a hundred to be worked out in its solution. It has taken its author days of weary toil to elaborate, and if no flaw in any of its endless variations vitiates its soundness, the author may truly boast of its difficulty. One wishes with Dr. Johnson that it were impossible. The real chess-player who would take up with pleasure a natural position ten or twelve moves deep by Bolton or Bone, and solve the mystery with the application he would give to a difficult position in a chess game, must be prepared to devote hours of labour to the German monstrosity, with a feeling of astonishment from the beleaguered position of the Black king, not that he can be mated in so few moves, but that his fate can be so long protracted.

The Messrs. Pierce have, we regret to say, fallen sometimes into this fashionable folly. Problem 116 is a fair example of this style. It is nominally in three moves. The first move apparently removes the queen from the attacked king, and leaves Black a choice of 38 moves, of which it may be said that ten are not so bad for him as the rest. There is no point or ingenuity in one of the numerous variations; but in two more moves, somehow or other, the Black king is mated by the foes all around him. The problem may be difficult of solution, but it is without beauty or any element of surprise; it is in our opinion essentially bad style.

The early conception of a problem was a position, more or less natural in construction, where a lesser force by skilful combination mated the adversary, despite an apparently overpowering superiority. The greatest master of these simple stratagems we consider to be D'Orville, who almost exhausted the art of mating by skilful sacrifices, and introduced the more elegant *coup de repos*. In the present day no problem depends on a series of direct sacrifices; the first move is almost always a *coup de repos*, and the sacrifice occurs only incidentally in the after moves. We think D'Orville first made use of this charming subtlety, which has been carried out to perfection by his successors. None of them, however, unless it be the American Loyd, have surpassed D'Orville in beauty of construction; and the highest praise that can be awarded to any problem is to call it worthy of D'Orville. This praise can fairly be applied to several of the present collection. Problem 8 is in two moves and very simple, but in elegance of construction it would have satisfied the Belgian composer. Problem 14 has the same charm of character, and we should be inclined to rank it as the best two moves we remember. It begins, of course, with a *coup de repos*, leaving the Black king four squares open; whichever he takes he is mated by a different move of White's two knights. In construction this little problem is perfect.

It is to be regretted that composers capable of such elegance of construction as both these gentlemen, should have admitted into their collection an amorphous monster like No. 45, which, besides its hideousness and want of freshness in idea, is an impossible position. There are eight Black pawns on the board, and three on the queen's rook's file, where it

is needless to assert they could not have arrived in play. The board is crowded with needless pieces, and the problem has in short every fault which a good problem ought not to have.

We think it a pity that our authors have made their collection so large. We have not been able to examine even cursorily the whole of these three hundred problems, but we have pointed out two not worthy of the authors, and have detected three which must be called plagiarisms, so palpably are they old and well known ideas vamped up with the most meagre alterations. The Messrs. Pierce might have sent them to chess columns, when a problem was required by a friendly editor to order, but they should not have included them in their collected works. No. 58 is an old position of D'Orville's, altered, and we think spoilt, by a needless variation. No. 71 is almost a reproduction of a prize problem by Healey, and No. 199 is the idea of the celebrated and now worn out Indian problem, in no way concealed by a slight alteration of the pieces. We believe that if the Messrs. Pierce had weeded out their work rigorously, they might have produced from fifty to a hundred faultless positions, charming alike in conception and execution, that might be ranked amongst the gems of chess literature. The present collection is far from faultless, but will afford copious resources to the amateur who has a taste for these subtleties of chess.

JAMES INNES MINCHIN.

MR. MUNRO'S TRANSLATION OF GRAY'S ELEGY.

MR. H. A. J. MUNRO has just printed for private circulation a translation of *Gray's Elegy*, which is and will always remain the most interesting of all the Latin versions of that immortal poem. This would be true if for no other reason than that it is the workmanship of the first of living Latin scholars; but Prof. Munro, besides being the editor of *Lucretius* and *Aetna*, is also the author of some of the most beautiful among the translations in the *Sabrinæ Corolla* and *Arundines Cami*, and Englishmen who have long known these will find a curious satisfaction in comparing and contrasting them with the present work.

The author's own words suggest that Ovid has been the model followed. But though the pentameters always end in a dissyllable, which may perhaps be thought to constitute the main difference between Ovid and his predecessors, it would be very untrue to call these elegiacs Ovidian; at least they are not like the smooth faultlessness of the *Heroides*, the *Amores*, the *Ars Amatoria*, the *Fasti*, on the one hand; nor like the inviolated constructions and unimaginative diction of the *Tristia* and *Epistles from Pontus* on the other. They are at times somewhat Propertian; perhaps to this may be ascribed a mannerism which in the judgment of the present writer recurs unduly; the direct quotations of a word—

"Pipiet e tuguri stramine mater 'Ity,'
'Laudamus' retonans undat ubique sono.
Suspires 'cheu' praetereasque rogant.
Curaque 'mancipii res' ait 'iste mei'—"

and the non-avoidance of some rhythms which Ovid either excludes or uses very rarely, e.g.:

"Verrere festino pede rores perque supinos.
Cella quisque brevi cubat aeternoque sopore."

But in truth they have more of *Lucretius* both in language and, in a less degree, rhythm. This is perceptible not only in direct imitation of particular passages, e.g.:

"Iam iam non erit his rutilans focus igne, neque uxor
quae vesperinum sedula verset opus;

non reditum balbe current patris hiscere nati,
oculae escenso ferre cupita genu"—

the charm of which is entirely *Lucretian*; but even more in the sustained richness and rareness of the words, an excellence which at once removes this version from any comparison with the commonplace and undistinguishable mediocrity of most of the translations of the *Elegy*. It is not to be denied that in spite of this there are lines, and even passages, which fail to please or actually jar upon traditional *aesthetics*. Such is the elision at the end of a hexameter *omnium egenus*, and, still more, the obscure and, even to readers familiar with the *De Rerum Natura*, extravagantly difficult rendering of the lines,

"For who, to dumb forgetfulness a prey."

Quintilian, however, tells us that the Romans varied in their preference for Propertius or Gallus, and it is not impossible that Gallus, who we suspect was the greater poet of the two, may have written elegies resembling these in the occasional harshness, as well as the uniform imaginativeness, of their composition. Perhaps no finer specimen of the translation can be quoted than the last twelve lines, which are almost as affecting as the original; * as affecting no translation can ever be.

"Qui caput hic gremio terrae iuvenale reponit,
non res, non illist cognitus ullus honor:
aversata humiles non alma est Aonis ortus,
curaque 'mancipii res' ait 'iste mei.'
immensa huc bonitas, mens simplicitatis apertae
par meritis merces numine missa deist;
quod potuit, miseris lacrimam largitus, amicum,
quod voluit, coeli munere nactus erat,
desine virtutes recludere, desine culpas
e formidando sollicitare lare:
utraq; ibi pariter spe cum pavitante quiescunt,
qui pater, et deus est, hujus opera sinu."

R. ELLIS.

MISCELLANEOUS BOOKS.

The Friendship of Books and other Lectures. By the Rev. F. D. Maurice. Edited, with a Preface, by T. Hughes, M.P. (Macmillan & Co., 1874.) The unity of tone and spirit which this volume possesses, in a degree unusual in reprints, helps to explain the popularity of the school of which Mr. Maurice was the intellectual leader, and at the same time makes it intelligible that the popularity, though genuine and not unmerited, has been curiously short-lived. The Lectures are a favourable specimen of the popular side of the writer's doctrine. As a theologian and philosopher, his idea was to reconcile contradictory opinions by contemplating the points of agreement between the dissentients, and refusing, with amiable obstinacy, to take into account the difference of the roads by which they were reached, and the promise of further divergence after an accidental meeting. As a popular moralist, his idea was to persuade his hearers, who were generally "Christian young men," to take a serious view of their own life and its duties, by insisting on the common elements in the lives of the great and good and the small and indifferent. Shakespeare and Milton might be out of the reach even of their powers of admiration as poets, but they might learn to take an interest in them as men; and then they were to conclude that, since even Shakespeare and Milton were more interesting as men than as immortal authors, they themselves

* "Here rests his head upon the lap of earth
A youth to fortune and to fame unknown:
Fair science frowned not on his humble birth,
And melancholy marked him for her own.
Large was his bounty, and his soul sincere:
Heaven did a recompense as largely send:
He gave to misery all he had, a tear;
He gained from heaven, 'twas all he wished, a friend.
No farther seek his merits to disclose,
Or draw his frailties from their dread abode,
(There they alike in trembling hope repose),
The bosom of his father and his God."

had only to be manly enough to be extremely interesting and important members of society. In writing of modern civilisation, of newspapers, criticism, and the like, the same half-edifying, half-misleading process of levelling and confusing moral and intellectual distinctions is repeated, always with the purpose of helping the audience to feel, not that it ought to become more moral and intellectual than it was, but that it ought, as a religious duty, to discern and admire all its own actual moral and intellectual acquirements and tendencies. In some minds this encouraging doctrine fostered self-respect and independence, leading to the adoption of more definite opinions than Mr. Maurice's; on others, having lost the charm of novelty, it ceased to have any appreciable effect, for the impression that an ordinary life is full of wonder and deep meaning can only be kept alive by fresh suggestions: and Mr. Maurice's successors, since he had exhausted the advertisement column of the *Times* as a symbol of human brotherhood, and the police reports as a lesson in history and psychology, are too often reduced to the mere imitation of his mannerisms, the chief of which was a habit of asking rather trivial questions with an air of importance proportioned, not to the question, but to the gravity of the answer which he intended to give it. In other hands, the effect of this harmless rhetorical artifice is to remind us a little of Mr. Chadband.

Toilers and Spinsters, and other Essays. By Miss Thackeray. (London: Smith, Elder & Co., 1874.) The contents of this little volume are miscellaneous, but the papers that will be re-read with most interest (the readers of *Cornhill*, the *Pall Mall Gazette*, &c., will remember having seen most of them once before) are those which follow up the note struck in the first essay, "Toilers and Spinsters," written fifteen years ago. The literary criticisms on Miss Austen (if that is to be called criticism which is all unreserved, though not uncritical praise) and on Mrs. Riddell and other modern novelists, who harrow the feelings with tales of too unbroken gloom, like "A Country Sunday" and "Rome in the Holy Week," are bits of pleasant polished writing, with the gracefulness of style peculiar to the author; the abuses of croquet, the uses of five o'clock tea, and the impertinence of fashionable ladies who annex the harmless days of the week as their own peculiar possessions, are dilated upon with feeling and penetration. But it is in writing of little children, homeless or deaf or sick, or only poor and hungry, and of what men and women, and especially wise and good women, are doing and may do to make the present easy and the future hopeful to these most helpless and most irresistible pleaders for help, that Miss Thackeray writes her best, and certainly does no disservice to literature, by showing that it is possible to appeal to charitable impulses and to stir effectual sympathies without misrepresentation, exaggeration, or extravagance. The argumentative philanthropist with fixed ideas and remedies of universal application is likely, as we see every day, to do as much harm as good; but though no advocacy can turn merely ordinary well-meaning people into characters such as that described in a few sentences on page 188—one in which well-doing is an instinct, an impulse superseding or illuminating the slow and dubious inferences of reason—it is well that so able a pen should both state and illustrate the position that charitable agencies cannot work mechanically, and that the only benefits which do not demoralise the recipient are those which come half concealed in the moral atmosphere of personal relationship, influence, or kindness. Industrial schools, the "boarding out" of workhouse children, the Hospital for incurables, Newport Refuge, the Society for the Employment of Women, are amongst the subjects specially referred to; and though the author's literary tact forbids the clumsy insistence on particular applications which belongs to a charity sermon, her bright descriptions, with touches of suggestive remonstrance or criticism,

of playful fancy and earnest realism, will interest many in the good works of which she speaks, or in new undertakings of the same kind.

Business. By a Merchant. (Edinburgh: Edmonston & Douglas.) This is, perhaps, the oddest and quaintest book that has been published for many years past; a book so odd and quaint that it defies criticism. The author is evidently a man of very various reading, and apt at quotation; and he has strung together quotations without number on a thread of rambling talk, which, if it were less extravagant than it is, would be regarded as pedantic.

"Let the critic be indulgent," he says "for I assure him that Swift was my godfather when I was christened into the Church of Literature, which Sauerteig praises above every other Established Church; that Pope, with his *Dunciad*, made me swaddling clothes; that Byron's *Vision of Judgment* was the Apocalypse of my youth; that in my time I have had assignments with Candide and Zadig; that Rubelais has been my tutor far beyond the years of discretion; and that Montaigne is still my breviary."

Writing thus, in exaggeration of the style of Sir Thomas Browne and other quaint writers of two centuries ago, the "Merchant" discourses on "the excellency, object, and nature of business," on the faculties necessary to a due performance of its work, on its disadvantages and drawbacks, on its dignity as a school of virtue, on the grandeur of its "everlasting dominion and royal progress" in aid of civilisation, and other ramifications of the subject he has taken in hand. The reader who looks for such a treatise as Mr. Bagehot would write, will be woefully disappointed; anyone who tries to peruse the book at a sitting will find it as unsatisfactory as a dinner of sweetmeats; but whoever likes desultory reading and can understand the peculiar humours of the author, may read a section at a time with pleasure, and be sorry when he has read to the end.

Mike Howe; the Bushranger of Van Diemen's Land. By J. Bonwick. (King & Co. 1873.) This book would hardly come under notice in our columns, were it not that we were misguided first by the title and then by the short preface, into reading it, and we would wish to save our readers from a similar calamity. The preface informs us that "the tale may have some claim to be considered as a contribution to Colonial history." If this is the case, more than proverbially happy are those colonies which have no history to be contributed to by Mr. J. Bonwick. From beginning to end the book is commonplace and absurd in the extreme. Here is an example of the flowery and sentimental style of the author. Two lovers are in a grove and begin to talk as follows:—

"To tell the truth," says John, "though we needed no *twisp* of declaration, it was pleasant to recognise the *lilac* of love's real budding at last, and enjoy the *pink* of true affection, while looking for the *lime tree* of conjugal love." A merry laugh followed this speech from the gentleman, to be succeeded by some little tenderesses, which were so prolonged that the lady had to cry for quarter. She threw him a piece of *maiden hair* to remind him of the virtue of discretion.

A man named Lula dreams that a departed bad black fellow "might steal upon him in the sleep of night, gnaw into his side and depart exulting with the *kidney fat* of poor Lula."

No vision, however, could be worse than the reality of the work itself.

Distinguished Persons in Russian Society. Translated from the German by F. E. Bunnètt. (Smith & Elder, 1873.) Contains many anecdotes to the disadvantage of distinguished persons, and it is in the main instructive, since it adds to our stock of materials for proving with how little wisdom the world is governed. Clever, saucy, and often spiteful, it sets the grave and potent signiors of St. Petersburg in an unfavourable and, for the most part, ridiculous light; it is therefore likely to ingratiate itself with the large body of readers

who feel as if their own position were raised when a high reputation is debased. But for minds averse to gossip it possesses no great attraction. Its statements as to matters of fact are not always to be accepted without caution, or even suspicion, and to anything like scientific analysis of character it makes but small pretension; with serious studies of political men and minds, such as those by Mr. Richard Hutton for instance, it has little in common, but there are many points of resemblance between its by no means flattering portraits and the sketches of public men which appear in our existing satirical journals; while sometimes it recalls to mind the personalities which were wont to enliven some of those periodicals which are now, to the satisfaction of mankind, defunct.

The Charm and the Curse, by Charles Grant, published by Williams and Norgate, is a tale dramatised from those parts of the *Volsunga Saga* and the *Poetic Edda* which deal with the story of Brynhild and Sigurd. Despite certain prettinesses of style, and a tolerably smooth system of blank verse in the love-passages, the poem is almost worthless. The story has been altered in a very unjustifiable and strangely inartistic way; the grand myth of the fire-surrounded bower of Brynhild being, for instance, supplanted by a night-scene in a gallery, where everybody sobs and scuffles as if in a fourth-rate French novel. Without undue prudery, too, we may object to the grossness of one or two scenes, and erotic innuendoes are not in fashion since the days of Beaumont and Fletcher. To be vulgar over the *Edda* is indeed a triumph, beside which certain historical and literary inaccuracies seem too trifling to be dwelt upon.

Amongst the books received by us during the last quarter we find *A Record of my Artistic Life*, by J. B. Waring, published by Messrs. Triebner. Mr. Waring is principally known to the public by his connection with the International Exhibition of 1861, and as the Chief Commissioner of the Exhibition of Works of Art held at Leeds in 1868. In the present volume the author gives us such jottings from his diaries as are concerned with art and works of art, held together by intervening bits of autobiography. Mr. Waring seems to have been an industrious and persevering student, travelling much in Germany, Italy, and France. He has seen a great deal, and his comments on what he sees are usually sensible and just; but his description of the objects themselves is rarely sufficiently exact to be of much use for the purposes of study and reference.

School Life and Boyhood. By Percy Fitzgerald. (Cassell, Petter, & Galpin.) It is a common device of novelists who wish to republish their magazine novellettes, to write a framework to explain how they came to be told. Mr. Fitzgerald has invented a framework of about the same value, to explain how excerpts from *Tom Brown*, *Eric*, *Dumas' Autobiography*, and *Hugh Miller's Schools and Schoolmasters*, came to be read aloud: the result may be characterised as a fairly good pudding, to which Mr. Fitzgerald contributes the suet, and other writers the plums.

Schiller's Don Carlos in English Blank Verse. By Andrew Wood, M.D. (Edinburgh: Nimmo.) The writer of this new translation of *Don Carlos* has aimed chiefly at faithfulness, and expresses in his preface a fear that in too many instances he has "failed to steer clear of the tendency to revert to the German idiom." The fear is well founded, and there is not always even the excuse of literal accuracy for the awkwardness of the verse, which is apt to be bald when the original is simple, and stilted when the original is dignified; in both cases stiff and un-English.

Lyrics from a Country Lane. By J. I. Owen. (Simpkin, Marshall & Co.) Mr. Owen knows by this time that he will not be a poet, whatever he might have been: his verses have a good deal of music, and a good deal of manliness, and a little fancy, and a great deal of good neighbourly north

country feeling, which quite atone for occasional deficiencies of grammar and metre.

On Self-Culture. Intellectual, Physical, Moral; a vade mecum for Young Men and Students. By Professor Blackie. (Edmonston & Douglas.) A young man may propose to himself as the reward of his self culture, to be, to know, or to do; if he is content to make sure of the first, and let the others take their chance, he will find Professor Blackie not merely an useful but an adequate guide to a generous, eager, sensible life, which need not be the less rational for understanding very little of the world, or less useful for leaving little mark upon it. Some of the precepts might perhaps be cumbersome, like the recommendation to keep to Leibnitz for philosophy, and Cudworth for theology; others perhaps liable to break down in practice, almost treacherous, like this: "To have felt the thrill of a fervid humanity shoot through your veins at the touch of a Chalmers, a Macleod, a Bunsen is, to a young man of fine susceptibility, worth more than all the wisdom of the Greeks, all the learning of the Germans, and all the sagacity of the Scotch." But in spite of these incidental blemishes, the general tone of the book is admirably fitted to aid those who think *mens sana in corpore sano* the chief good. Those who cannot place themselves at the author's point of view, may still find his remarks on the subordinate place of books in education judicious, and relish the simple rightness of his appreciations of Napoleon and Byron.

EDITOR.

NOTES AND NEWS.

BERTHOLD AUERBACH'S forthcoming novel is to be called *Waldfried; a German Family History of the Present Time* (Eine deutsche Familiengeschichte aus der Gegenwart).

MR. HENRY HINCKES GIBBS'S new and privately printed book on the game of Ombre is just ready. The clever article in the last number of *Macmillan's Magazine* has well prepared the way for it. The writer of that article has given a very good study of Ombre as described by Pope in the *Rape of the Lock*. Mr. Gibbs has rather described the Ombre of the present day, illustrating it by Pope's description. The article written has given us a picture of the game which our ancestors played; Mr. Gibbs has produced a Manual by the help of which the descendants of those ancestors may play the present game, if they please. The article-writer had of course to limit his sketch to the requirements of a magazine essay. Mr. Gibbs, printing his own book, has said all he knows about the game, historically and otherwise. He likewise gives pictures of the leading cards, which differ from those in an ordinary pack. The modern game, as described by Mr. Gibbs, is more entertaining than that played by Belinda, having more variety and fun in it. The system of marking and paying, too, as given by Mr. Gibbs, and as now practised in Spain, is much better than that which was in vogue in the days of Pope. Mr. Gibbs's book is very tastefully printed by Messrs. Childs of Bungay.

It is proposed to commemorate the author of *Piers the Plowman*, by filling in with stained glass the fine east window of Clebury Mortimer church, at which place the poet is said to have been born. The window will be known henceforth as "The Poet's Window." It will not be difficult to find suitable subjects for it, as nothing can be fitter than to select scenes from the life of *Piers the Plowman*. When this has been done, perhaps students of English literature will learn at last that *Piers the Plowman* is not the name of an English author, nor yet of the dreamer of a vision, but merely the allegorical title under which William the dreamer represented our Saviour Jesus Christ. By the kindness of the Rev. E. G. Childe, Vicar of Kinlet and Clebury Mortimer, we are enabled to subjoin an extract from his

prospectus concerning "The Poet's Window." He says:—

"We think that the author of this *national* work should not be left without a memorial in the place which gave him birth; and that lovers of English literature will not be unwilling to lend a helping hand towards this object, the restoration of the parish church to what it was in the days of 'Long Will,' as the poet familiarly calls himself. A nave, and aisles of five bays, with a fine fourteenth-century roof, a tower and spire, and a chancel (the east window of which it is proposed to fill with stained glass, and to dedicate to the poet), will, when restored, form one of the finest churches in Shropshire, and be a worthy memorial. Cheques received and acknowledged by the Vicar of Clebury Mortimer, Kinlet, Bewdley."

MR. THOMAS SUTCLIFFE, of 8 Market Place, Manchester, will publish shortly *Memorials of Manchester Streets*, by Mr. Richard Wright Procter. The book will treat of the history of Manchester, literary, social, and political, in connection with the streets of the city—mostly ending in "gate," like the streets of York; and will contain many points of interest for the student of North-country life and character. It will include appendices by Messrs. Crossley and Croston; and illustrations of old buildings, and persons famous in old Manchester.

THE first part of the Palæographical Society's Fac-similes of Ancient Manuscripts, which has just been issued, contains thirteen autotype fac-similes of manuscripts ranging in date from 152 B.C. to 904 A.D., with copies in modern type and short descriptions, edited by Messrs. E. A. Bond and E. M. Thompson. The part contains thirteen autotypes from—1. Greek papyrus, B.C. 152; 2. Latin papyrus, Ravenna, A.D. 572; 3-6. Lindisfarne Gospels, about A.D. 700; 7. Canterbury Gospels, 8th century; 8, 9. Ecclesiastical Canons, 8th century; 10. Worcester Charter, A.D. 759; 11. Charter of Cænulf of Mercia, A.D. 812; 12. Charter of Offa of Mercia, A.D. 793-4; 13. Charter of Werfrith, Bishop of Worcester, A.D. 904. The most interesting plates are four taken from the Lindisfarne Gospels (*Brit. Mus., Nero, D. IV.*), a book which was written by Eadfrith, Bishop of Lindisfarne, and which both in handwriting and ornamentation is a very splendid specimen of early English art. The pages copied are the commencement of the fifth chapter of Matthew, showing the interlinear English translation and the marginal references; the first pages of the Gospels of Matthew and John, with beautiful initial letters, and a page wholly consisting of illumination. This wonderful design is an oblong figure, with a cross in the centre surrounded by tessellated panels of red, pink, yellow, and green, the ground being filled in with a pattern consisting of birds, whose long necks and legs are interlaced in the most intricate manner. In the notice which accompanies the first of these plates, No. III. in the Series, the manuscript is said to have been written "in honour of St. Cuthbert;" but as the general and more probable opinion is that it was written for St. Cuthbert, it would have been well if some reason had been given for the above assertion. At any rate, the date assigned, "about A.D. 700," is misleading, for that expression would imply that the manuscript might belong either to an earlier or later date, whereas it is extremely unlikely that Eadfrith could have spent his time in writing such a book after becoming Bishop of Lindisfarne in 698. The descriptions of the manuscripts are, on the whole, carefully and accurately done, but we notice that in the description of this manuscript it is stated that the large N is uniformly used, although in the page copied there are three instances of a small n, one being in the first line. Plate VII. is a copy of a page from a magnificent bible of the eighth century, which formerly belonged to the Monastery of St. Augustine, Canterbury. Though entirely devoid of ornament, it is a fine specimen of writing, and curious as showing the scribe's ignorance of Latin, for without re-

garding a word or two omitted, which may be merely accidental, several words are divided into two, in a way that would have been impossible if they had been familiar to the writer. The remaining plates consist of Greek and Latin papyrus, ecclesiastical canons of the eighth century, containing a version of the Catholic creed very similar to the Athanasian, and some early English charters. This first number will be heartily welcomed by all historical students and lovers of antiquity, from whom the society deserves every encouragement. As a help to the less learned of the Society's members, we think that a translation of the Greek and Anglo-Saxon texts should be given, a knowledge of Latin and French only being assumed. The second part of the autotypes for 1873 is nearly ready, and only waits for some plates from the most ancient MSS. in the National Library at Paris.

AMONG average students of Shakspeare, the impression prevails that the First Folio of 1623, printed seven years after his death, is the true and best basis for the text of all his plays, and that the Quartos should only be used for the purpose of collation. Yet an examination of the facts of the case does not warrant this conclusion, as it appears from the statements of the Cambridge editors, that the Quartos must form a better foundation than the Folio for at least these seven plays: *Much Ado About Nothing*, *Love's Labour's Lost*, *Midsummer Night's Dream*, *The Merchant of Venice*, First Part of *King Henry the Fourth*, *Romeo and Juliet*, and *Pericles*; while no satisfactory text of the following seven plays can be made from the Folio without considerable emendations from the Quartos: *Richard II.*, *Richard III.*, *Troilus and Cressida*, *Titus and Andronicus*, *Hamlet*, *King Lear*, and *Othello*. These results appear from an elaborate summary of the results arrived at by the Cambridge editors, which Mr. P. A. Daniel has drawn up for Mr. Furnivall, which will be most useful for all students to refer to, and in which he has italicised those additions which he recommends the New Shakspeare Society to print in parallel texts. Mr. Daniel has undertaken thus to edit *Romeo and Juliet* as the Society's first play, as the differences between its first two Quartos are thought to exhibit best Shakspeare's manner of work, how he altered and developed the first sketches of his plays.

M. A. DE MONTAIGLON, the colleague of M. Paul Meyer at the École des Chartes, is going to reprint the curious and quaint old fifteenth-century work *Les quinze Joies de Mariage*. He is very anxious to reprint with its old English translation, printed by Wynkyn de Worde, in 4to, in 1509, *The Fyftene Joyes of Maryage*, which is catalogued in Lowndes as an anonymous book under "Marriage," but under its translator, Henry Fielding, in Mr. Hazlitt's *Handbook to Popular Literature*, where it bears the † which shows that Mr. Hazlitt had examined the work himself. He gives its colophon, and says that it contains 143 leaves, but does not name the owner * of the copy he saw, as he usually does. Four leaves of this rare *Fyftene Joyes* are said to be in the Bodleian; but M. de Montaignon can hear of no complete copy of it. He will, therefore, feel greatly obliged to Mr. Hazlitt, or any other English collector or student, who can point out a complete copy of the book to him, and enable him to get a transcript of it.

THE new novel of Gustav Freitag, *Der Nest der Zaunkönige*, which has only been out a few weeks, has already appeared in a second edition. It forms the second part of the cycle issued under the name of *Die Ahnen*. The first part, *Ingo und Ingraban*, has already reached a fourth edition. The hero of the present tale is Immo, and the period sketched that of the Emperor Henry II. There is an excellent and penetrating review of *Ingo und Ingraban*, by Professor Scherer, in a recent number of the *Preussische Jahrbücher*.

* Mr. Christie Miller, of Britwell House, Burnham, Bucks.

Apropos of a selection of poetry called *Living Voices*, recently issued by Messrs. Strahan, which contains, amongst other things, a contribution of the Poet Laureate's published in the *Gem*, a literary annual for 1831, with emendations and biographical gossip, Mr. Tennyson writes to a correspondent:—

"I object to variorum readings. When the carpenter has made his table, why should we treasure the chips? and when poems have been rejected, why not let them be rejected? And as for biographical illustrations, &c., it seems to me that these had better wait till my death."

KARL BARTSCH, the well-known philologist, has just published, with Brockhaus, a volume of poems entitled *Wanderung und Heimkehr*, which is well spoken of.

DR. KRIEGER, the keeper of the Frankfort town-archives, is editing a collection of Goethe's letters belonging to the period between 1765 and 1768.

MR. BAYARD TAYLOR, the translator of *Faust*, is at present in Germany collecting materials for a joint biography of Goethe and Schiller.

AT the sale this week at Messrs. Puttick and Simpson's of rare Liturgical Tracts, a small quarto volume (says the *Daily News*) containing twenty-five curious Liturgical Tracts, issued during the reigns of Edward VI., Elizabeth, and James I., among which was included "Psalms and Hymns of Praier and Thanksgiving, made by William Barlowe, Bishop of Lincoln," privately printed, 1613, was sold for 72l.

THE last number of the *Indian Antiquary* gives a new and, it would seem, true etymology of "Calcutta." It was supposed to be derived from Kālī, the famous goddess, and kṛta, a burial-place. But kṛta in Kālī-kṛta, stands for the Sanskrit kṣetra, field, place; and the ancient Hindus called the place Kālī kṣetra. There is a place called Kālighāṭa, near Calcutta, i.e. the flight of stairs or bathing-place of Kālī, and it contains the celebrated temple of the goddess Kālī.

AN "English Reprint Society" is now in course of formation, with Dr. Charles Rogers as "Secretary and Editor of Publications." It is to begin work when two hundred members are enrolled, the subscription being a guinea a year, or ten guineas for life, with an entrance fee of half a guinea. A list of books proposed for reprinting has been issued, the earliest work being the *Syon Martiloge in Englyshe, after the vse of the Church of Salisbury*, 1526; and the latest, George Scott of Pitlochrie's *Model of the Government of the Province of East-New-Jersey in America*, 1685. We think it will be a mistake to reprint from faulty and poor black-letter texts, works like certain of those proposed, which exist in MSS. nearly two hundred years earlier, as for instance, *Rychard Rolle, Hermyte of Hampull, in his contemplacions of the Drede and Love of God, with other Dyverse Titles as it sheweth in his Table*, 4to Lond., by Wynkyn de Worde, 1560; or, *The Parlyament of Denyllles*: emprinted by W. de Worde, 4to, 1509, of which the Early English Text Society has printed a very good MS. of about 1430, in one of Mr. Furnivall's volumes: or, *Syr Eglamore of Artoys*, 4to, Lond., by John Walley, of which Mr. Halliwell's much more valuable edition in the *Thornton Romances* for the Camden Society can be had, with several other romances, for five shillings or less. It is also needless, surely, to reprint books like Harman's *Caveat*, which the Early English Text Society has continuously on sale, in both small paper and large. But with these exceptions, and the expression of a hope that Dr. C. Rogers may not edit all the Reprints—they are too many and too varied in subject for one man to do with full knowledge—we welcome the announcement of the "English Reprint Society," and wish it all success.

MR. WEATHERLY has reprinted from Colburn's *New Monthly* his translation from a German

version of *Peivash Parneh, the Sons of the Sun-God*, an episode of "an epic" discovered in Lapland. The mythology seems a good deal influenced by the Edda; the metre of the translation is an experiment, which consists of repeating something like the first two-thirds of an English hexameter six or eight times or oftener, and then interpolating something like the last third. If this had not the disadvantage of reminding us of Mr. Swinburne, with the rhymes left out, it would be on a par with Seneca's discovery that it was possible to write Sapphics, putting in Adonics at discretion; and with Claudian's, that the metre of the first two lines of an Alcaic stanza might be continued through an ode.

THE investigations on the famous book *Calila e Dimnah* (i.e. the fables of Bidpai, derived from the Panchatantra) are making considerable progress. Besides the Syriac translation of the Pahlavi text, found in a convent in the East (see *ACADEMY*, II., p. 387), and of which an edition is in preparation by Professors Hoffmann and Dr. Bickel, preceded by a preface of Professor Bensey, and the Syriac translation of the Arabic text, of which a specimen was lately published by Professor Wright, Signor Ignazio Guidi has just published the result of his researches on the Arabic translation, under the title *Studii nel Testo Arabo del libro di Calila e Dimnah*, Rome, Libreria Spithöver, 1873. Signor Guidi made use of two MSS. at Rome, and of a third in the Palatin Library at Florence, and he gives the description of the differences of composition in those MSS. A great number of chapters are translated, and in the notes he refers to the previous labours on the *Calila*, with which he is well acquainted. We cannot abstain from observing that more could have been done for the subject if the MSS. of the National Library in Paris (those, namely, which were acquired after De Sacy's publication of the Arabic text of *Calila*) and those of the Bodleian Library had been consulted. No doubt other libraries possess also a great number of Arabic MSS. of the book, which are completer than these of which De Sacy made use. But what can one scholar do to exhaust such a subject? Publications of this kind are generally undertaken by scholars of limited means, and we must therefore receive with gratitude every little note given to us from the treasures which are most accessible.

We are glad to welcome the appearance of a new German literary and scientific weekly, the *Jenener Literatur Zeitung*, to which many of the best men at the renowned University of Jena are contributing. The first two numbers contain four departments, corresponding to the old division of all knowledge into four Faculties—Theology, Law, Medicine, and Philosophy: the last including under it, the multifarious subject which we comprise under the Faculty of Arts. We would suggest the addition of a news sheet, and a recognition of the claims of fine art and of the literature of the imagination. The *Literarisches Centralblatt*, which has hitherto been the sole paper of the kind, has of late years very greatly diminished in value; its best writers have apparently left it, as the old custom of signing articles has been almost given up. We hope its new and decidedly formidable rival will stir it up into renewed life.

PROFESSOR IHNE has been appointed to the Chair of English Literature in the University of Heidelberg.

Two important publications will be issued from the Clarendon Press in a few days:—1. *The Icelandic-English Dictionary*, based on the MS. collections of the late Richard Cleasby, enlarged and completed by Gudbrand Vigfusson, M.A. With an Introduction and Life of Richard Cleasby by G. W. Pasent, D.C.L. The introduction amounts to 108 pages 4to; the Dictionary fills 780 pages. 2. The first volume of the *Constitutional History of England, in its Origin and Development*, by the Rev. Professor Stubbs.

THE two volumes of *A History of Greece*, by Mr. G. W. Cox, announced as nearly ready, by Messrs. Longman, will bring the narrative down to the close of the Peloponnesian war. We understand that Mr. Cox announces in his preface that he considers that the history before the formation of the confederacy of Delos calls for further scrutiny, and that he has "striven to do for traditional history what Dr. Ihne, with unflinching honesty and singleness of purpose, has already done for the traditional history of Rome." He has also endeavoured to bring out points in which he considers Grote's history unsatisfactory, such as the character of the Greek and Latin polity, the intolerance of ancient religion, carrying with it the idea of profanation if plebeians were admitted to patrician or eupatrid offices, and the notions of family, clan, tribe, polis or civitas. He also differs from both Grote and Thirlwall on the character of the evils with which Solon had to deal, and of the measures by which he met them. Something, too, has been attempted to be done to clear up the narratives of Marathon and Thermopylae, and to present the character of Themistokles in a fairer light. In the second volume Mr. Cox is more in accord with Grote, but he differs from him in his account of the careers of Kleon, Nikias, and Alkibiades, and of the condemnation of the generals after the battle of Arginoussei; and he attempts to trace the causes of the deterioration of the Athenians after the beginning of the Peloponnesian War.

EARLY last year the Chetham Society presented a memorial to the Chancellor of the Duchy of Lancaster, showing that in the Castle of Lancaster there was still remaining a large collection of valuable records of the County and Duchy of Lancaster, which could not be consulted without considerable difficulty; and that there was reason to believe that they were a charge from which the prothonotary and the officers who kept them would cheerfully be relieved, as the records could never be consulted but in their presence—a process which always necessitated a journey from Preston, where the courts are kept, to Lancaster; indeed the expenses and the fees which these journeys entailed were almost a bar to the use of the records at all, at any rate for historical purposes. The Society, therefore, prayed the Chancellor to lay the case before Her Majesty, who, from her known favour for the extension of literary enquiry, might be graciously pleased to command the removal of the records to the Public Record Office, and so render them as easy of access as the other records of the kingdom. It is worthy of note, too, that the Deputy Keeper of the Records, in his Annual Report for 1869, had already pointed out, in reference to the same records, that they were of considerable importance, and there was no doubt that their value would be considerably increased by an additional facility of access, such as would be afforded by their being kept under the charge of the Master of the Rolls. In consequence of these representations, Her Majesty graciously assented to the incorporation of them with the other Duchy records which she had already caused to be transferred from Lancaster Place to the Record Office; and in the autumn Sir Thomas Hardy proceeded to Lancaster with a small staff of assistants to examine the collection and to make arrangements for its being brought to London. A little before Christmas the entire series, with one exception, was safely lodged in Fetter Lane. When we add that the weight of the documents removed exceeded sixteen tons, and that many papers relate to the government of the Palatinate by John of Gaunt, some idea of their extent and value will be arrived at. All thanks are due to the Chetham Society for their exertions in this matter.

THE Hanseatic Historical Association met as usual in Whitsun-week, 1873, together with the

Local Historical Society of the Hartz country in the old city of Brunswick. Papers were read, and progress was reported. Some more of the towns which formerly belonged to the famous maritime league of the Hansa, several corporations, and a number of private gentlemen became members of the Society. The issue of its annual periodical, however, the *Hansische Geschichtsblätter*, had been unluckily delayed by a strike of the compositors at Leipzig; but the number which has been at length distributed to the members is a very copious one. It contains papers on the *Sigillum Civitatum Maritimarum* of 1370, which has been adopted likewise by the Society. The number includes a report on researches into the records of Danzig, Königsberg, Riga, and Revel for the purpose of collecting the Recesses (the parliamentary protocols) of the Hansa meetings in the fifteenth century, and of preparing a complete collection of the diplomatic letters and papers of the Hanseatic League. These investigations have lately been extended to Holland, and will reach England by and by. The next meeting of the Society is to take place at Bremen in Whitsun-week.

THE publications of a *Verein für Deutsche Literatur*, Berlin, 1874 (A. Hofmann & Co.), in good print and handsome binding, have commenced lately with a volume of *Lectures and Essays* by Heinrich von Sybel. Most of them have been printed before. We refer with pleasure to the lectures on the emancipation of women, on the doctrines of modern socialism and communism, and on Pope Boniface VIII.; the last especially, which has not been printed before, being full of contemporary interest. The liberal principles of the author are well known abroad. He did not hesitate to proclaim them in troubled times to French and English readers. We can now read in the German original the article on "New Germany and France," translated by other hands for the *Revue des deux Mondes* in 1866; and one on the "New German Empire," inserted in the *Fortnightly Review* for January 1871.

IN the second volume of Dr. Rogers' *Monuments and Monumental Inscriptions in Scotland* the author acknowledges having received considerable assistance "from papers on the graveyards of the north-eastern counties prepared by Mr. Jervise." Mr. Jervise, however, writes to the *Scotsman* on the 3rd of January that he had furnished some copies of inscriptions to the *Montrose Standard*, in which paper they appeared full of errors and misprints. He then explains that Dr. Rogers has simply reproduced these papers, blunders and all. He further charges Dr. Rogers with reprinting inscriptions from Monteith's *Theater of Mortality*, from the Glasgow edition of 1834; also without correction. Thus an inscription "He died a true believer" has been rendered by the Glasgow book and so reproduced by Dr. Rogers, "He died a bachelor."

NOTES OF TRAVEL.

By private advices dated 6th December, 1873, we learn that news had been received at the British Consulate at Zanzibar that Lieut. Cameron and the East Coast Livingstone Search Expedition were all well at Unyambe, at the end of September last. They had been hospitably received, and were living in the house of the Arab Governor. There were no tidings whatever of Dr. Livingstone since he had passed through Fipa on his way to Katanga. It appears that the war with Mirambo still continued, and there were rumours that 100 of the Sultan's soldiers had been killed, and that numbers were on their way back to Zanzibar, disheartened for want of food; the gunpowder in the settlement at Unyambe had also come to an end. Nothing was known by the native messenger who brought these tidings as to the plans or movements of Lieut. Cameron's expedition; and no private letters were received. We should consider

it not improbable that the Expedition might eventually work round to Uganda by Manyema and the Albert Nyanza.

WE understand that Lieutenant Parent, who accompanied the late Swedish expedition to the Arctic regions, will shortly publish the results of his experiences in the valuable Italian geographical journal, *The Cosmos*, the editor of which, Signor Guido Cora, was the Italian delegate at the late meeting of the British Association at Bradford.

THE *Times* of the 13th instant contains a full account of the death of Lieutenant Garnier. Mr. Garnier was the Royal Geographical Society's gold medallist in 1870, that honour having been awarded him for his expedition up the Cambogia into China, the results of which were published in a very handsome volume by the French Government.

MESSRS. MACMILLAN & Co. will shortly publish a work entitled *Telegraph and Travel*, by Sir F. J. Goldsmid, C.B., K.C.S.I. The work will principally deal with the history of the construction of the telegraph in Persia, and the laying down of the cable in the Persian Gulf, and will also contain a memoir of the late lamented Colonel Patrick Stewart, who was Sir Frederic Goldsmid's predecessor as Director-General of the Persian Telegraph. The book is, we believe, published under authority of the Secretary of State for India.

It is reported from various sources that the breakwater at Karachi is proving a great success, and is likely to benefit the harbour even to a greater degree than was anticipated. For some time its success seemed so doubtful that house property in Karachi sensibly depreciated in value, in consequence of the uncertainty that seemed to attend the future prosperity of the town. With its splendid harbour, however, accessible to ships of all tonnage, Karachi has now a brilliant future before it. We believe that the Karachi breakwater is one of the few public works of the same magnitude in India that have been finished under the originally estimated cost.

MADRAS is, we learn, also to have an enclosed harbour. The pier, erected some years ago, has proved a most costly and useless experiment. Is Madras of sufficient commercial or other importance nowadays to render it likely that the newly projected harbour will ever pay?

COLONEL GORDON, who is about to take Sir Samuel Baker's place in Central Africa, and prosecute the plans of the Viceroy of Egypt, is now in England making his final arrangements before departure.

WE draw attention to the small map which illustrates Mr. Markham's *History of Persia*, because it is the only one on which the northern frontier is properly delineated, on the side of Khurasan; and the only one which shows the central range of mountains, and those between Kirman and the Persian Gulf, with any approach to accuracy. The former delineation is specially important, as, on previous maps, the garrisoned post of Sarakhs, which has always been Persian, as well as Merv, are shown outside the Persian boundary.

At the time of his death on the Col du Géant last September, the Russian traveller M. Fedchenko was occupied in preparing for publication the results of his researches in Central Asia. This work, which will be completed for the press by his widow, will be of great scientific value. The geographical portion will be of much interest, but the zoological sections will be even more important. M. Fedchenko was in London in the autumn of 1872, and a principal object of his visit was to see the Hodgson collections of insects at the India Office. It will scarcely be credited that they were packed away in boxes so as

to be inaccessible, and that the eminent traveller was unable to obtain a sight of them. His map of Kokand and the Upper Syr Daria was published in *Ocean Highways* for August 1873, with an account of his travels by Mr. Robert Michell. His posthumous work, with illustrations now in course of preparation at Paris and Leipsic, will first appear in Russian, at St. Petersburg; but it is hoped that an English translation of at least the geographical portion will appear almost simultaneously in this country.

MR. HALE'S LECTURE ON SHAKESPEARE.

MR. J. W. HALE gave, last Saturday night, at the London Working Men's College, a very interesting lecture on "The Succession of Shakspeare's Plays." He of course treated as utter nonsense the old notion that Shakspeare was a kind of portent, a man who sprang at once to his full power. On the contrary, like all other men and writers, Shakspeare grew; he served his apprenticeship and learned his trade. The evidences of that growth and that apprenticeship-time are plain to every reader with a head. The tests Mr. Hales proposed were seven in number: those of 1. External Evidence; 2. Historical Allusions in the Plays; 3. Change of Metre; 4. Change of Language and Style; then development of dramatic art as shown in 5. Power of Characterisation, and 6. Dramatic Unity; 7. (the most important of all) Knowledge of Life. Under the first head Mr. Hales needed only to refer to Mr. Halliwell and other biographers of Shakspeare; to the entries in the Stationers' Registers; and to the notices in contemporary books of criticism, such as Meres's; diaries, such as Henslowe's, Forman's, Manningham's. Under the second, Mr. Hales reminded us first of the difference between the England of Elizabeth—when the time was animated by an intense national spirit, in the struggle against Spain, &c.—and the England of James I.'s inglorious reign. Therefore the plays that glowed with patriotism must be early,—those that, like *King John*, contained the Bastard's last words against the Papal power, the invasion of England, the allusion to the Duke of Westmoreland and others' intrigues with Alva; like *Richard II.*, act ii., s. 1, which had old Gaunt's speech, "This royal throne of kings," &c.; like *Henry V.*, which was a great paean to the glory of England; like *Henry VIII.*, which holds Cranmer's speech, &c. As to other allusions, see, secondly, the *Midsummer Night's Dream*, act iii., sc. 1; referring to the mermaid (Mary Queen of Scots); and the stars (the Duke of Westmoreland, etc.); *Macbeth*, act iv., sc. 1, referring to James I., and act iv., sc. 3, to his touching for the King's evil; *Lear's* British man; *Henry V.*, act v., chorus, referring to Essex in Ireland in March—August 1599; *Comedy of Errors*, referring to the French civil war of 1501-2; *Winter's Tale*, act i., l. 359, referring to the assassination of Henry IV. of France in 1610, &c. Thirdly, as to Metre, Mr. Hales said strongly that metrical form was not an accident, but an essential clothing of a poet's mind. There was a certain irresistible fitness between the body and soul of poetry; and therefore, as a poet's mind developed, his metrical form altered. When Shakspeare joined the stage, there was a battle of the Muses, Rhyme and Blank Verse. England took Blank Verse, France took Rhyme. If rhymes abounded in any of Shakspeare's plays, these plays were certainly early, as *Love's Labour's Lost*, *Comedy of Errors*, *Two Gentlemen of Verona*, *Midsummer Night's Dream*, *Romeo and Juliet*. In Blank Verse, the lines of the early plays were more self-contained and less continuous than the later plays, as Mr. Furnivall and others had shown. The other metrical changes in Shakspeare's line, as the use of the redundant syllable, &c., Mr. Fleay would prove. On the fourth head of Language and Style, Mr. Hales noticed first Shakspeare's early faults: 1. His over-use of classical allusions (as in Mar-

lowe) in *Love's Labour's Lost*, the *Two Gentlemen of Verona*, *Merchant of Venice*, &c. 2. His superabundance of Puns and Conceits, as in *Love's Labour's Lost* and the *Two Gentlemen of Verona*, for which Dr. Johnson rightly criticised him. This latter disappears almost in some plays: *Macbeth* has none of it. Shakspeare grew in good literary taste and judgment. 3. Bombast and Rant. Of these, though Shakspeare ridiculed them in *Pistol* (*II. Henry IV.*), he cannot be acquitted altogether in *Richard III.*, parts of *Henry VI.* (if his), &c. Yet he soon grew out of it; compare his Sonnets, Northumberland on the news of Hotspur's death, Hamlet in the burial scene, with Laertes. Yet 4. Contrast Shakspeare's comparative plainness of style in his early plays, with the involution of his later ones, as *Hamlet* with *Macbeth*, in which latter he seemed to put on words—as Beethoven on music—a burden of meaning too heavy for them to bear. Fifthly, as to Characterisation, note the great change in Shakspeare (as in Chaucer) from the feebleness of his early plays like *Romeo and Juliet* (in which the poetic element overpowers the dramatic) *Love's Labour's Lost* (in which no one lives), the *Two Gentlemen of Verona* (of which Launce is the only character) *Richard III.* (again with only one character, though that its leading one, drawn with terrific force); *Midsummer Night's Dream* (a dramatic poem, not a drama, &c.). Then turn to his riper works, rife with life, like *Henry IV.*, *Henry V.*, and every one of his later plays, every figure in them lives, and is known to you. Creative power is specially Shakspeare's own. Sixthly, Dramatic Unity, the harmony of every part in one whole, which is the dramatist's highest merit. Look at early plays, like *Love's Labour's Lost* and *Midsummer Night's Dream*: they have hardly any oneness of view, or concentration; nothing to give a unity of interest in the midst of their confusion. Contrast them with later plays like *Hamlet*, like *Lear*, which, though each double-plotted, yet are each one a whole, the two plots in each working together, and expounding one another. Seventhly, Knowledge of Life; Wisdom. Do not forget the deep moral sense in Shakspeare's wit and humour. True, that in his early plays he seems to sport with them; but see, even in *Love's Labour's Lost*, how Rosaline shows Berowne the true worth of his wit, and sends him for a year to the realities of a hospital to cure him of his trifling. Shakspeare soon discovers life to be serious, and puts before us, with intense feeling, the consequences of the breach of moral laws; he realises the moral conditions of life. Taine does egregious injustice to Shakspeare in this. See what profound pathos there is in Falstaff's last scene and death. Shakspeare never preaches, but works out his sermons in life. The sense of responsibility grew with his growth; he is the Poet of Conscience. In *Hamlet*, *Macbeth*, &c. he dealt with all the great questions of life, and vindicated the Creator's order of the world. To him the world was a school, and all men and women scholars in it. His infinite docility of spirit led him to learn from all, to gather always fresh stores of knowledge. Through the wrastlings of *Hamlet* and *Macbeth* he passes to the serenity of the *Tempest*. Take as his epitaph his own song in *Cymbeline* (act iv. sc. 2):—

"Feare no more the heate o' th' Sun
Nor the furious Winters rages!
Thou thy worldly task hast don,
Home art goun, and taen thy wages. . ."
Feare no more the frowne o' th' Great!
Thou art past the Tirants strooke,
Care no more to cloath and eate,
To thee the Reede is as the Oake.
Feare no more the Lightning flash,
Nor th' all-dreaded Thunderstoake!
Feare not Slander, Censure rash!
Thou hast finish'd Joy and mone."

After the lecture, Mr. Furnivall said a few words of thanks to Mr. Hales, and of the future work of the New Shakspeare Society; and Mr

Fleay enlarged on the Metrical Texts he had worked, and to which Mr. Hales had alluded. Mr. Hales lectures again to-night at the Working Men's College, 45 Great Ormond Street, w.c., at 8.30 P.M., on a play from each of the three decades of Shakspeare's poetic life—I. 1585-95; II. 1595-1605; III. 1605-1615.

SELECTED BOOKS.

General Literature and Art.

- CHEFS d'œuvre des auteurs français avant La Fontaine. 1050-1650. Avec une introduction, etc., par Ch. Lomandre. Paris: Charpentier. 3 fr. 50 c.
- DODSLEY'S Old English Plays. Edited by W. Carew Hazlitt. Vol. I. Reeves & Turner. 10s. 6d.
- FANFANI, P. Studi ed osservazioni sopra il testo delle opere di Dante. Firenze: tip. Cooperativa. L. 3.
- FICHTER, J. C. Popular Works. New Edition. With a Memoir of William Smith, L.L.D. Trübner.
- GILLRAY, James, the Caricaturist, The Works of. Edited by Thos. Wright. Chatto & Windus. 81s. 6d.
- LOBB, S. A Modern Version of Milton's Areopagitica: with Notes, Appendix, and Tables. Calcutta and London: Thacker. 10s.
- MAIN, A. Life and Conversations of Dr. Samuel Johnson. With a Preface by G. H. Lewes. Chapman & Hall. 10s. 6d.
- MENNIS, Sir John, &c. Musarum Deliciae; or, The Muses' Recreation; with Restor'd; Wit's Recreations. New Edition. Chatto & Windus. 21s.
- SIMPSON, W. Meeting the Sun; a Journey all round the World. Longmans. 24s.
- TROLLOPE, A. Phineas Redux. Chapman & Hall. 24s.
- WHITTON, H. P. Bygone Days in Devon and Cornwall. Bentley. 7s. 6d.

Philology.

- BOCKENMUELLER, F. Versils Georgica nach Plan und Motiven erklärt. By 4. Stendel: Stade. 3 Thl.

PARIS LETTER.

4 Place Wagram, Paris, Jan. 14, 1874.

M. de Loménie's reception at the Academy was one of the most conventional ceremonials that have taken place at the Palais Mazarin since Sainte-Beuve was admitted to immortality in spite of his *Vendredi gras*. In its nakedness an Academical programme is anything but exhilarating; and this time it was strictly and primly carried out, without a digression, without an "incident." M. de Loménie's *fautail* is surrounded by respectable but somewhat depressing traditions. Of its eleven occupants, the last two alone were purely and simply men of letters; the rest being *abbés*, phy-

sicians, cardinals, dilettanti, advocates, &c.—the ordinary academical rank and file. And M. de Loménie apparently forgot his two immediate predecessors, and fell contentedly into line with Jacques Mairan and the advocate Target. His panegyric on Mérimée was singularly colourless and moderate. The polished and amusing *cours* at the Collège de France had led his hearers to expect something more acute and incisive—elegance if not eloquence. They were disappointed. Scarcely veiling his antipathy to Mérimée, the Academician elect spoke of his predecessor in the tone of a censor and a pedagogue. His panegyric was a lesson; he forgot his subject, and occupied himself in deducing moral truths from Mérimée's life and writings for the instruction of regenerated France—held up the portrait of the shrewd satirist not as an example, but as a warning. Nearly all the Academicians present had known Mérimée. They had heard the brilliant and vigorous *discours de réception*, in which, by a few strokes of the pen, he portrayed Nodier, his friend and predecessor, saying in reference to the *conteur's* difficulties with the Government: "Nodier, quand il croyait fuir les gendarmes, courait après les papillons." There are no such flashes in M. de Loménie's oration. He described superficially in a series of commonplace the bitterest hater of commonplace of modern France; only relieving the monotony of the sermon by rhetorical regrets for the Restoration, and compliments to the Academicians who had supported his candidature. Jules Sandeau welcomed the new comer—if the *discours de bienvenue*, with which the Academy is wont to salute a new immortal, can be called a welcome. M. Sandeau fully maintained the sound tradition that requires something between a kiss and a castigation as a response to the recipient's address. He did not spare M. de Loménie; his very style was a rebuke of the former frigid flood of classic periods—light, sparkling, and facile. The lines of the portrait which M. de Loménie had blurred, reappeared harmonious and distinct. Still the *séance* was scarcely successful. There were few political allusions. M. de Loménie had consecrated an eulogistic paragraph to the ex-President; but M. Thiers was absent, and the flattery fell tamely. The Academician elect was introduced by the Marquis de Noailles and M. Guizot, who received with imperturbable tranquillity a public ovation and a long oratorical compliment.

The next reception, that of M. Saint-René Taillandier, will take place on the 22nd of this month. M. Désiré Nisard will answer the *discours de réception*. Another candidate has presented himself for election on the 29th. Dr. Froissac is the fourteenth claimant.

One of the fourteen, M. Taine, has just begun his lectures at the Ecole des Beaux Arts. His course comprises *l'Esthétique et l'Histoire de l'Art*; and the subject for this year is the history of ancient sculpture. The lectures are only open to male students.

Victor Hugo is revising the English proofs of *Quatre-Vingt-Treize*—a somewhat difficult task, considering that the poet's knowledge of English is purely theoretical. The novel forms three volumes octavo, and will be published by Michel Lévy on February 15. M. Hugo has once again wedded history and romance: his chief characters are Marat, Danton, Robespierre, St. Just, Théroigne de Méricourt. I believe that the author has

founded his study of Robespierre's character on Mr. Lewes' biography.

La Fille de Madame Angot does not seem at first sight a promising basis for an essay on literary history. But it yields in the *Chronique Musicale* a clever critical study of "Le Réalisme dans l'Opéra Comique au XVIII^{ème} Siècle." M. Charles Barthélemy has discovered the origin of the *genre poissard*, the fish-fag school of art of which Vadé was the primitive master. Vadé, the market-porter, is the undoubted ancestor of Theresa and the Père Duchesne—a foul-mouthed, forcible satirist, who etched vivid portraits of the aristocracy with a pickaxe. M. Barthélemy cites Fréron's opinion of the school—since "school" it has become. "Burlesque paints nothing: the Poissard paints nature—base, if you will, in the sight of certain dignified philosophers, but pleasant and amusing, whatever the exquisites may say. Vadé is the Teniers of literature." This is an unexpected ecclesiastical apology for the European echo of "Fort en gueule."

A novel congress has just met in Paris—a congress of provincial editors. In view of the coming press legislation, they are about to elect a committee which shall confer with the Commissions Parlementaires in the interests of departmental journalism. The two most burning questions are those of the stamp duty, and the project that orders that newspapers shall be distributed through the post alone, and not in bales as heretofore. This is a crusade against the Government; but another purely professional war is preparing. Theatrical managers have been in the habit of announcing by letter to the critics of the different Parisian newspapers the changes in their companies and programmes, the amount of their receipts, the hours of their rehearsals. *Paris Journal* points out that this is simply a system of gratuitous advertising, for the manifest disadvantages of which the free list offers no compensation. It demands the suppression of the free list as far as the critics are concerned, and announces that the Press will pay for its stalls if the managers will pay for their notices. This is merely the commercial view of the question. Several journals are beginning to examine its artistic bearings, asserting that the species of *camaraderie* established between the theatrical and literary worlds frequently results in insipid and partial criticism. And they add with some reason that there are few managers living who do not estimate at one private box the value of a critic's conscience. This delicate conscience is to be guarded. A league is being formed with the object of upholding the dignity of the press against the pretensions and encroachments of theatrical directors. But the innovation may possibly prove anything but profitable to the adherent journals: the directors hint that they will withdraw all advertisements and found an organ of their own.

Such a special organ would by no means startle the Parisian public. In the list of the forty new newspapers that have appeared in Paris during the past year, there are representatives of every taste and industry, from the "art" of the *coiffeur* to the poetry of the future. *The Mercure Galant* is the fourteenth attempt to revive the famous ancient fashionable gazette. It professes to form "a league of good breeding in order to counteract the bad taste and villanous tone that dominate in modern society." *La Férie Illustrée* is one of those periodicals which can only exist in Paris:

a weekly collection of fairy tales, romances, *contes fantastiques*, and *chroniques diaboliques*, professedly intended for children, but full of the equivocal double meanings of an Offenbachian operetta. The *Brocanteur* is also highly Parisian, being the organ of the *bric-à-brac* trade—a *spécialité* as curious as that of the *Clairon*, which supports the interests of regimental bands. The *Bas Bleu* is frank in title. It is a monthly "moniteur des productions artistiques et littéraires des femmes," and proclaims in two epigraphs that "All women are equal before Talent—all women are equal before Art."

EVELYN JERROLD.

CORRESPONDENCE.

THE ETRUSCAN DICE.

Peak House, Ventnor, Jan. 12.

In your last issue you notice the disappearance of the pair of dice which are believed to contain the key to the Etruscan language, and you suggest a doubt as to their genuineness. The account of their discovery at Toscanella will be found in the *Bullettino dell' Istituto di Corrispondenza Archeologica*, for 1848, pp. 60, 74. Had the "find" occurred at any other time than in 1848, the year of revolutions, the dice would doubtless now be in the Gregorian Museum at Rome, since, under the convention concluded with the discoverer, Signor Campanari, they would have been liable to be claimed by the Papal Government, and, considering their supreme philological importance, and the interest the discovery excited at the time, they would undoubtedly have been so claimed.

It is most unfortunate that they should have disappeared, but their record has been so remarkably confirmed that there can be hardly any question as to their genuineness. The reasons for this conclusion I will briefly set forth. In 1848, when the discovery was made and published, there existed not even a suspicion as to the nature of the Etruscan digits. There was nothing which could guide a forger, and the six words selected must have been a pure invention on his part. Now three of the six digits on the dice are *zal*, *ki*, and *mach*. In 1850, two years after the publication of the dice, an Etruscan tomb was opened at Viterbo, which proved to be the burying-place of the Alethnas family. In that tomb were found two sarcophagi, bearing inscriptions, which recorded the number of children born to the deceased persons. The numerals used for this purpose are two of the numerals on the dice. In one case the record is that there were *klenar zal*, or "three children;" in the other that there were *klenar ki*, or "two children." The word *zal* has never been met with except on the dice, and on this sarcophagus, where its position shows that it is a numeral. Now, if the dice are a forgery, the forger must either have possessed a clairvoyant prescience of the contents of the then unopened tomb at Viterbo, or by an incredible chance he must have lighted upon two words which subsequent research has proved to be numerals. But this is not all. Three years later, five years after the publication of the dice, another tomb was opened, also at Viterbo, in which was found a sarcophagus which gives an independent corroboration of another of the digits on the dice—namely, *mach*, "one." This word occurs in the statement of the age of the deceased.

Other confirmations of the record of the dice will be found in my forthcoming book. As this will be published in a few days, it is perhaps unnecessary to adduce them here. Meanwhile I am bold to affirm that the theory of the forgery of the dice is, from a philological point of view, absolutely untenable. The character of Signor Campanari, the discoverer, makes it also extremely improbable. Nothing is known of him which would justify the imputation of a fraudulent intent, and his papers on Etruscan subjects prove him to be destitute of the philological acumen

which such an ingenious forgery would demand. He, if any man, must be the forger. Both morally and intellectually I believe him to be incapable of doing it.

The record in the Alethnas tomb at Viterbo is almost as valuable as the record on the dice. The word *klenar* gives us the plural, formed according to the Mongolic law, of the well-known Etruscan word *klan*, "son," which is identical with the Turkic *oglan*, "son." It gives also an instance of the harmonic permutation of vowels, so characteristic of the Altaic languages. Moreover it affords an answer to Prof. Max Müller's remarks on the Etruscan numerals. Following as usual the Aryan analogies, he thinks that *ki* denotes "five." I maintain that it means "two," herein following the analogy of the Ostiak *ki*, "two," and the Turkic *iki*, "two." Now the sarcophagus which contains the record of the *klenar ki* goes on separately to enumerate by name two children, and it also states their ages. It tells us that the father died at the age of lxvii., and his "two children," the *klenar ki*, at the ages respectively of xxviii. years and vi. years. The wife's name is also given, but her age is not recorded. On Prof. Max Müller's theory there should have been seven names in this record, but there are only four, two of which are those of the parents. If *ki* can once be proved to mean "two," the Aryan theory of the Etruscan numerals falls hopelessly to the ground. The Alethnas tomb is not the only evidence, or even the strongest to this effect.

ISAAC TAYLOR.

THOMAS CHAUCER.

3 St. George's Square, Jan. 14.

In Mr. W. Macray's review of Mr. Marshall's *Early History of Woodstock Manor* in your last number, p. 25, col. 2, he quotes Mr. Marshall as saying that Woodstock was "the supposed dwelling-place of Chaucer's son." In the *Athenæum* review of the same book last week, the reviewer quotes the spurious *Testament of Love* to prove that the poet Geoffrey Chaucer was born in London. Will you allow me to say, on the first point, that there is as yet no evidence that Thomas Chaucer was Geoffrey's son; and on the second, that while the *Testament of Love* is plainly not by Geoffrey Chaucer, whom it praises highly—some admirer of his having written it—Chaucer's birth in London is no doubt a fact, because his father, John Chaucer, vintner, lived in London before and after his son Geoffrey was born; and in 1380 Geoffrey re-leased all his estate in his late father's house in Thames Street, London, to Henry Herbury, who then had possession of it.

F. J. FURNIVALL.

OLIVER CROMWELL'S FIRST PARLIAMENTARY SPEECH.

London, December 31, 1873.

Everybody has heard of Cromwell's first speech, delivered in the session of 1629, and how he protested against Dr. Alabaster preaching flat Popery at Paul's Cross, and against Bishop Neile for supporting the Doctor in so doing. Probably everybody, too, who has read the speech, has imagined that the sermon had just been delivered, and that Cromwell was testifying against some recent outbreak of the Laudian spirit.

Here, however, is a fuller account of Cromwell's speech, derived from notes taken down in a kind of shorthand by Edward Nicholas (State Papers, Domestic, Charles I., vol. 135). Sheffield, it may be premised, had just been speaking against the Bishop, when Cromwell rose.

"Mr. Cromwell saith that one Doctor Alabaster did, at the Spital, preach in a sermon tenets of Popery; and Beard being heard to repeat the same, the now Bishop of Winton—then Bishop of Lincoln—had sent for Dr. Beard, and did charge him, as his diocesan, not to preach any doctrine contrary to that which Alabaster had delivered; and when Dr. Beard did, by the advice of Bishop Felton, preach against Dr. Alabaster's sermon and person, Dr. Neile, now Bishop of Winton, did reprehend him the said Beard for it."

As Neile was translated from Lincoln to Durham in 1617, the affair was at least twelve years old. It does not follow that Cromwell heard of it at the time when it happened, but it shows how carefully he had been noting the acts of the clergy; and, at all events, the words are worth preserving, as probably the most authentic record we shall have of the first public utterance of such a man.

SAMUEL R. GARDINER.

THE NAME "PALAMON" IN CHAUCER'S "KNIGHT'S TALE."

1 Oppidan's Road, Jan. 14.

That the ultimate original of the *Knight's Tale* is a Greek story, there can be little question. The whole poem is marked by Greek features, though seen for the most part through an atmosphere of romance. One may easily believe that Boccaccio's authority was one of those scholars who, already in the fourteenth century, began to leave the sinking Constantinople, and find a welcome in the country destined to be the nurse of the Renaissance.

Evidently the names *Palamon* and *Arcite* are corruptions of old Greek names. The Middle Ages gave strange shapes to many a well-known classical form; see, for instance, the catalogue of worthies in Chaucer's *House of Fame*. It was no violent exercise of this licence that converted *Archytas* (Ἀρχύτας) into *Arcite*. The name *Palamon* is the more interesting because it may be shown to be significant of the person who bears it. It is a modification in form and accent of the Greek *Palaemon* (Παλαίμων)—a name borne by several celebrated ancients. Spenser, it may be noted in passing, living at a time when scholarship was beginning to pay more attention to accuracy, more correctly writes *Palémon* (see *Colin Clouts Come Home Again*, line 396). If we look at the radical force of this name, we shall see its appropriateness in the *Teseide*, and the Canterbury Tale founded on the *Teseide*. It means properly "the wrestler," and in this sense is applied to Hercules by Lycophron of Alexandria. It is in fact equivalent to *παλαιστής*. But *παλαιστής* is used metaphorically to denote a "suitor;" and what I suggest is, that this is also the meaning of *παλαίμων* as borne by the "servant" of the Lady Emily.

Palamon is emphatically the lover—the lover pure and simple. He is "all for love." Arcite is the protégé of Mars; but Palamon of Venus. See his prayer to his goddess:

"Fairest of faire, O lady myn Venus,

Allas! I ne have no langage for to telle
Theffectes ne the tormentz of myn helle.

Consider all this, & rew upon my sore
As wisly as I schal for evermore
Enforce my might thi trewe servant to be.

I kepe nat of armes for to yelpen,
Ne not I aske to morn to have victorie,
Ne renoun in this caas, ne veyne glorie
Of pris of armes, blowyng up & down;
But I wolde have ful possessioun
Of Emelye, & dye in thi servise;
Fynd thou the maner how, & in what wyse.
I recche nat but it may better be,
To have victorie of him, or he of me.
So that I have my lady in myn armes."

For him, as for King Pharamond, "love is enough."

For *παλαιστής* itself, see *Æsch. Agam.* 1206, where *Kassandra* says of *Apollo*:

ἀλλ' ἦν παλαιστής κίπρ' ἱμοὶ πνέων χάριν.

Compare *As You Like It*, I. iii.:

"*Celia*. Come, come, *wrestle* with thy affections.

"*Rosalind*. O, they take the part of a better *wrestler* than myself.

"*Celia*. O, a good wish upon you! You will try in time, in despite of a fall."

Where the double intention of "wrestler" is to

be noted. If one may speak of "Adam Cupid," Cupid the archer,

"that shot so trim,
When King Cophetua loved the beggar-maid,"
why not of Cupid the wrestler?

J. W. HALES.

NEW SHAKSPEARE SOCIETY.

January 12, 1874.

I am very glad to see from your columns that, with the new year, we are to have a New Shakespeare Society. I heartily wish it all possible success. I was Director of the Old Society for more than a dozen years; and we printed above forty volumes, more or less illustrative of the works, character, and times of the greatest Poet that ever lived. There is yet much to be done, and I trust that the New Society will do it, or a part of it. I am now too far advanced in life (eighty-five) to be able to do more than to give it my best wishes.

I have not seen its Prospectus beyond what I find extracted from it in your pages; and, among other points, I perceive that it is meant to reprint the Ballad on the Death of Queen Elizabeth, in which Shakespeare, Jonson, and Greene are called upon to lament in verse that event. Without troubling Mr. Christie Miller, the New Society may find every word of it, from the title to the imprint, in the *Life of Shakespeare* which I compiled sixteen years ago for my third edition of the Works of our Poet. I may add that the Ballad was not "imprinted for Thomas Purfoote the younger," as stated in your columns, but for T. P., i.e. Thomas Paviour, who was concerned in some of the spurious editions of Shakespeare's Plays.

In reference to another publication on the death of Elizabeth, about to be reprinted by the New Shakespeare Society, Henry Chettle's *England's Mourning Garment*, which you describe as anonymous and without date, it may be worth while to state that Chettle placed his name at the end of it, and that, in figures on the title-page, it bears the date of 1603, just after the Queen's death. There were at least two impressions of it.

The same author's *Kindhart's Dreame* you state "must have appeared about 1600:" it has no date on the title-page, but internal evidence shows that it was printed in 1593. It was reprinted about twenty years ago by the Percy Society.

The same article in the ACADEMY of January 3, by a clear mistake, fixes the date of Greene's *Groatworth of Wit* as 1596; there certainly was such a re-impression of the popular tract, but it originally came out in 1592, just about the date when we may suppose that Shakespeare was first attracting notice as a dramatist.

I have taken these particulars from your abstract of the Prospectus of the director of the New Society, and there may possibly be some mistakes as to figures, for which he is not responsible.

J. PAYNE COLLIER.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Jan. 17, 3 p.m. Saturday Popular and Crystal Palace Concerts.
" Royal Institution. First of four Lectures by Professor Croom Robertson "On Kant."
8.30 p.m. Working Men's Club. Mr. Hales "On Shakespeare." II.
" First night of *Ought We to Visit Her* at the Royal Theatre.
MONDAY, Jan. 19, 3 p.m. Royal Asiatic. Mr. Rhys Davids "On Sri-giri King of Ceylon," and "On Sinhalese MSS.," Mr. Howarth "On the Origins of the Mongols."
8 p.m. Monday Popular Concert.
8.30 p.m. Royal United Service Institution, Whitehall Yard, Capt. Shortland, R.N., "On Economy of Coal."
TUESDAY, Jan. 20, 7.45 p.m. Statistical.
8 p.m. Civil Engineers; Pathological; Anthropological (Anniversary).
8.30 p.m. Zoological.
WEDNESDAY, Jan. 21, 1 p.m. Horticultural.
7 p.m. London Institution. Second Musical Lecture by Dr. Ella.
" Meteorological (Anniversary)."
8 p.m. Society of Arts. Mr. Ferdinand Praeger "On Wagner and German Music."

WEDNESDAY, Jan. 21, 1 p.m. London Ballad Concert, St. James's Hall.

THURSDAY, Jan. 22, 4 p.m. Geological.
6 p.m. Zoological.
6 p.m. Royal Society Club.
8 p.m. Royal Albert Hall Choral Society.
Hymn of Praise and Sublet Mater.
" British Orchestral Society, St. James's Hall.
8.30 p.m. Antiquaries; Royal.
7.30 p.m. Exeter Hall: Sacred Harmonic Society. Crotch's Oratorio, *Palestine.*

FRIDAY, Jan. 23, Professor Sylvester on "Recent Discoveries in Mechanical Conversion of Motion."
8 p.m. Royal Institution.
" Society of Arts. Dr. Campbell "On Indian Teas."
" Wagner Concert, St. James's Hall.
" Quekett Club.

SCIENCE.

THE ORIGIN OF MAN AND OF CIVILISATION.

Man and Apes: an Exposition of Structural Resemblances and Differences bearing upon Questions of Affinity and Origin. By St. George Mivart, F.R.S., V.P.Z.S. (London: Hardwicke, 1873.)

On the Origin of Savage Life: Opening Address read before the Literary and Philosophical Society of Liverpool, October 6th, 1873. By Albert J. Mott, President.

MR. MIVART'S work consists of a short, clear, and popular description of the various groups of apes, monkeys, and lemurs, with a somewhat detailed account of the various points, both of external and internal anatomy, in which they agree with, or differ from, the human organisation. The author is so well known for his careful study of the anatomy of many of these animals, that the general reader cannot have a more trustworthy guide to the facts of this somewhat complex but very important subject. The most interesting part of the work is that in which the general results are summed up, and conclusions drawn. It is shown that most of the anatomical peculiarities of the human body are to be found reproduced, more or less closely, in the apes; but that while the larger proportion of these are to be met with among the higher or anthropoid forms, a considerable number only occur in the lower, and some in the very lowest, groups. Even among the highest, there is a most perplexing conflict of evidence as to which species most nearly approaches man; each in turn presenting human and non-human characters in an almost equal degree. On carefully weighing these, however, the conclusion is arrived at with some confidence that the gorilla, so far from being the most human, is the least so of the anthropoid apes; and that this high position must be given to the orang, chiefly on account of the greater complexity and more human character of its brain, although in some important features of its skeleton it diverges more from man than does any of its immediate allies.

The widely scattered points of affinity between man and the apes are well indicated in the following passage:—

"If man and the orang are diverging descendants of a creature with certain cerebral characters, then that remote ancestor must also have had the wrist of the chimpanzee, the voice of a long-armed ape, the blade-bone of the gorilla, the chin of the siamang, the skull-dome of an American ape, the ischium of a slender loris, the whiskers and

beard of a saki, the liver and stomach of the gibbons, and the number of other characters before detailed, in which the various several forms of higher or lower primates respectively approximate to man."

Mr. Mivart argues that such a creature would be an *homunculus*, and that to suppose the existence of such a creature is begging the question, and is as difficult to conceive as the existence of man himself; and he goes on to argue that all these cross affinities cannot be accounted for on the theory of "natural selection." However this may be, it seems very clear that these deep-seated and divergent relations and differences do plainly indicate that the common ancestor of man and the higher apes must have originated at a very remote epoch, far earlier in fact than that of the common ancestor of the existing anthropoids. This throws us back indefinitely into the past, and renders it quite unnecessary, on grounds of zoological probability, to place any limits to the possible antiquity of man—a point of some importance when we come to discuss Mr. Mott's paper.

The copious illustrations of the various species of apes and of their anatomical peculiarities add greatly to the value of this little work, and render it a valuable book of reference for all who take an interest in the discussion as to the origin and antiquity of our race.

The "Address," which forms the second heading of this article, is one which deserves more attention than it is likely to receive; and we trust that the author will develop it more fully and bring it more prominently before the public. It is quite refreshing to meet with an author, who, while opposing the greatest scientific authorities of the day, can hold his ground with so much tenacity, and discuss his subject with so much skill and in so philosophical a spirit as effectually to resuscitate a theory which it was thought had been finally disposed of. Mr. Mott here challenges the doctrine, almost universally held by modern anthropologists, that we have positive evidence of a time when the whole earth was in a state of barbarism, and that all existing civilisation has been developed out of that pre-existing savagery. He maintains; on the contrary, that

"Our most distant glimpses are still of a world peopled as now with men both civilised and savage," and that the facts known to us

"Give us at present no information as to any previous state of human existence, or concerning the origin or first appearance of men."

The main facts to which he appeals in support of his views are those furnished by the sculptured remains on Easter Island, and the prehistoric mounds (with their contents) on the North American continent. In the case of Easter Island, he argues against the possibility of these remains having been produced by the indigenes of so small an island without constant and regular communication with some much larger country; because, if the population were very small, it could not possibly have effected works so gigantic; if larger (the island not being as big as Jersey), the struggle for existence must have become too severe, for labour and thought and skill to be expended on them. But regular communication with a larger population implies

the power of navigating a wide expanse of ocean, and therefore a high civilisation. All this is argued with a force and completeness which cannot be given in a mere outline; and the author considers that it demonstrates the former existence, either in the Pacific islands or on the continent of South America, of a race far more civilised than any of which we have direct knowledge.

In the case of North America the evidence is perhaps stronger, and must be given a little more fully. The great mounds which are scattered all over the continent, and which are of unknown antiquity, furnish two kinds of evidence that they were the production of a civilised race. In the first place, they contain numerous works of art, chiefly sculptured pipe-bowls; but these are of so high an order, and so very far superior to the works of all the existing Indian races, that they are alone proofs of a considerable degree of civilisation. In the second place—and this seems much the most important point—the mounds themselves are often in exact geometrical forms, although of enormous size. One is an exact square, though enclosing an area of twenty-seven acres; another an exact circle, containing forty acres; others are octagons and ovals. These have been carefully surveyed, and no error of figure can be found in them. Few who have not tried know how difficult a thing it is to lay down anything like an exact square on a moderately large scale; and when the sides are over a thousand feet long, as in some of the mounds, it cannot be done without accurate measures and instruments, and a considerable knowledge of geometrical rules. This implies a culture altogether different from that of any existing savages, or even of any people not highly civilised; and, as Mr. Mott well remarks, the desire to make these figures true, far beyond any limit of inaccuracy that on such a scale could be detected by the eye, is a stronger proof of habitual skill and of high mental culture than even the power to arrive at such accuracy. Yet in spite of this most unanswerable evidence of civilisation, our archaeologists have come to the conclusion that these mound-builders were savages of a somewhat higher type than those which still inhabit the American continent—but yet savages. They found this conclusion mainly on the absence of certain works of art, which they consider civilised people would necessarily have produced. But our author argues that

“We often entirely misread the past by supposing that the outward signs of civilisation must always be the same, and must be such as are found among ourselves.”

This is a pregnant remark, and furnishes an answer to some of the most powerful arguments of the opposite school. It has been held, for instance, to be almost a certainty that the stone age of Europe was one of universal savagery, because, if civilised races had then existed, they must, it is said, have left records of their existence in more or less artistic pottery, if in nothing else. But this argument implies that before pottery was invented or metals discovered, civilised man could not have existed. Surely this is illogical. Civilisation is a state of mental progress, and may have manifested itself in

various ways at various stages of the earth's history. As our author well says:

“Nations who leave behind them the thoughts of Confucius or Zoroaster, the language of the Vedas, the buildings of Egypt, or the sculptures of Nineveh, have been our equals in all human qualities and powers; and to think of them as our inferiors, because under different circumstances they used their time and their talents in different ways, is to set the work above the workman, and to make civilisation an inventory of goods and chattels, and not a standard measure of the human mind.”

The knowledge of mathematics, of astronomy, and of mechanics, implied by the minute accuracy of the proportions, levels, angles and orientation of the Great Pyramid, is so marvellous, that Professor Piazzi Smyth believes that its builder must have been supernaturally inspired. Mr. Mott, on the other hand, takes it as a proof that at that remote epoch the Egyptians were already a highly civilised people; and he argues that it is a very significant fact that in so many cases existing low or savage races can be proved to have been preceded at the very dawn of history by races which possessed all the essential attributes of civilisation. A number of collateral issues are equally well argued by Mr. Mott in his very thoughtful “Address;” and, although we may not be prepared to accept all his conclusions, we must admit that he has shown good reason for rejecting the belief that we can trace back the history of the world to a period when all then existing races were savages, or that we have any record of the steps by which civilisation first arose.

It is a good thing even for old and thoroughly well-founded beliefs to be occasionally called in question: that those which are newer and less firmly established should be so attacked, is essential to the cause of truth; and, whatever may be their opinions as to the force of Mr. Mott's arguments, all his readers must admit that he has shown consummate ability in his exposition of views opposed to those of almost the whole scientific world.

ALFRED R. WALLACE.

GERMAN GRAMMARS OF ENGLISH.

Koch: Englische Grammatik. (Wigand, Cassel. 1865-8.)

Mätzner: Englische Grammatik. I. Theil. 2^{te} Aufl. (Weidmann, Berlin. 1873.)

THAT the historical method of studying philology should have been applied to English is nothing very remarkable; it is, indeed, rather to be wondered at that the turn of English should have come so late, but it is a strange phenomenon that the scientific study of English should, till within the last few years, have been entirely engrossed by Germans. It is not enough to say that the two works before us are incomparably the best English grammars that have ever been produced; they are, rather, the *only* English grammars that exist,—that is, if we understand by grammar anything more than an empirical introduction to the abstruse technicalities of the *Eton Latin Grammar*. It is true that we have now an historical grammar of our own—*The Outlines of English Accidence*, by Dr. Richard Morris;

but in point of fulness, accuracy, and method, this work will not stand any comparison with its German rivals.

The two works of Koch and Mätzner, different as they are in plan and execution, yet agree in exhibiting in a striking manner the best qualities of German philological work—laborious accuracy and thoroughness. These cardinal virtues of the philologist are unfortunately still rare in many branches of linguistic research as pursued in England, and are rarest of all in that department of philology which is concerned with the historical development of the English language. In spite of the great and praiseworthy energy now displayed in organising societies and printing texts from the MSS., the standard of work is still lamentably low, or rather there is no standard at all. Many students of English really seem to regard the history of their native language as a playground where ignorance and incompetence may disport themselves at will. A man who would shrink from the responsibility of preparing a school edition of a third-rate Latin poet thinks nothing of offering himself to the committee of one of our societies as editor of an unpublished English text bristling with all kind of difficulties, his own knowledge of the subject being nothing, or next to nothing.

And yet the study of English—the most complex in origin and highly-developed of all languages—postulates an exceptionally wide and systematic preparatory training. No language, for instance, affords so clear a proof of the necessity of uniformly applying the simple principle that before theorising on the origin of words or on the connection of two words in different languages, these words must be traced back to their oldest ascertainable forms. This principle is so self-evident that when thus broadly stated it sounds like a truism; and yet we see that a popular etymological dictionary, every page of which violates this fundamental principle of etymology, has not only found a publisher, but has actually reached a second edition! It is the consistent application of this simple principle which constitutes the main strength of German philology; which, in short, allows it to take rank as a science.

A one-sided application of the historical method is, however, almost as injurious to true philology as the superficiality of the English school. The historical method is apt to degenerate into *antiquarianism*. By antiquarianism we understand an admiration for what is old, simply because it is old, often accompanied by a corresponding contempt for the new. Now this is the besetting sin of modern German philology, and, as a natural consequence, of scientific philology generally. The first and most obvious result of this philological antiquarianism is the neglect of living languages. One has only to glance through such a work as Grimm's *Deutsche Grammatik* to see how cursory and superficial is the treatment of the modern as distinguished from the old Teutonic languages. In the short comparative grammar of Heyne (*Laut- und Flexionslehre*) the modern languages are omitted altogether!

This one-sidedness reacts injuriously on the study of the dead languages themselves.

The antiquarian philologist, having the written symbols constantly before his eyes, gradually comes to abstract them entirely from the sounds they stand for, and at last regards them as *the* language: any attempt to discover the real language represented by these symbols is looked on by him with supreme contempt, as a mere question of "pronunciation." Thus, if asked what a word is, such a philologist will probably have to confess that he has never considered the question; and, if the Socratic method is rigorously applied to him, will end with defining a word as "a group of type-marks separated from other groups by spacing." If a spoken sentence from some African language is submitted to him with a request to point out the word-divisions, he will ask to see the sentence written down; and then, if told that the language has no alphabet and has never been committed to writing, will have to confess that he is utterly ignorant of the real nature of a word. Other grammatical terms, such as "inflection," are used by philologists in the same unintelligent way, and the result is that the real relations of languages, especially of ancient to modern languages, have been utterly misunderstood.

English, especially, has suffered from this one-sidedness. After studying English from the purely antiquarian point of view, and observing the gradual loss of the old forms till nothing is left but such wrecks as the *s* of the third person singular of the verb, the philologist is apt to re-echo without hesitation such statements as that "English has no inflections," or that "English has no grammar, properly so called." If, on the other hand, he begins by ridding himself of all antiquarian prejudices, and sets to work to write down the living language exactly as he hears it, writing only one word where he hears only one, and disregarding the traditions of the printing-office, he will come to the conclusion that "English is a language of great inflexional complexity," that it is a "symmetrically developed agglutinative language," and will finally refuse to consider it an Aryan language at all and insist on classifying it with the Turanian languages.

We thus see that the claims of German philology to the title of science are but partially established. It is, at most, an empirical and one-sided science, and will remain so until the imperative necessity of a thorough training in the observation of living languages as the only sound foundation for the study of the old, is generally recognised. Now that phonetics, which are in fact the science of linguistic observation, have begun to be studied seriously, both in England and—although to a less extent—in Germany, we may hope in time to see a really scientific structure raised on the broad basis of an impartial study of ancient and modern languages.

These reflections were mainly suggested by reading over the chapters on Phonology in the books under review. Koch and Mätzner are both, as might be expected, quite ignorant of phonetics. Neither seems to have taken the trouble to make himself acquainted with the results of modern investigations. For example, Koch—and Mätzner agrees with him substantially—describes the English *w* thus: "*es ist vocalisch ein, und geht in einem von*

den Lippen eigenthümlich gestalteten Hauch über = uw." They both entirely confuse sound and symbol, and the resulting confusion of ideas is simply chaotic. Thus, they first classify the sounds according to their formation as guttural, dental, &c., then treat of their history and correspondence with the Anglo-Saxon, and then in a separate chapter give an account of their pronunciation! To talk of the pronunciation of a guttural or dental is about as unmeaning as it would be to talk about the colour of a colour. They accordingly indicate the "pronunciation" of these chameleon elements—we do not know whether to call them sounds or letters—by a most appalling array of diacritics. The result is that not only are the actual facts muddled and obscured, but also that both writers seem entirely to lose sight of the consideration that the ultimate object of a scientific phonology is not merely to heap together facts, but rather to ascertain the laws they are governed by.

What do we mean, when we say that such a word as *one* is pronounced *wun*? Simply that the present spelling represents not the English words of the 19th century, but the corresponding words of the 16th: the words have changed, but the symbols have been retained unaltered, to the great detriment of all interests, both practical and scientific. The only basis for an intelligible history of English sounds is to write the words of each period, as they were sounded at the time, on a uniform system, in which the Roman letters would be applied consistently according to their present continental values, which they also had in English up to the 17th century. Thus, to take a few typical examples, we would write (the turned *e* = the un-Roman vowel in *bul* *bird*):

XTH CENTURY	XVTH CENTURY	XIXTH CENTURY
nan	oon	wan
kniht	kniht	nait
niht	niht	nait
dæg	dai	deo

If we take this view of philology, it is clear that the work of such men as Koch and Mätzner can only be regarded as one-sided and imperfect collections of material. It is from this point of view that we now propose to criticise their labours.

Measured solely by the antiquarian standard, both works deserve high praise. The full command of the chief stages of the language, the mass of examples from the most varied sources, the minute accuracy of detail which pervades every department, would be very remarkable in an Englishman; and considering that they are entirely the work of foreigners, who have probably had to contend with great external difficulties, they appear simply astounding.

Even the bare enumeration of the contents of the two works would far exceed our limits: a brief mention of their more prominent features must suffice.

In the phonology and inflections the very full details of the Semi-Saxon and Middle-English forms given by Koch deserve special notice. Mätzner is much less full in this respect, confining himself more to the two extremes. Both writers have also made some

use of the phonetic treatises of the 17th century, so admirably worked up by Mr. Ellis, but without appreciating their real value. They both give lists of words spelt alike, but differing in meaning. Koch even goes so far as to register "homonyms," such as *Abel, able*. This is weak. Of more value is Mätzner's list of double forms, such as *morrow, morn*; *waggon, wain*; *cattle, chattel*. Full and interesting details on the genders in modern English are given in both works. The treatment of composition and derivation is full, but of little interest on the whole, most of the details belonging really to much earlier stages of language. Both Koch and Mätzner, as might be expected, fail to distinguish between living and dead derivative elements. Such derivatives as in "*mis-calculate*," "*Egyptology*," are genuinely English, because they are still freely employed, and with full consciousness, to form new words; but it is surely carrying antiquarianism too far to talk, as Koch does, of *stone* as "a derivative formation with the suffix *a*," when this *a* is lost even in Gothic—in fact, everywhere but in the runes of the Golden Horn. Koch has also a volume on Syntax (the second edition of Mätzner's Syntax has not yet appeared), which forms not the least valuable portion of his work. He rightly starts from the principle that syntactical investigations must be based, not on *à priori* logical abstractions, but on a study of the grammatical forms. Here, again, we cannot but admire the thoroughness and fulness of the work: each construction is illustrated by a mass of well-chosen examples from each period.

One important consideration remains, before we close this lengthy review—one which has probably suggested itself already to many of our readers:—is not the enterprise far too vast to be accomplished satisfactorily by a single individual? This question must, we think, be answered affirmatively, even from the purely antiquarian point of view. The task is too great even for half-a-dozen of the hardest workers that ever lived. What is wanted is full special investigations of special departments (pronunciation, inflection, &c.), or of single periods or writers. We consider that the real foundations of historical English grammar are being laid, not by the comprehensive grammars of Koch and Mätzner, but by such work as Child's *Memoirs on Chaucer and Gower*, Ellis's *English Pronunciation*, Abbott's *Shakespearean Grammar*, and Murray's *Scotch Dialects*, all of them classical examples of sound, accurate, laborious investigation in their respective departments. Mätzner himself has shown how much concentration within a comparatively narrow field raises the value of philological work in his *Altenglische Sprachproben*—a book which has done as much to raise the standard of Early English philology as Wackernagel's *Leesebuch* has that of Old German.

H. SWEET.

LECTURES OF THE WEEK.

SIR WILLIAM THOMSON ON TERRESTRIAL ELECTRICITY.

At the meeting of the Institution of Telegraph Engineers on Wednesday, the 14th instant, Sir

William Thomson, the new president, gave an inaugural address. After mentioning the very prosperous and satisfactory condition of the society, he said that the subject on which they were engaged exhibited in an eminent degree the action and reaction of theory and practice. It was unnecessary to mention the services of electrical theory to the telegraph; and he would only briefly refer to the great advantages which science had gained by improved instruments and more accurate means of measurement, made necessary by the practical importance of telegraphy. The object of the address was to direct attention to one particular point in which the practical engineer might in future do great service to scientific knowledge; namely, the subject of Terrestrial Electricity. This name is used to include all electric phenomena connected with the earth, whether static or dynamic; two such phenomena are Terrestrial Magnetism and Atmospheric Electricity. It is known that the earth is a variable magnet; that is to say, if the distribution of magnetism be expressed by a series of spherical harmonics, the first term corresponds to a uniform distribution, and the axis of this revolves about the earth's axis of figure in about 1,000 years. Hence the variation of the magnetic north, and of the dip (discovered by Robert Norman, an instrument maker). Our experience of accurate measurements extends over rather more than a quarter of this period. Of this variation there is as yet no explanation known; the only suggestion having any plausibility being that of Halley, that the earth's nucleus is a free magnet revolving with a period somewhat different from that of the crust. We do not even know whether the earth is a permanent magnet or an electro-magnet. On all these questions we must await further data from the practical telegraphist. Besides this variation of long period, the earth's magnetic field has a diurnal variation, and is disturbed by magnetic storms. Observation has distinctly made out a connection between these latter and the aurora; which (there is every reason to believe) consists of electric currents passing through the upper and rarer regions of the atmosphere analogous to those which can be produced in so-called "vacuum tubes." In underground currents the telegraphist meets with a troublesome difficulty, which may, however, be made use of by theory. Are we to seek the cause of these in the auroral currents of the upper regions of the atmosphere, or in those internal changes which modify terrestrial magnetism?

For the solution of these questions it is most important that observations should be made with an electrometer at each end of every telegraph wire. If this be used with a condenser there will be no interference with the work of the telegraph, and observations may go on even while messages are being delivered, the pause between two words being quite sufficient to enable the practised observer to judge what the indication would be if the wire were at rest. If an electrometer be not available, a galvanometer of very large resistance may be used.

We know of no direct connection between atmospheric electricity and earth-currents, but the telegraph forms a link. Submarine lines sometimes, and air-lines always, are disturbed by thunderstorms. In England, France, and Italy the surface of the earth is found negatively electrified in fair weather. Piazzi Smyth found positive electrification on the Peak of Teneriffe, but this observation is not to be relied on; the doubt is an important one, and should be cleared up.

The common statement is that the air is positively electrified. This is based on observations which only prove the negative electrification of the earth's surface. There is, however, evidence that the lower strata of the air are negatively electrified. This is found by experiments on air brought into a room by the window on a fine day. There is also great probability that the upper strata of the air are positively electrified.

Observations for the settlement of these questions should be made at all telegraph stations. By assisting in this work, the society might do very considerable service to science.

ROYAL INSTITUTION.—FRIDAY EVENING LECTURES.

YESTERDAY evening Professor Tyndall gave a popular account of a series of observations and experiments which he had undertaken on behalf of the authorities of Trinity House, under the title of the "Acoustic Transparency and Opacity of the Atmosphere." It is a well-known fact that the opacity of the air to light, produced, e.g., by fog or snow-storm, does not interfere with its "transparency" (there is perhaps no better word) to sound. The lecturer regarded opacity to sound in the atmosphere, observed under certain circumstances, as due to a want of homogeneity, which he attributed to the presence of a varying quantity of aqueous vapour in different portions of it. At the meeting of the Royal Society on Wednesday last, when the subject was discussed, unfortunately, in the absence of Professor Tyndall, Professor Stokes and Sir W. Thomson preferred to refer the heterogeneity of the air to differences of temperature for the most part, this cause being more competent to produce the observed effect. Professor Stokes also described some theoretical deductions of his in respect of the effect of a wind in the transmission of sound, showing how if the wind is travelling in the same direction as the sound, it curves the wave-front forwards, weakening the effect in the direction of propagation, but leaving a perfectly clear sound to proceed in the transverse direction. Besides the great theoretical interest attaching to the subject, it is, of course, of great practical importance in connection with the use of fog signals at sea.

MR. ELLIS ON A PHYSICAL THEORY OF ASPIRATION.

At the meeting of the Philological Society last night (Jan. 16), the President, Mr. Alexander J. Ellis, read the following paper:—

"Aspiration is a term vaguely applied to various modes of utterance not involving the voice proper, and generally as vaguely symbolised by *h*. An explanation of its phenomena is important philologically, to determine the meaning of the Sanscrit letters, of the Greek alphabet, of Grimm's law, and numerous derivative changes. The utmost confusion prevails concerning it among older grammarians, and even the most recent and esteemed phonologists. Without criticising these, an attempt is here made to determine what actual physical phenomena are involved, and to refer these briefly to the old symbols. My indispensable new (paleotypic) symbols inclosed in () are explained as they arise. For modern native pronunciation of Sanscrit I am indebted to the personal audition of two highly educated Bengalese gentlemen, Messrs. Gupta and Mookerjee. My knowledge of the opinions of the native commentators is derived wholly from Professor W. D. Whitney's translation of and commentary on the *Atharva-Veda Prātiśākhya*. Fuller details will appear in Part IV. of my *Early English Pronunciation*, where the investigation was rendered necessary by Professor Whitney's theory of the English *wh*."

"So far as speech sounds are concerned, man is a self-modifiable and self-working wind instrument, with bellows (lungs), tube (windpipe), containing a valve (glottis), in a closable box (larynx), terminating in two expansions, one tolerably fixed but full of obstructions (nose), the other (mouth) greatly variable by an internal plug (tongue), and constrictable orifices at either end (arches of palate, mouth); and these expansions may be used separately or jointly, by means of a valve (uvula)."

"When the mouth is full of air, independently of respiration, its movable parts may be *smacked*,

producing *clicks* (*ʈh*), of which *t't*, *c'ck*, are English. When the air in the mouth is confined by closing with lips or tongue, uvula and larynx, it may be constricted, by raising the larynx like a piston, producing *implosions* (*ʈh*), dull thuds, varying in effect with the shape of air inclosed. Of these (*t't*) occurs in Yorkshire at *t' door*, two (*t't*, *p*) in Saxony, and these, with the third (*k*), probably in the North American Indian languages."

"Respiration is a bellows-action where the air is drawn in (inspired) and expelled (expired) through the same orifice (glottis). This bellows-action may be feeble (*h*), or strong (*h*), or variable, continuously or in jerks (*h*). Sounds arise when sufficiently rapid and extensive undulations of air are produced, by contraction of passages, or obstructions, or internal resonance."

"In *inspiration*, the glottis is wide open, the breath may enter through the mouth (*i*) or nose (*i*), and gives rise to chirps (*p'i*), false aspirate (*h'i*), which may be sometimes heard when Frenchmen essay English, gasps, sobas, snores, &c."

"In *expiration*, the glottis may be wide open, producing *flatus* (*h*); or the vocal chords, which form its edges, may be *nearily* in contact, leaving a chink, so that there is a great escape of air through it, while the edges vibrate, producing sonorous waves, the result being *whisper* (*h*); or the vocal chords may be perfectly in contact, opening by the bellows-action, and closing by their own elasticity alternately, and thus giving a regular succession of *puffs*, the result being *voice* (*h*). Before reaching the outer air these (*h*, *h*, *h*) are *differentiated* by passing through the larynx box, the pharynx, the nose or mouth, which present obstructions, roughnesses, vibrating membranes, or muscular organs, &c., and form various changeable resonance chambers, the air in each having its own musical pitch and being capable of very variously modifying the original action, producing the hisses, buzzes, murmurs, vowels, and glides of actual speech."

"*Glottids* are the marks that point out the management of the glottis, which a good speaker has under thorough control. The *clear glottid* (*h*) indicates that the edges of the vocal chords are brought exactly into the proper position for voice (*h*) at the moment that breath is expired to set them in action, giving a clean edge to the sound; it is the singer's 'shock of the glottis,' the true French *h aspiré*. The *clear jerk* (*h*) shows that the breath is jerked suddenly, but not violently, at the beginning of the vowel sound, so that it begins louder than it continues; it is the proper singer's *h*, and the one I habitually use myself, and it is the Sanscrit *h* as now pronounced at Benares; in Bengal this jerk is constantly omitted, as in many parts of England. Whether or not this is the Arabic and Hebrew initial gentle *ha*, *he*, I cannot say. The *check* (*h*) shows that the vocal chords are so tense and firmly brought together that they form an airtight closure, requiring considerable condensation of the air in the chest to break it open, so that the vowel commences *staccato*; it is the Arabic *hamza*, Hebrew *aleph*, and is very frequent in ordinary German conversation. The *explosion* (*h*) ensues when the tightness of (*h*) causes the breath to break through with such violence that the regular puffs for voice (*h*) cannot be immediately formed, giving (*h* + *h*), heard in nervous, exaggerated, ill-placed aspirates as *my h-eye*; and in stammering, cough, &c."

"For the *gradual glottid* (*h*), the glottis is wide open, as for *flatus* (*h*), when the breath begins to issue, and then contracts with more or less rapidity to the stage of *whisper* (*h*), over which it passes rapidly to the voice, so that (*h*) represents (*h* + *h* + *h*) with short (*h*), and (*h* + *h*) the same with very perceptible (*h*), the *differentiation being throughout the same as for the final sound*. Thus (*h*) = flated gradual glottid + vowel, indicates a perceptible *flatus* through the vowel position preceding the vowel. But (*ha*) = *flatus* + glide + vowel, shows merely *flatus* through any indeter-

minate position while the tongue is assuming the vowel position. When the flatus is gentle, either may be the Greek *spiritus lenis*. When jerked (π'ha) is the theoretically, and, I think, (π'ha) the practically used aspirate for Germans and such English as do not say (π.α), and was probably the Greek *spiritus asper*. This may be the Arabic and Hebrew gentle initial *ha, he*. In Japanese I seemed to hear (π'ha, π'he, π'ho), but an anterior (π'hi π'hu) seem to have further developed to (k'hi phu), where (k'j) is German *ch* in *mädchen*, and (ph) is *toothless* (f)."

"All the above glottids may be final; (a,) ends clear and sudden; (a,π) with a jerk, giving a remarkable feeling of want of finish in Benares Sanscrit; (a;) is scarcely different; (aπ) or rather (aπh) = vowel + whisper + flatus through the same position, is Sanscrit *visarjaniya*; it is heard constantly in Danish and Icelandic after final (i, u) sounds, developing almost into (k'j, ph) or (wh) respectively; after (a) in Benares Sanscrit, the position is slightly narrowed to make the sound more audible, and in dictation even (s) is used thus (aπs). It may be the Arabic and Hebrew final gentle *ha, he*, when audible."

"The above are actions of the *elastic* glottis, the following are due to the *cartilaginous* glottis, or clink between the folds of mucous membrane covering the arytenoid cartilages, as results from Czerniak's laryngoscopic observations (*Vienna Acad. S. B. Math. Cl.*, 29th April, 1853, p. 576). The wheeze (h) is flatus driven through this cartilaginous glottis, in an unbroken stream, and (gh) the same when interrupted and fluttered by mucus; either, for they seem not to be distinguished, forms the Arabic *hha*, Hebrew *heth*, often confused with (kh) by Europeans. The bleat (g) arises when the breath, forced through this glottis, which is greatly compressed, breaks up into puffs, forming a species of harsh voice, which may precede the true vowel (ga), the bleat ceasing as the true voice begins, or continue through it (ga), and may, like a sheep's bleat, be nasalised (ga). These forms of bleat answer every condition laid down by the native commentator for the ancient Sanscrit *h*; moreover, (g) is considered to be in Arabic a harsher form of the check (j), which is closely related to the jerk (π), the Benares Sanscrit *h*; and again (g) was even by the Alexandrine Greeks confused with Greek γ, then, probably, as now, a species of Arabic *ghain* (like one form of the Dutch *g*), which Professor Whitney thought to bear some relation to the commentators' descriptions. The croak (r) or Danish and low German *r*, is merely a very mild (g), and, like it, capable of sounding throughout a vowel (observed by Donders), and is also often confused with the uvular (r) of France, Germany, and Northumberland. This croak in a very mild form is supposed to exist in Shields, and in a very coarse form in Wiltshire."

"A hiss is flatus through a narrow passage or against a sharp edge, as (s, f); and a buzz is hiss mixed with voice caused by driving voice through a hiss position, as (z, v). The glottid actions apply to them; German *sich's!* is (π'ziis) or (sziis); English *seize* is (siizh) or (siizs), the German form being unnatural to English mouths. According to Professor Whitney, English *wheat*, *hue* are (π'whiit π'huu), where (π) is the German *j*; that is (whiit π'huu), and I have heard the first from Americans. I believe that (whiit π'huu) are as natural English sounds as (siit suu), and that Professor Whitney's are as unnatural as (π'ziit π'huu). Of course (wiit juu) are still more easy, and are generally used by Southern Englishmen. The effects of medical (π) are important. In English, *since* *sins* (sins sinzh) I believe the (n) is the same; Mr. Melville Bell has (sinzha) for *since*; I have heard an Indian say (sinzh) with very brief (z) for *since*. All this and much more is observable in Benares Sanscrit."

"Mutes (k, t, p) are absolutely silent positions. In producing their speech effects, national habits differ. English, French, Italians say (p, a), the

clear glottid being formed while the mute position is held, and, voice being simultaneous with the relaxation of mute position, a *gliding* voice sound is heard before the fixed vowel. In German and Danish, the glottis being open when the mute position is changed, the vowel is preceded by more or less distinct flatus, as (p, a, p'ha, p'ha), and in the last case the flatus develops through the lingering of the organs near the mute position, into a hiss (p + ph + a), which may be further developed, as in *pfaden*. In Sanscrit *p* we have the first effect, in Sn. *ph* the second. The hiss is even generated for all the Sn. mutes, *k, c, t, p*. This is named *jihvāmūtiya* and *upadhmaniya* for the first and last, but being isolated only for the three intermediate, appears alphabetically for them alone, as *ç, sh, s*, originally (jh, sh, s); but even in Benares the first and second are now pronounced alike as (sh), and in Bengal all three have become (sh). *Par parenthèse*, in Benares Sanscrit *c* is the mute corresponding to (ç, t), and is a real mute (kj), not English *ch-at*, which Sn. *ch* = (kjπh) or nearly (kjπh) more closely resembles; but theoretically the 'aspirated cerebral' (tπh), developing (tsh), gives the exact English sound, this, however, I did not hear distinctly; 'cerebral' *t* is English 'coronal' *t* = (t), *t* is French 'dental' *t* = (t). This dental (t) occurs in Cumberland and Yorkshire, and Ireland before (r), more or less followed by (h)."

"The sonants (*g, d, b*) are smothered voice-sounds formed without relaxing the mute positions (but cannot be continued after the air in the mouth becomes much condensed). In English and Sanscrit this smothered voice lasts just long enough to be recognized, and then the mute position, being broken, the glide to the vowel is made, the same as for (p), thus (ba). But if there is the same lingering near the mute position as produced the hisses (ph), &c., in the former case, in this latter case a buzz results, the (k, kf, t, t, p) positions thus producing (gh, j, zh); (z), or (dh) and (bh), of which (zh, z) may both occur from (t) and are never found in Greek, while (gh, dh, bh) are modern Greek γ, δ, β, and (j, bh) are the only sounds developed in Sanscrit, although it is doubtful whether they were developed by this means, and *y, v*, may have been anciently always vowels, as they still are after consonants, although *r* is dental in Benares, and = (b) in Bengal. Now it is evident that the voice in (b) may be true voice, as (ba), or may be bleated as (ga); or the bleat not being perceptible till after relaxation of mute position, as (bga), which corresponds to all conditions of the old Sanscrit 'sonant aspirate'; or may be jerked out as (bna), which corresponds to the Benares pronunciation of the same, and may often be heard from Irishmen. In this case we have not a lengthened sonant and then a jerked flatus ('b + πh + a'), as Germans pronounce Sanscrit; this was entirely repudiated by both Mr. Gupta and Mr. Mookerjee, who, each of his own accord, mentioned the pronunciation to me to warn me against it. No trace of flatus occurs after the sonants in (bna), but there is a momentary energising of the following vowel. In Chinese, as pronounced by Dr. Wang Fun, a Cantonese graduate of Edinburgh, after (tsh, ts) there is often a similar jerked emission, as (tshna, tsna) very perceptible, where the (πh) would be almost unintelligible. Thus the justification of simple forms for *ph, bh*, &c., in Sanscrit is complete; the essential difference between 'aspirated' surds and 'aspirated' sonants is evident, and the 'sonant' classification of *h* by natives is explained."

NOTES AND NEWS.

THE Trades Guild of Learning will issue, on Monday, a statement drawn up by the Council, describing the nature and objects of the Guild. This movement is not an attempt of the upper and middle classes to educate the people, but a spontaneous endeavour of some leading workmen to organise the education of their fellows:—

"So far from looking to or leaning on Government for the industrial elevation of the working people, this Guild is founded to stimulate and organise public enterprise independent of the State."

It is desired that workmen should be educated—(1) in the sciences underlying their respective industries, and (2) in various branches of the higher education:—

"Our mission is to give the interest and dignity of science to all industry—for the many workers, not the few theorists alone."

The Guild has placed itself in communication, with a view to united action, with the "missionary system" of the University of Cambridge, now so successfully started in many manufacturing towns, which owes its conception and formation to Mr. James Stuart, of Trinity College; with many of the leading trades' unions, whose organisation admits of being applied to educational purposes; and with the City Companies, which have recently appointed an Education Committee to consider the means of promoting technical education in the various industries of the metropolis. A memorial has been also addressed to the London School Board, to the effect—(1) that the simple elements of science, especially the elements of mechanics, should be taught more systematically in our elementary schools; and (2) that the schools should be provided with proper rooms and appliances for the teaching of mechanical drawing. The Guild will endeavour to form local boards, consisting mainly of workmen, who will be responsible for the preliminary formation of classes, and the collection of the funds necessary in order to obtain University teaching.

M. VAN DER WYCK, Professor of Philosophy in the University of Groningen, has, in a *brochure* of sixty pages, reprinted the article on "Mill" which originally appeared in *De Gids*. The main contentions of the Dutch philosopher are: that "Mill's theory of the use of syllogisms is one-sided," and that the "concluding from the particular to the particular need not by any means be the type of all argument." Further on, the Professor lays down the rule that "the theory of Mill does not hold good in those cases where not only the minor is a synthetic proposition, but where the major also might be termed an independent truth, an indisputable law." Mill's theory is false, "whenever from the untruth of the conclusion there would follow only the untruth of the minor, never that of the major." Finally, the proposition of Mill, that "the conclusion is not an inference drawn from the major, but an inference drawn according to the major," is rejected as not universal. "It holds good only for many syllogisms."

THE history of the collection of models of ruled surfaces recently placed in the South Kensington Museum, and believed to be the finest of its kind in existence, is rather curious. Some officers of the Science and Art Department at South Kensington had recommended the formation of a collection of models similar to those which had been found so useful in the Conservatoire des Arts et Métiers, and in the Ecole Polytechnique in Paris. An order was consequently given, some twelve years ago, to a M. Fabre de Lagrange, who had constructed some of them, to make a set for the Educational Museum at South Kensington. It appears that for some years M. Fabre obtained better employment. At any rate the order was not executed, and was considered as lapsed. During the siege of Paris, however, employment being scarce, M. Fabre set about the execution of the almost forgotten order, and carried it out successfully amidst many risks and privations—trials through which he lost both his wife and his mother. The models themselves narrowly escaped destruction by the bursting of a shell in the next room. At the end of the second siege, when Paris was again pretty open, he wrote to South Kensington to ask whether he might consider the order as still outstanding, and, under the

circumstances, it was very wisely as well as considerably decided to make the purchase. The preparation of the catalogue was entrusted to Mr. C. W. Merrifield, F.R.S., and contains a running commentary on the models, as well as an appendix on the mathematical classification of ruled surfaces. Every one interested in solid geometry should certainly visit this collection of models.

AN instrument for observing the altitude of the sun has recently been found under a stone near the harbour of Valentia, county Kerry, Ireland. When discovered it was enclosed in a case, which on being touched fell to pieces. The graduations were very carefully and accurately made, but there was no maker's name or date. The instrument was of a most primitive kind, being intended to be suspended from the observer's thumb while he made the observation, and no such instruments have been used for the last two hundred and fifty years or more. Two ships of the Spanish Armada are known to have been wrecked near Valentia, and it may have belonged to one of them; or perhaps it was stolen from some merchant vessel and concealed where it was found.

It is generally believed that the only instrument that the Government has sanctioned for the observation of the transit of Venus in India is a photo-heliograph. This is not so; the whole of the instruments recommended by Colonel Strange and Dr. De la Rue having been ordered. They are now approaching completion, and the observatory will be thoroughly equipped with first-class instruments. The site is not chosen, but it will probably not be far from Peshawur.

MR. MARTIN, in a letter to Mr. Lassell published in the *Astronomical Society's Notices*, has pointed out the favourable chances that observers may have during the present apparition of *Uranus* of contributing something towards the decisive settlement of the question respecting the existence of Sir William Herschel's additional satellites of the *Georgium Sidus*. The geocentric place of *Uranus* in the heavens is now only some twenty seconds south of that in which it appeared in 1790 at a three-days' later date, so that the planet in its retrograde course passed on Thursday night (Jan. 15), and will pass on the night of February 6 the same stars which it passed on the evenings of January 18 and February 9, in 1790. Some of these stars were then supposed to be additional satellites. It seems certainly desirable that the opportunity for recovering these little stars, and also for ascertaining the effect of the neighbourhood of the planet upon their visibility, should not be allowed to slip away unused. It will be remembered that Sir W. Herschel announced the discovery of six satellites to *Uranus*, two only of which, viz., the second and fourth, have been confirmed by subsequent observations. Two inner satellites revolving within the first of Sir W. Herschel's have been observed by Mr. Lassell (who named them *Ariel* and *Umbriel*) at Malta, to which place he transferred his large reflector on account of the great clearness of the atmosphere there, and by others. The existence of four of Sir W. Herschel's satellites is therefore very uncertain, and it is to these that Mr. Martin refers.

A DISCUSSION took place at the last meeting of the Royal Astronomical Society on some suggested changes of position of stars noticed by Mr. Prince, who had detected considerable discrepancies in the relative places of certain stars from those depicted in the late Admiral Smyth's well-known work, the *Celestial Cycle*. It was stated by Mr. Lassell, Captain Noble, and others, that the drawings in this valuable work, so much used by the amateur astronomer, were not at all to be relied on; in fact, that they were only intended to give a good idea of what was represented, and, not being the results of accurate measurement, could not afford evidence of change of position. This only applied to the drawings, not to the places given in the text of the work. Mr. Lassell mentioned a

drawing of his own of one of the groups in question, made in 1856, which agreed with Mr. Prince's recent sketch, and not with that in the *Celestial Cycle*.

THE second part of the *Flora of British India*, which is being prepared at Kew, under the supervision of Dr. Hooker, is ready for publication. This important undertaking is likely to occupy the attention of the botanists engaged upon it for some years to come. It involves the critical examination and description of the whole of the flowering plants of our Indian possessions, numbering some thirteen to fourteen thousand distinct species. The new instalment continues the Polygalaceae, and proceeds as far as the Geraniaceae.

No. 147 of the *Proceedings of the Royal Society* contains Professor Burdon Sanderson's note on the Electrical Phenomena exhibited by Venus's Fly-trap (*Dionea*). The blade of the leaf is found to possess a current proceeding from base to apex, but what is very remarkable is that the stalk contains one which proceeds in the opposite direction. The result of snipping off successive portions of the stalk is to increase the effect upon a galvanometer of the current in the blade. When the blade is irritated, the blade-current appears to be diminished, at first momentarily (but afterwards to be slightly augmented); correspondingly the stalk-current appears to be intensified.

THE January number of the *Quarterly Journal of Microscopical Science* contains, in a condensed form, a translation of the important memoir by Le Monnier and Van Tieghem, on the Mucorini or Moulds of which the species appearing on flour paste or bread may be taken as a type. By an ingenious method of cultivation, which the authors have been the first to devise and practise, many errors of observation arising from the confusion with one another of kinds really distinct, has been avoided. A flood of new light has been thrown on the life history of these microscopic plants, which is all the more striking owing to the simultaneous clearing away of many points which were anomalous, especially in the work of Brefeld, Klein, and some other observers in Germany. The whole history of a large green mould, originally supposed by Agardh from its colour to be an alga, has been carefully worked out. The development of the zygospore is most singular, and quite unique in its details. This species is very rare, but has principally been met with in oil-mills; the authors, however, obtained it in Paris on cochineal-dye.

Some other moulds are remarkable for being able to pursue indifferently an autonomous or parasitic mode of life.

THE *Medical Record* reports that the Geographical Society of Italy has received from Alexandria, with the news of the death of the explorer Miani, two living individuals of the Akka or Tikku-Tikki, whom he had bought of the King Munza and forwarded. These individuals, of whom one is eighteen years old and forty inches in height, and the other sixteen and thirty-one inches high, are regarded by Miani as belonging to the race of dwarfs described by Herodotus, and recently discovered and described by Schweinfurth. They are potbellied, very long and thin-limbed, and knock-kneed, with spherical and prognathous crania, copper skins and crisp hair.

MR. MORTIMER COLLINS' novel *Transmigration* (which we shall shortly notice in its artistic aspect) is of some interest to the psychologist, as showing how the progress of a rational science of mind will in time render impossible the wild conceptions which were easy enough to our ignorant forefathers. The hero lives an ordinary earthly life of the last generation (a little sensational, but the effect of this is reduced by the archaism), then dies, passes a few probationary hours, magnified into years, in the planet Mars, and returns to earth as a new-born child, to pass a second life with all the memory of his previous

one preserved. The educated reader who knows that memory is always associated with permanent connections of different portions of brain substance, experiences a sort of shudder at this terrible incongruity; the more so as the infant is represented as actually able to speak, but obliged to conceal his powers for fear that his secret may be found out or he may be confined as uncanny. One is rather reminded of the baby who on seeing his father kiss the nursemaid by mistake for himself, said: "Oh, you old rascal, won't I tell ma when I can speak!" There the impossibility is part of the joke; here it is not perceived by the writer, who by his very unconsciousness forces it on the reader's attention.

DR. ACLAND is editing, with the aid of Mr. Carey, the resident physician of Guy's Hospital, the manuscript catalogues of Pathology, by the eminent Dutch physician, Professor Schroeder van der Kolk. The volume is paid for by a grant of the Radcliffe Trustees, and is already in the press.

AT Cambridge a Modelling Society has been formed, under the presidency of Professor Cayley, from which a great deal of useful work may be expected. The desire for physical realisation of abstract ideas which gives rise to this branch of industry is characteristic of the present stage of the exact sciences, being exemplified by the conceptions of Faraday, followed up by Clerk Maxwell in electricity, and by the increasing use of graphical methods of representation and calculation in all branches of physics. The most important step recently made in this direction is the classification of all possible shapes of surfaces of the third order, by Professor Klein, of Erlangen. This was made possible by the actual construction of models of certain special forms, the number of which has been considerably increased by the beautiful method of Professor Henrici.

M. GARNIER, the French explorer, has been assassinated by Chinese rebels at Tonquin. The news was sent by Admiral Dupré to Admiral de la Roncière, and by him communicated to the French Geographical Society.

THE Meeting of the International Congress of Orientalists in London has now been fixed for the 14th to the 19th of September. It promises to be a great success, as it ought to be, if England is really the greatest Oriental empire in the world. We trust that every facility will be given to native scholars in India to be present at the Congress. Their expenses might well be paid by the Government, and several of them might give useful evidence to the Indian Committee, now appointed by Parliament. It is a pity that the building of the Indian Museum should have been so long delayed, so that our guests will have to go up in a loft in order to view the finest existing collection of Oriental works of art, antiquities, and manuscripts that exists in the world. At all events, they may now be told that these treasures will not permanently remain under these *piombi*, but that in a few years they will be exhibited in a Museum not unworthy of them and of our Indian Empire.

M. ADOLPHE PICTET is preparing a new and revised edition of his *Origines Indo-Européennes*.

AT the last meeting of the Société Asiatique, M. Garrez explained why the restoration of the Stele, containing the inscription of King Mesha, had been so long delayed. The reason is that some fragments of the stone are still kept back in England, or, at all events, did not reach M. Clermont Gaméan before his departure for the East.

M. Oppert mentioned at the same meeting that there was among the antiquities brought back by Mr. Smith from Koyundjik, a brick of the time of the Arsacidae, which contained a double date, and is of great importance for the chronology of the Parthian kingdom.

MEETINGS OF THE WEEK.

GEOGRAPHICAL (*Monday*).

DESPATCHES were read from Mr. Forsyth to the Royal Geographical Society on the progress of the Yarkand and Kashgar mission. He described the Karakorum route, which he preferred as easier than any other. Mr. Forsyth had himself arrived at Yarkand in November, and expected in less than a fortnight to continue his journey to the capital of Atalik Ghazee, and afterwards to Aksu. Sir Henry Rawlinson observed that if this expectation should be realised, this would be the first instance on record of Europeans who had made the journey to Aksu from Kashgar. Professor Leone Levi then read his paper on Paraguay. Nearly thirty new Fellows were elected.

THE ASSOCIATION FOR THE IMPROVEMENT OF GEOMETRICAL TEACHING (*Annual Meeting, Tuesday*).

The object of the association is to produce a syllabus on which text-books may be modelled, which shall be more suited for elementary instruction than Euclid's *Elements*. The meeting in question was mainly occupied with the acceptance of the new part (Book V.) of the syllabus, treating of Proportion and Application.

ANTHROPOLOGICAL INSTITUTE (*Tuesday*).

A PAPER, by Mr. S. E. Peal, was read "On the Nagas and Neighbouring Tribes." The tract of country occupied by the Nagas lies mainly between lat. 25° N. to 27° 30' N. and long. 93° 30' E. to 96° E. It is bounded on the east by the country of the Tsingpos, a distinct race showing strongly-marked differences in language, physique, and customs; on the north, by Assam; and on the west are various other tribes; while to the south the boundary is undefined. The inhabitants of the tract, although all termed Nagas, are divided and subdivided to so great an extent, that few parts of the world can present such a minute segregation of innumerable and independent tribes. —Mr. C. B. Clarke contributed a paper "On the Stone Monuments of the Khasi Hills."

NUMISMATIC (*Thursday*).

THE whole time was occupied by the reading of parts of a very important paper, by Mr. Barclay V. Head, on the coins of Syracuse. The arrangement of the copper coins was entirely novel, and such as, if established, to prove that in Sicily copper was never from the earliest times used except as money of account. Strong numismatic reasons were urged for supposing that the successive reductions of the weight of the Sicilian litra were merely expedients for the relief of debtors. A most plausible theory was started to account for the introduction of an electrum coinage in the place of pure gold; Mr. Head supposing that the electrum coins were passed as gold, all debtors thus saving to the extent of the proportion of silver contained in the electrum. Finally, Mr. Head was able to form into a series those very interesting Sicilian coins inscribed *Συρακυσίων*, and to show the probability that they were all issued at one period by the Sicilian cities in alliance with Timoleon. It is noteworthy that Diodorus speaks of the *συνπαξία* of Timoleon.

LINNEAN (*Thursday*).

A PAPER by Mr. Gwyn Jeffreys was read on some species of Japanese marine shells and fishes which inhabit also the North Atlantic. The mollusca noticed by the author were preserved by Capt. St. John in H.M.S. *Sylvia*, during 1871 and 1872, on the coasts of North Japan. His dredgings varied between 100 and 300 fathoms. After passing in review the works of naturalists who had described the marine shells of Japan, and especially the "Mollusca Japonica" by Dr. Lischke, with reference to those species which are common to Japan and Europe, Mr. Jeffreys proposed to record from Capt. St. John's dredgings thirty-nine species, and to give the range of depth for each of them as he had obtained

it in the *Porcupine* expedition of 1869 and 1870. He then offered an explanation of the occurrence of the same species in the Atlantic and Pacific oceans, by suggesting that it was probably owing to involuntary transport by tides and currents, and not to voluntary migration. Very little is known about the direction and force of deep-sea currents; but high northern species might be transported on the one side to Japan and on the other to Europe by a bifurcation of the great Arctic current, which has been traced as far south as the Straits of Gibraltar in the course of the *Porcupine* expeditions. The entry of northern species into the Mediterranean may be accounted for by the former existence of a wide channel, or rather an open sea, between the lower part of the Bay of Biscay and the Gulf of Lyons, which has been satisfactorily proved on geological grounds to have been formed since the tertiary epoch. A list of the mollusca referred to by the paper was given, with critical remarks, as well as a list of twenty-two species of fish which Dr. Günther communicated as common to the Japanese seas and the North Atlantic and Mediterranean.

FINE ART.

An Art Tour to Northern Capitals of Europe.

By J. Beavington Atkinson. (Macmillan and Co.)

MR. ATKINSON deserves the thanks of all art-students for collecting into a definite form the stray notes and impressions of his visit to Scandinavia and Russia. He is within the mark in saying that the territory has scarcely become beaten ground. The natural beauties of the North grow yearly more familiar to Englishmen, but the art treasures of the great Baltic cities remain practically unknown to us. In the first place, there is a certain reluctance in the critical conscience trained in richer schools to enter at all into sympathy with the rough Northern art. —Mr. Atkinson himself is not able to divest his thought of a certain scorn of his self-chosen theme; and, in the second place, it must be confessed that there is something cold and uninviting in the art itself, something limited and meagre in its very spirit, and indeed, setting aside sculpture and poetry, in which the Danes at least have achieved brilliant successes, the absolute executive attainment of the Northern peoples in the fine arts has not been at all striking. Nevertheless there is enough to be known to make Mr. Atkinson's generally accurate and judicious essays a welcome novelty; and reminding the student that æsthetic instruction is to be found even in the failure and weakness of nations, we cordially recommend the notes of this Art Tour to all travellers intending to visit Denmark or Russia.

The chapters of the book are of necessity desultory. They do not pretend to any special connection. In the first, after dealing in a rather superficial way with the archaeological and historical collections which have justly earned for Copenhagen the title of "the city of museums," the author gives a sketch of the Danish school of painting. It had the misfortune to be founded by a man imbued with all the worst traditions of the last century. The once-famous Niels Abildgaard was a frigid theorist, ignorant of nature, and inspired by the most futile art. His whole soul was steeped in a semi-classic affectation. The Danish critics consider his colour to be the result of the study of Titian; to myself, it suggests rather the ignorant imitation of

dirty specimens of Nicolas Poussin. At the same time I must enter a protest against Mr. Atkinson's sweeping condemnation of this old-fashioned, affected master. In some of his pictures at Kristiansborg the tone is very harmonious and even: an amber sunlight, cleverly imitative of Claude, floods the whole canvas effectively, but the general result, in spite of the technical respectability, is decidedly uninteresting. In a better age Abildgaard would have painted better; in his palmiest days he was an excellent draughtsman. There is a work of his, a *Philoctetes*, grotesquely designed in the nude, that distinctly prophesies of Thorwaldsen in his earlier, more grandiose style. And Mr. Atkinson has not mentioned—a cruel omission—that Abildgaard was the principal master of the great sculptor.

Abildgaard's greatest pupil in painting was Eckersberg, a painter for whom Danes profess an enthusiastic admiration, but whose works at first sight have exceedingly little to recommend them to a foreigner. Though the pupil of Abildgaard, and, worse still, of David, he worked in a direction diametrically opposed to those pseudo-classical masters. In spite of his dulness, his opacity, his want of the sense of beauty, he in reality created Danish painting, and the questionable qualities just enumerated have clung by the school ever since. The admirable Danish critic, Julius Lange, has judiciously said, "It is of far more importance for our art to know how Eckersberg painted than what he painted;" and his method was one that in a country where Nature offered more tempting scenes to an artistic eye could scarcely have failed to succeed. He drew the young painters of his day into the open air, and bade them, instead of drawing vast cartoons of Love, aided by the Muses, subduing Ignorance, paint with extreme care shore and meadow and the quiet peasant-life. A group of youths obeyed his injunctions with scrupulous fidelity; and not possessing between them all so much imagination as the poorest of our own pre-Raphaelites possessed, they copied the dreary outlines of Danish scenery and the blunt features of Danish boors with the cold accuracy of photographers. The works of these men Mr. Atkinson reviews with care and attention, losing his temper a little over some of them—a sin which all who have gazed at the great blank canvases of Sonne, or the tame portraits of Constantin Hansen, will be inclined to think venial.

Mr. Atkinson tells us that when he was in Copenhagen his introductions were chiefly to artists of the anti-national party. This is a misfortune; had it been otherwise, he would scarcely have learned that such a party existed, and he would have avoided the mention of totally worthless painters. To criticise severely the productions of such persons as Simonsen and the Gertners is to break butterflies upon the wheel; and the space occupied with these persons, unknown even in Copenhagen to all but an absurd clique, might well have been filled with a notice of those men among the younger Danes whose works are worthy of general recognition. Marstrand, who died last summer, was a painter of great skill and power. Absolutely without the higher qualities of imagination, he was a genre-painter of ex-

ceptional technical skill, a humourist, and a good colourist. He is the one exception to the prevailing dirtiness of Danish colour. The author dismisses him in a few lines, in which he makes no reference to those larger works, such as the frescoes in Roeskilde Cathedral, by which Mastrand best sustained his reputation. Among the genre-painters Exner stands highest; he has the gift of masculine and tender humanity, and a sort of genre-imagination that passes for something sublime in Copenhagen. But the greatest of all the younger Danish masters, beyond question, is Carl Bloch, a painter of whom Mr. Atkinson speaks under the misnomer E. Block, whose "Samson" he justly praises, but whose charming works in the Royal Chapel at Frederiksborg he does not appear to have seen. To close these animadversions on the Danish painters, surely the author is misinformed in stating that J. W. Gertner is reputed to be a first-class portrait-painter in Denmark and Sweden. Lange does not even mention him.

The chapter on Thorwaldsen is genial and interesting, but adds little that is new to our critical estimate of the great sculptor. The author allows a personal bias in favour of Gibson to stand in the way of his full appreciation of those large masculine qualities that set Thorwaldsen high above all modern sculptors, even above that gracious genius whom Mr. Atkinson delights to honour. But there is a more serious want than this bias implies. A work on the art of Scandinavia is indeed imperfect that does not deal with the Danish school of sculpture that followed Thorwaldsen. There is, to be sure, a short word of commendation here for Jerichau; but of Bissen, beside whom Jerichau is nothing, not a word. Bissen is perhaps the most genuinely Scandinavian of all Northern artists. In his earlier years he followed Thorwaldsen dutifully, though not to the detriment of his own individuality. But when the master died, Bissen became for Denmark what Thorwaldsen had been for all Europe, the recognised monumental artist. A new development took place in his genius, and he abandoned classicism for Danish realism. His share in the monument of victory at Fredericia marks the change. The groups here of soldiers and peasants, strong and solid, Danish to the core, rough and realistic in their stormy jubilee of victory, are full of Scandinavian sentiment and of vigorous originality. There is nothing finikin or weak about any work of Bissen's; he is a man of whom Denmark is justly proud, and we are sorry to miss a tribute of honour to his name in these pages.

From Copenhagen Mr. Atkinson went north to Christiania, and the chapter on the art of this capital is one of the best in the book. Very excellent indeed is the criticism on the landscape school of Norway, the pictures of the men trained at Düsseldorf—men who delight in the grandiose features of their own woods and waterfalls—Dahl, Gude, Morten Müller, and the rest. From these painters one must not expect a delicate idyll of rich colour such as Alfred Hunt can give us, or sea-pieces executed with the poetical imaginativeness of Henry Moore; but they have a just eye for the large proportions of mountain scenery, for the balance of form,

and a peculiar felicity in composition. Mr. Atkinson truly says that all the best landscapes of Northern Europe are produced by Norwegians.

From Christiania the author travelled overland to Stockholm. Swedish art is in an unsatisfactory condition,—without individuality, without distinct preference for any type or any school. As in literature, so in art, Sweden has never succeeded in stamping her own local colour distinctly on her productions. Mr. Atkinson reviews the works he found at Stockholm and Upsala—the monuments of architecture, painting, and sculpture—with patient care and discrimination; but it is no fault of his, if, in spite of his painstaking study, the reader fails to find the recital interesting. The subject, indeed, is radically tedious.

From Stockholm Mr. Atkinson proceeded to Finland. Here, where so much has been done in literature, where so many of the Swedish poets have been born—amongst others, Runeberg, the greatest of all—here art seems scarcely to have developed in the slightest degree. It is a little startling, consequently, to read that the walls of Abo Cathedral, the outpost of Gothic architecture, are decorated with frescoes by a Finnish painter. The name of this artist was Ekman. With this singular exception, painters in Finland appear to be as rare as snakes in Iceland. We remember in the 1872 Exhibition at Copenhagen vainly endeavouring to discover a single work contributed by a Finnish artist. From Finland the author proceeded to St. Petersburg, and the rest of the volume is occupied with the semi-barbaric art of Russia.

Before closing, it may be well to quote some truly excellent remarks in which Mr. Atkinson sums up the prospects of art in the North:—

"Before bidding adieu to Scandinavia, I asked myself whether these countries admit of any very marked development in the future. It is true that they have advanced and are still advancing, and yet scarcely in the same ratio as other nations. Neither do these Northern races seem to possess the germs of growing civilisation; they are truthful and honest, pleasant and peace-loving, but with some marked exceptions their minds are stagnant and their lives stationary. It is said, as I can well believe, that these people are inert save when moved by powerful passion, and indolent except when actuated by some strong exceptional motive. The recent art revivals which I have passed under review, are chiefly worthy of observation from the anomalous circumstances under which they have arisen. Viewed from the point of the abstract, the ideal and the absolute, the modern developments in Scandinavia are commonplace. But as manifestations of race, climate, and nationality, their value can scarcely be overrated."

A more generous acknowledgment of the intellectual vigour of Denmark, and a little more illustrative matter from the literature of the three countries, is all that is wanted to make this book thoroughly valuable of its kind. Denmark possesses a school of very delicate and original music, on which an interesting chapter might have been added; but, after all, the labour of critics must have a boundary somewhere, and we are thankful enough for what has been done so carefully.

EDMUND W. GOSSE.

Concerto for Piano and Orchestra. By Joachim Raff. Op. 185. Full Score. (Leipzig: C. F. W. Siegel.)

THE first (and as yet only) performance of this recently-published work in this country, at the Wagner Society's first concert of the present season, was briefly noted in the ACADEMY of Dec. 1. It was impossible at that time to pronounce a final opinion on a composition of such extent and importance, especially as one's judgment would naturally be somewhat influenced by such a superb rendering of the solo part as that given by Dr. von Bülow. To form a really just estimate of any new work at a single hearing, without previous opportunity of studying the music, is in nine cases out of ten impracticable—unless, indeed, the piece should be so bad that there can be no doubt on the subject. An inadequate performance may so transfigure a masterpiece that its beauties can no longer be recognised; and, on the other hand, very indifferent trash may, if served up with sufficiently piquant sauce, acquire an adventitious relish which calls away the attention of the hearer from its inherent defects. There was, after all, a certain amount of sense in the French musical critic of whom Berlioz (I think it is) in one of his amusing sketches tells us, who would on principle never attend any concert about which he had to write, "lest he should be biassed in his judgment of the music by the excellencies or shortcomings of the performance!"

A careful perusal of the score of Raff's concerto more than confirms the favourable opinion of it expressed on the occasion of its performance. It would be very interesting to trace the gradual development of the pianoforte concerto, from the time of Bach, through Mozart, Dussek, and Hummel, to Beethoven, Weber, Mendelssohn, and Schumann, till we find its newest metamorphosis in the rhapsodical concertos of Liszt. The present work does not belong exactly to any of the above schools. Perhaps it may be best defined as an amalgamation, and at the same time an expansion, of the Beethoven and Schumann form of the concerto, with somewhat more leaning toward the latter. It is written in the customary form as regards outline, but with considerable freedom of detail in the treatment of this form. It is impossible to enter fully into this point without more technicality than would be interesting, even if intelligible, to many of our non-professional readers; it must suffice to say that Raff introduces such an abundance of subject-matter as at first to give the impression of want of definite form. This feeling, however, soon vanishes on closer acquaintance with the work; and it is only just to the composer to say that the concerto does not now, as it did after hearing the performance, seem to us to suffer from diffuseness.

It is no small thing, in these days, when nine-tenths of those who write music would seem to draw their water from other men's wells, to be able to credit this work with being original in its ideas from the first bar to the last; and this praise can honestly be given. The ideas, too, are not only new—they are thoroughly interesting, and often of

great beauty. The noblest ideas, however, are not enough by themselves to form a masterpiece; like brilliants, they need to be properly "set," that their full value may be seen; and here, too, Herr Raff has not been found wanting. His thematical and contrapuntal treatment of his themes is admirable, and his treatment of the orchestra is most effective. It is true that in places it overpowers the piano altogether, as, for instance, on pp. 6, 7, and 34, 35 of the first movement, where the soloist plays almost in dumb show. But this is evidently intentional, and is simply the further carrying out of ideas suggested by Schumann in his concerto; and these are only exceptional passages. In most cases piano and orchestra blend harmoniously, instead of striving each for the mastery; and some of the combinations, especially in the slow movement, are most charming.

Of the three movements of which the concerto consists, the opening *allegro* is the most remarkable for its ingenuity of construction. The subjects are bold and full of character; and great is the skill with which two are sometimes worked together. A remarkable example of this is seen on p. 44, where the flute and oboe play the first subject, while the second, a totally distinct one, is given to the piano.

The slow movement, *Andante quasi Larghetto*, is simply exquisite. Most graceful melodies, set off by tasteful orchestration, and ornamented with the most delicate "filagree work" for the piano, combine to form a whole which is of its kind perfect. The finale, again, in striking contrast, overflows with exuberant vitality. The only word which will adequately describe it, is the colloquial "jolly." The music seems to tear and dash along without leaving an instant for reflection, and the whole movement is a worthy conclusion to one of the very best works which Joachim Raff has as yet produced.

EBENEZER PROUT.

Two Centuries of Ceramic Art in Bristol. Being the Manufacture of the True Porcelain by Richard Champion, &c. By Hugh Owen, F.S.A. (Bell and Daldy, 1873.)

THE great epoch in the ceramic history of European nations has been the discovery of the materials for making hard-paste porcelain. The unusual weight of Böttcher's wig made known the kaolin of Aue and led to the production of hard porcelain at Meissen, and the use of the kaolin of St. Yreix by Madame Darnet as a substitute for soap revealed the sought-for element to Sèvres. But the discovery in England was not due to an accidental cause: William Cookworthy only found it after long and laborious research, and his discovery of the felspathic rock at St. Austell's in Cornwall was the foundation of the manufacture of hard porcelain in England.

He immediately took out a patent and set up a manufactory at Plymouth; but two years after he removed it to Bristol, and placed it under the management of Richard Champion, merchant and potter, who was established at Castle Green. Champion subsequently purchased Cookworthy's whole interest in the patent, and carried on the

manufacture till 1781. The two establishments had consequently a duration of only thirteen years, which accounts for the rarity of their products.

Champion had great difficulties to contend with. When he applied, in 1775, for an extension of his patent, the whole of the Staffordshire potters, with Wedgwood at their head, arrayed themselves in opposition against him, and petitioned Parliament against its renewal. Champion was most zealously defended by Mr. Edmund Burke, who used his personal influence in his favour. The "China Bill" passed the Commons most triumphantly, but was materially altered in the House of Lords, where his opponents were too strong for him; still, though sorely crippled in his finances by the struggle, Champion was not, as Wedgwood stated, "demolished." He continued his works with unabated energy until 1781, when he sold his patent rights, and on the 3rd of November left Bristol finally.

In 1782 the Rockingham Administration made Burke Paymaster-general, and he immediately gave a fresh proof of his friendship for Champion by giving him the office of Deputy Paymaster-general, in which post he assisted Burke in the sweeping reforms he made in the national expenditure. With the change of ministry he lost his office, and then Champion carried out his long-planned scheme of emigrating to America, and sailed in 1784 to Charleston, with which place he had been formerly connected as a merchant, and determined vigorously to begin anew the business of life. He settled at Camden, a place about a hundred and fifty miles from Charleston—afterwards at a farm about eight miles distant from Camden, called Rocky Branch, where he and his sons carried on the regular occupation of planters. "Men of energy and talent soon find a position in a new country, and Champion, who had received his letters of naturalisation soon after his arrival, was appointed Master in Equity for the district." His love of politics remained unabated, and he took an active part in the petition of the colonists for justice from England, and would probably have been elected to a seat in the Assembly of one of the newly emancipated States, when his home suddenly became desolate by the death of his wife, and the energy that had supported him under his commercial and political struggles seems to have deserted him. Within a year of her death Champion sank from mental depression. Like the Pilgrim Fathers of old, he lies in no consecrated ground; a brick enclosure surrounds his last resting-place, which is planted with the sweet-scented syringa, a native of Carolina. In this obscure spot repose his remains; but the name of Champion will be ever preserved with those of the other great potters of Europe as having been "the one who, when Cookworthy the inventor gave up the undertaking, supported the making of hard porcelain with his time, his labour, and his fortune, and improved it from a very imperfect to an almost perfect manufacture."

Mr. Hugh Owen's book is mainly occupied with the biography of Champion and his correspondence, which he appears to have in his possession. What relates to Plymouth and Bristol porcelain takes up the rest.

The first Plymouth porcelain was generally decorated with blackish-blue designs in the Oriental style; coloured pieces are of less frequent occurrence. Indeed Mr. Owen expresses a doubt whether the fine vases with the Plymouth mark (of the planet Jupiter), in the possession of Mr. Joseph Fry, were the production of that locality. They are exactly similar to others which are undoubtedly Bristol, and if Plymouth was able to produce pieces so faultless as these, how could Champion lay claim to having brought the manufacture, as he states, from an imperfect to a perfect state? He inclines to the belief that the old Plymouth mark was retained during the first years of the Bristol manufactory, when under the firm, till 1773, of Cookworthy and Co., and that it was not till Champion had the manufactory alone that the blue cross was adopted. The other theory is that these vases, which were made at Bristol, were preserved as heirlooms in the Cookworthy family, to keep up the remembrance of the discovery of hard porcelain, and that Cookworthy retained on them the original Plymouth mark in order to indicate the manufacture rather than the manufactory.

As Cookworthy adopted the Oriental style of decoration, so did Champion that of Dresden and Sèvres, and he fixed sometimes the Meissen mark to his pieces.

His copies of Dresden figures were remarkable for their diminutive size. Being moulded on the Dresden models, the hard paste would shrink in the furnace and thereby reduce their proportions.

The figures made and modelled at Bristol are remarkably graceful and spirited. The Seasons, Elements, and the Four Quarters of the Globe are among the most esteemed, and fine examples of some of these groups were exhibited last year in the rooms of the Burlington Club. There were also some of Mr. Fry's unrivalled series of vases, of which it would be impossible to give an adequate idea by description. Some are painted with exotic buds, others in *camaiieu* exquisitely pencilled; in short, the vases were the great speciality of the Bristol works, exhibiting the perfection of the paste and the skill of the artists. On some are wreaths of flowers beautifully modelled in relief, an art in which the Bristol artists excelled, as also shown forth in the highly-prized plaques with bouquets of flowers, of the greatest delicacy and beauty.

But it is the tea-services of Bristol porcelain to which public attention has been lately turned, in consequence of the fabulous prices they have fetched. A teapot was sold for 210*l.*, a milk jug for 125*l.*, and a cup and saucer for 70*l.*, all forming part of a set the joint gift of Champion and his wife to their friend Mr. Burke, which had all in quality of paste, excellence of workmanship, and beauty of decoration to render it a perfect specimen of the manufacture.

Mr. Owen furnishes us with some new marks of the Bristol porcelain, and his spirited and delicate delineations of Bristol tea-services, vases, figures, &c., with which the volume is profusely illustrated, do the highest credit to his pencil. He has given the fullest development to the history of hard-paste porcelain in England.

F. BURY PALLISER.

GAIETY THEATRE.—"THE BATTLE OF LIFE."

THERE is a story that one of our great water-colour painters, who scarcely ever signed his works, answered quite simply, when he was asked why he kept back his signature, that they were "signed all over." It was a true answer, coming from Peter De Wint, and in the main it would have been a true one had it come from Charles Dickens. But the unwritten signature, which speaks in the work itself, may be of different kinds. Now one may recognise it by the presence in the work of the great qualities of the master, and now by the presence only of his mannerisms, and sometimes by the presence of small peculiar traits of thought or style which can hardly be called mannerisms, but which certainly are not to be confused with the great qualities. It is these slight peculiar traits which cause us to read Dickens's signature upon *The Battle of Life*.

For in truth *The Battle of Life* is worthy of a master's play-hours: not of his serious work-time. It does not matter that the story is slight, but it does matter that it is improbable, and that the act of self-renunciation, which is its chief point, does not command our sympathy as much as it is supposed to do. And then again, the characters, with perhaps two exceptions, are not of the kind that remain upon the memory. The work adds little indeed to the great gallery of strongly-outlined portraits, the production of which will be one out of many a just claim of Dickens's to be remembered for all generations. So that on the whole it is clearly a book or work which might have been spared—where indeed so little could be spared. And one wonders at certain moments how altogether to account for it. Does it add its jot of confirmation to the interesting theory that in the early middle-life of great imaginative men there comes a dozing-time during which the work done has neither the impulsiveness of youth nor the richness of maturity? Or are we to associate it at all with those sighs after the stimulating life of London—the familiar sights and noise of the friendly streets—which escaped from Dickens very often in the comparative solitude of that self-imposed exile in the villa at Lausanne? Anyhow the story was either the product of playtime, or the product of weariness.

It is full of little touches—the "signature" we spoke of—which are characteristic of the author. This "battle of life" is fought out on the spot where long ago was fought a battle between two great armies. That is a coincidence he loves. And then there is his never-tiring reverence for anniversaries: there is the welcome little sermon, preached perhaps by implication, on geniality; the reading of the gospel of jollity; the country dance; the feasting; the admission of the humble to the fellowship of the rich. And, as a last instance, there is the recourse in moments of perplexity to the comforting aid of some slight material thing. It occurs to one of the lawyers that a timely pinch of snuff will enable him to bear up under the burden of astounding news; and the "Will you oblige me with a pinch of snuff, Mr. Craggs?" recalls the "Gravy; more gravy, Pip;" of *Great Expectations*.

Mr. Dickens the younger has done his best for his father's work. That best is as satisfactory as the circumstances of the case permit; and the result is a piece which will probably have as long a run as Mr. Hollingshead, the manager of the theatre, cares to give it. He caters, it must be remembered to his credit, more for London audiences than for a continuous stream of country visitors, and attracts his public by frequent change of performance. And those of us who have never read the story may do much worse than see it acted at the Gaiety. Other works of Dickens make more interesting dramas, but this one, being small to begin with, can be brought upon the stage in its complete form; and that is, so far, an advantage. The first act is decidedly a weak one. It hardly rouses curiosity. The

second and third are much better, but the serious interest is never very strong; and as the book owes what vitality it has to Ben Britain and Clemency Newcombe, so does the play owe its vitality to the representatives of those characters—Mr. Toole and Miss Farren. But in the first and second acts even Mr. Toole is not highly amusing. Not, indeed, that he lets opportunities slip. His placid self-satisfied acceptance of his own superiority to his wife is good; and his repartees, across the tea-table at which he is so thoroughly at rest, are delivered with excellent effect. Miss Farren's performance of Clemency Newcombe is indisputably clever. With all her rapidity and significance of gesture,—much more French than English,—there is a quaintness about her, and a quite old-world sharpness more easily perceived than described. With cap and kerchief, and a cotton gown of India-shawl pattern,—with watchful interest in all the doings of the house,—with devoted attachment to the family and a humble opinion of herself,—Miss Farren's Clemency has a certain pleasant reality about her, as of one who was indeed familiar with the English kitchens, orchards, and poultry yards of the days of George II. The remaining characters are somewhat shadowy, and not very much is done by the actors to make them substantial.

FREDERICK WEDMORE.

MONDAY POPULAR CONCERTS.

THESE concerts, which had been suspended during Christmas time, were resumed last Monday evening at St. James's Hall, when a programme was provided which, though not containing any absolute novelties, introduced in the case of three out of the four instrumental works performed pieces which had been but seldom heard at these concerts. Following the plan generally adopted, the performance commenced with a string quartett,—the one selected on this occasion being that by Schumann in A major, Op. 44, No. 3. It is a somewhat singular thing that only on one occasion should Schumann have tried his hand at the composition of the string quartett, the three works of this class which alone we possess from his pen having been all composed at about the same time in 1842; and it is the more surprising that he should not have been encouraged by his first attempt to further ventures in the same direction, seeing that the three quartetts in question rank indisputably among his most characteristic and successful works. On whatever class of composition he essayed, Schumann was sure to imprint the seal of his own individuality; and these works occupy a niche of their own in the quartett gallery. Cast in the Beethoven mould as regards form, they are yet perfectly original in idea and treatment, and may perhaps be said to bear a similar relation to Beethoven's quartetts to that which the "Rhenish" symphony bears to the C minor. Of the three the one in A major is the most dreamy and imaginative. The opening *allegro* is constructed on a theme full of, one might say, almost passionate yearning, and of such delicate structure as to remind us of the remark of Von Lenz with reference to one of Beethoven's quartett movements, that to do it justice "the players ought to read in one another's eyes, rather than in their parts." Such music as this must inevitably suffer from performance in such a large space as St. James's Hall; and the nearer the execution approaches the required delicacy, the greater will be the loss. The second movement, a set of free variations, which replaces the usual *scherzo*, is far less interesting than the rest of the work; but the following *adagio molto* is most exquisite, and full of the composer's own warmth and tenderness. The vigorous finale is on the whole the most remarkable portion of the work, noticeable alike for the rhythmical boldness of the constantly recurring principal subject and for the variety in unity by which the composer avoids the slightest feeling of monotony. The quartett was played to perfection

by Messrs. Straus (one of the safest and most reliable players of classical music now before the public), L. Ries, Zerbini, and Piatti; and though, for reasons mentioned above, its effect was less than some of the more "orchestral" quartetts—such, for instance, as those of Mendelssohn—it was very warmly received.

The pianist of the evening was Dr. Hans von Bülow, who reappeared here for the first time since his recent visit to the Continent. He selected for his solo Beethoven's *Fifteen Variations and Fugue*, Op. 35. The work is so well known to pianists that it will suffice to remind them that the theme is the one so frequently used by Beethoven, first as one of a set of *Six Contredanses*, then in the finale to the *Prometheus* music, afterwards in these variations, and lastly in the finale to the *Eroica* symphony. An analysis of the various transformations which the simple dance tune undergoes would be full of interest; it would, however, not only lead us too far, but require music type to make it fully intelligible. Mention may, however, be made of the close resemblance between the fugue and the finale of the symphony, especially in the introduction near the close of the original theme as an *andante*. It is so very rare to find Beethoven repeating himself, or using the same ideas twice, that where, as in this place, he has plainly done so designedly, it is but natural to infer that he attached especial value to the music. Whether Dr. Bülow had not recovered from the fatigue of his recent journey, we are unable to say; but he certainly did not seem to us "in good form" in this piece. We make this avowal the more candidly, because we have the highest possible admiration for his wonderful talents, and therefore have no fear of being ranked among his disparagers. But no man can always play alike; and the more nervous and sensitive an artist's organisation, the more likely he is to be affected by the state of his head, or his stomach, or of our uncertain climate. Any disappointment, however, that we may have felt in the variations was more than compensated by the Doctor's superb performance, with Signor Piatti, of Beethoven's Sonata in D, Op. 102, No. 2, which came next on the programme. This great work is very seldom heard in public—it had, indeed, been only once previously given at these concerts—chiefly, we think, because of its great difficulty. It belongs to what is known as Beethoven's "third style," being one of the works written in the later years of his life, after he had become entirely deaf. It is only since the "higher development" of pianoforte playing by Liszt and his disciples, that these later works of Beethoven have become accessible to pianists; and even now (so great are the difficulties they present) it is but few who can render them full justice. The performance of the sonata on this occasion was a thing to be remembered by all who were present. The wonderful pathos of the slow movement, and the intricacies of the final fugue, were alike brought out with a point, clearness, and expression which were unsurpassable. By the way, it is not a little curious, remembering how eminently adapted the violoncello is, as Beethoven has himself frequently shown, for expressive *cantabile* passages, that in this one sonata alone of the five which he wrote for the two instruments, do we find anything like a developed slow movement. The concluding instrumental piece was Mendelssohn's Trio in C minor, which was played on this occasion for the twenty-second time at these concerts, and is too well known to need a word of remark. The vocalist on Monday was our prince of baritones, Mr. Santley, of whom any praise would be wholly superfluous.

Next Monday Dr. Bülow and Madame Norman-Néruda are announced to appear, and an interesting novelty of the concert will be a performance of a piano trio by that excellent musician, the late Bernhard Molique.

EBENEZER PROUT.

THE PARTHENON SCULPTURES.

Dayswater, Jan. 14, 1874.

My previous letter sought to state the conflicting opinions which have been expressed by high authorities with regard to the interpretation of the frieze of the Parthenon; and I now propose to do the same for the sculptures of the pediments, referring, as before, for details to the recent works of Michaelis and Petersen. In this instance the variety of opinion is greater, because of the greater difficulty of either refuting or maintaining satisfactorily any one theory in the present mutilated condition of the marbles, and in the absence of the central key-giving groups. In the eastern or front pediment was represented, as we gather from Pausanias, the birth of Athene; and to assist in reconstructing the original composition we have left us the following figures, beginning on the left:—The familiarly known Theseus, two seated females, Iris in the attitude of conveying tidings, a torso of Victory, and the group of three females commonly known as the Fates, the whole scene being shut in on either extreme by Helios and Selene, the former rising out of the ocean, his steeds dashing the water from their manes, and the latter driving away over the horizon. Obviously the first step must be to discover the locality in which the sculptor assumed the birth of Athene to have taken place. But while there is no doubt of his having located the happy event in Olympus, and in presence of its startled dwellers, there arises a difference of opinion when we are asked to decide whether he restricted the entire scene to Olympus, with only such indication of its importance to mankind as was conveyed, for example, by the attitude of Iris, or whether, with a view of marking the significance of the event to the world, and to Athens in particular, he introduced such legendary representatives of Attica as might be supposed to have been contemporaries of Athene in this sense. Face to face with the marbles is the Museum; the latter theory commends itself highly by reason of the indifference to the central event shown by the figures at the ends, which is most readily explained by their being not yet informed of the news which Iris brings to them on earth. On the other hand, we have in Pausanias the description of a composition by Pheidias on the base of the statue of Zeus at Olympia, in which is rendered the birth of another goddess, Aphrodite, in presence of the deities of Olympus, whose names and manner of grouping are given in detail. In this case, also, the scene is bounded on either hand by Helios and Selene. But there is this difference between the two compositions, that while from the necessary conditions of the pediment the figures in it increase in personal importance towards the centre, the conditions of design upon a base nearly on a level with the eye led Pheidias to group his figures so that they should increase in personal importance towards each extreme. If, then, the assemblage of Olympians at the birth of Aphrodite be accepted as a model for that at the birth of Athene, the order of their grouping must at least be inverted, not to say changed, in several other respects. Still this would be gained by accepting the analogy, that there would be no place in the composition for terrestrial beings, and upon this turns the main question. At the same time it is not to be overlooked that though all the persons present at the birth of Aphrodite were divine, that event nevertheless took place on earth, or, as we should say, rather on the sea, so that the gods who were represented as looking on must have been conceived by the artist as doing so from the height of Olympus. Here is proof of such a double locality in one composition by Pheidias as is contended for in the eastern pediment. But there is also another circumstance in which it is possible to find an indication of this double locality of earth and heaven. We refer to the fact of both works being bounded by the sun on the one hand and the moon on the other; the former, in the case of the Parthenon sculptures at least, rising from the waves, the latter de-

scending into them, while the space between readily suggests itself as the vault of heaven, which is traversed by these bodies. It does not, however, follow from assuming a union of heaven and earth in the subject of the eastern pediment, that the earth was represented other than merely as a sphere of divine operations. Still less can we infer that a particular portion of earth, Attica, was represented on the occasion. As has been hinted, this inference would never have been made but for the indifference towards the central event betrayed by the figures on the extremes of the composition. It is certainly not easy to account for indifference on the part of any one of the Olympians on that day; but if it were impossible, it would perhaps still be better to leave it a mystery than to assume the composition to have been rudely broken up into two parts, the one representing the gods of Olympus amazed at the newly-born goddess, the other representing Attica as yet unconscious of the birth of a deity to protect it. It is better to conceive Iris as starting to bear the tidings to the indefinite but practically very comprehensible "all whom it may concern," than to conceive her as just arriving in Attica with them, for this reason, that we cannot annihilate space and time as she did, and therefore could not look on the whole scene as other than reproducing two events separated from each other in time as well as place. Both the recent authorities agree in restricting the whole scene to Olympus, though they differ in a few of the details; and since Petersen of the two has given the subject a more exhaustive examination, I will here state his result as regards the remaining figures. The well-known Theseus becomes Dionysos; next to him we have Demeter and Kore, then Iris; beyond her Victory, and in place of the three Fates we have Dione and Aphrodite reclining in the lap of Peitho. Perhaps in no instance ought the change of name to be more gratefully received than that in which the most graceful of reclining figures becomes Aphrodite.

With regard to the western pediment we learn from Pausanias that it represented the contest between Athene and Poseidon for divine supremacy over Attica, and we have the drawings made of it by Carrey before that fatal bombardment by the Venetians made havoc of its charms. But what with the injury done even before then, and what with the looseness of the drawing, there remains considerable difficulty in discovering the artist's design, and consequently in determining the names of the existing figures. According to tradition, the question was whether the brackish spring which Poseidon struck out with his trident on the olive-tree which Athene caused to grow was the greater gift. The decision was for Athene; but by whom and under what circumstances it was given, is not clear. In one report Kekrops was the umpire, and for this it has been resolved to identify the figures on the side of the goddess towards the end as that hero and his family, not, however, to assert that they are there in the position of judges; the argument being that they represent the common sense of the district to which appeal was made by the contending deities. The astonishment of the two figures on the extreme left next to the reclining river-god, Kephissos, represents the astonishment of the natives of Athens when the Olive suddenly appeared on the Acropolis. A grave doubt raised by this theory is whether the family of Kekrops, however intimately connected with Athene, could properly balance the divinities who occupy the corresponding places on the right side of the pediment, and who are supposed to be present in support of Poseidon's claim. Assuming that they could not, we must find divine beings for whom the appearance of these figures would not be unsuitable, and in doing so it should be borne in mind that there is another report, according to which the contest was decided by the twelve gods. Michaelis suggests Asklepios and Hygieia for Kekrops and his daughter, Demeter, Kore, and the boy Iacchos for

the next group. But then it is impossible to conceive Hygieia clinging to her father in fear and amazement, as is here the case, and perhaps the strongly human feeling in the attitude of this group ought alone to reconcile us to adopt the names of Kekrops and his daughter for it. The next group, as a matter of course, would be the other members of his family. The centre was occupied by Athene and Poseidon, the former striding to the left towards a chariot which was being reined in by Victory, the god also striding towards his chariot on the right, but looking back. Recent authorities assume the contest to be over, and the contending parties to be preparing to leave the scene. But this would imply a breaking up of the other groups also, for which there is no indication. And yet the two principal deities are certainly in the act of departing from the scene before us. We must, therefore, find a point of time in the dispute at which Athene and Poseidon can be regarded as hastening away from an assembly before which the matter of dispute was laid, and with which its decision was to rest. Suppose then the entire scene to be in Olympus, and the moment seized by the artist that in which the rival deities started to perform the miracles on the strength of which they rested their final claim. How the difficulty of explaining the various figures, among whom females prevail, as Olympians, could be overcome, we cannot well see. But perhaps it would not be greater than that which all the other theories have encountered.

A. S. MURRAY.

NOTES AND NEWS.

DR. FRIEDLÄNDER, keeper of the Berlin collection of coins, has published in the *Archäologische Zeitung* (Neue Folge, Bd. VI.) a short but interesting notice of General Fox's collection of Greek coins, lately acquired by him for the Berlin Museum. He states that by the purchase of this splendid series the Berlin collection begins to rival those of London and Paris, and leaves all others behind. How far his prediction that the English and French collections will never be surpassed is likely to be verified depends upon public spirit,—a quality in which the French Assembly has not shown itself wanting, by its recent purchase for a large sum of M. de Sauley's great collection of Gaulish coins.

Dr. Friedländer speaks of the extent—11,500 coins, 330 in gold and more than 4,000 in silver—select character, and good condition of the Fox collection, the work of nearly fifty years' judicious and liberal purchasing, with the aid of the best numismatists of the time. He specifies some of the rarest and most curious coins, to a few of which we may call fresh attention.

The silver coin of Metapontum inscribed ΛΞΕΛΟΙΟ ΑΕΘΑΟΝ is in the very first rank of coins with agonistic types. Epigraphically that of Gortys in Crete with the inscription ΓΟΡΤΥΝΟΣ ΤΟ ΠΑΙΜΑ, unique (at least in a legible state)—is no less important. Dr. Friedländer decides on good grounds against the old reading ΣΑΙΜΑ for *σῆμα*, but hesitates between Π and Φ for its contested initial letter. Among coins of the finest art he rightly singles out the silver piece of Clazomenæ, by Theodotos, the one signed coin of Asiatic Greece; observing that he had quite recently seen the only other two examples of this splendid work, Wigan's in the British Museum, and the Duc de Luynes' in the Bibliothèque Nationale, and that the Fox specimen, which comes from that choicest of cabinets, M. Dupré's, is the finest. Among the regal coins Dr. Friedländer accepts as true the great gold pieces of the kings of Syria, and certainly one of the four in the Fox collection seems beyond all suspicion. Among the Greek imperial examples he equally accepts the famous and much-disputed coin of Apamea in Phrygia, with the type of the ark with Noah and his wife and the inscription ΝΩΕ.

It is satisfactory to learn that from 300 to 400 of the finest of these coins will shortly be exhibited.

CONCERNING the objects excavated by Dr. Schliemann, Mr. Murray of the British Museum writes to us:—

"As to the owl-headed figures which Dr. Schliemann identifies as *Glaukopis Athene* and relies on to prove his site, it apparently defies everyone else to find anything in them but excessively rude attempts to produce a human figure. Most of them are in clay, and the process of making them seems to have been to form the wet clay into a ball for the head, then to take one side of the ball between the finger and thumb and press it flat so as to form the nose; and with this feature strongly expressed like a beak, and two circles drawn for the eyes, the head was complete, and not unlike that of a bird, though intended for human. Such figures in clay and even in marble are not rarely found in the Greek islands, and though usually assigned to very primitive times may equally well be rude work of a late period."

MR. FRITH, R.A., has received the diploma of the Royal Swedish Academy of Fine Arts. The Academies of Vienna and Antwerp have before bestowed upon him the same honour. "Such a recognition," says the *Times*, "of the claims of English art at the hands of foreigners is most unusual." It has, perhaps, been unusual, but English art is becoming more and more known and appreciated on the Continent every day.

THE unveiling of the Holborn Viaduct statue to the late Prince Consort took place on January 10. It represents the Prince on horseback in the dress of a Field-Marshal, and in the act of returning a salute. The pedestal on which it stands is of polished granite, composed of stones weighing from two to ten tons each. On the sides of the pedestal are two bas-reliefs representing the Prince laying the first stone of the Royal Exchange, and Britannia distributing awards to the successful competitors at the Exhibition of 1851. Mr. Charles Bacon of Sloane Street is the sculptor of this ambitious work. It has been cast in bronze by Messrs. Young and Co. of Pimlico, and the granite work has been executed by Mr. D. D. Fenning. The statue is a gift to the Corporation of the City of London from a gentleman who does not desire that his name should be known.

WE learn from the *Times* that the new Law Courts at Winchester are now "virtually completed," as well as the old Gothic hall of Winchester Castle, which has been restored according to a design furnished by Mr. Thomas Henry Wyatt, who is also the architect of the new Law Courts. The Public Works Committee contemplate filling the windows of the old hall with painted glass, and at a meeting at which Lord Eversley presided they asked the assistance of the magistrates of the county in this undertaking, it not being "a kind of work which they would be justified in throwing upon the county rates." The windows are estimated to cost 100 guineas each, and one is already promised by the Earl of Carnarvon and Sir William Heathcote. It is proposed that they should illustrate the history of Hampshire from the earliest times, by displaying the names, arms, and deeds of its most noteworthy men, thus forming so many "pages of county history that all well-informed persons would be able to understand easily." The question of the windows was not decided at the meeting, but Lord Henry Scott said he hoped with the permission of the Court to bring it forward again next sessions.

In the *Times* of January 7, there appeared a detailed and laudatory account of a School of Art Needlework, founded in 1872, and now flourishing at 31 Sloane Street, under the presidency of the Princess Christian:—

"The purpose of the school," we are told, "is twofold: to revive a beautiful and useful art which has long been practically lost to us, and to provide what may be termed private employment for gentlewomen in reduced circumstances."

A praiseworthy aim the latter, it must be acknowledged; and many persons will no doubt be glad to find that in these days, when so many women are asserting their claims to severe intellectual labour, there should still be a few content to practise the time-honoured and "essentially feminine" art of needlework. Still, in spite of an attempted revival by High-Church ladies—who like to arrange their work, as well as their faith, according to mediæval patterns—it seems tolerably clear that the age for doing elaborate work with the needle has passed away. In olden times, when the baron's lady sat in her hall, surrounded by her maidens, working endless pieces of tapestry, her worsteds, no doubt, formed bright threads in her somewhat colourless existence; but amidst the stir and excitement of modern life few persons, we imagine, except perhaps those "gentlewomen in reduced circumstances" who allow their gentility to preclude them from more healthful employment, find needle-embroidery a profitable occupation. "The needle," as Jean Paul says, "has worn out more hearts than it has fingers;" but, besides this evil, it is a question whether, in most cases, the work that it accomplishes is not better done by machinery. In "wool-work," as tapestry is now called, the woven pattern is almost invariably more artistic than the one worked by hand.

A SOMEWHAT important question in matters of art has recently been adjudicated in France.

In the year 1837 a painting by Eugène Delacroix, representing St. Sebastian, was bought for a small sum by the Administration of that time, and presented to the Commune of Nantua for its church. Some time after, when Delacroix's powers as an artist were beginning to be recognised, a merchant saw the picture in the church, and offered to buy it for 25,000 francs; the church authorities at once struck the bargain, and the picture was sold by them to the merchant, M. Brame, who sold it again for 30,000 francs to some one, who sold it for 35,000 francs, the value of the work (it is one of Delacroix's *chefs-d'œuvre*) increasing at every sale with the reputation of the artist. But now the question has arisen as to whether the church authorities had any right to sell a work which did not belong to them, but to the Commune. The Municipal Council of Nantua declared that they had not, and accordingly brought an action against M. Brame for the recovery of the picture. M. Brame, upon whom the sins of the church seem to be visited, gained the day in the first instance, but the Court of Appeal at Lyons, before which the matter was finally brought, has reversed the former judgment, and has decided that works of art given by the Government to buildings are public property and cannot consequently be alienated.

A PORTRAIT of M. Botta, the learned French Consul who made the earliest of the discoveries at Nineveh, has been placed in the Assyrian room of the Louvre. The portrait is the work of M. de Champmartin, who has presented it to the nation.

THE spirit of iconoclasm has been strongly excited during the past week by the enquiry held by the Bishop of Exeter as to the legality of erecting a sculptured reredos in an English Protestant church. The reredos that provoked this especial outbreak was designed by Sir Gilbert Scott in that anomalous style known as "modern decorative," or sometimes as "Scott's decorative." It is profusely ornamented with gilt, marble, and precious stones, and represents in bas-relief the three subjects of the Transfiguration, the Ascension, and the Day of Pentecost. Whether the images of these sculptures come within the class forbidden in the English Church is the subject of the ecclesiastical dispute; but besides awakening the wrath of Churchmen, the offending reredos has likewise been the subject of much recriminative discussion among artistic authorities, some of whom warmly defend Sir Gilbert Scott's inventions, whilst others characterise his

style as "bastard Gothic." Altogether the restoration of Exeter Cathedral seems to have given rise to so much bitter feeling that perhaps it would have been wiser to have let the old structure fall into peaceful and picturesque decay, or, at all events, to have attempted no more than its simple preservation.

JOSEF ANTON KOCH, "old Koch" as the Germans familiarly call him, is the subject of an interesting article by Carl von Lützow in the *Zeitschrift für bildende Kunst*. Lützow deals chiefly with Koch's *Jugendzeit*, describing the early life and some of the early works of the master before he went to Italy in 1795. At this time, when he was twenty-seven years of age, he is described by Kestner as "a sturdy young fellow from the Tyrolean mountains," who was so excited by the world of art which Italy revealed to him that he could not contain himself in the galleries, and gave "such extravagant leaps of joy" that the custodians with justifiable precaution turned him out and would not admit him again until he had pledged himself to more moderate expressions of delight. An excellent portrait of the genial old master engraved on steel by E. Forberg, from a drawing by Wittmer, and a small engraving from an early pencil drawing of Koch's, representing himself between Art and Fashion—the latter an absurd made-up figure who holds the artist by a long chain fastened round his ankle, while he looks sorrowfully towards the classical beauty of Art—illustrate the article.

The other articles in the number are of less importance. The translation of Ivan Lermolieff's *Galleries of Rome* is continued. The Vienna Exhibition, of which every one is tired, still claims considerable space in its now retrospective review by Jacob Falke, and under the heading of "Art-literature," there are notices of several works on architecture.

L'Eau-forte en 1874 is the title of a collection of thirty etchings by thirty different artists of the Modern French School, edited by M. A. Cadart. The etchings have no connection of subject, each artist having followed his own particular bent. We have river scenes, forest scenes, street scenes, war scenes, domestic and sentimental scenes in charming variety. For instance, Jules Hereau contributes a clever study of a snowy season in a town called "La Station des Omnibus." "Death" sits to A. Legros in the branches of a pear-tree, illustrating the legend of "Le Bonhomme Misère." Several artists represent passages in the late war. Lançon draws an "Old Lion," and Edmond Morin "A Shower on the Boulevards." In the introduction to the volume M. Ch. Burtz gives a slight sketch of the history of etching and of its renaissance and development in France within the last half-century. It is an art we are willing to admit well suited to the French genius, but it is not "tout français, par l'esprit, la spontanéité et la couleur," as a French critic declares. There are several admirable German etchers, and there have been few more skilful etchers in any country than George Cruikshank.

PROFESSOR CONZE, of Vienna, has this year chosen as the subject of his *Uebungsblätter*, presently to appear, a class of painted vases bearing the signature of Euphronios, who stands in the theory put forward by Brunn (*Probleme in der Geschichte der Vasenmalerei*) as suspected of being, not a fresh original painter, but a late imitator of a style that had ceased to exist. It is understood that Brunn's theory will be put to a severe test, and perhaps most people will be glad if Euphronios in particular is vindicated. The British Museum possesses one specimen of his skill which will be engraved in the forthcoming work.

MR. TOM TAYLOR has read a new piece to the company of the Olympic Theatre. We hear that the scene of it is laid chiefly in Kensington to-

wards the end of the seventeenth century, and that a well-known historical incident suggested the play. The three principal parts, which are accounted unusually strong, will be represented by Mr. Henry Neville, Miss Ada Cavendish, and Miss Emily Fowler. But, as the *School for Intrigue* continues to be deservedly successful, several weeks will probably pass before the production of Mr. Taylor's work.

The Battle of Life at the Gaiety is criticised elsewhere. Here we may add a note recording the present week's production at that theatre—Mr. Byron's extravaganza of *Guy Fawkes*, supported by Mr. Toole, Miss Loseby, Miss Farren, and others—and we may draw attention to the extraordinary strength of the cast at the performance of *John Bull* announced for this afternoon, when Messrs. Phelps, Vezin, Toole, and Montague will appear on the stage together.

Le Reveillon and *Une Corneille qui Abat des Noirs* have been played at the Holborn Theatre during the week.

On Wednesday there was revived at the Théâtre Français Octave Feuillet's well-known two-act comedy, *Péril en la Demeure*; the principal parts being played by Madame Arnould-Plessy, Madlle. Sarah Bernhardt, Messieurs Febvre and Pierre Berton.

Jean de Thommeray has been already withdrawn from regular performance at the Français, — a theatre, it should be remembered, which can never endure the semi-success which is enough to enable a play to run for twenty, thirty, or even forty nights in London. At the Français, a piece must either fail or succeed: the decision of the first-night audience is not itself final, but the audiences of the first week generally decide the question. A success, however, may be one of two kinds, popular or literary. Certain works not greatly esteemed by the literary world, such as *Les Ouvriers* of M. Eugène Manuel, for instance, have held the stage for several months. No doubt *Jean de Thommeray* will continue to be occasionally performed.

By the death of Beauvallet, the French stage sustained a loss which it had good reason to expect, for the tragedian was full of years: all his old promise had long ago become performance, and there was nothing further which he seemed likely to give us. But two other losses must be differently spoken of, for Berton and Madlle. Desclée were in the prime of their powers when they were struck down. Madlle. Desclée's malady—a long and painful one—leaves, it is said, but faint hope of her ever returning to the stage. Berton's illness, both physical and mental, confines him to his bed in a lunatic asylum, where his life is at the present moment despaired of. The *Figaro* publishes respecting him an anecdote which appears to us almost too painful for the columns of a public print; but Paris likes to know everything of its favourites, and the *Figaro* generally satisfies it. M. Berton will be remembered by many of our readers as having played the chief character in Sardou's *Rabagas*, at the St. James's Theatre, a year or two ago. He never joined the company of the Théâtre Français, though it is believed that he was asked to do so. His son, Pierre Berton, the author of *Didier*, and of the better known *Les Jurons de Cadillac*, is now a member of that company. Berton's reason for remaining outside of it may have been that he felt himself best fitted for serious comedy and *drame*. So it is that at Paris he was seen chiefly at the Vaudeville and the Odéon. For some years he was at St. Petersburg, where there is a French theatre probably second only to the Théâtre Français itself.

THE Saturday concerts at the Crystal Palace are resumed this afternoon, when Madame Patey and Mr. Sims Reeves are announced to appear.

The symphony will be Schubert's great "No. 9" in C; and an interesting novelty will be the production of the late H. H. Pierson's overture to *As You Like It*.

THERE seems at length to be a reasonable probability of the production of Wagner's *Lohengrin* in the coming spring. Mr. Carl Rosa promises it with his English opera company, and we learn on good authority that the music is already being studied by the chorus singers. It is also said that Madame Nilsson is studying the part of Elsa. If this latter statement be correct, it would seem to point to a performance of the work by Mr. Mapleson's company.

DR. FRANZ HÜFFER's new book, entitled *The Music of the Future*, has just been published by Messrs. Chapman and Hall. We hope shortly to notice it in our columns.

THE *Musikalisches Wochenblatt* states that it is intended to apply the larger part of the money bequeathed by the late Duke of Brunswick to the city of Geneva to the erection of a new theatre, which is to cost 1,600,000 francs.

THE young pianist Fräulein Emma Brandes, whom some of our readers will remember to have heard in London two seasons ago, is about to be married to Professor Engelmann of Utrecht, and will, it is said, retire from the profession.

FRANZ LISZT, who now so seldom appears in public as a pianist, was announced to perform at a concert for a benevolent object last Sunday at Vienna. The pieces selected were his own arrangement of Schubert's *Fantasia*, Op. 15, for piano and orchestra, and his *Hungarian Rhapsody*.

THE *Pall Mall Gazette* states that M. Halanzier is completing his arrangements for the re-opening of the Opéra at the Salle Ventadour. The first performance is announced for Monday next, when *Don Giovanni* will be given. Owing to the destruction of the scenery and dresses in the recent fire, the *répertoire* will for the time be somewhat limited; but it will be possible still to mount the following operas:—*Masaniello*, *Robert le Diable*, *Les Huguenots*, *Il Trovatore*, *Hamlet*, and *La Favorita*, and three ballets. The Assembly has voted by 503 to 42 a sum of 609,258 fr. to enable the director to open the house, and a second sum of 300,000 fr. for the cost of scenery, stage accessories, and new instruments for the orchestra.

CONSIDERABLE interest will attach to the performance of Dr. Crotch's *Oratorio Palestine* by the Sacred Harmonic Society, on Friday, the 23rd inst., as the work, which was originally produced and received with great favour in 1812, has not been heard in London for nearly fifty years. The words were selected by Dr. Crotch himself from a Prize Poem by Reginald Heber.

It is reported that an original score of Mozart's greatest opera, *Don Giovanni*, has been discovered among the archives of the opera-house at Prague, that it is written in Mozart's own hand, and fills four volumes, and that the manuscript has been bought by the Vienna Museum for 3,000 florins. The report, however, needs confirmation; for, on the authority of Köchel, Mozart's autograph is in the possession of Madame Viardot-Garcia. Possibly the copy referred to may really be in the handwriting of Mozart's amanuensis, Süßmayr, which is known to have borne a remarkably close resemblance to that of the master himself.

CASES of passionate friendship between sovereigns and musicians have existed at all times and in all countries. The following story of the Chalif Yezid II., the son of Abd el Melik, was translated from Arabic by the late Caussin de Perceval, and has just been published by M. Deffrémery in the *Journal Asiatique*:—

"Yezid said to Mabel: 'I shall tell you openly what I think of you. If I am wrong, tell me so; I give you full liberty. I find in your music a grave

and solid style, which Ibn Surāj does not possess. But the songs of Ibn Surāj seem to me softer and lighter.'

"Mabel replied: 'Prince of believers, that is exactly the opinion which Ibn Surāj and I myself entertain of our compositions. But is my music therefore inferior?'

"The Chalif replied: 'It is not for me to decide on your merit; all I say is, that I prefer the music which gives me more pleasure, more *entrain*.'

"Mabel said: 'Ibn Surāj cultivates a high and graceful style, my own style is massive and grand. turn to the west, he to the east, and we shall never meet.'

"But," said the Chalif, 'could you not produce something like Ibn Surāj?'

"I will," replied Mabel; and he at once proceeded to compose and sing a quick jovial song.

"Bravo, bravo!" cried the Chalif; 'sing again.' Mabel sang again. The Chalif asked for the song a third time. When Mabel sang, he called in all the ladies of the harem, and began to dance round the room, followed by the ladies, till he fell down, and all the ladies fell over him. When the keepers of the harem came to carry off the ladies, the Chalif was left fainting."

INTELLIGENCE has just reached the *Pall Mall Gazette* of the death of Jan de Graan, a young Dutch violinist, a pupil of Joachim, and known from his earliest days at Amsterdam as one of the most promising artists in Europe. On his *début* in London at the Musical Union, in 1870, he at once created a favourable impression, evincing a rare degree of musical intelligence and considerable executive power. During his visit to London he was the guest of Professor Ella, the director of the Musical Union, and won the esteem of many of our local professors and amateurs. After a lingering illness in Italy he died last week, at the Hague, of consumption, at the age of twenty-one.

POSTSCRIPT.

THE first portion of Mr. J. Orchard (Halliwell) Phillips's new *Life of Shakspeare* has gone to press. This book will contain the documents which throw so much fresh light on Shakspeare's connection with the theatres in which he was before supposed to have been a shareholder, when in fact he was not. We hear that the MSS. are from the collection of the late Sir Thomas Phillips, of Middlehill, who so religiously excluded his son-in-law Mr. Halliwell (as well as all Roman Catholics) from access to his collection of MSS. But if the mountain will not come to Mahomet, Mahomet can go to the mountain; and so, if our information is correct, the process has been in this case reversed: the Shakspeare documents, or at any rate faithful transcripts of them, have found their way from the inaccessible mountain of Middlehill to the prophet of Brompton,—the man who, by his lifelong devotion to the details of Shakspeare's life and works, has more right to memorials of them than any other man in the world. By him they will be given to the public, for the clearing up of important facts relating to our great poet's life.

THE *Pall Mall Gazette* states that Herr Schleich, the German landscape painter, has just died at Munich of cholera.

HANS MAKART's *Catarina Cornaro*, a picture which attracted considerable attention at the late Vienna Exhibition, will shortly be on view in England.

THE *Athenæum* states that Dr. Lonsdale, the author of the *Cumberland Worthies*, is preparing a *Life of John Dalton*, the chemist, and founder of the Atomic Theory, who was a native of Cumberland. From members of the Society of Friends Dr. Lonsdale has got many valuable letters, and he has, for several years back, tried to gather what he could of Dalton's early history from those who knew him very intimately.

SATURDAY, JANUARY 24, 1874.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

LITERATURE.

Life of the Right Honourable Spencer Perceval. Including his Correspondence with numerous Distinguished Persons. By his Grandson, Spencer Walpole. In Two Vols. (London: Hurst & Blackett.)

RIGHTLY to appreciate a biography of this description we must be intimately acquainted with that long and wearisome labyrinth of ministerial intrigues which makes the end of George the Third's reign so much resemble the beginning. A brief sketch of the state of parties at the date of Mr. Pitt's death may help our readers, perhaps, to gauge the justice of our criticisms on Mr. Walpole's book, but we can hardly hope to make them interesting to any but that class of political students to whom no kind of literature ought to be unwelcome which throws light upon the mysteries of party.

When Mr. Pitt retired from the King's service in March, 1801, it was not supposed that Mr. Addington, who succeeded him, would ever develop into a rival. But a little brief authority had its usual effect upon a person of common-place abilities. In a very little time he began to assert his independence. His personal popularity aided in the work of self-deception. And the result was a growing breach between himself and his former leader, which was greatly widened by the injudicious sallies of Pitt's young protégé, Mr. Canning. The seeds were sown at this time of a lasting enmity between Canning and the new Prime Minister, afterwards better known as Lord Sidmouth, of which it is hardly too much to say that it is the key to more than half the political complications of the next twenty years. At length when ten years afterwards it became absolutely necessary that Pitt should return to office, Addington retired in dudgeon, and refused to join the new Administration, under the impression that between Pitt and Canning, and one or two others, he had been a very ill-used man. The bulk of the Tory party resumed their allegiance to Mr. Pitt, though they still continued to cherish a lurking regard for Mr. Addington, who was not quite so far above themselves or their own prejudices as the superb son of Chatham. But a small section of them continued to regard him as their leader, and only supported the Ministry as far as he permitted them to do so. Thus at Mr. Pitt's death two years afterwards, the Tory party stood as follows. First there was the section which had never ceased to look up to Mr. Pitt as the real head of the party, and had only tolerated Addington as a necessary stop-gap. Secondly came those who, though thoroughly loyal to the great Minister, and aware of his intellectual superiority, preferred nevertheless the domestic policy of Addington, as much as they preferred the man. Thirdly came the small band of downright Addingtonians, who

looked upon their chief as a statesman of the first rank. After Mr. Pitt's death the two last named sections again became one party, greatly outnumbering the small remnant—the remnant who had not bowed the knee to bigotry, and were called “the friends of Mr. Pitt.” Of a party thus constituted the natural leader was evidently no other than Lord Sidmouth. But he lost credit with his followers by joining the Whig Ministry of 1806, though he did it at the King's desire. And his positive determination not to sit in the same Cabinet with Canning alienated some of those Tories who were not prepared to sacrifice the public welfare to personal antipathies, however much they privately endorsed them. As Sidmouth was impossible, and as the bulk of the party would only have followed Mr. Canning with extreme reluctance, a neutral Minister was pitched upon in the first instance; and the Treasury was committed to the Duke of Portland, the head of one of those families who felt that all they owed to the English Revolution was now imperilled by the French. This being settled, the next question that arose was, who should lead the House of Commons. Two men only had any pretensions to the post. One was Mr. Canning, the other was the subject of these volumes, the Right Hon. Spencer Perceval.

Mr. Perceval, the second son of Lord Egremont, was born in 1762, educated at Eton and Cambridge, married early a Miss Maryon Wilson, of Charlton, in Kent, became the father of a large family, and settled down for some years as a hard-working Chancery barrister. He obtained a seat in Parliament, through the interest of his mother's family, in 1796, where he speedily distinguished himself as a debater of peculiar talent, and, in 1801, Addington was thought to have been extremely lucky in securing him as solicitor-general. He soon afterwards became attorney-general, and served under Mr. Pitt in his second administration. He belonged to that middle-class of Tories whom we have already described, whose reason made them follow one statesman though their sympathies lay rather with another; and who, after the death of the former, preferred the *entourage* of Mr. Addington to the more brilliant *entourage* of Mr. Pitt. In point of abilities there could, of course, be no question between Mr. Canning and Mr. Perceval. In Parliamentary rank Canning was greatly the superior. But he and his were regarded with jealousy and suspicion by the majority of the country gentlemen, who did not relish his pleasantries, and who, now that Mr. Pitt was removed, saw no reason for condoning them. The King was of the same opinion, and Mr. Perceval became chancellor of the exchequer and leader of the House of Commons, while the services of Mr. Canning were secured by the bribe of the Foreign Office. It is at this point that the really onerous part of Mr. Walpole's task commences. With a view to subsequent transactions in which his grandfather was involved, Mr. Walpole may have thought it necessary to paint the share which Canning took in previous ones, though Mr. Perceval was but distantly connected with them. The vindication of Perceval from many of the charges

under which his political reputation has long been staggering, depends to some extent on shaking the credibility of Canning. In fact the fame of the one has to be established at the expense of the other. And we cannot, therefore, blame Mr. Walpole for introducing at considerable length the episode of Canning and Lord Castlereagh, since if all can be proved which has been laid to the charge of Mr. Canning in this memorable transaction, his appearance in the witness-box on any subsequent occasion need alarm no one. But Perceval himself took personally but a very small share in the discussions which followed the discovery of what is called Canning's intrigue; and in the mysterious miscarriage of the arrangements with which it was connected none whatever. We shall content ourselves, therefore, with observing that we have found nothing in these volumes to shake our belief in that version of the story which is, on the whole, favourable to Canning. It was observed at the time that both Canning and Castlereagh were Irishmen. *Manent vestigia ruris*, said Lord Wellesley. By which it was meant that nobody but Irishmen would have thought it necessary to burn powder over the business. Neither, therefore, shall we. Castlereagh had a right to feel aggrieved; but Canning was not the real offender. Canning had a right to feel aggrieved; but he could not challenge the real culprit, for the best of all reasons that to this day he is unknown. The fault lay between the poor old Duke of Portland and Lord Camden, and there it seems destined to remain. For the benefit of those who wish to enquire any further, we will merely add that the best account of the whole matter is to be found in the *Annual Register* for 1809, which may be compared with another very good one in Lord Colchester's *Diary*, vol. ii. p. 220.

Our readers must always bear in mind that Mr. Walpole's *Life of Perceval* is less a biography than an *apologia*, and that it, therefore, of necessity dwells mainly on those public incidents on which the waves of controversy still continue to beat like the breakers on a distant shore. The main object of the volume seems to be to clear the memory of the statesman from the aspersions cast upon it by Napier, Lord Wellesley, and others who make him answerable for all that want of energy in the conduct of the Peninsular War, of which in its earlier stages Wellington so bitterly complained. Canning laid the blame on Lord Castlereagh, and when afterwards by Canning's importunity Lord Wellesley was installed at the Foreign Office, he laid the blame on Mr. Perceval. Canning and Wellesley were the two firebrands who gave the Cabinet no peace. And as they were personal friends they have generally been looked upon as one in their criticism of Ministerial policy. Mr. Walpole would naturally feel that in damaging the credit of Canning he was damaging the credit of Wellesley; and that if the one was proved wrong about Castlereagh the public would more readily believe that the other might be wrong about Perceval. This, perhaps, is a sufficient explanation of the otherwise disproportionate tenacity with which Mr. Walpole dogs the steps of Mr. Canning, for the purpose of convicting him of bad faith and double dealing. Except on this hypothesis

we hardly see the advantage of devoting so much space to these now antiquated scandals. Were it proved to demonstration that Canning was the greatest rogue unhung, that would not prove that Wellington had a siege train at Badajos, or that the transports on which his safety depended were not ordered home from the Tagus. Mr. Walpole, of course, has a great deal more to say in defence of Mr. Perceval's policy than simply that Canning was a knave. But he dwells too much upon the point, and too little on broader considerations which are far more relevant to the issue.

The harassing affair of Lord Castlereagh, combined perhaps with some consciousness that he himself was not wholly guiltless in the matter, fairly killed the Duke of Portland. And then recurred the same difficulty about finding a leader which had arisen on the dismissal of Lord Grenville. But the same reasons which made Perceval leader of the House of Commons at the death of Pitt, made him First Minister of the Crown at the death of Portland. No third man was to be found. Sidmouth was disqualified; and after Sidmouth, Perceval represented most prominently that more numerous section of the Tories which now succeeded in stamping its impress on the party, and in converting what had been a mere temporary deflection from its original principles into the main road. At this point—at the conclusion, that is, of the struggle between Pitt's people and Addington's people by the complete defeat of Mr. Canning—the Tory party finally turned away from the footsteps of its second founder and wandered on till it lost itself in the barren desert which lies behind the first Reform Bill. To regain the long disused road, and retrace the half-hidden footprints of the great Tory hero, is the aspiration of some among us at the present day. Nor is it of necessity impracticable. But whether it is realised or not, the accession of Mr. Perceval to the office of Prime Minister must ever possess this peculiar interest in our history, that it marks the point of departure from which the new Toryism, falsely called the old, of the Regency and George the Fourth, started on its own course, proclaimed its own watchwords, and issued its own coinage. One disciple of Mr. Pitt, indeed, joined the Perceval administration—Lord Wellesley. But he found it impossible to get on with them. And though doubtless there were faults on both sides, it is easy to see what was virtually the position of his lordship. Invited and solicited to co-operate with men who were palpably his inferiors in abilities, in experience, and in accomplishments, he joined them only to find himself an object of jealousy and suspicion, and to be snubbed on every possible occasion. Lord Wellesley was too proud and too exacting, and should have thought less of himself and more of his country than he did. But this does not acquit the Ministry, if all said against them is correct, of unwillingness to profit by his counsels, and do justice to his eminent abilities. At this time Lord Liverpool was Secretary at War, and Lord Wellesley, citing for all he said the authority of his brother, was constantly urging him to more extended operations in the Peninsula. According to Lord Wellesley himself, Lord

Liverpool was inclined to listen to him, but was always overruled by Perceval, who said that the thing was impossible. At the same period (1810-11) we find the Duke of Wellington's despatches teeming with complaints and remonstrances against the short-sighted parsimony with which the war was conducted, and the general indifference with which his suggestions were received. As a set off to this, Mr. Walpole produces a letter written by the Duke himself many years afterwards, in which he states that the "King's servants" gave him all the assistance in their power, and pays a high compliment to Mr. Perceval in particular. On this conflicting evidence we can only remark, in the language of Mr. Justice Stareleigh, that if we believe the Duke's letter we shall acquit Mr. Perceval, and that if we believe the Duke's Despatches—why, we shan't. The two, at all events, flatly contradict each other, and it is almost impossible to say now which of them represents his real opinion.

We willingly admit, however, that any man of whom the Duke of Wellington could be brought to say that no "more honest, zealous or able minister ever served the King," stands up before posterity with a certificate to character in his hand, which must at least silence detraction if it does not convince reason. And Mr. Walpole in turn has done good service to history by pointing out the many really valuable qualities which Perceval possessed, and which justified the devotion with which he was regarded by his party. It is always satisfactory to know, for the credit of mankind in general, that those whom it has honoured with its confidence have not been entirely unworthy of it. And whoever rescues a man eminent in his generation from unmerited ridicule becomes a public benefactor. To this praise Mr. Walpole is undeniably entitled. If he cannot prove him to have been a sagacious and far-sighted statesman, he says enough, at all events, to make the jokes of Sydney Smith look very small. And he has shown himself anxious to be impartial by the unfavourable criticism which he bestows on other parts of Mr. Perceval's policy. Indeed, we think he almost goes too far in regretting Mr. Perceval's loyalty to all existing abuses. Abuses, to be sure, possess no intrinsic merit, but they are sometimes like the crust of port wine, and require to be handled very tenderly. Such a time was that quarter of a century during which we were fighting with the principles of the French Revolution. And to say that a man was no "Reformer" when the enemy was thundering at the gates is only to say that he is not such a fool as to try to do two things at once. The worst of it was that the habit of mind, insensibly acquired by the Tory party during this period, clung to them after it was past, and disabled them from judging on its merits any project of Reform whatever.

The general conclusion then on the result of Mr. Walpole's labours seems to be as follows. On the question of the Peninsular War, he has not, we think, upset the verdict which the majority of competent judges have pronounced on the policy of Perceval. The Duke of Wellington's letter may either

express his more mature opinions on the subject, after reflection and enquiries had convinced him that his strictures were unfounded; or it may only express that milder and more sluggish view of past offences which most of us are apt to take when time has robbed them of their sting, and distance has confused their outline. That Mr. Perceval should have the benefit of the doubt is only fair, and to that extent we will allow that the biographer has bettered his position, though, as it is perhaps needless to repeat, the letter is not now published for the first time. With regard to the rivalry between Perceval and Canning, we hope Mr. Walpole will not be angry with us for saying that we think he doth protest too much. Perceval was never accused of attempting to injure Mr. Canning, and as Canning, if he tried, wholly failed to injure Mr. Perceval, less than he has said upon the subject would have served his purpose better. On all other points we are happy to feel justified in saying that he has written very well, and that he has presented us with a picture of his grandfather which, as it is a more flattering, so we believe it to be a more lifelike portrait than those painted by contemporary artists. He shows him bold, prompt, and eloquent, with that practical eloquence which, except for the very highest occasions, is the most effective. With a small fortune and a numerous family, he shows him capable of refusing emoluments which worthier men than himself would have seized without compunction. And, by dint of these and other good qualities, he shows him rising every day in the estimation of both Parliament and the public, up to the very moment of his tragic end, when friend and foe alike combined to do honour to his memory. Since the Reform Bill of 1832 there has been no room in the House of Commons for ministers of Perceval's calibre. But scarce a session passes in which his honesty, courage, and common sense, combined with the rare debating faculty which is said to have distinguished him, would not be found of priceless value.

T. E. KEBBEL.

Les Dernières Années de Lord Byron. Par l'auteur de *Robert Emmet*. (Paris: Michel Lévy frères.)

FEMININE authorship appears to have taken possession of Byron's private life. The mystery that marred it, the shameful imputations that surrounded it, were, some ten years ago, nearly forgotten by all save the ladies with the microscope and scalpel. This select category continued to probe and examine, and the results of their labours have appeared from time to time in the shape of pamphlets with a purpose—*pro* Byron or *contra*. But for the greater part of the literary world, even of that small world that still, like Walter Scott, considers *Hours of Illness* "very promising," the question of Byron's private sins and sorrows had become an old-world chapter of the Calamities of Authors, when an imprudent American novelist thought fit to vindicate a lady whom nobody had attacked, at the expense of a man whose wrong-doing was forgiven and forgotten. Since that renewal of the *Morning Chronicle*

scandals concerning Lord Byron's domestic circumstances, there has been a redundancy of femineity in the treatment of all facts and fables relating to the monstrous offshoot of well-bred society before whose coffin noble houses closed their shutters in scorn, and the base peasantry doffed their hats in salutation. After Lady Wentworth there has been the Marquise de Boissy—Countess Guiccioli—Georges Sand, and more recently Madame d'Haussonville. The authoress of *Robert Emmet* has, indeed, made Byroniana her *spécialité* in literature. She has confessedly devoted many years to the study of Mme. de Staël's friend and rival—perhaps because he was Mme. de Staël's friend; and her opportunities of study have been many and favourable. Commanding, it is asserted, some exceptional sources of information, she had purposed writing a complete and minute biography of Lord Byron, which should have united the two sketches already published—*La Jeunesse de Lord Byron* and *Les Dernières Années*. The first of these two contributions to literary history was chiefly remarkable for a lyric declamatory style, that suggested a composite of *Consuelo* and *Corinne*. It contained nothing new in the way of fact and anecdote, and betrayed a wearisome tendency to elaborate theological disquisitions and moral examples of the folly of infidelity, and the comfort of implicit belief. The second memoir is more ambitious, and, albeit manifesting the same unfortunate tendencies, claims a certain amount of serious attention and excites not a little interest. It deals with the most imperfectly known epoch of Byron's life—that of his stay at Geneva and the last months in Italy, before the expedition to Greece. Mrs. Shelley has produced the best recital as yet of Byron's life in Switzerland; but Mme. d'Haussonville does not go over the same ground. Her history of the Swiss residence occupies two-thirds of the volume, and that history is chiefly a chronicle of the relations existing between "Corinne and Lara." Concerning these *dernières années* the authoress has an undoubted right to speak with some authority. She was the friend of Mme. de Staël; she has lived at Coppet and ransacked its treasures—the literary relics of the dead Châtelaine—relics which it is marvellous to remember have not yet been given to the world in a complete and connected form. Moreover, Mme. d'Haussonville was acquainted with Mr. Hobhouse, and counted Miss Mercier—Comtesse de Flahaut—among her intimates. We may therefore accept the story of the friendship between Byron and Mme. de Staël as substantially true, albeit a discursive and somewhat confused style has rendered the authoress's citations of authorities regrettably vague and fitful.

The chief object of the talented and refined but somewhat meddlesome circle at Coppet appears to have been the reconciliation of Lord and Lady Byron. Mme. de Staël (as he mentions in his journal) was in the irksome habit of cross-questioning her guest concerning the origin of the separation. Byron was polite and grateful, writes the authoress of *Les Dernières Années*, but perfectly impenetrable—saying laughingly to Poillidori: "Je pardonne à ses terribles

bonnes intentions." Mme. de Staël corresponded with members of Lady Byron's circle in London and endeavoured to enlist them in a general crusade against the "separators," as she vaguely denominated the persons of whom Byron complained most bitterly. She also sent him news of his wife, and Byron's answer to a missive containing some such intelligence is one of the most interesting features of the present volume. It was discovered by the Comtesse d'Haussonville in the archives of Coppet, and is dated

"Diolati, August 24, 1816.

"DEAR MADAME,—It was my intention to address you at some length, but my subject has too many thoughts for words. The intelligence which you mentioned came upon me unexpectedly, as my correspondents in England are forbidden by me to name or allude to any branch of that family except my daughter. To say that I am merely sorry to hear of Lady B.'s illness is to say nothing; but she herself has deprived me of the right to say more. The separation may have been my fault; but it was her choice. I tried all means to prevent, and would do as much and more to end it. A word would do so, but it does not rest with me to pronounce it. You asked me, if I thought Lady B. was attached to me? To this I can only answer that I love her. I am utterly unable to add one word more upon the subject; and if I were to add ten thousand, they would only come to the same conclusion, and be as unavailing as sincere. I cannot conclude without thanking you once more for your kind disposition towards me on this—as on other—occasions, and by begging you to believe me ever and faithfully your obliged and affectionate servant,

"BYRON.

"To the Baroness de Staël-Holstein."

With regard to Lady Byron, Mme. d'Haussonville professes the most rigid impartiality. Her bitterest words are those which describe Lady Byron as "une Anglaise froide et impassible qui s'enferme dans la stricte légalité." Indeed her history is as impartial as such a chronicle of passionate recriminations, springing from an unknown source, could possibly be. Beside Byron's "Fare thee well" she places his wife's verses as demonstrative of a kindly disposition and a noble mind. The poem is said to have been communicated to the authoress by a friend of Lady Byron's—probably Miss Mercier, who has contributed several anecdotes to *Les Dernières Années*. It should be quoted *in extenso*, for its authenticity can scarcely be doubted considering the facilities Mme. d'Haussonville has had for the collection of such unpublished documents.

"A Character.

"O marvel not that she who once could love
So keenly, now should gaze with steadfast eyes
E'en on the withering of her last, last ties.
That strength was wrought by teaching from above.
Each moment of such calmness does but prove
Long years of silent martyrdom survived
Till faith has at its earthly goal arrived,
And hope and fear no passion thro' can move.
Her life was spring and winter! Summer flowers
She ne'er had looked on save in early dreams,
And fancy's world with all its living streams,
That wandered wide through mystic glens and
bowers.
In frozen stillness dwells the crystal bright,
Showing where once the fountain gushed to light."

The rest of *Les Dernières Années* is devoted to needless enquiries as to Byron's catholicism or infidelity; and we feel that the authoress would forgive the poet anything save that

one sin of infidelity. The residence in Italy is lightly passed over without a mention of the Countess Guiccioli's name; and the story of Byron's last days at Missolonghi is entirely similar to the best authenticated accounts.

EVELYN JERROLD.

Vergniaud: Manuscrits, Lettres, etc. Par C. Vatel. (Paris: J. B. Dumoulin.)

For the student trying to separate the members of the brilliant Girondin group from one another, and to make, at least of the more prominent among them, distinct personalities, Vergniaud is one of the first to come out into tolerably clear outline. He had all the political faults of his party; its want of foresight, its indefiniteness of aim, its incoherent purpose, its failure in energy. But the first of Vergniaud's speeches that one reads—that of the 13th of March, or that of the 10th of April, '93, for instance—reveals in him the greatest orator of the most eloquent set of men known to history. He has not all the reckless impetuosity of Isnard, nor the fiery passion of Lanjuinais, nor the declamation of Brissot. Nor, to go beyond the ranks of his own party, has he either the plausible moralising eloquence of Robespierre, or the pregnant might of Danton. Yet a speech from him was more redoubtable in the Convention, as it is more irresistibly attractive to us, than any other oratory of that most oratorical day. He was the greatest master of true spoken eloquence, as distinguished from literary or bookish eloquence; he had the rare secret of the cadences of spoken prose, which are so different from those of written prose. Robespierre's sentences, fine as they often are, still have the turns, the proportion, the balance, proper to literary composition. Vergniaud has always the ring of the human voice in his words. Then, under the smooth and brilliant outer form, we see the muscle and sinew of a strong athlete. His style abounds with ornament, but the decoration, to borrow the language of architecture, is subordinate to the construction. There is, under occasional floridness of surface, a Demosthenic grip and firmness. Add to this that he has the gifts of directness, penetration, arrangement; of a fine imagination along with a fine sense of measure and proportion; above all, of a noble and disinterested character, constantly suffusing his intellectual faculties with a certain quality of elevation and generosity. Vergniaud would perhaps have been a less interesting figure if he had been greater as a revolutionary statesman. The indolence of which he was accused, his fondness for playing with his friend's children when he ought to have been thinking of a policy and guiding his party, even this is not ungraceful. Unfortunately for him the crisis demanded not eloquence nor grace nor even virtue, so much as coherent energetic action in face of the energetic action of the insurrectionary Commune of Paris. If the Girondins could only have brought themselves to accept the alliance of Danton while that alliance was still open to them—that is, before Lasource's ill-judged attack on him, April 1, 1793—there would have been no insurrection of May 31, and France would have been spared many

ills, including the loss within a dozen months of the truest lovers of freedom and most disinterested men alike of Mountain and Gironde—a loss that left all swept and garnished for the advent of Napoleon. A Vergniaud and a Danton in the Council of Five Hundred, or in the Legislative Body of the Year VIII., would have made a difference. However, it is useless to wonder how some things would have gone, if other things had gone different. When a nation is committed to an achievement as profoundly beyond its powers as the effective transformation of its government was beyond the power of Frenchmen in 1792-3, it is of little use to speculate on the mere superficial occasions which from time to time demonstrated the impotence of the chiefs, even the great Danton included, and the want of sense and steadfastness in the people, not excepting the people of Paris, of whom so much has been said and sung then and since in the highest pitch of lyric extravagance. "How much intelligence in individuals," wrote Barnave in 1792, "how much courage in the mass, but how little real character and calm force!" This was even more true of the Convention than of the Constituent Assembly in which Barnave had sat; it was as true of Vergniaud as of the most brilliant and most obscure among his friends and his enemies. But he is none the less interesting a figure on that account, for those who are touched by what men are as well as by what they do.

M. Vatel, who is known as the writer of an elaborate book on Charlotte Corday and her relations with the Girondins, has not made a very valuable contribution to our knowledge of Vergniaud. But it seems to be a point of honour now to make the discovery of the most trivial document a pretext for opening afresh the widest historical questions, and publishing a large book. One never wishes to speak disparagingly of anybody who takes pains to settle once for all a single point in the personal history of an eminent man, and M. Vatel is a much more laudable person than the author of a book about Anacharsis Clootz, which, though in two volumes, has neither a date nor one precisely stated fact. M. Vatel is not a mere rhapsodist, nor, again, is he one of the swarm of paradoxical writers who think it proof positive of originality and historical insight to dress up some ruffian of the Hôtel de Ville as a statesman and a saint. But he certainly does care about some extremely small things. His reason for giving to the world the two considerable-sized volumes before us, was the discovery in the National Archives of the rough notes prepared by Vergniaud for his defence before the revolutionary tribunal. The notes are the mere frame and skeleton of a defence, filling no more than fifteen of the seven hundred pages of the book. This strikes one as making the edifice slightly out of proportion to the foundation. And one hardly sees how these notes, even with the justificatory pieces which M. Vatel has carefully and meritoriously added to them, really help to set anything connected with Vergniaud or his trial in a new light. Whether you side with Jacobin or Girondin, or take no side at all, it is at any rate pretty well understood now

what each party aimed at, and would have said for itself against the rival party. And Vergniaud neither had nor sought to have any distinction from those with whom he acted. His proposed defence was never delivered, as everyone knows, because Robespierre, now rapidly becoming supreme in the purged Convention, drew up and passed the decree empowering injuries who found themselves sufficiently injured to stop the trial without hearing more of the defence. This decree was passed on the 8th Brumaire; the next day the jurymen in the case of the Girondins declared themselves sufficiently instructed, and the Jacobin leaders were saved from the risk they might have run if Vergniaud and the others had been allowed to defend themselves. The notes which M. Vatel has found and printed for us only show, that Vergniaud's intended points were naturally points in a defence before a legal tribunal accustomed to the precise interpretation of words and the careful measurement of evidence. Of course the revolutionary tribunal was not of this kind, and the Girondins, if they had obtained a hearing, would only have been acquitted by an appeal to the sympathy or passion of their hearers, and not by a mere argumentative defence. Vergniaud's notes have this element of interest: they show, what might have been supposed on other grounds, that his greater speeches were not of the nature of improvisations, but rested on a carefully prepared foundation of logic and fact.

These notes, however, are only M. Vatel's excuse for going into the whole of Vergniaud's life. He gives us an engraving of the house at Limoges in which Vergniaud was born, and takes a good deal of trouble to settle the spelling of his name, which appears variously as Vergniaux, Vergnault, Vergniaulx, and Verniot. Even the official register of his baptism gives it as Verniau. M. Vatel, at much pains, sought the register of the marriage of the orator's father and mother, which he gives us in its integrity, and which settles the orthography in favour of the accepted form. Then we have the catalogue of Vergniaud's library, just as Dr. Robinet has been at the pains to transcribe for us the catalogue of Danton's library. Vergniaud had exactly the sort of books which a Bordeaux advocate, with a turn for gallantry in his leisure hours, might have been expected to have—a good law library; a novel or two and some song-books of the period, more or less licentious; a few classics, and some history. English literature only contributes Ferguson's *Essay on Civil Society*. Of the French destructive philosophers of the century, not one. Then M. Vatel prints a large number of Vergniaud's letters, but they were mostly known before, and tell us little more about him than the list of his books does, except that he was painfully short of money, until the assistance of a brother-in-law enabled him to qualify himself for practice at the Bordeaux bar; here he soon won success, in spite of the indolence of temperament which M. Vatel, in a very feeble way, tries to disprove. It is no new thing for the oratorical temperament to be associated with indolence. Danton, for instance, when his outbursts of energy were spent, used to sink into long periods of something

almost like stupor; and in our own day, it is no secret that the "fiery Rupert of debate," was one of the most indolent of men, while the most eloquent of living English political orators has proved one of the most inactive of officials. Vergniaud's letters are mostly scraps written in a hurry, with the familiar excuse that the post is just starting, and that he will say more next week. They do, however, give us a graphic notion of the scandalous disorders and delays in the administration of justice on the eve of the Revolution, arising from the perpetual conflict between the Parlement, or local tribunal, and the central authorities at Versailles. Four times in ten years the Parlement of Bordeaux suspended the administration of justice on trivial pretexts of outraged authority, and its chiefs seemed to have spent half their time on the road to Versailles. Those who ignorantly suppose that the eighteenth century in France was an epoch of despotism, will be surprised to find a provincial body addressing Louis XV. thus:—

"SIRE,—Ce n'est point sur des *serfs* que vous regnez, mais sur des *francs*; c'est sur des hommes qui trouvent dans leur dénomination même le titre sacré d'une liberté légitime. Ce n'est point sur la force qu'est fondée votre puissance, c'est sur l'amour et sur les lois," &c. (Vatel, i. 211.)

This was not in 1791, mark, but in 1771. Several passages in Vergniaud's letters show the prevalence among the people around him—that is, among the professional people and bourgeois—of that spirit of fretful and jealous insubordination which is much more hurtful to a nation than any particular government can be. (See, for instance, vol. i. p. 117.) The disputes of which he tells the tale, between the Parlement of Bordeaux and the Government, illustrate the truth of Tocqueville's observation, that such quarrels were nearly always on the ground of politics, and not of administration. It was, as he says, the legislative power, usually in its bearings on taxation, for which the two adversaries fought—a power to which the central Government and the local judiciary had each of them as precisely little claim as the other.

Of course Vergniaud's prominence began with the meeting of the Legislative Assembly in the autumn of 1791. A year after that the monarchy had fallen by a *coup d'état* of the Faubourgs (Aug. 10, 1792); the same process which, a few months later, purged the Convention of its Girondin members (May 31—June 2, 1793). It is curious that Vergniaud, writing to his brother on September 16, 1793, says not a word about the memorable massacres in the prisons. He does say, however, that he has been "*si tourmenté, si accablé, si malade*," ever since the beginning of the month, and that the exhaustion of his moral forces makes him wish he could honourably retire from public life. He declares that he would retire if he did think he might be of use in resisting "some scoundrels whose projects I know, or at least suspect." In this resistance he proved the weaker, and the "scoundrels" cut off his head thirteen months afterwards.

M. Vatel raises the ordinary points of discussion connected with Girondin history. Were Vergniaud and the Girondins respon-

sible for the Tenth of August? Was the insurrection of the Thirty-first of May to be vindicated on the same principles as that of the Tenth of August? Could the Girondins have kept their majority in the Convention in spite of the Paris mob, if they had been more courageous? Why did not Vergniaud answer Robespierre's tremendous apostrophe, "Oui, je vais conclure, mais contre vous," &c.? Why did Vergniaud condone the insurrection by his motion that the sections had deserved well of the country? M. Vatel discusses these and the rest, but without any novelty of suggestion.

J. MORLEY.

Wonders of the Yellowstone Region in the Rocky Mountains. Edited by James Richardson. (London: Blackie & Son.)

A GLANCE at a map of North America, even of the most modern date, will show in the line of the Rocky Mountains and between the 44th and 46th parallels of latitude a blank space indicative of an unknown region. It is the point where three of the great rivers of North America, the Missouri, the Columbia, and the Colorado, take their rise, and lies close by the track of the pioneers, Lewis and Clarke, who traversed the continent from east to west, and traced far towards their sources most of the chief branches of the two former rivers. They omitted, however, to follow up one important tributary, the Yellowstone, and thus just missed the discovery of one of the most remarkable regions in the Western continent. The head waters of the Yellowstone, too, are but a short distance to the north of the emigrant road to the Great Salt Lake, and to California. At first sight, therefore, it seems strange that the existence of a country abounding in natural phenomena of the most striking kind, as this has proved to do, should not have become known, and have long ago attracted the footsteps of some of the numerous enterprising travellers of the Far West. And yet it remained unvisited and apparently unheard of until within the last few years.

The fact that this curious region escaped discovery so long is to be explained, no doubt, by the peculiarity of its situation and surroundings. The basin, in which the head waters of the Yellowstone take their rise, lies 6,000 feet above the sea, buried in the recesses of the Rocky Mountains, hidden from view, and shut in on every side by huge mountain barriers of from 8,000 to 10,000 feet in height. Some of these are absolutely impassable; others to be penetrated only by obscure and difficult passes. On the north the Gallatin Range; on the east the Snowy Range; on the west the main chain of the Rocky Mountains; on the south the Wind River Mountains, a snow-clad barrier which no white man has ever crossed. And thus begirt with natural ramparts, this valley of marvels remained hidden from the eye of man until gold was discovered in the neighbouring territory of Montana, and the irrepressible "prospector" found his way there, and returned with strange stories of burning prairies, of hot spouting springs, of great lakes, and a valley in which whatever entered it was instantly

turned to stone. Rabbits and sage-hens, even Indians, were standing about there like statuary among thickets of petrified sage-brush, whose stony branches bore precious gems — diamonds and rubies, sapphires and emeralds by thousands, as large as walnuts.

These and similar reports, which became rife in the mining districts, induced Col. Reynolds, of the U.S. Engineers, to make an attempt to reach the scene of all these wonders. Endeavouring, however, to enter by the south, he encountered the invincible Wind River range of mountains, and found his way barred by a vertical wall of basalt, rising to a height of 5,000 feet, and without visible pass or cañon. The head waters of the Yellowstone lay immediately beyond, but the traveller was compelled to turn aside and attempt to enter by the west. Here, however, the deep snows, still unmelted in June, baffled all the efforts of the party, and Colonel Reynolds was compelled to return unsuccessful. This was in 1859, and no further attempt to explore the head waters of the Yellowstone appears to have been made until ten years later, when, in 1869, a small party succeeded in reaching the Yellowstone Lake. In the following year an expedition was despatched from Montana under General Washburn, the Surveyor-General; and in 1871 General Sheridan, commanding on the Missouri, despatched another expedition, organised with all the scientific completeness which the United States Government never fails to give to such enterprises, under the direction of Col. Barlow, of the Engineers, and Dr. Hayden, the Government geologist. The reports published by the officers of these expeditions have furnished the material from which Mr. Richardson has compiled his book. He has succeeded in producing a very readable volume—too much, perhaps, in the style of a guide-book, and garnished with descriptions of scenery somewhat overstocked with superlatives. These passages are chiefly quotations from the original accounts, and their authors may be pardoned for declaring, amid the excitement of the new and wonderful scenes which burst upon them, that each was of its kind the grandest and most marvellous in the world. The volume is illustrated by two good maps and numerous wood engravings of less merit.

Each of the later expeditions, profiting by the unfortunate experience of Col. Reynolds, sought a passage through the encircling mountains on the northern side, up the valley of the Yellowstone itself. This route led them sometimes down into deep and precipitous cañons, sometimes up the steep sides of lofty mountains, and through trackless forests beset with fallen timber; but they succeeded in forcing an entrance into the central basin, and found their toil and enterprise amply rewarded by the plenty of a land abounding with fish and game, by scenery of great beauty and grandeur, and by the discovery of wonderful natural phenomena, which bore out in rare degree the travellers' tales which had led them there. There were the geysers with hot springs and mud fountains innumerable, the great lake, petrifications (limited, however, to trees and butterflies), and even the precious stones,

although neither rubies nor diamonds nor emeralds.

The whole district was carefully explored, surveyed, and mapped out by the scientific members of the expedition. One of the most unique scenes upon which they came was on Gardiner's River, a tributary of the Yellowstone; a group of hot springs in active operation interspersed with stagnant lakes occupying the craters of extinct volcanoes, and covering an area of several square miles. These are situated on a mountain-side, which, for nearly a mile, is covered with white incrustations resembling a frozen cascade. Small streams, flowing down this snowy field, run in channels lined some with varied tints of red, some of yellow, some of green, brilliant as the brightest aniline dyes, and forming an exquisite combination of vivid colouring and most delicate hues. The waters run down this richly-painted slope step by step into a succession of some hundreds of natural basins of all sizes and depths, with margins beautifully sculptured and scalloped, ornamented with exquisite bead work, and beset with stalactites from the dripping of the lime-impregnated water.

The Yellowstone bursts through the mountain chains which encircle its sources by a succession of profound chasms or cañons of from 800 to 3,000 feet in depth. In some of these are mighty walls and pillars of basalt like those of Pingal's Cave and the Giant's Causeway; in others gigantic columns of volcanic breccia, some resembling towers, some spires of churches, while others "shoot up lithe and slender as the minarets of a mosque." At two points where walls of hard basalt cross the chasm, and have resisted erosion, the river dashes over precipices of 140 feet and 300 feet each, in magnificent cataracts.

The Grand Cañon, described as without a parallel in the world, evidently falls far short, in size and grandeur, of the Great Cañon of the Colorado, a chasm whose vertical sides are in places above a mile in depth, where the darkness is that of night, so that the stars can be seen at noon, and inaccessible except at one or two points for the 300 miles for which this mighty gorge extends. From the summit of Mount Washbourne, which rises to a height of 10,575 feet, the loftiest of the northern peaks, the explorers had a magnificent bird's-eye view of the whole basin of the Yellowstone, and caught the first glimpse of a phenomenon, afterwards a familiar sight to them, a great column of steam, rising from the dense woods to the height of several hundred feet, in regular successive puffs, and with a roaring sound as of a high pressure locomotive, audible at a great distance. In the further landscape, scattered over the vast expanse of the basin, were others so numerous that the atmosphere was here and there obscured by smoke, and the scene reminded the spectators of the coal and iron districts of the Alleghanies with all the furnaces in active operation.

The Yellowstone Basin is nearly circular in form, from 50 to 75 miles in diameter, about 2,000 feet below the great ranges which form its outer rim, and Dr. Hayden thus describes its geological features:—

"The entire basin of the Yellowstone is volcanic. I am not prepared to pronounce it a crater, with

a lake occupying the inner portion, while the mountains that surround the basin are the ruins of the great crater, but at a period not very remote in the geological past this whole country was the scene of wonderful volcanic activity. I regard the hot springs so abundant all over the valley as the last stages of this grand scene. . . . The true volcanic action has ceased, but the safety valves are the thousands of hot springs."

Hot springs of all kinds are found along the Yellowstone river, and on the shores of Yellowstone Lake; but the true geyser region lies in the western portion of the basin, on the Firehole River, a stream flowing into the Madison, another tributary of the Missouri.

The members of the expedition of 1871 were hurrying along the Firehole under the belief that they had quite exhausted the wonders of the country, and anxious only to reach the settlements of the Madison Valley, when they were startled by the sight of an immense column of clear water projected into the air, at no great distance from them, to a height of 125 feet—then another geyser, which they supposed to be merely an extinct crater, suddenly filled and shot up a stream to the height of 219 feet; and further on still others of varying size and power. The two chief of them, the Grand Geyser and the Giant Geyser, are of unparalleled size and grandeur, as far outstripping those of Iceland as the hot springs and mud pools do in number and extent those of New Zealand. Take, for example, the Grand Geyser, which was observed in eruption three times in one afternoon, and is described thus:—

"A well in the strata from 20 to 25 feet in diameter, and when quiet having a visible depth of 100 feet. When an eruption is about to occur the basin gradually fills with boiling water to within a few feet of the surface, when suddenly, with heavy concussions, immense clouds of steam rise to the height of 500 feet, and the whole great body of water, 20 by 25 feet, ascends in one gigantic column to the height of 90 feet; from the apex of this column five great jets shoot up, radiating slightly from each other to the unparalleled altitude of 250 feet from the ground. The earth trembles under the descending deluge from this vast fountain; a thousand hissing sounds are heard in the air; rainbows encircle the summits of the jets with a halo of glory. The falling water plows up and bears away the shelly strata, and a seething flood pours down the slope into the river. It is the grandest, most majestic, most terrible fountain in the world."

The latter portion of Mr. Richardson's volume is occupied by an account of the adventures of Mr. Everts, one of the first exploring party, who became separated from the rest of the company, and lost in the wilds for a period of thirty-seven days. The narrative is written by Mr. Everts himself, who, although destitute of food, provisions, blankets, guns or matches, and his only food the root of a kind of thistle, eventually succeeded in escaping after undergoing terrible sufferings. He tells the story of his wanderings with a circumstantial simplicity which carries with it a strong impression of truth and reality.

Shortly after the discovery of this wonderful country of the Yellowstone, an Act was passed by the American Congress reserving an area of 55 by 65 miles as a National Park, for the benefit and enjoyment of the people, not to be alienated, sold, or built upon for ever. The Great Park lies

indeed at a distance of 2,275 miles from New York. But the Northern Pacific Railway, now in course of construction, will pass close by it; and in course of a few years no doubt the hot springs of the Yellowstone will be as much frequented as the waters of Saratoga.

W. B. CHEADLE.

Poems. By William Cullen Bryant. (London: H. S. King & Co., 1873.)

OF all the poets of the United States there is no one who obtained the fame and position of a classic earlier, or has kept them longer, than William Cullen Bryant. It is fifty years and more since his performances first obtained English recognition in the *Retrospective Review*, and during the whole of that time he has held no undefined place in English esteem. One of the surest if not the most dignified points of vantage has long been his,—a position in those school-room and drawing-room anthologies, whence more people than would care to confess it derive their chief acquaintance with general poetry. The appearance of a new English edition, arranged by the author and containing poems which cover as to their dates of production the whole period above mentioned, gives us a good opportunity of considering, with something more than the languid interest which is too commonly the portion of poems neither ancient nor modern, what Bryant's real poetical merits and position may be.

It will perhaps take a little time, but should not take more than a little, for poetical students fresh from the poetry of to-day to adjust themselves properly to the study of such poems as these. Instead of a style "bourré par l'idée à en craquer," and subjects fetched from all heaven and earth, they will find a singularly simple and straightforward fashion of verse, dealing mainly with one theme and satisfied with that. With the mechanism of his art the poet apparently troubles himself very little, or conceals his efforts very cunningly. There is scarcely a new or unusual metrical effect throughout the book; the language is as little studied as the versification; and the subjects, however various, are generally treated in such a manner as to come very much under one head. But it would be a very great mistake to suppose that these poems, because they lack certain characteristics more or less effective, are either monotonous or trivial. It is a very common error to confound a genuine love of poetry with a mere feeling of gratification at seeing thoughts and feelings which happen to be congenial to us, expressed in a manner which happens to be attractive. It is this latter which makes so many men at five-and-twenty unable to take any pleasure in Cowper or Wordsworth, and so many others at five-and-forty indignant at praise bestowed on Mr. Swinburne and Charles Baudelaire. And perhaps there is no hope of acquiring a perfectly flexible poetical judgment, so long as men confine themselves to the study of one school at a time, at the period when their taste for poetry is at its crudest. It is just then that foils and contrasts should be sought and studied, in order to prevent

the artistic error of supposing that because two styles are different and one is good, therefore the other must necessarily be bad. It would hardly be possible to find a better foil to the poetry of this age than the volume before us—a volume written by a living poet, and therefore of more value for the purpose than almost any product of other times. Used in this way, the book produces very much the same effect as a study of Constable's *Valley Farm* would produce upon one who had just been contemplating Mr. Dante Rossetti's *Hesterna Rosa*, but in a greater degree. For Bryant is a *paysagiste*, or else nothing. All his poems are fashioned to this rule, to display as best may be possible the kindly aspect and influence of everyday nature. In his verse there are no ethical problems, no studies of metaphysics, no displays of passion exceptional or otherwise. His own words in a passage taken almost at random (p. 227) express his creed precisely:

"It is sweet
To linger here, among the fitting birds,
And leaping squirrels, wandering brooks and winds
That shake the leaves, and scatter as they pass
A fragrance from the cedars, thickly set
With pale-blue berries."

And to this creed he is unvaryingly faithful throughout his work. From his earliest poems, the "Waterfowl," the oddly named "Thanatopsis," and the rest, to those of only a year or two ago, he observes his worship of nature with no diminished zeal and no diminished power. Very rarely has any writer preserved such an even level of merit throughout his poems, the absence of any particularly absorbing theme being compensated by the steady attention which he pays to his one subject. Not that there are no exceptions: once or twice a determination to be jocular has seized the poet, as in the "Mosquito" and "Rhode Island Coal,"—verses which may be dismissed with Théophile Gautier's gentle reminder, "Il est permis d'avoir quelquefois de l'esprit, pour prouver aux sots qu'on pourrait être leur égal; mais cela n'est pas nécessaire." The American civil war also, not unnaturally, is noticed in a few pieces, but all such subjects are in a very small minority. It is in such lines as the following (old and often-quoted ones, but pretty enough to deserve reproduction) that the author really delights and really excels. The subject is a morning mist:—

"Look, how by morning rivulet,
It lingers as it upward creeps,
And clings to fern and copsewood set
Along the green and dewy steeps:
Clings to the flowery kalmia, clings
To precipices fringed with grass,
Dark maples where the wood-thrush sings,
And bowers of fragrant sassafras."

Like some other American poets, Mr. Bryant is particularly happy in translation. Many of his performances in this kind—notably the lines on p. 170,

"Stay, rivulet, nor haste to leave,"—

are of singular merit, and, like Longfellow's, are almost better than his originals; a not unusual occurrence with poets of the second rank, though rare—perhaps the solitary exception is Shelley—with those of the first. Altogether there are not many of his countrymen who can be placed above him. Walt Whitman and Edgar Poe, indeed, are poets

of a very different and far higher order, yet the work of neither has the uniform excellence of Bryant, who has had the rare wisdom or good fortune to try nothing beyond his strength, and to produce no single example of slovenly work. He is certainly not a poet for a man of one book, but by a man of many books and of catholic poetical taste he is by no means to be passed over.

A considerable portion of this volume, containing poems written during the last ten or twelve years, will presumably be new to most English readers. Some of these poems, the political ones already alluded to, are of merely local interest, but others are fully up to the standard of the earlier works in execution. Three of them, "Sella," a translation of the fifth book of the *Odyssey*, and "The Little People of the Snow," are of some length. The first and last are graceful enough *Mährchen*; of the translation it can only be said, as of most Homeric translations, that it is strongly suggestive of Tommy Merton's verdict, in *Sandford and Merton*, on the apple-juice, "It is very sweet and pleasant; but not cider." But the translator who shall give to his version the fermentation necessary to make it Homer, is not likely to appear this year or the next. The two last poems in the book, and therefore, according to the principle of its arrangement, the two last written, are among the most satisfactory, and quotations from each will give a perfect idea of the simple and unpretentious excellence of Bryant's style. The first is entitled "Among the Trees."

"Ye have no history. I cannot know
Who, when the hill-side trees were hewn away,
Haply two centuries since, bade spare this oak,
Leaning to shade with his irregular arms,
Low-bent and long, the fount that from his roots
Slips through a bed of cresses toward the bay:
I know not who, but thank him that he left
The tree to flourish where the acorn fell.
And join these later days to that far time
While yet the Indian hunter drew the bow
In the dim woods, and the white woodman first
Opened these fields to sunshine, turned the soil,
And strewed the wheat. An unremembered Past
Broods like a presence, 'mid the long gray boughs
Of this old tree, which has outlived so long
The flitting generations of mankind."

The other, "May Evening," well deserves quotation at length, but a cento must suffice:—

"O'er the pale blossoms of the saffron
And o'er the spice-bush spray,
Among the opening buds, thy breathings pass,
And come embalmed away.

Yet there is sadness in thy soft caress,
Wind of the blooming year!
The gentle presence that was wont to bless
Thy coming, is not here.

Go, then; and yet I bid thee not repair,
Thy gathered sweets to shed,
Where pine and willow in the evening air
Sigh o'er the buried dead.

Pass on to homes where cheerful voices sound,
And cheerful looks are cast,
And where thou wakest in thine airy round
No sorrow of the past.

And whisper everywhere that Earth renews
Her beautiful array
Amid the darkness and the gathering dews
For the return of day."

This is quiet enough, and no doubt sadly insufficient on the good old "stimulant" theory; but it seems to us that we could

make room on our shelves for a good deal more of it.

To conclude, the get-up of this volume suggests certain reflections. It is eminently "handsomely" got-up. Blue-and-gold covers, red lines round the pages (which lines were well exchanged for a somewhat bolder type), and twenty-four illustrations of the usual kind—which can, it would be imagined, afford artistic satisfaction to no mortal—constitute its attractions. Is it hopeless to look forward to some change in the clothing of (at least) books of poetry and *belles lettres* in England? Surely if a French publisher can send out at the price of three or four francs volumes printed in large type of artistic pattern, on paper pleasant to the eye and touch for qualities other than mere glossiness, embellished with good initial letters, head and tail pieces and the like, and not unfrequently with an admirable etching or two, something of the kind might be at any rate attempted among us. If any enterprising member of the trade would condescend to follow in the footsteps of M. Poulet-Malassis, M. Lemerre, and others of their line, he would take away a serious reproach from English book-dealing, and earn the eternal, and probably not unsubstantial, gratitude of English book-lovers.

GEORGE SAINTSBURY.

Nancy. By Rhoda Broughton. (London: Bentley & Sons.)

Lucius Davoren. By the Author of *Lady Audley's Secret*. (Maxwell & Co.)

The Master of Greylands. By Mrs. Henry Wood. (Bentley & Sons.)

The Good Old Times. By Harrison Ainsworth. (Tinsley Brothers.)

IN *Nancy*, though it is less successful as a novel than *Goodbye, Sweetheart*, we seem to see rather more clearly than even there what is the kind of power to be looked for from the writer. The slender strain of vigorous, if not very refined originality observable even in her earliest works, written under the influence of the Ouida and Guy Livingstone school, is becoming more definitely apparent; the conventional melodramatic element in her last book was tempered by broadly comic touches, and in *Nancy* the comedy becomes so prominent that we are even spared the infliction of a hero of the familiar type, with iron will, mesmeric countenance, and antecedents of mysterious blackness. The misfortune is, that the supply of even moderately readable novels is so scanty, that any promise of originality in a new writer is welcomed with uncritical eagerness, which seldom allows the promise to ripen into performance. To take the most hopeful view of Miss Broughton's talent, we should say that, if taken care of, it might develop into something standing in the same relation to the highest form of humour as that in which Charlotte Brontë's works stand to the highest kind of tragic fiction. The comedy of situation or incident, which throws no imaginative light upon the paradoxes of human consciousness, has a legitimate place in literature answering to the poetry or romance in which sentiment is the substitute or representative of passion; but it is in danger of degenerating into burlesque or

vulgar farce unless the writer has some literary conscience, ambition, and a natural or acquired correctness of taste. *Nancy* would be a better book if it did not suggest an occasion for asking that very delicate question, What is coarseness, or vulgarity, in a novel? Coarseness, essential commonness of thought or feeling, is independent of social or literary accessories; a book written in the purest English may be coarse, and a reproduction of the dialect of costermongers refined. Neither *Vanity Fair* nor *Oliver Twist* is coarse, but one might have been so as easily as the other. We will not go so far as to say that *Nancy* is coarse, but it is certainly not free from the more superficial fault that consists in transferring the feelings or language of one class, age, sex or character to persons of a different class, to whom they are inappropriate, which we conceive to be the most general mark of vulgarity. To begin at the beginning, we are introduced to a noisy school-room full of boys and girls, who are making toffee. Their conversation appears sufficiently lively and lifelike until we compute that their ages vary from twelve to twenty-one; then the toffee appears inappropriate, except as a symbol of a delayed or neglected education. Again, one of the boys is popularly called "the brat," as the heroine explains, "because he is such a brat," which seems conclusive till we gather that this youth, who amuses himself by pinching his sisters during family prayers, is an undergraduate. In the character of the heroine at least there ought to have been no suspicion of vulgarity, for she is introduced to us as a nice tomboy (though, as with the rest of the family, there is a mistake of two or three years in her age), and a tomboy, by the nature of the case, is never unladylike, seldom even ungentelemanly, but has simply the virtues and the vices of other boys. The inappropriate expressions and ideas attributed to her, which give the unfortunate impression that the writer does not know whether her characters are well-bred or not, are partly the result of the autobiographical form; for the touches of broadly realistic description which Miss Broughton cannot resist, and which are inoffensive in the pages of a novelist, are liable to sound coarsely inappropriate when a girl of nineteen is supposed to be speaking in her own character. The story is simple, one of the writer's merits being to dispense with the help of sensational incident. *Nancy*, one of a large family, marries a General Tempest, old enough to be her father, whom she likes in an outspoken childish way. His proposals are freely discussed in the school-room, and her confusion and gradual disgust at "the boys'" heartless insensibility to the gravity of the emergency are very comically set forth. On her wedding journey she meets and snubs, with innocent heedlessness, a Mr. Musgrave, who, for no further reason, falls in love and supposes his passion returned. In the remainder of the book, which turns upon the cross action of unfounded jealousy on both sides, the character of the heroine is still further vulgarised, because it is a part of the story that the jealousy is entirely unfounded, while the *Nancy* of the first volume, a combination of tomboy and *ingénue*—unless her natural innocence had been corrupted by society, or novels, of a low tone—would not

have had the ideas needed to give point to Mr. Musgrave's malicious insinuations. Since she cannot understand him when he is making love to herself, she certainly would not have understood his suggestions that her husband was doing the like to some one else. Miss Broughton could have made as amusing a novel out of a desperate misunderstanding lasting for a month about a trifle, in which case she would have escaped some inconsistencies and would have had opportunities for displaying quite as much jocular cynicism as her present powers of insight and observation will warrant. It is a transparent blunder to suppose that incidents in fiction are exciting because their counterparts in real life are so; the interest depends upon the extent to which the reader is enabled to enter into the situation, and happily for their peace of mind most people are quite incapable of realising to themselves how it would feel to be murdered, or robbed, or divorced, or revenged, or conspired against, or doomed to any of the other trying destinies of which they read the tale complacently. Miss Broughton might still excite the liveliest sensations of the season even though she were to renounce slang, and to learn from Miss Austen the useful art of knowing where to begin and where to leave off. Of course Miss Austen's unerring eye and delicate touch are not to be borrowed, but she is an especially profitable model for a writer who overlooks the importance of realising exactly what degree of social refinement she means to represent her characters as possessing.

Miss Braddon is another victim to the diseased appetite of the class that would rather read half-a-dozen bad novels than one good one. How excellent a story-teller was spoilt when she took to writing against time, may be gathered from the first numbers of her innumerable serials, which are almost always entertaining and promise a quite Dumas-like variety and vivacity. Unfortunately the most active invention must flag sometimes, —to imagination Miss Braddon makes no pretence,—and the dutiful reader has to wade through long passages of mechanical detail, only sustained by the hope, which, we are bound to say, is seldom disappointed, of coming again in time upon something interesting. In work of this kind, success is only a question of the degree to which the curiosity can be kept awake; and in *Lucius Davoren*, though Miss Braddon has educated her public to such a point of acuteness that she can no longer hope to conceal from them for many pages who is who, and what is going to happen to him or her, the lesser question how it is to happen, and by what steps everybody's identity will be made clear to themselves and their nearest relations, is involved in quite sufficiently ingenious obscurity to make, as things go, a decidedly readable romance—of unreal life. It is in the mechanical arrangement of the unrealities that we feel the want of more careful workmanship to supply the place of the natural verve of the author of *Monte Christo* and *Les Trois Mousquetaires*. The ravelling and unravelling of the plot makes a variety of false starts, and is delayed by episodes which fill a magazine number well enough, but look as if the writer had forgotten to invent a

reason for inventing them. It is a fixed idea with this school that a hero who has not got a crime to detect, a mystery to fathom, a villain to track, an injury to revenge, or a conspiracy to baffle, is not worth wasting ink upon: the triumph of art is to combine all five qualifications; and the way in which Lucius Davoren is differentiated from other heroes equally well endowed, is that all the threads of the intrigue of which he is supposed to hold one end, meet again at the opposite end, after losing their way in Canada and taking a trip to France and South America, so that the ends of poetical justice are satisfied with the execution of a single victim. Miss Braddon hardly takes a sufficiently serious view of the detective business. Like Robert Audley, Lucius is apt to contract suspicions for which he has not been provided with motives, and, a more unpardonable crime, to be obtuse to the significance of circumstantial evidence that the merest tyro of the circulating library could interpret for him. The story is to this effect: Lucius had a sister who ran away from home with a man of whom nothing was known except that he played the organ like a demon; with this clue he proposes to discover the man and avenge his sister. He travels, and is snowed up with a small party in a Canadian forest and in danger of starving. A man joins them who plays the violin like a demon, and Lucius is prepared to recognise his brother-in-law, till the latter assures him he has never been in England. Whether or no, Lucius shoots the musician for having murdered a faithful Indian. Then he comes home and buys an East London practice, and falls in love with a young lady, who will not marry him till he has found her lost father, who is also a musician, and once went to South America. Of course the two musicians are the same person, and the question whether Lucius shot the violinist dead becomes doubly important, because on the one hand it would be inconvenient for him to have killed the father of his betrothed, while on the other hand his friend and Canadian fellow-traveller, Geoffrey Hossack, has fallen in love with the rediscovered sister, so that to have killed his brother-in-law would be an advantage. With the reckless disregard of economy that is the besetting sin of sensational writers the difficulty is got out of twice over, for the musician in the first place was not Lucille's father, and in the second place was not killed, but enlivens the last half of the book with a little burglary and poisoning,—the latter rather too much in the manner of the poisoning in *Monte Christo*,—and does not die till the third volume, when everybody is ready to be made happy by his last speech and confession. In the interests of morality and religion we object to making villains die on the stage at such devout length. Otherwise the book is calculated to give a great many people a fair amount of harmless amusement, unless, indeed, it be a harm to gratify, though without stimulating, the taste for narratives of melodramatic incident. The episode of Geoffrey Hossack's courtship is original and rather pretty.

With the progress of civilisation we conceive fresh developments of diabolical malice. To fill the cup of the calamities of a modern Job, he would have to hear the history of

his woes related by Mrs. Henry Wood: the most patient of men might curse his day under such a trial. We do not so much complain that in the *Master of Greylands* dignified gentlemen defraud the revenue and their near relations with unaccountable impunity for imperceptible inducements; we do not complain that two or three young men seem to have no object in life except to get themselves shot by accident, under circumstances so ambiguous as to bequeath a fund of insoluble problems to their surviving friends; we do not even complain that while the light of the natural detective reason is thus artificially turned to darkness, the unerring guidance of dreams and omens, of broken china and ragged button-holes, is lavishly supplied to everyone who is not likely to be the better for it. But when startling crimes, awe-inspiring visions, and incidents enough to thrill every heart not hardened at Mudie's are to be had for the inventing, we do complain that our expectant nerves should be disconcerted by detailed descriptions of prosaic doings and most prosaic sayings that are ominous of nothing; placid maundering genealogies relating to accessory personages, too insignificant even to have a ghost in their family; or—once for a variety—an elaborate recipe for making pea-soup. It is the combination of platitude and sensation that makes books like the *Master of Greylands* so peculiarly irritating; but even if the two elements could be separated, or some excuse made for their juxtaposition, there is something about Mrs. Wood's platitudes which makes them flatter even than those of the majority of novelists who, having heard that art ought to be true to nature, give appallingly true representations of all they know about nature—namely, how people get up in the morning, put on their clothes, dine, breakfast, and talk about dress and cookery. Now we have nothing to say against realism; other things being equal,—that is, given the lack of original power common to most novelists,—on the whole we prefer those works which aim only at giving a recognisable picture of ordinary life, either to those which indulge in the most unrestrained flights of imagination which the inherent feebleness of that faculty will allow, or to those in which, by a strained interpretation, the possible is made to stand for the real. The reason that Mrs. Wood is not, in her matter-of-fact moods, any more of a realist than Mr. Charles Reade is not the material untruth of her representation. No doubt pea-soup is sometimes talked about in Sisterhoods just as people are sometimes shipwrecked or become insane under very remarkable circumstances; but Mrs. Wood generalises in the wrong place,—in her characters instead of in her incidents. Mr. Charles Reade is quite capable, if he happened to have views upon the subject, of giving a recipe for pea-soup in a novel, but then it would be pea-soup in the abstract, considered in relation to the wants or destinies of humanity; but the Grey Sisters of Greylands' Rest have no reason for discussing pea-soup rather than any other subject, culinary or devotional, and they do not discuss it in such a manner as to convince the imagination of the concrete fact that they really did discuss it on the particular occasion recorded, only of the self-evident proposition

that a sisterhood—any sisterhood—may be the scene of a trivial—any trivial—conversation. As to the incidents: a simple youth turns up to claim an inheritance that he has no reason for supposing to belong to him, though it does; he disappears; his wife comes in search of him, and—a reminiscence of *East Lynne*—takes a situation as governess with the uncle whom she suspects of being accessory to his death. Her attempts at detection are unsuccessful,—firstly, because the uncle has not murdered anybody; secondly, because she is too much afraid of ghosts to visit the place where her husband was murdered, though not by his uncle; and, thirdly, because even if she had visited the place, she would have found no signs or traces of what had happened there. A younger brother of the heir then appears on the scene, with somewhat unwarrantable abruptness, for the rules of the game do not allow the novelist to complicate matters by the cheap device of springing a new character upon the reader at the critical moment, unless its previous existence was veiled in a mystery essential to the plot. However, this second heir when he arrives does nothing to solve the mystery of his brother's fate, except fall in love with his uncle's wife's step-daughter; and the book ends with a confession, instead of a discovery. For the benefit of the curious we should add that we have not told nearly all the story; there is such a great deal of it, that it is really strange that it should never even by accident contrive to be exciting.

In Mr. Harrison Ainsworth's last book, we have an uncle with a strong family likeness to the Master of Greylands, a type as venerable as the babes in the wood, but then "in the good old times" such types flourish by a prescriptive right, and only call up uncritical reminiscences of the days when G. P. R. James had a lofty view of the moral functions of historical romance. But from one point of view, Manchester in 1745 is too modern to fulfil the promise of the title. *Waverley* itself is rather a trial to ingenuous youth, which can by no means understand a hero of romance who half turns, and half does not turn, his coat; while Atherton Legh, the hero of the *Good Old Times*, has not even a coat to turn, but improvises a faint preference for the young Pretender to oblige a young lady, whose own political principles are not too decided to allow of her promising the Duke of Cumberland to be a good Hanoverian if her cousin's share in the insurrection is pardoned. There are two or three pairs of true lovers of different ranks, the ladies being distinguishable, as is usual in such cases, mainly by the colour of their hair and eyes; the young men by the more or less solemnity with which their execution is narrated. Hero number one succeeds to his treacherous uncle's estates, marries his cousin, and lives happily ever afterwards. Of hero number two we have at least the melancholy satisfaction of hearing the last: "As his lifeless body was cut down and placed upon the block to be mutilated, and the executioner flung his faithful heart, which happily had ceased beating, into the flames . . ." There is something plaintive in that *happily*, as if the writer were making a virtue of necessity, but would gladly have told us if he could what the heart felt

when it was being burnt, or what the head thought when it was stuck upon Temple Bar. The best that can be said of the book is, that the topography and antiquities of Manchester have been got up with some care.

Messrs. Bentley deserve much praise and gratitude for one prudent and humane innovation: their novels are sold cut. This is humane in the case of a good book, prudent in the case of an indifferent one; for though there are works in three volumes which not even a self-acting machinery for turning over the leaves could lure the reviewer to the end of, there are others trembling upon the brink of the unreadable which might hope just not to pass the brink if there were no material impediment to their leaves being turned over *very* fast.

EDITH SIMCOX.

Diamonds and Precious Stones: A popular account of Gems. From the French of Louis Dieulafoy, Professor of Physics, Doctor of Sciences. Illustrated by 126 Engravings on Wood. (London: Blackie & Son, Paternoster Buildings, Glasgow, and Edinburgh. 1874.)

WHEN we would trace back to its origin the passion for stones as personal ornaments, we naturally picture to ourselves our barbarian ancestors wandering by brooks or on mountain sides, and having their attention arrested by some little fragment of green stone, or by the fiery glow of sparkling red particles of mineral, to which the water of the torrent lent an artificial lustre.

But the step from collecting such rare and pretty objects to that of finding out how to shape and polish, and bore them for stringing into a necklace or anklet, is perhaps a greater advance in civilisation than even that by which modern arts have learnt to cut and polish the ruby and diamond.

Even to this day the hereditary art by which the Hindoo has known time out of mind how to bore, not merely the agate and garnet pebble, but the diamond itself, is, as regards this last stone, one which the modern diamond worker is unable to imitate.

And certainly if we wished to point to some universal taste or fashion that should serve to illustrate, by the forms in which it has been gratified among different peoples, the civilisation that they had reached, about the last that we should select would be the taste for personal adornment with precious stones. Look, for instance, at the courtly dame conspicuous in and envied for her *parure* of so many thousand pounds' worth of diamonds, displayed entirely without artistic beauty, and so arranged as simply to dazzle with their broken lights; and compare her with the Greek lady of the antique time, with her earrings and necklace of pendant gold, light as gossamer, yet pressed into forms and covered with tracery in which Greek art still breathes: and see with what tasteful handling the accessory of coloured stone is introduced; as, for instance, in the twined gold and garnet of the Woodhouse band in the British Museum.

Who does not feel that the Greek lady had the higher view of what is befitting, that she wore an ornament in which, whatever

there is of the barbarous inseparable from its character, was redeemed by a beauty belonging to art, and independent of mere vulgar money-value? And the same may be said of the goldsmith's art, which is an inheritance of the Hindoo from times beyond the reach of history. Rajahs and Sultans might emulate each other in collecting huge diamonds and getting them polished and faceted, but even by them such exceptional stones were rather valued as rare specimens and costly curiosities representing wealth and power (sometimes of a talismanic kind) than as objects of beauty.

The jewellery of the Hindoo people has always consisted of simple goldsmith's work, truly artistic in its forms, even though wanting in the finest finish, and has often been made the vehicle, either for exquisitely rich and harmonious colour in enamel, or in the precious stones which the enamel imitated. It was generally the colour which gave to the precious stone its charm for the eye, alike of Hindoo and of ancient Greek; the diamond being merely introduced by the former as a foil, so to say, to its brightly-coloured companions, and being like them merely rounded and polished on its surface without any attempt at facetting. Facetting, in fact, though an ancient Indian art, was only applied to the vast diamonds that found their way into the treasuries of great Rajahs, or might be used to adorn a peacock throne.

No doubt improvements in cutting and polishing hard stones by the aid of which the unapproachable lustre of the diamond was first made available for ornament, has led to the modern European fashion of employing the diamond for the purposes of jewellery only in this form; and it is in this form certainly that it is best adapted for these purposes. But the sapphire, the ruby and the spinel, the emerald and the peridot, the chrysoberyl and the topaz do not need to be faceted to exhibit in perfection their one great attribute of lovely colour; the flash and glare of the facettes only detract from this, while a well-made imitation in paste rivals them at once in lustre and in dispersive energy.

The history of precious stones as ornaments is, however, mixed up with that of another function which they have discharged from time immemorial as the fancied vehicles of talismanic powers.

Half the engraved gems of antiquity were amulets. Bacchanalian subjects are found engraved on amethysts, for the reveller who wore them deemed that his potations would thus be robbed of their sting; and every stone had its supposed virtue, prophylactic or curative, in some one or other of the ills of life, or as coming to the aid of its possessor in attaining his desires.

There are not many people in our generation, however, who would care to learn with what fantastic attributes the caprice and the credulity of superstitious minds in other times may have invested the various precious and other stones that were worn on the person. On the other hand, a good book describing the stones themselves, their history, the localities whence they come, and giving some account of the commerce in them, would be welcome to a considerable number of readers.

Several books have appeared in English during the last quarter of a century that have dealt with the subject in one or other of its aspects.

Jackson's little volume on *Minerals and their Uses* (Parker & Son, 1849) was the first, and in some respects the best of them, its form being that of a series of readable letters, in which much good material was agreeably put together.

Mr. King's well-known volumes were the next contribution to our literature on "Precious and Decorative Stones." They are entitled *The Natural History of Gems and Decorative Stones*, and *The Natural History of Precious Stones and the Precious Metals* (Bell & Daldy, 1867): but why Mr. King gave them the title of a natural history is not easy to understand. They contain, as everything the distinguished Senior Fellow of Trinity writes must contain, a great amount of erudition and much novel matter, but it is where they deal with the subject on its classical and antiquarian side that Mr. King is most at home, and the mineralogist is repeatedly reminded that Mr. King is distinguished as a classical rather than a scientific authority. It is, in fact, as the author of the work on *Antique Gems* (Murray, 1860), and as the resuscitator by its means of the taste for collecting the intaglios and cameos of antiquity, that Mr. King fills a conspicuous place among contemporary authors.

A very amusing book by Madame de Barrera, entitled *Gems and Jewels* (Bentley, 1860), appeared in the same year with Mr. King's first work. The mineralogical portion of the work is worthless, and inaccuracies in the historical, or rather anecdotal, part of it are abundant enough; yet the way in which anecdote and allusion are strung, or rather clustered, together in its pages may remind one of some of the gorgeous dresses which its authoress describes in and before the days of "Great Elizabeth."

In 1865 Mr. Harry Emmanuel, the well-known jeweller, brought out a little volume on *Diamonds and Precious Stones* (Hotten, Piccadilly) that deserves recognition on account of the general, though very far from universal, accuracy of the accounts it gave of the stones employed in jewellery, as well as for some curious matter regarding the Hebrew terms for the stones alluded to in the Old Testament, contributed by a learned rabbi, Mr. Loewe.

The book the title of which heads this article, purposes to cover much the same ground as that of Mr. Emmanuel. As the Persian historian commences his history with the formation of the world, so M. Dieulafait gives in some sixteen pages a sketch of the science of geology, and his book is rather disfigured than adorned by several plates, the bearing of which on his subject is sometimes hardly to be recognised. The opal, for instance, is illustrated by a picture of the Icelandic geysers, which, of the various ways in which opal may be formed in nature, illustrates that which is assuredly about the least probable as a source of the "noble" opal employed in jewellery.

A lizard figured in a mass of "amber," page 205, is far more probably imprisoned in a piece of the recent fossil copal from the Zanzibar district.

On the other hand, the work, viewed as a quite popular treatise on the subject, will meet the requirements of readers who only want a little tolerably correct information about diamonds and precious stones. The portions dealing with diamonds, their occurrence, their history, the attempts to form them, and the imitations of them, are the most interesting and best parts of the little volume. The extraordinary demand for this most precious product of nature may be illustrated by one or two facts. A one-carat brilliant of fine water and correct in form was sold at Venice in 1606 for 21*l.* 13*s.* 4*d.*, and such a one was valued in Jeffries' time—he wrote about 1754—at 8*l.* The subsequent discovery and development of the Brazilian mines had lowered this value very considerably, and the value of 6*l.* put on such stones in 1791 by the French Commission appointed to value the crown jewels is stated by Mr. Emmanuel to have been a higher value than they had been worth before the uncertainties of the period had enhanced the prices of all portable forms of wealth. After the peace the price fell to 4*l.* or 5*l.*, till on the eve of the discoveries in South Africa, it had again risen to from 18*l.* to 24*l.* And yet during the last half century tons of diamonds must have reached Europe from Brazil, the average supply for the ten years previous to 1865 having been above 800 troy pounds per annum. The effect of the Brazilian discoveries must have been very similar to that we are now witnessing as the result of those in South Africa. The smaller diamonds of fine water suffered less in value than the larger stones.

Thus in Jeffries' time a five-carat stone was worth 450*l.*, while the one-carat stone was worth but 8*l.*; but Mr. Emmanuel states their relative values in 1860 to have been 320*l.* and 18*l.* Few jewellers would like to give the former sum now for a five-carat stone of any degree of perfection, whereas the perfect one-carat stone has not fallen at all in proportion to those of larger dimensions.

The fact is, that a very large proportion of the stones from South Africa are a little "off colour," being slightly yellow in their tint; and the proportion of large to small African stones is very much greater than is the case with the mines of Brazil. The externally yellow-tinted stones of Brazil and India generally prove to be perfectly colourless in their interior; whereas a yellow-tinted African stone is yellow throughout. Some of the larger and deeper-coloured of these yellow stones are, however, extremely beautiful, and form jewels of the utmost splendour. The mode of occurrence of the diamonds in South Africa would seem to be remarkable. They are found in the *débris* of one or more now much altered rocks that once appear to have filled the throats of certain volcanoes, the lavas and whole upper portions of which have been borne bodily away by the devastating influences of geological denudation. How they got there—whether brought up from the inner depths of the earth's crust or formed from hydrocarbonous vapours from the surrounding rocks traversed by this volcanic pipe, or whether they have in some other way been found ready formed in some lower stratum

and been mechanically brought up to the surface with the molten rock driven through the volcanic throat, none at this moment can say, though one or other of these explanations seems forced on us. No doubt, when the geological and mineralogical features of the curious "pans" or hollows in the ground (somewhat reminding one of the Kessels in the Eifel) in which they occur have been more closely studied, new localities will be found in the basins of the Vaal and Orange rivers, and the trade in diamonds will have yet to undergo violent fluctuations.

M. Dieulafait has recounted with a Frenchman's interest in the subject, and with something of his sanguine interpretation of the results, the efforts made in Paris to form the diamond, and the success of M. Deville in forming elementary boron and silicon; these are, as it were, the next thing to the formation of the diamond itself. We have not space to enter here on this subject, nor on the curious optical enquiry as to the best form in which any particular diamond should be cut. It is a pity that no record has been preserved of Ralph Potter and the other great English diamond-cutters in the early part of this century, who were the best the world has seen.

We may conclude by noticing that the carat, the unit of weight for diamonds, is the karruba or carob bean, and was an ancient weight in the Mussulman world. It was estimated at four barleycorns, each of which weighed six mustard seeds. Another corn divided it by three, and perhaps is the wheat grain represented by our troy grain. The old French ounce, the sixteenth part of the pound, was equal to 144 carats, and to 576 Paris grains, or 472.15 troy grains, the Paris grain corresponding to the carat grain, and the French carat being 3.28 troy grains. The English carat of 151½ to the troy ounce weighs 3.168 troy grains.

N. STORY-MASKELYNE.

MISCELLANEOUS LITERATURE.

The Amateur's Greenhouse and Conservatory. By Shirley Hibberd. (Groombridge.)

THE colloquial but business-like tone of this convenient little manual distinctly recommends it. There are few things in which there is more charlatanism than gardening, but Mr. Shirley Hibberd writes about what he is practically familiar with, and he will be found a very trustworthy guide by anyone who is anxious to set up a greenhouse. This is not a thing to be lightly undertaken. A great number of those who buy this book will probably attempt personally to carry its precepts into effect, and some of them, no doubt, who possess perseverance as well as leisure, will succeed, and will reap a double pleasure in success. But plants, like tame animals, must be looked after continuously, and nine months' labour spent on a greenhouse is worse than wasted if it is to be followed by three months' casual attention from some deputy of the possessor. To manage a greenhouse successfully is an exacting occupation; but it is one which an immense number of persons are prepared to undertake without a moment's hesitation. These people will buy Mr. Hibberd's book, and he is so far wise in his generation that he does not discourage them. But there are not wanting indications of his opinion that any results worth talking about will not be attained without a good deal of expense, and an amount of toil which will make a transition to the employment of a gardener an easy one if the attempt is to be permanently continued.

Any person, however, who takes an interest in a garden, even without actively intervening in its management, will find Mr. Hibberd's information very useful. No class of skilled workpeople are more apt to tyrannize on the ground of technical knowledge than the subordinate grades of gardeners, and probably none are less justified in doing so except by the more profound ignorance of their employers. Mr. Hibberd's instructions will be found to afford a sound basis for the exercise of very salutary criticism.

Those who wish for personal amusement in conservatory gardening without being wholly tied to it, should try their hands at the cultivation of succulents, or of hardy and Alpine plants. The former can be managed with very little heat, and the latter require, of course, none. In fact, it may be thought surprising at first sight that they should be grown under glass at all. But an immense number of tolerably common plants are wonderfully improved by being grown in pots, and they are brought more under observation than when grown out of doors. Alpines, too, in this way, can usually be made more of than in the best contrived rockery, and they are not liable to be swamped by rain. The chapters on these two classes of plants might have been advantageously somewhat fuller.

Mr. Hibberd mentions—and it is a good instance of the practical character of what he says—that he found the water secreted by pitcher plants to vary with the amount supplied to their roots. This is confirmed by other observations, but he is less correct in stating that the cellular tissue of the pitcher is destitute of spiral vessels, which really abound in it; while, on the other hand, the stomata, which he attributes to the secreting surface, are not to be discovered; but this is only a kind of digression. There are a good many passable woodcuts and some coloured illustrations which are less laudable, and have probably done duty elsewhere.

Bibliotheca Cornubiensis. A Catalogue of the Writings, both Manuscript and Printed, of Cornishmen, and of Works relating to the County of Cornwall, with Biographical Memoranda and copious Literary References. By George Clement Boase and William Prideaux Courtney. Vol. I., A to O. Pp. xii-417. Imp. 8vo. London: (Longman, Green, Reader, & Dyer.) The task which the learned compilers of this valuable book have taken upon themselves is no light one. It is not only the formation of a catalogue of all works which treat of the County of Cornwall, but also of all works written by natives of Cornwall, members of Cornish families and persons resident in the county; and the design embraces not merely books of permanent interest, but also pamphlets, sermons, political tracts, literary and scientific papers, reports of societies, dramas, music, songs, maps, manuscripts, &c.; and further brief biographical particulars of the several authors are given under their names.

The want of such a work has long been felt, and a few years ago the Council of the Royal Institution of Cornwall projected a catalogue of all books, pamphlets, &c., relating to the county, and, having printed preparatory lists, invited the co-operation of all who were interested in the subject. The scheme made, however, little progress, and was finally abandoned when the present compilers commenced their labours.

It is difficult to speak too highly of the perseverance and research displayed by Messrs. Boase and Courtney in the prosecution of their work. They modestly say in their preface that the volume now presented to the reader "makes no pretension to the title of a complete Bibliography of the County" to which it relates. Necessarily many scarce and obscure tracts and pamphlets remain undiscovered; nevertheless, a glance at their well-filled pages is sufficient to show how diligently they have endeavoured to make their work exhaustive. It may, indeed, be doubted whether the introduction, as in some

instances, of mere ordinary deeds for conveyance of land is not rather beyond the scope of a work of this nature, and, moreover, we conceive that the names of some persons who have not contributed anything to the literature of the county—e.g., the brothers Lightfoot, the murderers of Mr. Norway—had better have been omitted. These, however, are errors, if errors they are, on the right side. The work is a very valuable one, not only to natives of Cornwall and those who take an interest in Cornish literature, but to the public generally.

Letters from Jamaica. (Edinburgh: Edmonston & Douglas.) This is an excellent little book. In its 174 pages the author manages to give his reader a succinct and clear account of what life in Jamaica really is; and enables him, moreover, to gain a distinct impression of the sort of existence which is passed by the negroes. Our author has plenty of humour, and the irresistibly comical side of the negro character has been done full justice to. Some of the negro love-letters are very funny, and the account given at page 97 of planter's legislation between negro litigants is delightful. The Appendix of Proverbs is also most useful in giving an insight into the negro character. It is strange how the same ideas find vent in different languages and modes of expression all over the world. Here is the negro version of the proverb concerning the wind and the shorn lamb: "When cow no hab tail, Goramighty brush fly;" and this is another good one: "Cockroach eber so drunk, him no walk past fowl-yard."

The Ashantees, their Country, History, &c., by A. C. Beaton. (London: James Blackwood & Co.) This is another of the cheap publications that have been brought into existence by the war with Ashantee; and notwithstanding the very sensational picture on the cover, it has really much that, told in a brief, pleasant way, is well worth the reading. It supplies a very general want for easily attainable information about the savage kingdom which is giving us so much trouble. It would have been better if the worthless portraits had been omitted.

Tales of My Dragoman. By W. Amati-White. (London: John Hodges, 46 Bedford Street.) These tales, loosely put together, hardly enable us to judge how far the author is qualified for the pursuit of literature, which, as he tells us in the preface, he considers the noblest occupation in life. They possess that similarity to one another characteristic of all Oriental tales, and the author seems to have caught with sufficient accuracy the trick of investing them with an Oriental halo and colour. We doubt, however, whether they will ever be preferred to the *Arabian Nights*. The small blue volume in which they make their appearance is by far too insignificant to be attractive.

The Bells of Botterville Tower. By F. G. Lee. (Parker.) The matter of this book, at least of the principal poem, is a legend of desecrated bells and a family wrecked and blasted by sacrilege, and would have been more interesting thirty years ago than now. The manner is a compound of Tennyson and the Church Times.

Maud Vivian and other Poems. By Walter Rew. (Moxon.) "The strange and quite unaccountable fact"—we quote from the preface—"in the economy of Nature, that she expends ecstatic impulse too uncontrollable to be deemed fictitious in the production of indifferent verse, must do duty as this author's excuse for coming before the public." Mr. Rew is probably right in thinking that with luck and leisure, and a better furnished imagination, he might have been a poet. *Maud Vivian* is a five-act play; it shows some gleams of sense and humour, though the author's notions of the sublime are coarse. It is to be hoped upon the whole that he may outlive his "ecstatic impulse," though it is a phenomenon which deserves more attention than it is likely to get.

The Child's History of Jerusalem. By F. R. Conder. (Isbister & Co.) Children who learn

history from Mr. Conder will have a good deal to unlearn, as that the Persia of Cyrus was the same country as the Elam of Chedorlaomer, that Christianity was first preached at Rome by St. Paul in the third year of Nero, that the monks of the Thebaid were under generals who lived at Rome, though this is only implied; all which is a pity, as if anybody could teach him to be accurate, Mr. Conder would be a pleasant and skilful compiler.

EDITOR.

NOTES AND NEWS.

AN offer was recently made by a lady to the Library of the Oxford Union Society of the whole collection of books made by the late Mrs. M. A. Schimmelpenninck, while writing the *Memoirs of the Port Royal*. It consists of about 800 volumes of Port Royalist Histories, Commentaries, Memoirs, and Devotional Treatises. In case these were accepted a similar offer was made at the same time by another lady, of bequeathing a large collection of engraved portraits, &c., illustrative of the history of the Port Royal. It was considered, perhaps wisely, by the Union Society, that their library, being merely a lending library of current literature, was not a fit place for such a special collection. The offer was, therefore, declined. But, as Oxford still possesses a Professor of Ecclesiastical History, is there no other library to be found there that can make room for these collections, and so prevent their dispersion?

THE Paper Survey of the Abbey of St. Mary's Winchester, at the time of the Reformation coupled with Ducange, have enabled Mr. Furnivall to clear away all the difficulties connected with Chaucer's Prioress, her Nun-Chaplain, and three Priests that worried Tyrwhitt, and have troubled all Chaucer-critics since him.* The first of these difficulties was how a nun could be a chaplain, because (as was assumed) a chaplain must be a priest, and that a woman could not be. This trouble disappeared on a glance at Ducange, whose quotations show that the *capellanus* was originally the guardian of the *capa* or *capella* of St. Martin—the cloak that he cut in two to give half to a beggar in the cold—that the word afterwards meant "secretary, amanuensis," in which sense it was freely used in French romances; and that later only did it signify what we understand by a "chaplain," a priest, which is its fifth meaning in Ducange. 2. Why did Chaucer, in describing the head of a holy house of nuns supposed to be wholly devoted to the service of God, talk only of her graceful deportment, pretty ways, her sentimentalism, her effort to imitate court style, and be "estatelich of manere?" Because, as the Paper Survey of the Abbey of St. Mary's Winchester† shows, the prioress was, in fact, the "finishing governess" of the time to a bevy of to-be fashionable girls, "chylidren of lordys, knyghttes, and gentylmen brought up in the sayd monastery," whose most important accomplishments were correct deportment and pleasing manners. 3. Why had Chaucer's prioress three priests with her, when only one, "the Nonnes Preest," told a "Canterbury Tale,"—and one of the best, too, that of the "Cock and Fox?" Because, as St. Mary's Abbey had five priests to look after its six-and-twenty nuns and six-and-twenty young ladies, no doubt the prioress's priory had five priests too, three of whom might well be spared to go a-pilgrimage with their prioress. And as, of the five St. Mary's priests, only one was *Magister*, the Confessor, the other four but "Sirs" (*Domini*), subordinates, the prioress's "Magister" would be especially "the Nonnes Preest," and tell his "Tale" accordingly. Thus, Chaucer is right in

* See Mr. Furnivall's "Temporary Preface to my Six-Text Edition of the *Canterbury Tales* for the Chaucer Society," p. 92.

† This is printed in Dugdale's *Monasticon*, ed. Ellis, Bandinel, &c.

all points, and his critics all wrong—a most welcome result. The fact that, in A.D. 1537, the five priests of St. Mary's, Winchester, were all called "Chapeleyns" (as like priests may have been called earlier), does not militate against Chaucer's use of the word in its earlier and well-established sense of "secretary" in the French romances that he studied.

MR. WILLIAM A. WHEELER, the assistant superintendent of the Boston Public Library, in the United States, and who is favourably known by his labours on *Webster's Dictionary*, *The Dictionary of Noted Names in Fiction*, &c., has been cataloguing the most complete Shakspeare Library in the States—that of 2,000 volumes—formerly belonging to Mr. Thomas P. Barton, and lately bought by the Boston Library. In the course of this work he has made up his mind to compile "A Cyclopaedia of Shakspearean Literature, designed to elucidate the Biography of the Poet, the Antiquities, Geography, Topography, Political and Natural History, and Bibliography of his Works, and the Lives and Writings of his Editors, Translators, Commentators, and Critics." He hopes to secure the help of the best English Shakspeareans in his undertaking.

MR. HENRY ADAMS is to be the new editor of the *North American Review*, which was founded above sixty years ago, and still thrives.

DR. RICHARD WÜLCKER of Leipzig will edit for the Early English Text Society next year the *Legend of Nicodemus*, with a full account of the different forms the legend takes in the different literatures of Europe.

THE Marquis of Lothian's *Blickling Homilies*, Anglo-Saxon of the 10th century, which the Rev. Dr. Richard Morris is editing for the Early English Text Society, and of which Part I. is just ready, is one of the few dated Anglo-Saxon MSS. in existence. The writer has been dwelling on the evils abroad in his time, "lamentation and weeping on all sides; mourning everywhere, and breach of peace; everywhere evil and slaughter" (*Hom. X.*, pp. 114-15); has been saying that the world's end on Doomsday must needs come soon, only the advent of "the accursed stranger Antichrist" has yet to take place (*Hom. XI.*, pp. 116-17); and then, he goes on, the world must come to an end in this present age, of which "the greatest portion has already elapsed, even nine hundred and seventy-one years (*nigon hund wintra & lxxi*) in this [very] year" (pp. 118-119, l. 2). Dates of this kind are very seldom found in MSS., and are proportionately valued when they do occur. Dr. Richard Morris and Mr. Sweet agree, we believe, in thinking that the MS. was copied once, if not more times, and that this date of A.D. 971 is that of the last copier's transcript. Some of the forms in the text seem older than those in the Alfredian Anglo-Saxon version of St. Gregory's *Regula Pastoralis* that Mr. Sweet edited, from the two best MSS., for the Early English Text Society.

THE Rev. J. Rawson Lumby has also in the press, for the Early English Text Society, two short Anglo-Saxon poems, *Be Domes Dage*, a paraphrase of Bede's *De Die Judicii*, and *Lár*, an Exhortation, how to attain "that blowende rice" or "blooming realm" of heaven.

PROFESSOR SEELEY asks whether the history of the degradation in England of chivalry, in the sense of the profession of knights or fighting gentlemen, before a standing army existed, has yet been worked out? Contrasting Chaucer's knight, the valiant warrior and perfect gentleman, with the knight as seen in Shakspeare's plays, the so-called gentleman whose profession is arms—Sir John Falstaff, Sir Andrew Aguecheek, Sir Toby Belch—what a change is seen! The knight seems to be a needy swaggerer, whose occupation's gone, or nearly so; who lives on the rich men he can get to feed him, and whose followers support themselves by open robbery. The esquire seems

to be of more estate and importance than the knight, instead of being his attendant.

THE strictness with which the right of censure is exercised against the press in the Austrian dominions may be judged by the fact that the day's issue of one paper alone, the *Politik*, published at Prague, was stopped sixty-nine times in the course of last year.

WE learn from Rome that, in obedience to the wishes of Cardinal Antonelli, Father Theiner has declined the post of Chief Librarian to the Order of the Oratorians.

THE Minister of Instruction at the Porte has succeeded in establishing a large public library at Constantinople, the Council of State having at length advanced the necessary funds; and active steps are now being taken to collect and catalogue printed books, which are one of the modern innovations in Turkey, and are only beginning to supersede the ancient use of MSS. The heads of the various schools, monasteries, and mosques are being called upon to furnish complete lists of the MSS. in their possession; and, as some of these institutions are known to contain extensive and choice collections, we may hope to obtain access to some remains of real importance. It is intended to appropriate the ground-floor of the building to a Museum of Antiquities.

A NEW paper, for the special use of subalterns and first-year volunteers in the Prussian army, has been started at Berlin, under the title of *Unterofficier-Zeitung*. Its object is to acquaint the young officer with the name and character of all inventions, works, and theories bearing upon his profession, which are exciting the interest of military men abroad or at home. Politics are excluded, but other subjects which may tend to promote the cultivation of the middle classes, from which the German soldiers are chiefly drawn, are freely discussed.

WE understand that an authorised translation of Auerbach's forthcoming novel *Waldfried*, will be published by Messrs. Sampson Low.

A GERMAN translation by Dr. Höne of Professor Max Müller's Westminster Lecture on Missions, and Dean Stanley's Sermon, is advertised by K. Trübner, Strassburg.

PROFESSOR BOEHMER has resigned the co-direction of the Seminary for Modern Languages at Strassburg University, which he held with Professor Bernhard ten Brink, thus leaving the sole direction in Professor ten Brink's hands. Professor Böhrner still continues his Professorship of the Romance languages.

WE hear that Professor A. W. Ward's work on English Dramatic Literature will not be ready for some months, though he hopes to bring it out this year.

PROFESSOR J. R. SEELEY's work on the great German statesman Stein will probably not be ready till next year.

FREILIGRATH, Geibel, and Höfer have issued an address to German authors in which they point out the fact that no copyright treaty exists yet between Germany and the Netherlands, and that in consequence the reprint of German works, especially of those treating of the fine arts, is daily increasing. Heine has lately, and Geibel and Freiligrath only recently, been reprinted in Holland. German novelists and dramatic authors, likewise, have been for years translated into Dutch, unasked and unrewarded. German authors are now called upon to co-operate with their legitimate publishers in demanding a treaty between Holland and the Empire for the protection of literary property. The authors of the address request German literary men in all parts of the world to combine with them in presenting a petition to this effect to the next German Reichstag, and to address themselves, not later than the end of this month, to F. Freiligrath, Stuttgart.—*Cologne Gazette*.

It is to be regretted that more energy is not shown in improving the National library in the British Museum. It not unfrequently happens that an important book is not to be found at all in the library, and works issued in parts are sometimes left incomplete; when an organised inspection of foreign sale-catalogues would generally supply the deficiencies.

MR. HALES's edition of Milton's *Areopagitica* for the Clarendon Press Series is far advanced at press.

TEN more volumes of transcripts from the Archives of Venice reached England last week, and were deposited in the Public Record Office. Two contain English translations of letters from Alvise Contarini, ambassador at the court of Charles I., to the Doge and Senate, between October 1627 and September 1628, and are in continuation of letters from the same ambassador, which have been previously transcribed. Two other volumes relate to the descent into Italy of the forces of the "Grand Alliance," stipulated at the Hague on September 7, 1701, between the Emperor Leopold, King William, and the Dutch, against France and Spain. Altogether sixty-three volumes of these Venetian transcripts are now available for the consultation of historical students, and as they have reference to almost every event of importance in English history during the last three or four centuries, they should be included in the researches of every future historian of our country. In addition to the collection of further transcripts, Mr. Rawdon Brown is preparing for press the continuation of his printed calendar of the most important State papers preserved at Venice.

WE understand that the Fourth Report of the Royal Commission on Historical Manuscripts will be ready for publication early next month, and that it will exceed in interest and in bulk all its predecessors.

MR. HEFORTH DIXON seems to have a curious notion of historical evidence. He has been endeavouring to show in *Notes and Queries*, contrary to the opinion entertained by some of our best modern investigators, that Anne Boleyn was the eldest daughter of her father, Sir Thomas Boleyn, Earl of Ormond. She had, as is well known, a sister named Mary, who was the mother of Henry Carey, Lord Hunsdon, and it is the opinion of Mr. Brewer and others who have examined the subject, that Mary Boleyn was several years older than Anne. Mr. Dixon maintains the contrary; but in support of his theory cites only two pieces of evidence, of which the first really tells most powerfully against it. In 1597, George Carey, second Lord Hunsdon, petitioned to be restored to the Earldom of Ormond, on the express ground that he was descended from the eldest daughter, Mary, while the reigning queen, Elizabeth, was descended from the younger daughter, Anne. This would surely have been a very great piece of presumption if the facts had been the other way. But Mr. Dixon conceives that Lord Hunsdon did not know his own pedigree; and that the Queen, who refused to make him Earl of Ormond, caused him to know it better. The evidence on which he relies in this case is an epitaph, composed certainly not less than thirty-two years after Lord Hunsdon's death, on his daughter Elizabeth, Lady Berkeley, who died in 1635. In this epitaph, most assuredly, Lady Berkeley's ancestry is traced back to Mary Boleyn, who is called the younger sister; but Mr. Dixon does not tell us why he thinks the authority of the epitaph superior to that of the petition. If so, it is, we suppose, to be presumed that the son or other survivor of Lady Berkeley who put up her gravestone knew more about her father's pedigree than he himself did.

M. LECOY DE LA MARCHE, who has for some time past been engaged in completing his researches on King René in the Archives of Italy

and Marseilles, published a formal report of his mission in the *Official Journal* of October 31 and November 1 last; a summary of which is given in this month's *Polybiblion*. The Report enumerates the documents discovered relating to King René, and gives interesting details with regard to various Italian libraries. M. Lecoy de la Marche's mission detained him longest at Naples. The creation of the Archives of that city is due to the founder of the House of Anjou, Charles I., brother of St. Louis. The registries of the chancery gradually accumulated, and in the end a very valuable collection was formed and installed at the Zecca. Though a considerable number of these precious registers disappeared in the troubles of later times, 378 are still left; and happily the lost volumes are in some degree replaced by notes taken in the seventeenth century by Charles de Lellis, which are now in the possession of a learned Neapolitan, Minieri Riccio. The inventory of these registers was published between 1824 and 1845. The Neapolitan archives also contain seventy portfolios of documents, of which only a few are classified. The registers only go back to 1423, and the other documents to 1476, so that this library gives but little information about King René.

The House of Aragon, at its accession, opened a new library under the name of Archives della regia camera; the letters and accounts of these princes date from 1432—before the year of their accession. The Spanish viceroys opened a new collection in 1540, at Castel Capuano, part of which was destroyed by fire in an insurrection in 1701. In 1782 Charles III. formally constituted a single establishment for the preservation of State papers, titles to landed property, and registers of mortgages. In 1802 and 1812 these Archives received their present organisation into four sections, political, administrative, financial, legal, from the French Government. In 1855, they were transported to the Monastery of San Severino, where a school of palaeography, a library, &c., were formed. Recent events have brought to San Severino the archives taken from the monasteries by the Italian Government.

The National and Brancacciana libraries at Naples also contain interesting memoirs, chronicles, &c., bearing on the history of France.

M. Lecoy de la Marche also explored the Archives of Montcassin, Venice, Florence, Milan, Genoa, and Marseilles, and copied or analysed 695 documents in all. Among these we may mention the regulations of the Council of the Genoese Republic for the solemn reception of King René; instructions given to the Papal envoys at the French court, attesting the help given by the Papacy to the cause of King René; a will of King René, dated June 27, 1453; an ordinance of King René against certain games, and the blasphemies, quarrels, and homicides which result from them; various documents bearing on the relations between King René and the town of Florence; *Gaspary Pelegrini historia Alphonsi primi Aragonii, Neapolitis Regis*; and a MS. *De Arte Illuminandi*.

THE first volume of Professor Stubbs' *Constitutional History of England*, which is to appear shortly, from the Clarendon Press, will contain the history as far as the Great Charter.

MR. JAMES BURGESS, editor of the *Indian Antiquary*, and author of several works on the antiquities of Western India, has been appointed by Government to take charge of the Archaeological Survey of the Bombay Presidency.

SOCIETY OF ARTS.—The Swiney Prize, consisting of a silver goblet, value 100*l.*, containing gold coin to the same amount, was awarded, on the 20th inst., to the Right Hon. Sir Robert J. Phillimore, D.C.L., one of Her Majesty's Most Honourable Privy Council, and Judge of the High Court of Admiralty, for his work entitled *Commentaries on International Law*. The prize is given under a bequest of the late Dr. Swiney, and is awarded every fifth anniversary of his death to the author of the best published treatise on Jurisprudence.

NOTES OF TRAVEL.

A CORRESPONDENT of the *Pall Mall Gazette* of the 16th inst., gives a description gathered from eye-witnesses, of the audience ceremony at Pekin, which fully justifies Mr. Duffield Jones's refutation in the *ACADEMY*, based on his personal knowledge of Mr. Wade, of the absurd story quoted by an evening contemporary. The *Pall Mall's* correspondent observes, and the observation is fully borne out by the long report of the ceremony which he subjoins, that "the whole proceedings were dignified and formal, and the Prince of Kung's conduct showed a marked courtesy and anxiety to avoid offence."

A QUESTION possessing great ethnological interest is at present engaging the attention of the Russian Government, and may very possibly prove of sufficient weight to interfere with the realisation of the scheme which, as is well known, the Emperor has at heart for bringing his subjects under one general law of compulsory military service. Politically, nothing seems more simple than that the Czar of All the Russias should make it obligatory upon his people to learn how to use arms in defence of their country; but, considered from an ethnological point of view, the suggestion offers enormous and apparently insurmountable difficulties.

The unsettled or wandering tribes of Russia are divided officially into the "Brodjatschije" or roaming, and the "Kotschuschschije" or semi-nomadic. The former of these include in Siberia the Ostjaks, Samojedes and Tunguses, and in European Russia only the Woguls. These tribes wander about in single families, having no fixed settlements, and live by hunting. The latter on the contrary live in tribes or communities, each division of which occupies a fixed area, within whose limits they yearly, at certain times, make nomadic migrations to certain points on the steppes, mountain sides, or river banks, which they frequent with such unvarying regularity that anyone acquainted with the tribal order of migration knows where each family will be found at any given season. The slightest deviation from the prescribed course requires to be settled by definite agreement with neighbouring families, and is in most cases a source of sanguinary feuds. The numbers and condition of these tribes are accurately known to the Russian Government through the system of representation which they have established among them for the election of the district bailiffs (Wolostnoi Starshina), who serve as middle-men between the Government and the subjugated tribes. There would be no difficulty, therefore, in instituting a system of recruiting among these nomadic people, who have from ancient times been subject to military service, and some of whom under the generic name of Bashiks, or as "Cossacks," are known in the history of modern European warfare. The practical difficulties that stand in the way of general compulsory military service are nevertheless very considerable. In the first place, Russia pledged herself on the surrender of the Kirghis, the true Siberian races, that they should be for ever exempt from compulsory service, in lieu of which they were to pay a fixed tax in skins, or an equivalent in money. This exemption was granted on the ground—a purely ethnological one—that such service was incompatible with their habitual mode of life. And it is obvious, that if this exemption is abrogated, and military service strictly enforced, there must soon be an end of nomadism, whether in families or tribes. It is precisely on the exertions of the able-bodied men that the lives of the remaining members of the community are dependent. Remove the young and the strong from the hunting, fishing, and grazing grounds, from which all derive their scanty sustenance, and the family or tribe must be speedily exterminated. The chances are, moreover, that the wild nomad, who has never slept beneath a roof, would when shut up in barracks speedily fall a victim to the effects of nostalgia or pulmonary disease—both so

fatal to half-wild races—if he did not rather brave all risks of punishment and seek to return to the savage freedom of the steppes. Finally, would it ever be possible to make soldiers of such physically deteriorated races as the Kargasses, Woguls, Kottes, Jenisee-Ostjaks, and others like them? Would it be conceivable that men of such degenerate *physique* could survive even the most moderately enforced military discipline? What then is to be the end of this new scheme of Russian mobilisation? Are nomad life and the tribes who have followed it in all known ages to be together crushed under the heel of Imperial despotism? or is Russia going to recast the lives and destinies of races whose peculiar characteristics have hitherto seemed to be indelibly impressed upon the stock from whence they have sprung?

WE understand that the Dundee Chamber of Commerce, through their member, Sir John Ogilvy, have sent in a memorial to the Prime Minister, representing the importance of Arctic exploration, and urging the Government to despatch an expedition this year. The question is of vital importance to the welfare of Dundee, and indirectly to that of the whole seafaring population of Scotland. The Chamber represents that it is most important that the unknown seas and coasts to the north of Greenland should be explored, and that the extent to which they are frequented by oil-producing animals should be investigated and ascertained.

The memorial further advocates an expedition for general scientific purposes, and for the service it would be to the maritime interests of Great Britain, in stimulating enterprise, and giving employment to the intelligent seamen experienced in ice navigation.

THE question of the Arctic Expedition still seems to hang fire. It appears that Mr. Gladstone has up to the present given no answer as to whether he will receive the deputations from the learned societies, who are desirous of urging this matter upon the attention of Government. If the matter be delayed much longer, it will be too late in the season to think of despatching an expedition this year. But we have the best authority for stating that such an expedition will be despatched, if not this year, then the next; and if not under Government authority, by private enterprise and from private funds.

DR. KIRK, the Consul-General at Zanzibar, arrived in London last Sunday. Dr. Kirk will, it is anticipated, be present at the next meeting of the Royal Geographical Society, on Monday, the 20th inst., when an interesting paper will be read by Lieut. Baker, R.N., describing the experiences and results of Sir Samuel Baker's late expedition. One of the most exciting experiences of the expedition was the getting through the Bahar-el-Giraffe, on the Nile. In connection with this subject we may state that an influential attempt will be made to have Lieut. Baker placed on the active list of the Royal Navy staff, from which he has had to retire under the operation of regulations which were brought into force almost immediately prior to his departure.

COLONEL GORDON, R.E., left London for Cairo on the 21st inst. We believe that Colonel Gordon will be accompanied on his mission by a staff of four Europeans only, the majority of whom served with Sir Samuel Baker. No commissioned officer either of the army or navy will accompany Colonel Gordon.

WE hear that, on the 30th instant, a meeting will be held at the Society of Arts, under the presidency of Sir Bartle Frere, at which a large number of leading commercial men are expected to be present, and which will take into consideration the whole question of how best to develop commerce on the East Coast of Africa. The rapidly increasing steam communication on that coast renders this step a highly desirable one.

WE understand that, with regard to the much-

vexed question of the proper method of spelling Indian names, the following rules have been definitively sanctioned by the Secretary for India, and are to be strictly followed in all future official correspondence:—

“I. Short *a*, as in the second syllable of *tartan*, is to be uniformly expressed by *a*.

“Long *a*, as in the first syllable of *tartan*, is to be expressed by *ā*, but the diacritical mark may be omitted when it is not essential to pronunciation.

“Soft *u*, as in *rural* (corresponding to the double *oo* sound in *foot*), is to be uniformly expressed by *u*.

“Long or short *i*, as in *police*, *ravine* (corresponding to the double *ee* sound in *creek*), is to be uniformly expressed by *i*.

“The sound of *i*, as in *ride*, is to be expressed by the diphthong *ai*.

“The sound of *au*, *ou*, or *ow*, as in *cowl*, *cloud*, &c., is to be uniformly expressed by the diphthong *au*.

“II. All names which have acquired an absolute fixity of spelling, from historical or popular usage, such as *Calcutta*, *Bombay*, *Madras*, &c., are to be left untouched; excepting that when such words end in *nagar*, *nagore*, *nuggur*, &c., the termination *nagar* is to be uniformly used; and when they end in *pur*, *pore*, or *poor*, the termination *pur* is to be uniformly adhered to.

“III. When any difficulty occurs, the *Guide to the Orthography of Indian Proper Names*, as drawn up by the Director-General of Statistics to the Government of India, or his supplementary List of Indian Geographical Names, is to be consulted.”

FROM St. Petersburg we learn that public attention is much given to the consideration of railway communication between Russia and Siberia, as well as to the question of a Central Asian railway.

At the last meeting of the Society for the Development of Russian Industry and Commerce, it was unanimously resolved that the line to Siberia should go by way of Kazan to Ekaterinburg, and that public interests demanded a speedy commencement of the undertaking. Colonel Gluchowski, under whose instructions the first caravan from Khiva to Kazan was recently equipped and started, was present, and took occasion to enlarge on the commercial importance of the Khivan Khanate.

The concession for a railway from Orenburg and Posen to Ekaterinburg is the first step towards the realisation of a system of Asiatic railways. The line will start from Batraki and run along the right bank of the Volga past Samara to Orenburg. The work will be set on foot within six months, and will probably take three years to complete.

THE Secretary of the Russian Legation at Pekin has issued a letter from Capt. Prjevolzky (who has been travelling for eighteen months in Thibet), dated Dyn-Joan-In, June 17, 1873, which makes useful additions to those previously received:—

“Three, or rather four races, the Chinese, Tanguts, Mongols, and Dalds, inhabit the countries I have visited, namely Han-Su, Khu-khu-Noor, and Tsaidam; northern Thibet is uninhabited. The Chinese are found only in Han-Su, and do not differ in character or costume from their compatriots of Pekin. With the Chinese in Han-Su, and there only, in the neighbourhood of Si-Nin, is a separate race, that of the Dalds, as distinct from the Mongols as from the Tanguts and Chinese. In type they approximate rather to the Mongol than to the Chinese; their language, according to the natives, is a mixture of the two. They practise agriculture, and live in houses (*funz*) like those of the Chinese. I have seen these people only on the route, and have not been able to study them closely.

“The Mongols, who are in small numbers in Han-Su, but fairly sprinkled over Khu-khu-Noor and Tsaidam, belong to the Eleut family. In type and character they are the ugliest branches of their race. Physically they approximate to the Tanguts, with whom they always prefer to mix. The pure Mongol type is here modified and deformed in a most remarkable manner. The expression is stupid, the eyes soulless, like a sheep's; the character sober and melancholy. They have no energy nor desires, and show a brutal indifference to all but their food.

“The *Vane* of Khu-khu-Noor, speaking to me of

his subordinates (subjects), compared them to beasts. ‘Put them on four legs,’ he said, ‘and you will have real cows.’

“The Tanguts, who are numerous in Han-Su, Khu-khu-Noor, and part of Tsaidam, remind one by their type of our gipsies, to whom in character they bear a still closer resemblance. Rough as the Mongol is when compared with the European, he is a civilised man to the Tangut. His habitation (*surtā*) is a palace to that of the Tangut, in which you find a heap of filth up to your knees and leaves thrown on the ground for a bed. One may say without exaggeration that a marmot's hole is ten times more comfortable than a Tangut's hut. The marmot has at least a soft warm bed, while the Tangut's tent, made of a thin trellis-work, protects him neither against the rains nor against the cold of winter.

“The chief characteristic of the Tanguts is their love of thieving and deceit. In this respect they beat the Chinese, and are to them what these are to the Mongols. A population of this race, the Khara-Tanguts, who live principally in Khu-khu-Noor, live by brigandage, and keep the country in constant alarm. The Mongols are the objects of the attacks of the Khara-Tanguts, who not only steal their beasts, but kill the inhabitants or carry them into slavery.

“The Mongols of Khu-khu-Noor, vile by nature, have not so far been able to defend themselves by arms against these aggressors, because by the established law of the Tanguts a Mongol who kills a Tangut pays his family an enormous fine of 1,000 *lanas*. If the killer is poor, all his tribe pays for him. If the fine is refused, the Tanguts unite in hundreds and seize it by open plunder. The local authorities pretend not to see, being corrupted by the brigands.

“As to ourselves (the Russians), the Tanguts have conducted themselves in the most respectful manner, knowing very well that we should pay no fine and fight on the slightest provocation. The brigands have entirely ceased to sack the districts where we are found, so that the Mongols are exceedingly glad of our presence. On my way to Thibet I left at Tsaidam a sack of corn which I did not want; the Mongols received this deposit, and said that it would preserve the whole of Tsaidam. In fact no brigand dare show himself the whole winter, for fear of stealing some object left by the Russians, the Mongols having carefully spread a report that we had left many things in their keeping. Moreover, the chiefs of Mongol tribes came often to beg me to order the restitution of cattle stolen from them by the Khara-Tanguts.

“Mongols even came to ask my benediction and permission to pray for me, as there was a widespread rumour that I was a ‘great saint.’”

CORRESPONDENCE.

MR. HERBERT SPENCER'S SOCIOLOGICAL TABLES.

Athenæum Club, Jan. 17, 1874.

Your number for January 10 contains a review of the *Descriptive Sociology*, &c., in which there occurs a sentence indicating the character of the work, and proceeding to say that, “when one considers the high reputation Mr. Spencer has acquired by his sociological theories, it acquires a peculiar interest, as it will serve to show the nature and value of the material which he has used for constructing or testing his speculations.”

This passage tacitly asserts that, in framing the sociological theories known to be held by me, I have used the materials contained in the tables and classified extracts reviewed. Now, no one of the sociological theories referred to is based upon, or elaborated from, the materials already published, or other like materials in course of printing or preparation. The first sentence of the preface, which the reviewer himself quotes, is to the effect that the materials in question have been, and are being, collected and organized “in preparation for the *Principles of Sociology*”; and if, not previously knowing it, he had taken the trouble to inquire, he would have found that no part of that work has yet appeared. Materials which I am

about to use as bases for conclusions to be hereafter set forth, he represents as bases for conclusions already known as mine.

HERBERT SPENCER.

Jan. 17, 1874.

It concerns the ACADEMY, even more than the author or the compiler of *Descriptive Sociology*, that various incorrect statements made in your review of that work should not pass unchallenged.

I may first notice two very grave cases of misquotation:—

1. In the single paragraph which is quoted at length, there occurs the sentence, "Intervention of King in Courts declared illegal." This appears in the ACADEMY with the omission of the words "declared illegal." It is of this mutilated statement (again mutilated in his comment) that he courteously remarks that I have "probably escaped error by avoiding detail."

2. In the same paragraph in Table V., two statements are made under the sub-head "Legislative," relating not to law, but to the law-making power. This sub-head your reviewer sets down as "Legislation,"—the impression left being that nothing more is to be found in the Tables referring to legislation than the two statements spoken of; though there is an entire column devoted to the history of law.

Passing to my alleged blunders, I find that your reviewer accuses me specifically of four "errors," one "inaccuracy," and an omission.

I. First as to the "errors." The paragraph which your reviewer has travestied in the way above shown "contains," according to him, "nearly as many errors as sentences." His precision in the use of language will appear from the fact that the paragraph in question contains twelve sentences and eighteen distinct propositions. Only four of these does he even attempt to prove erroneous. I will now show that he fails.

1. In a series of tabular statements describing the development of the office of Secretary of State, there occurs the subordinate statement that he "drew up reports at conclusion of sittings of Privy Council." Upon this his criticism is as follows:—"The Clerk of the Council and not the Secretary of State drew up the reports at the close of the Council sittings, if indeed Mr. Collier refers to the reports which are entered in the Council Registers." He thus selects an erroneous interpretation of the words, ascribes that to me, and then denounces the statement as an "error."

2. Your reviewer denies that the Cabinet Council existed apart from the main body of the Privy Council in the reign of Charles I. Against Mr. Gibson's unsupported assertion that it did not, it would be enough to set Mr. Hallam's assertion that it did. Assuming, however, that Mr. Hallam is no more of an authority than Mr. Gibson, appeal may be made to Lord Clarendon, who speaks of "the Committee of State which they called the Cabinet Council." So that the Cabinet Council not only existed, but existed *eo nomine*, in the reign of Charles I. Of course, the Cabinet Council of the seventeenth was a very different thing from the Cabinet Council of the nineteenth century; and an explanation of the difference will be found in the Extracts, page 16, column 2.

3. It is stated (still in the same paragraph) that, in the reign of Charles I., the "power of the Star Chamber [was] increased." This your reviewer simply denies. Here, again, it would be enough to quote the judicial summing up of Mr. Hallam, who says that "the reproach of arbitrary and illegal jurisdiction does not wholly fall on the government of Charles," implying that it does fall partly. But what are the facts? Does Mr. Gibson deny that an unusually large number of cases were withdrawn from the jurisdiction of the Common Law within that of the Star Chamber? And what is this but an increase of the power of the Star Chamber? In what conceivable way

could the power of a court whose jurisdiction was arbitrary, be increased except by that increased frequency and severity of its exercise which Mr. Gibson himself admits? Let me put a case. The House of Commons sustains, in the theory of the Constitution, precisely the same relations to the Crown and to the House of Lords as it did a century ago. Would it be *therefore* inaccurate to say that the House of Commons has, with relation to the Lords and the Crown, more power in 1874 than it had in 1774?

4. In the same paragraph there is a statement to the effect that the Petition of Right asserted, among other things, the illegality of tonnage and poundage. Your reviewer thinks this statement sufficiently answered by saying that the Petition of Right "makes no mention of tonnage and poundage." To this I reply that in the belief of Parliament, whose work the Petition of Right was, the illegality of tonnage and poundage was declared by the Petition of Right. If he still disputes the propriety of the word "assert," I refer him to Webster's Dictionary, where "assert" is defined:—
1. To declare positively, and with assurance.
2. To maintain or defend by words or measures.—
So much for the "errors."

II. The "inaccuracy" discovered by your reviewer is a very notable one. He finds in the Extracts a passage to the effect that "the Oriental conception of the Hebrew God had stamped itself on the minds of a Western people like the English," &c. Corresponding to this he finds the (necessarily) brief statement in the Tables:—"Puritan conception of Deity said to be Arabian." Then he goes on: "These kinds of inaccuracy are bad enough." When your reviewer condescends to state the reasons he may be assumed to have for describing this as an "inaccuracy," I shall be prepared to state the many reasons I have for saying that it is not.

III. I have, it appears, "decidedly signalled" myself "in a brief paragraph relating to literature," by omitting all mention of dramatic poetry. Mr. Gibson does not state that this brief paragraph relates to the period (1640-60) of the Parliamentary struggle with the King, of the Civil War, and the Puritan domination. That the "dramatic literature" produced (not merely first printed) at a period when the drama was under proscription was such as to claim notice in a condensed statement of typical facts, may be left to Mr. Gibson to show.

I have now dealt with all the *specific* accusations I can find: innuendoes are unanswerable.

If I say a word in conclusion on an accusation which is not specific, it is because it appears to be unmistakable. The drift of the closing sentences of the article is that the work chiefly made use of in the compilation of *Descriptive Sociology* was the *Pictorial History of England*. Of the character of this representation your readers may judge for themselves by examining the extracts which form the bulk of the volume. Here it will be enough to say that the only part of the work which your reviewer seriously attempts to criticise—that dealing with constitutional history—was compiled mainly from the writings of Kemble, Freeman, Stubbs, and Hallam.

JAMES COLLIER.

Academy Office, 43 Wellington Street, Strand.
January 20, 1874.

With regard to Mr. Herbert Spencer's complaint, that Mr. Gibson assumes that his Sociological theories hitherto published are based upon Mr. Collier's work, it is of course exceedingly important to learn that they are not. But I do not conceive that the reviewer intended to say anything different from what Mr. Spencer says himself, viz. that the compilation was made at first "solely to facilitate" his own work, and afterwards published to aid all students of social science "in testing such conclusions as they have drawn and in drawing others." "Constructing and testing," are Mr. Gibson's words; "testing and drawing," are Mr. Spencer's. I don't think there is any specific allusion to those

of Mr. Spencer's theories which have been published; but generally to the mode of working which he seems to have adopted since he took Mr. Collier into his employment.

The reclamations of Mr. Collier I have thought it best, for the satisfaction of Mr. Spencer's own mind as to the justice of the strictures made by Mr. Gibson, to place in the hands of a person especially and minutely conversant with the period of history to which they relate—and subjoin his report.

EDITOR.

I have been requested by the Editor to look over Mr. Collier's letter and to give an opinion on the points raised by it.

1. It is certainly to be regretted that the words "declared illegal" were omitted. But the sentence as Mr. Collier gives it, "Intervention of King in Courts declared illegal," though it cannot be said to be literally untrue, is entirely worthless, because nobody would be likely to guess from it or from the quotation from Fischel at p. 16, that what really happened was not that an intervention which had been customary was declared illegal, but that a proposal made for the first time by Bancroft, and backed by James, that the King should intervene, was nipped in the bud by Coke. The original authority is *Coke's Reports*, part xii. p. 63:—

"And the judges," he says, "informed the King that no king after the Conquest assumed to himself to give any judgment in any cause whatsoever which concerned the administration of justice within this realm."

Anyone who drew conclusions from the statement of Mr. Collier in ignorance of this fact would be likely to shoot very wide of the mark.

2. The right of Mr. Collier to complain of the misprint "legislation" for "legislative" may be fully admitted, and there is another misprint of "1603-1605" for "1603-1625," which he has not noticed.

I. 1. The supposition that Mr. Collier referred to the reports in the Council Registers seems to me to be fairly based upon the fact that these are the only reports known to exist. That the Secretary told the King what passed in his absence, or wrote letters to be communicated to the King, is something quite different. Mr. Collier doubtless found his authority in a passage of Fischel, who refers to Clarendon. But the passage in Clarendon ought to be definitely quoted, and it will then be time enough to consider what he meant. At all events, it is a fact that when the King was absent from London in 1627, the Lord President, and not a Secretary, wrote to let him know what had passed in the Council. We also have the orders issued by Charles I. for the regulation of Council business, entered on the Council Register, Nov. 8, 1630. These orders also contradict what Mr. Collier says about the Secretaries being "still subordinate there." They are directed to do things in the Lord President's absence which he would have done if he had been present, and it therefore looks as though they were empowered to act, after a fashion, as Vice-Presidents. The Lord President, for instance, had to certify the correctness of the clerk's reports for the Register. If he was absent, a Secretary was to do this for him, which is probably the grain of truth to be found in Mr. Collier's account. Nor have I ever met with a hint in the correspondence of the time of any subordination. There is nothing of the kind in the Earl of Salisbury's paper on "The State and Dignity of a Secretary of State's Place," printed in the *Harleian Miscellany*, ii. 281.

2. Mr. Collier is quite right in quoting Clarendon to show that the name Cabinet Council was used in the reign of Charles I., but as he gives no reference it is again impossible to verify his quotation without great waste of time. I find, ii. 99 (Oxf. ed.): "These persons made up the Committee of State (which was reproachfully after called the juncto, and enviously then in

Court the Cabinet Council), &c." This is evidently a mere nickname, just as we might say "tea-room council" of any private confabulation of members of the Commons.

It is more important to ask whether the thing corresponded with our modern Cabinet Council, not in all particulars, but in the main. And as Mr. Collier does not apparently stand up for the Commission on Spanish affairs in James's reign, or for the Committee on Foreign Affairs of 1625, the issue is narrowed to the meeting of which Clarendon speaks. It is to be observed that in 1640, the time to which Clarendon refers, the King was absent in the North, and that nine privy councillors meeting informally in his absence to read despatches, discuss measures to be taken, and then summoning the Council to empower them to act as they thought fit, would seem rather to resemble a Regency than a Cabinet. The question, therefore, is whether Mr. Collier is justified in baldly stating, "Cabinet Council exists apart from main body or Privy Council," knowing what ideas will be inevitably attached by his readers to so well-known a word. There is also a further question whether he is excused by the fact that he has quoted Hallam's *qualified and therefore correct* statement in another part of the book. My own opinion is that he ought to have followed his authority more closely.

3. Here it appears that the question is what Mr. Collier meant when he said, "Power of Star Chamber increased." Clarendon, indeed, says that it and the Council enlarge their jurisdictions; that they set higher fines, and interpreted offences against proclamations as offences coming within their jurisdiction. The powers of the Star Chamber were not capable of indefinite increase, but were limited by statute, and what was done was to strain the statute according to its own notions of what it was allowed to do. The usual statement which Mr. Collier has taken hold of that the Star Chamber was "a court whose jurisdiction was arbitrary," does not mean, as far as I can judge without being a lawyer, that it could do anything it pleased, but that it decided without a jury. It could not, for instance, hang a man. No new powers could be acquired by it excepting by Act of Parliament. Clarendon may again be usefully quoted:—

"They who look back upon the Council-books of Queen Elizabeth and the acts of the Star Chamber then, shall find as high instances of power and sovereignty upon the liberty and property of the subject as can be since given" (ii. 154).

The question again is, Whether Mr. Collier's words do not imply more than Clarendon admits? This question I am disposed to answer in the affirmative.

4. It is quite natural that Mr. Collier should believe himself in the right, as he has the House of Commons (*minus* Eliot, who was absent) on his side. But my belief is, that the House of Commons was wrong, and that Charles was right. The whole contention of the Crown lawyers ever since the great debate of 1610 had been that Customs' duties were not included in such words as those introduced into the Petition. Coke and Selden were wide enough awake to know this; and if they had meant to include tonnage and poundage, they would have said so. Nor is it strange that they did not mean to include it. A separate Tonnage and Poundage Bill was introduced in the beginning of the year, and they hoped to get out of their difficulties on that head independently of the Petition. We are able to refer to the full debates of this session—at least in MS.—and I believe I am right in stating that no single member ever suggested that the Petition would cover the case of Tonnage and Poundage. After the Petition was granted, the Commons, not getting the settlement by Bill, fell back upon the assertion which Mr. Collier adopts. But, though they were right economically, it appears to me that they were completely wrong in holding that either they or Charles had in-

tended the concession to be made by the Petition.

II. I pass over the identity Mr. Collier seems to offer to establish between the Hebrews and the Arabians.

III. If Mr. Collier will look at his own words again, he will see that, though the paragraph to which he refers as excluding all mention of dramatic poetry because of the Puritan proscription, does refer to the period 1640-1660, yet the section which refers to poetry is distinctly headed 1630-1688. Perhaps Mr. Collier is right in thinking that this is the paragraph to which Mr. Gibson referred, though from his language he seems to be speaking of the one before it, which runs as follows:—

"*Literature*.—1593. *Arcadia*, first scholarly prose fiction. 1590. *Faery Queene*. 1586-1612. Historical and topographical poems. 1597. First satires. 1599. First philosophical poetry. Many lyrics and sonnets. Tragedy chiefly heroic; comedy remote, with beginnings of modern description. Poetry exuberant and formless; no prosodial system."

Tragedy and comedy are certainly mentioned, but who would have supposed that this is the age of Shakespeare?

In conclusion, I would say that any objections taken to Mr. Collier's work ought not to be regarded as implying any want of appreciation of the value of Mr. Herbert Spencer's work. Students of history and students of sociology can be of such great assistance to one another, that it is a pity that they should meet only through the intervention of a third party. Human life is short, and it would be ridiculous to ask Mr. Spencer to study Rushworth and the State Papers for himself. But I am afraid that he must at least study Hallam and Clarendon for himself, if history is to be of any use to him, though it will always be well for him to keep in mind that "Kemble, Freeman, Stubbs, and Hallam" are not first-hand sources of information, but only interpreters of authorities. For instance, Mr. Spencer would do well to open Clarendon at the passage about the Star Chamber, already quoted; and he will know more that will be useful to him for that great forthcoming work on Sociology, which I sincerely hope some day to have the pleasure of reading, than is to be found in all that Mr. Collier has to say about the powers of the Star Chamber. Clarendon's view of the mischief is that it resulted not from an increase of powers, but from partisanship and passion in the judges. They were no longer calmly doing their best for England according to their lights. They were urging their own sectarian views. Transfer this to the whole of Charles's government, and you have the key of the entire change which was then passing over society. The Puritan revolution was a reaction against this state of things. Mr. Spencer's mistake has been, that from want of familiarity with historical research, he has under-estimated the amount of judgment required to form a good selection of facts, and to make the first generalisations from them. This sort of thing cannot be done to order. Mr. Collier is evidently a most painstaking man, and has worked conscientiously at the enormously hard task he has been set to do. But as far as I can judge from an examination of the portion relating to the part of history with which I am immediately acquainted, I do not see any reason to differ materially from the estimate formed by Mr. Gibson. Indeed, I doubt very much whether any man living is capable of treating the whole history of England satisfactorily in the way proposed to Mr. Collier.

SAMUEL R. GARDINER.

THOMAS CHAUCER.

Jan. 17, 1874.

Allow me a word of explanation, that I may not appear to have committed the mistake to which Mr. Furnivall alludes. My words are (pp. 115, 116):—

"The relationship of Thomas Chaucer to the poet has long been called in question. Speght, the editor of Chaucer's Works in 1598, remarked 'that some held opinion that Thomas Chaucer was not the sonne of Geoffrey;' and Tyrwhitt added to this observation, 'there are certainly many reasons which might incline one to that opinion.' Very recently, Mr. F. J. Furnivall has stated that there is so much indirect evidence against the supposition that he was 'the son or any relative of the poet Chaucer . . . as almost to amount to proof of the absurdity of the hypothesis.' Mr. [cor. Dr.] R. Morris, who, in the first edition of extracts from the *Canterbury Tales*, edited by him for the Clarendon Press Series, called the poet's wife 'the daughter,' has described her more cautiously in the second as 'supposed to be the daughter,' of Sir Paon de Roet, upon the settlement of which question the value of the evidence to be derived from the coats-of-arms on the tomb of Thomas Chaucer depends."

ED. MARSHALL.

SHAKSPERE'S PASTORAL NAMES.

It occurs to me, after reading Mr. Hales's letter (ACADEMY, January 10) on the name "Melicert" given to Shakspeare, that Chettle may have chosen to apply to him the surname which the Greeks assigned to Simonides on account of the melody of his verse. Suidas writes about him, *ἐπεικλήθη Μελικέρτης ἐὰν τὸ ἡδύ*. Though the play on the similarity between *Μελικέρτης* and *μελικήρτης* is not a very good pun in Greek, a scholar of the sixteenth century who had noticed the paragraph in Suidas, and who recognised in Shakspeare the qualities which the ancients admired in Simonides, might have found it suit his purpose to call Shakspeare "Melicert," especially as the name itself is euphonic.

J. A. SYMONDS.

IS AETION SHAKESPEARE?

Aberdeen, January 19, 1874.

SIR,—In the ACADEMY of January 10 Mr. J. W. Hales explains the meaning of the name Aetion, and treats it as being in all probability a pastoral name for Shakespeare. The explanation is obvious enough, and it would doubtless be pleasing if we could set off Spenser's "Eaglet" against Greene's "upstart crow beautified with our feathers;" but one cannot help fearing that in appropriating the complimentary "Aetion" for Shakespeare we aggrandise the poet before his time, at the expense of a humbler claimant. It seems to me that the claims of Michael Drayton are at least equally probable, and that they have not received full justice. The objections commonly looked upon as fatal to Drayton—that he "had published nothing in an heroic strain even in 1595; and, if he had, still it would be difficult to assign any meaning to the assertion that his muse did, *like himself*, heroically sound"—proceed upon imperfect information (Craik's *Spenser and his Poetry*). Drayton's *Harmony of the Church*, published in 1591, might well be called heroic and full of high thoughts, containing as it does metrical versions of the most sublime Hebrew songs of praise and triumph: and Drayton's assumed poetical name was *Rowland*, a name that sounded in those days much more heroically than *Shakespeare*.

It may, however, be urged that Drayton in the preface to his *Harmony of the Church* expressly disclaims invention, and professes to translate as exactly as he can. But that, perhaps, is putting too fine a point on Spenser's compliment. I am not by any means sure that even if we except the *Harmony of the Church* altogether, Spenser would not have found a justification for his epithets in Drayton's pastoral poetry. There is prefixed to Drayton's *Endymion and Phoebe* (1594) a commendatory sonnet signed "E. P.," which contains epithets in remarkable harmony with what Spenser says of Aetion:—

"Rowland, when first I read thy stately rhymes,
In shepherd's weeds when yet thou livest unknown,
I then beheld thy chaste Idea's fame
Put on the wings of thy immortal style.

Thy fiery spirit mounts up to the sky,
And what thou writest lives to Eternity."

In trying to interpret these old allusions, we must always be on our guard against the danger of importing our own ways of looking at things: and such an evidence as this of what Drayton's friends felt warranted in saying about him, is of more value than almost any amount of speculation as to what we should have considered proper to the circumstances.

Again, it may be said that if Spenser had wished to compliment Drayton, he would have used his own name *Rowland*. But that Spenser should have called Drayton *Aetion* instead of *Rowland* is not more inexplicable than that he should have called Shakespeare *Aetion*, and the name not have been adopted by subsequent panegyrista. The Arcadians of those days were not limited to one name. Even *Astrophel* (Sir Philip Sidney) was lamented under the name of *Willie*.

It is noticeable that Lodge, in an enumeration of the chief poets in 1596, mentions Drayton next after Daniel, and does not mention Shakespeare: and it may fairly be asked whether Lodge would have done so had Spenser given his authoritative recognition to Shakespeare, and not to Drayton.

W. MINTO.

THE SPELLING OF SHAKSPERE'S NAME.

I have been taken to task by several old Shakspearean students for spelling our great poet's name as he spelt it himself, SHAKSPERE, and not as some of his contemporaries spell it, Shakspeare or Shakespeare. The opinion evidently prevails among some folk that though the poor man could write plays, he did not know how to spell his own name. The fact is, as Sir Frederic Madden put it, that there are only five unquestionably genuine signatures of Shakspeare's in existence,—the two on his Stratford conveyance and mortgage, and the three on his will. About four of these there can be no question; they have neither an *e* after the *k*, nor an *a* after the *e*. The fifth is a little difficult to read. Many of the lovers of *eare* say that the last three letters are *are*; but, having had some experience in MSS., I say, without a doubt, that these letters are *ere*. The *e* preceding the *r* has the same shaped top as the final *e*, though a longer base. Between these two like-shaped *e*'s, a wavy stroke has been inserted for the *r*. Thus, neither the spelling "Shak" with *e*, nor "spere" with *a*, has really any autographic authority in its favour. Those who maintain either, do so in defiance of the plainest evidence; and, as a matter of course, they grumble against those who act on the evidence. Neither the practice of Shakspeare's friends, critics, or printers, nor the possibly spurious autographs in books never proved to be his, can stand for a moment against his own unquestioned signatures to legal documents. SHAKSPERE, then, is the right spelling of the poet's name.

F. J. FURNIVALL.

THE NEW SHAKSPERE SOCIETY.

MR. J. P. COLLIER'S letter is interesting as an illustration of his adherence to his old method of treating his originals. The ACADEMY said: "The New Shakspeare Society is to have a fresh series of publications added to the five named in its director's prospectus," and then, evidently on the authority of one of the journal's own contributors, named the books. Mr. Collier, as is his wont in like matters, treats "these particulars" as taken from "your abstract of the Prospectus of the Director of the New Society," from which you had expressly excluded them. This is a very slight exercise of Mr. Collier's "notorious daringness of invention that has made him read imaginary lines into MSS., and spelling into words, and has rendered him a wonder and warning to the editors of this age," on which I commented in my *Andrew Boorde*, pp. 71-2, notes, 1870.

Seeing that Mr. Collier is liable to such flights

of fancy as made him print, for instance, a passage in Henslowe's *Memorial* thus:—

Original.

The truth is right honorable, that one Lodge beinge about a yere nowe paste arrested within y^e Libertie of the Clincke (where I am a dweller,) at y^e sute of y^e said Toppin vpon an acc^{on} of debte, and havinge of me some knowledge and acquaintance requested me to be his bayle.

Collier.

The truth is, right honorable, that one *Thos.* Lodge beinge aboute a yere nowe paste arrested within the Libertie of the Clinck (where I am a dweller) at the suite of the said Toppin, upon an action of debte, and havinge some knowledge and acquaintance of him as a player, requested me to be his bayle.

It is obvious that the New Shakspeare Society cannot, in fairness to its subscribers, reprint Mr. Christie-Miller's Ballad from Mr. Collier's print, without asking Mr. Christie-Miller to allow them to collate that print with the original, and ascertain that Mr. Collier was not in an imaginative or fanciful mood when he copied it. The occurrence of the product of this mood in Mr. Collier's print of Dulwich letters, &c., and its leading Mr. Collier to take plainly forged Ellesmere documents, Perkins Folio, &c., as genuine, have made, and must make, all Shakspearean students distrust every text Mr. Collier has printed or reprinted, till it has been verified by the collation of some prosaic person who sees only what is in his original, and does not confuse his fancy's creations with it.

That the wrong dates to the Tracts Mr. Collier mentions, ever appeared in "the Prospectus of the Director of the New [Shakspeare] Society" I can positively deny, as I have now copies of the Third and Fourth Proofs before me. In the Fifth, dated Jan. 2, 1874, the dates are given as follows: "Three Shakspeare Allusion-Books—Greenes *Groatesworth of Wit* [1592], 1596; and Henry Chettle's *Kindharts Dreame* [1593], and *Englandes Mourning Garment* [1603], edited by C. Mansfield Ingleby, Esq., LL.D." It was on Sunday, Dec. 21, 1873, that Mr. Henry Huth kindly lent me his original copies of these three tracts. Mr. Collier, when finding fault with the date 1596 attached to Greenes *Groatesworth of Wit*, as the book to be reprinted, knew perfectly well that that edition only is in existence, no copy of the edition of 1592 being known. Again, when Mr. Collier asserted of "Henry Chettle's *England's* [that is, *Englandes*] *Mourning Garment* . . . that, in figures on the title-page, it bears the date of 1603," he had either fallen into one of his imaginative moods, or his copy (if he has one) differs from Mr. Henry Huth's, which, as the friend in whose hands it now is, says, "has neither date nor name at the beginning or end. But the penultimate two leaves set forth or end. 'The Order and Proceeding at the Funerall' &c. of Elizabeth 'To the Cathedrall Church of Westminster: the 28 of Aprill 1603.'" And at the end of this Order is "To the Reader," 5 lines, "Farewell. Hen: Chettle." F. J. FURNIVALL.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Jan. 24,	3 p.m.	Royal Institution. Professor Croom Robertson on "Kant" (iii.).
	"	Crystal Palace Concert. (Sims Reeves and Dr. Stainer.)
	"	Saturday Popular Concert. Beethoven's Serenade Trio. (Hallé and Madame Norman-Neruda.)
	5.45 p.m.	Royal Botanic. (Inner Circle, Regent's Park.)
MONDAY, Jan. 26,	1 p.m.	Sale of Books at Puttick and Simpson's; and of two collections of Oriental and English coins at Sotheby's.
	4 p.m.	London Institution. Mr. John Evans, F.R.S. "On Ancient Stone Implements."
	7 p.m.	Entomological (Anniversary); Institute of Actuaries.
	8 p.m.	Monday Popular Concert (Brahms' Pianoforte Quartet).
	8.30 p.m.	Geographical. Lieut. Baker on the Khedive's Expedition into Central Asia.
TUESDAY, Jan. 27,	12 noon.	Sale of old china and furniture at Bonham's.
	3 p.m.	Royal Institution. Professor Rutherford on "Respiration" (iii.).
	8 p.m.	Civil Engineers' Anthropological (Anniversary).
	8.30 p.m.	Medical and Chirurgical.

WEDNESDAY, Jan. 28,	1 p.m.	Society of Arts. Professor Ansted "On the Coal and Iron-fields of Virginia." Archaeological Association.
	"	London Ballad Concert, St. James's Hall.
	7 p.m.	London Institution. "Recent Assyrian Discovery," Rev. Sayce, A.H.
THURSDAY, Jan. 29,	1 p.m.	Sale of old English china at Sotheby's.
	3 p.m.	Royal Institution. Professor Duncan on "Palaeontology" (iii.).
	8.30 p.m.	Antiquaries.
FRIDAY, Jan. 30,	8 p.m.	Royal Institution. Sir Julius Benedict on "Weber and his Times."

SCIENCE.

On the Origin and Metamorphoses of Insects.
By Sir John Lubbock, Bart., M.P., F.R.S., &c. (Macmillan & Co.) Nature Series.

THIS is a most interesting little book, which will be very acceptable to the philosophical naturalist, and to those general readers who are tired of the wonders of insects and that kind of literature. It is not too learned for the majority of the insect-loving, or for those who dabble with pins and cork, and pursue practical entomology. Moreover, there is abundance of well-written and thoughtful matter in some parts of the work which will be enjoyed by advanced biologists. Commencing with a popular chapter on the classification of insects, which is followed by one on the influence of external conditions on the form and structure of larvæ, the book treats consecutively of the nature of metamorphoses, the origin of metamorphoses, and finally of the origin of insects.

The question has arisen in the minds of most naturalists who know something of geology, whether the first insects submitted to those changes in form, structure, and habit, which constitute metamorphosis. And such a question leads to those of what were the first insects, and from what earlier forms were they derived? Sir John Lubbock points out that greatly as the mature insects of most of the great groups differ from each other, still their larvæ have much in common, and in many instances resemble a typical form, consisting of a head, a three-segmented thorax, with three pairs of legs, and a many-jointed abdomen, often with anal appendages. Such a form exists, without suffering but slight change in its life-cycle, in the genus *Campodea*, and the author considers it to be the living representative of a primeval type, from which all the great families of insects have derived their origin. Its ancestry was humble enough, according to Sir John Lubbock, for it was probably derived from a less highly developed form, resembling the modern Tardigrade, a smaller and much less highly organised being, which has been successively placed amongst the *Acari* and the *Rotatoria*. On the other hand, Fritz Müller considers that the water-breathing *Crustacea* must be regarded as the original stem from which the insects arose, and argues as follows:—Neither the Nauplius nor the Zoëa of the metamorphic *Crustacea* has the normal number of extremities of the crustacean class. Like the larvæ of those spiders which undergo metamorphosis, they have six legs—the three pairs of extremities which characterise the true insects as a class. Moreover, the mouthpieces of the immature representatives of the different classes are of the same number, and the true insects, like the Zoëa of *Crustacea*, have no appendages

to the abdomen, and have mandibles without palpi. Fritz Müller has pointed out that the *Orthoptera*, with larvæ, which have eleven segments in the abdomen (and not nine, as in the *Lepidoptera*), agree with the rudimentary prawns, and with the higher *Crustacea* in the number of the segments. He notices also that in the *Orthoptera* and the *Crustacea* the egg-orifice and the vent are placed on different segments, and not on one particular ring. Fritz Müller believes that there were perfect insects like the non-metamorphosing *Orthoptera* before larvæ and pupæ; but this is hard to credit, especially as there are such things as larvæ which propagate by ova. It seems more probable that a larva with the same number of extremities as its crustacean ancestor, and which moreover moulted, was the first insect form, and it must therefore have been more or less vermiform, and probably aquatic in its habits.

In estimating the bearings of insect metamorphosis with regard to the slow changes which appear to have occurred during the formation of new species out of varieties, Sir John Lubbock points out that if great changes take place in insect form and method of life during a few days, it is hard to be denied the right of drawing upon geological time in explaining the derivation of one species from another—the structural alteration being less than that which occurs in metamorphosis—by the theory of descent with modifications by natural selection. The nature of the phenomena and the probable cause of metamorphoses are very well and clearly stated, and it is to be regretted that the size of the work appears to have prevented a chapter on the more important alterations in the nervous, digestive, and tracheary systems which accompany the external changes. The cause of the metamorphoses is thus stated, as a conclusion upon some preceding considerations:—

“The occurrence of metamorphoses arises from the immaturity of the condition in which some animals quit the egg.”

If this view be taken, it follows that the imago should have been developed within the egg and should have escaped, furnished with wings and reproductive organs, had there been no necessity for metamorphoses. This assumes that the imago in every instance is the perfect insect. No one will admit that the female *Psyche helix* or the female winter moth are more highly organised than their larvæ. It is not readily admitted that there is any great superiority in the organisation of the female Vapourer over that of its active larva. It is not sufficient to say that a winged insect must be more highly developed than one which has no wings, but which has certain other locomotive organs besides powers of digestion, assimilation and web-secreting, not possessed by the imago. The larvæ of some of the *Orthoptera*, which do not undergo metamorphoses, are not more highly developed and less embryonic than the larvæ of *Myrmelion* or of *Æschna*, which become pupæ and subsequently imagines.

It is evident that the larvæ of some insects which are metamorphosed are much less perfect, and in this sense more embryonic than others, but the compensating metamorphosis

does not occur any the sooner. Certainly there are many exceptions to this “cause” in the insects and in other Invertebrata, which have a complicated life-cycle. One feels tempted to ask what is the cause of the immaturity of condition in which some animals quit the eggs, as well as to demur at many active larvæ being thought immature. The cause of metamorphosis probably bears some reference to the potential energy which exists in organisms, and which, under certain circumstances, enables them to undergo modifications in their structures. Probably the active cause was an unusual external physical condition which threatened the life not only of the individual but of the species also. It is evident that many forms of metamorphoses are adaptations to meet changes in temperature, season and food supply, although it must be admitted that the changes in form of some insecta do not appear to have any relation with present and existing physical conditions. Sir John Lubbock points out the complicated metamorphoses of some of the parasitic insecta, and nothing is more evident than the relation which their changes of form and habit bear to the peculiar life-cycle of the victim. Yet the parasitic life was not from the beginning, if there is any truth in evolution, and it was determined by the force of circumstances, the potential energy being brought into play.

The author pays much attention to the relations of metamorphosis and alternation of generations, and endeavours to define their biological value. The well-known works of Allman and of Hincks on the *Hydroida* are frequently quoted, and their illustrations given. He appears to insist that the two phenomena are closely allied, and that certain insect life-cycles are alternations of generations. We find the following passage repeated more than once:—

“When the external organs arrive at this final form, before the organs of reproduction are matured, these changes are known as metamorphoses; when, on the contrary, the organs of reproduction are functionally perfect before the external organs, or when the creature has the power of budding, then the phenomenon is known as alternations of generations.”

Consequently Sir John considers that the flies which produce viviparous larvæ, *Cecidomyia* for instance, undergo alternation of generations. Following the same idea, the egg-bearing larvæ of *Chironomus* have a corresponding life-cycle. Yet these larvæ undergo the changes of form which are known as metamorphoses. In his introduction, the author remarks on the variety of opinions respecting these interesting biological questions, and it certainly is very pleasant to read page after page of firmly expressed opinion without meeting with an unkind remark. He disarms criticism, but he evidently anticipates opposition. It must, therefore, suffice to assert that the life-cycle of such a larva as *Cecidomyia* or *Chironomus* refers to an ancestral peculiarity. The first insects were in the form of larvæ and reproduced as such. The metamorphoses were superadded. But naturalists consider the phenomena of metamorphosis and of alternation of generation as parallel but by no means identical biological matters, and it appears that Sir John

really holds this view, subject to certain exceptions.

It is certainly very surprising that closely allied forms of insects should differ in the degree of their metamorphosis, and that some should not undergo other changes than those of ordinary growth accompanied by skin-shedding. Closely allied insects which undergo the same kind of metamorphosis differ in the details of the changes, and in the times and duration of the stages. In fact, very few insects lead the same kind of life-cycle. Clearly, identity of structure has nothing to do with identity of kind of metamorphoses, and therefore the phenomena which have been so ably considered by Sir John Lubbock must be determined by other biological laws than those which regulate ordinary individual progressive development.

If every organism has a force potential to it which determines variation in the face of unusual physical conditions, it is not unreasonable to assert that amongst several groups of the Invertebrata there is a potential force by which minute and great changes of structure may occur in order to preserve the species. It appears very reasonable to assert that the ancestor of the insecta was a freshwater crustacean, which submitted to metamorphoses, and that by ordinary variation it assumed the characters of a larva furnished with internal tracheæ and external respiratory filaments. Such a form might have resembled *Campodea*, and when adverse external conditions arose, instead of succumbing to them, the ancestral potentiality for metamorphosis was utilised and a slight but useful, and therefore transmissible change of form and habit occurred. Every insect fauna is formed of a great mixture of indigenous and sporadic species, and these have a geological ancestry; therefore it is to be expected that very different times for metamorphic changes will be found to occur in very similar species. As Sir John Lubbock admits the extent of latitude that exists for many opinions on the subject of the origin and metamorphoses of insects, it is to be hoped that he will, sooner or later, give us the advantage of his intelligent criticism and original ideas in a volume worthy of his name, and to which this small book will be the introduction.

P. MARTIN DUNCAN.

On some Pahlavi Inscriptions in South India.
By A. C. Burnell. (Mangalore: printed for private distribution.)

In the first part of this pamphlet Mr. Burnell has collected all the notices he can discover regarding the existence of early Christian colonies in India, commencing with those which are merely legendary, and then proceeding to such as are really historical, and to the evidence of such contemporary records as copper-plate grants and inscriptions. The second part is devoted to a detailed account of the Christian crosses with Pahlavi inscriptions in Southern India, with a notice of the Pahlavi signatures to a copper-plate grant, quoted from Professor Haug's Essay on Pahlavi.

Passing over the legends of the Apostle Thomas having founded seven churches in Malabar, of a Kanân Tommâ having preached

there, and of Mâr Sâphor and Mâr Aphrottu (both Persian names) having come to India from Babylon, Mr. Burnell observes that the first historical notice of a Christian mission to India is that of certain Manichæans from Persia. Mânî himself wrote a *Greater Epistle to the Indians*, and the persecution of his followers, after his execution in A.D. 272, led probably to the emigration of many of them to India. Cosmas Indicopleustes, in the sixth century, mentions Christians as residing in Ceylon and India; and the Arab geographer Abû Zaid, early in the tenth century, alludes to Jews and Manichæans in Ceylon. A copper-plate grant in Tamil-Malayâlam, now in the possession of one of the rival Syrian metropolitans at Kottayam in Travancore, is an endowment to the Christian church at Cranganore by one Marvân Sapir Iço, and was attested not only by Indian signatures, but also by Arabs in Cufic, and by Persians in Pahlavi and Hebrew characters; some of these Persians may have been Mazdayasnians, and others Jews, as the names Auharmazd and Abraham occur among the signatures. This grant is believed to date from the early part of the ninth century, and the words used in it for "Christian" are *tarišâ* and *tarussâ*, evident variants of the Persian *tarsâ*, which occurs in the form *tarsâk* in the later Pahlavi (the Christians being called *tarsâkân* in the tale of *The accursed Abûlsh*).

Mr. Burnell remarks that all the trustworthy facts he has been able to collect indicate that the Christian settlements in India, down to the tenth century, were Persian, and probably, therefore, Manichæan or Gnostic; while the Syrian (Nestorian and Jacobite) Christians must have settled in India at a rather later date, as they are chiefly mentioned by the mediæval travellers, especially by Friar Odoricus and Nicolo Conti.

It is to the earlier, or Persian, Christians that the bas-relief crosses with Pahlavi inscriptions must be attributed; these were formerly numerous in Southern India, according to the *Viaggio all' Indie orientali* of P. Vincenzo Maria di S. Caterina da Siena, who was a papal envoy to Travancore in the seventeenth century; and he specially describes one cross at Cranganore (now probably buried under the ruins of that town) and another at Meliapor (the Mount) near Madras. Mr. Burnell gives lithographs of this Mount cross, and of one in the old Syrian church at Kottayam, the former taken from a photograph; he also mentions a third cross which he has seen in the same church. The Mount cross was found by the Portuguese, about A.D. 1547, whilst digging amongst the ruins of former Christian buildings, for the foundations of the chapel over whose altar the cross was afterwards fixed. It is sculptured upon a slab of the ordinary trap-rock, about four feet high and three wide; the extremity of each limb of the cross is ornamentally enlarged, and the lower limb, which is not much longer than the others, stands upon a three-stepped pedestal, between two petal-like carvings which rise from the same pedestal, so that the cross appears to be standing in the section of a cup, or expanded flower; above the upper limb of the cross a bird hovers head-downwards; all this is sculptured in relief upon

a sunk panel, bounded on each side by a cushion-headed column, like those in the Elephanta cave, and by an ornamental semi-circular arch overhead, springing from the capitals of the columns. Outside these sculptures the Pahlavi inscription is cut into the flat surface of the slab, in a single line down each side, and semicircularly above the arch; it is divided into two unequal portions by a cross and dash; the longer portion, in which the bottoms of the letters are turned towards the cross, extends over three-fourths of the arch and down the side to the left of the observer; the shorter portion, in which the bottoms of the letters are turned away from the cross, extends down the side to the right, and owing to the reversed position of its letters it can be read from the same point of view as the longer portion, which appears as an upper line with the shorter line below it. The Kottayam cross differs in ornamentation, and stands upon a higher pedestal, whose foliage is curved downwards, instead of upwards; the bird hovers above the cross, but the sunk panel has no ornamental border, and the arch is pointed; the inscription appears to be identical with that at the Mount, and similarly situated and divided, but it is obscured by whitewash, and is not allowed to be examined very closely. The other cross in the same church has only the longer portion of the Pahlavi inscription, but it has also this sentence inscribed upon it in Syriac: "Let me not glory except in the cross of our Lord Jesus Christ" (Gal. vi. 14), which is probably a rather later addition.

Mr. Burnell, who is well aware of the difficulties of Pahlavi decipherment, proposes the following as merely a first attempt at explaining this inscription (omitting the unexpressed vowels): (shorter line) *yîn rjyâ mn vn drd-i dnmn*: (longer line) *mîn amn mshihâ af alhâ-i mîm af rshd-i aj asr bôkht*; (translation) "In punishment (?) by the cross (was) the suffering of this (one): (he) who (is) the true Christ, and God above, and guide ever pure." This reading of the inscription will hardly be accepted by Pahlavi scholars without considerable modification: thus, the particle *af*, "also," is inseparable in Pahlavi, and can only occur in combination with a pronominal suffix, as in the forms *afam*, *afat*, *afash*, and their plurals; again, *madam* is a Huzvâresh substitute for the Persian *bar*, a preposition before nouns, or used adverbially before verbs, but it is no adjective, not even in the passage *rad farhang-ê madam amûzam* (literally: "whilst I teach about a certain knowledge, or an epitome of learning"), which Mr. Burnell quotes as an authority; the word *alhâ* can only be read by supposing the letter *l* to be defective in the lithograph, and objections may be made to some of the other words. It is exceedingly easy to point out such defects, but it is not so easy to suggest any really satisfactory reading of the whole inscription, as only the three words *denman*, *madam*, and *bôkht* are indisputable. Mr. Burnell's interpretation from *drd-i* to *mshihâ* is probably correct, and his plan of reading the lower line before the upper one seems necessary, unless the longer line be taken as a question, and the shorter as an answer, or unless they be

considered as independent sentences. The longer line is comparatively easy, and may be read, with tolerable certainty, thus: *mîn âmen meshihâ-i avakhshâ-i madam-afâs aj khâr bôkht*; the word *meshihâ* being exactly over the centre of the cross in both lithographs. The shorter line is much more uncertain, and there is little chance of any two Pahlavi scholars agreeing about its interpretation; perhaps the most likely reading is: *sûllâ-i mîn van va dard-i denman*, where *sûllâ* stands for the Arabic *sulb*, "crucifixion," the change of a Semitic *b* into a Pahlavi *d* being not uncommon, and this *d*, when circumflexed, looks like a Pahlavi *z*, which is the letter shown in the lithograph. If these readings be admitted, two translations are possible: first, by taking the lines in their natural order, beginning with the upper and longer line, we have "What freed the true Messiah, the forgiving, the upraising, from hardship? The crucifixion from the tree, and the anguish of this." Secondly, by taking the lines in the reverse order, we have: "The crucifixion, &c., which freed, &c.," or, "which the true Messiah, &c., freed from hardship." Taking *van* as "a tree for execution," is no doubt objectionable, as the proper Pahlavi term is *dâr*, but the only alternative reading for *i mîn van va*, "from the tree and," is *i mîn nân*, "which henceforth is;" unless we suppose these words are a corruption of *i maranâ va*, "of the Lord and," or that they contain a proper name.

The Pahlavi characters in these inscriptions differ very little from those in the signatures to the copper-plate grant of the ninth century at Kottayam, of which Mr. Burnell likewise gives a lithograph; they also resemble closely those in the Pahlavi inscriptions at the Kanheri caves: these latter, however, have no connection with the Christian settlements, three of them being merely lists of the names of a party of Parsi visitors to the caves, commencing with the usual Zoroastrian invocation *pavan shem-i yazdân* (or *yêdâto*) "in the name of God," followed by the several Parsi dates corresponding to Oct. 10, Nov. 2, and Nov. 24, A.D. 1009; a fourth inscription is a mere fragment, dated a few years later.

It appears from Mr. Burnell's concluding remarks that he believes that much of the Indian learning has been derived from Persia; this is, however, a matter in regard to which an enquirer is very apt to be led astray by preconceived opinions, and it must not be forgotten that the Persian account of the revival of learning under Shâpûr I. (quoted from the *Din-kard* by Prof. Haug, in the appendix to his *Essay on Pahlavi*) states that much of it was imported from India.

E. W. WEST.

Modern English. By Fitz-Edward Hall, M.A., Hon. D.C.L. Oxon. (Williams and Norgate, 1873.)

THE author tells us in his Preface that "the object of this disquisition is to justify modern English, as well as to exemplify it," and he has disposed his subject-matter accordingly. The first question that arises is, of course, that we should know in what sense modern English requires justification. Per-

haps a few examples will best show this. We know that many new words, or many revivals of old words, are perpetually appearing and striving to gain acceptance, such as, a *talented person*, a *reliable authority*, a *break-down*, a *telegram*, or *utilitarian*. Some of these are often ugly enough; others, from a purist's point of view, are incorrectly formed, and so on. If they are ridiculously ugly or incorrect, they may perhaps be laughed down into disuse; but in a great number of cases, protest is of no avail, and those who are most jealous of the "purity" of English are liable to find themselves in the position of Mrs. Partington, when she attempted, mop in hand, vigorously to push away the Atlantic Ocean. Accordingly, Mr. Hall shows that our language, like every other language that possesses any vitality at all, is in a state of constant flux and change, and perpetually endeavours to renew its youth. The voices of critics are, in the main, but little heeded, and the continued progress of the language is as certain as it is irresistible. However much we may, in some instances at least, regret this, we should still be wise enough to yield to the logic of facts.

But Mr. Hall does good service in showing very plainly yet another matter. Not only have critics often protested in vain, but they have even done worse. They have frequently uttered the most dictatorial and presumptuous opinions upon matters respecting which they possessed no exact information. Nothing is more perilous than to assert a negative; to deny, *ex cathedra*, the previous existence of an apparently novel word. Certainly some of these negative assertions, as Mr. Hall shows, can be disproved in a manner that is almost ludicrous; and such writers as Coleridge, Landor, Gray, and sometimes Dr. Johnson (much as he is to be venerated), have let slip most ill-judged and unfortunate utterances. "It disturbs me to find in Southey," says Landor, "the word *re-write*. Properly, *re-* should precede none but words of Latin origin, though there are a few exceptions of some date and authority." Yet everyone knows that our language is full of hybrid words, and that *re-write* can hardly be dispensed with. The old prefix *ed-*, as in *eduiwan*, to renew, has practically been long dead, though said to survive in *t-wit*, from *ed-witan*, to reproach; so that we cannot possibly say *edwrite*, for who would understand it? On the other hand, it would be highly inconvenient to be saddled with the word *rescribe*, which after all would not perhaps express the true meaning. Again, Gray, in 1760, wrote, "*Elate* is a participle; but there is no such word as *to elate*, I imagine." It is amusing to see, in Mr. Hall's footnote, more than thirty references for its use at an earlier date, with the remark that "the references which follow are only a few to what I might give." His earliest reference is to William Watson, in 1602, and he cites ten instances from Dr. Johnson's *Rambler*, written in 1750-2, a book which it is reasonable to suppose that Gray may have seen. Again, "Sir James Mackintosh speaks of Parr's new-coined word *syllogize*;" yet it had appeared in Peacock's *Repressor*, before even the invention of printing. Numberless examples of a similar kind are adduced,

showing how exceedingly rash and shallow most of our critical writers have been in their statements respecting their own language; but what else could be expected, when Anglo-Saxon is still less known than Hebrew, and the study of it less encouraged; if indeed it can truly be said to be encouraged at all?

We do not say that we always approve of Mr. Hall's results, and it is much to be regretted that he should insert occasional references to a controversy concerning which most readers will not care one jot. He seems no more able to keep Mr. Grant White's name out of his books than Mr. Dick could keep King Charles out of his petition, though the relevancy in one case is not much greater than in the other. We fear that he also puts forward too prominently the notion that the nature of an Englishman is to "scorn" an American, which hardly makes a sufficient allowance for the fact, so frequently published, that both the Chaucer Society and the Early English Text Society have received such hearty support in America as to make them feel for ever grateful; whilst we positively assert, on the other hand, that Englishmen exist, from whose hearts a feeling of such silly scorn is entirely absent. This is one of the things which we hope the progress of time will develop yet more clearly.

Having said this, we must now draw attention to the main feature of Mr. Hall's book, which ought to ensure for it a most cordial reception, and renders it almost *indispensable* to the student of the English language. It abounds with a rich store of quotations such as has seldom been equalled. For every word that is discussed, there are crowds of references, all of them exactly quoted by volume, page, and line, and a large number of them dated. If ever a new English Dictionary, such as that proposed by the Philological Society, begins to appear, the editors might find, in this volume, hundreds of useful quotations to choose from, all ready to hand. If anything, the references are overdone; at any rate, the reader cannot complain that they are too few. Two lines of text on a page, with forty lines of notes below it, are of frequent occurrence; and we must give Mr. Hall credit for a most uncommon industry and for wide research amongst the writings of a whole army of authors.

But the most interesting remark is in the hint at the end of the Preface, that the author's materials are by no means exhausted. "Hitherto," he tells us, in conclusion, "only a small share of these has been turned to account; and whether the residue of this apparatus shall go the way of waste paper, circumstances must determine." We hope that the "circumstances" will be kind; as kind (which is a strong expression) as is the general feeling of sensible Englishmen towards their sensible brethren in America. And if King Charles—we mean Mr. Grant White—can be kept out of the next volume, we do not think that many readers will much miss him.

WALTER W. SKEAT.

A telegram states that Dr. Beke was to start directly for Akaba by steamer, and that the camels and caravan had preceded him over land.

LECTURES OF THE WEEK.

ROYAL INSTITUTION (Friday evening).

YESTERDAY evening Professor Sylvester gave a popular account of Peaucellier's remarkable discovery of a perfect parallel motion. In Watts' and all previous parallel motions the head of the piston-rod of a steam-engine does not describe a true straight line, but a figure of eight. Various attempts have been made to devise an arrangement of link-work connecting the piston-rod with the beam of a steam-engine in such a manner that the former shall move at each point of its path strictly in the direction of its own length, which, of course, cannot be the case unless every point in it describes an accurate straight line. Several mathematicians of the highest eminence have worked at this problem for years, but finally were compelled to give it up as a bad job. More than this, it came to be believed, and was supposed capable of demonstration (although not actually demonstrated), that such an arrangement was impossible in the nature of things; but the discovery of Peaucellier accomplishes perfectly this problem, and supplies a most important desideratum in practical mechanism.

To understand this apparatus, conceive a four-sided figure in the form of a jointed rhomb or diamond, to two angles of which a pair of equal links jointed on to each other (called the connectors) are attached. Such a combination forms the *cell*, alluded to in our impression of the 10th instant. It consists of six links in all, four belonging to the diamond and two to the connectors. However the links of such a cell are moved about, and its angles thereby made to vary, the point of union of the last-named pair of links (which may be called the fulcrum) will always remain in a straight line with two opposite points of the diamond, which may be called its poles.

For greater clearness of description let us agree to call the distances of the poles from the fulcrum the *arms* of the cell. The length of these arms will of course continually vary as the cell is made to change its form, but it may be proved mathematically that *their product is constant*, or in other words, that the length of the one varies inversely as the length of the other.

Now, suppose the fulcrum to be fixed, and one of the poles which may be termed the power-point to be made to move in the plane of the cell and in an arc of a circle, which, if completed, would pass through the fulcrum, then it may be proved, as a consequence of the principles just laid down, that the other pole, the weight-point (as it may be termed), will move in an absolutely true straight line. The power-point and weight-point may be more briefly referred to as the driver and follower respectively. Imagine now the driver to become attached to a fixed point by a rod equal to the radius of the circle on which it moves.

We have then what Professor Sylvester calls a *mounted Peaucellier cell*, which is Peaucellier's Perfect Parallel Motion. The radius bar, which we have just spoken of, may be prolonged, and will represent the beam of a steam-engine, whilst to the power the piston-rod or pump-rod may be attached, and will move at each instant strictly in the direction of its own length.

A model was exhibited showing how by the addition of extra pairs of links to the cell any number of rods may be made to move simultaneously in parallel straight lines, thus giving rise to a perfect multiple or compound parallel motion.

Models were also shown exhibiting the use that can be made of the Peaucellier movement cell to describe circles of any desired radius, and attention was called to the use of this method in the construction of charts and the processes of the millwright's art, whereby a saving may be effected of an enormous amount of hand labour of the most expensive kind.

The perfect parallel motion has been already introduced into certain machinery in the course

of construction for purposes of ventilation in the Houses of Parliament.

Further applications of Peaucellier's principle to descriptive purposes, and to the construction of calculating machines, were also pointed out by the lecturer, and he stated that in his opinion this discovery was, from the wide range of its practical applications (without taking into account the new field of mathematical enquiry to which it points the way), one of the most valuable ever contributed by the Muse of geometry to the useful arts, and that it constituted a new vital element of machinery, second in importance to none that had been invented since the introduction into mechanism of the Archimedean screw, more than two thousand years ago.

NOTES AND NEWS.

THE greatest loss which biological science has sustained since the death of Edouard Claparède, is announced this week. Max Schultze, Professor of Anatomy in Bonn, is dead. He was in the prime of life, and had just seen the completion at Bonn of the most ample and elegantly constructed anatomical laboratory in Europe, the erection of which had been carried out under his immediate supervision. Max Schultze had a very enviable reputation, being spoken of with profound respect throughout Germany as the first histologist of the day. He is no doubt indebted to some extent for this popularity to his charming personal qualities and that sense of what is befitting conduct in a professor and a gentleman, which prevented him from adopting in controversy the arrogant and caustic style unfortunately prevalent in German scientific circles. Schultze's earliest papers (published when he was at Greifswald about 1848) relate to the anatomy of the freshwater Turbellarian worms, and are of permanent value. His most important work is that on the Foraminifera, in which he definitely proclaimed the doctrine of protoplasm as the basis of life, in the place of the doctrine of cell-structure. This was fourteen years ago, but nearly six years after Huxley had enunciated similar views in this country. Ranking with his protoplasm work, and involving far more labour and skill in investigation, are his series of memoirs on the minute structure of the retina. Schultze in this investigation (which he was still pursuing) proved himself the most consummate master of the possible resources of the microscope. The method of treatment by osmic acid and by iodised serum are due to his ingenuity. Other most valuable works of Schultze's, which we can only cite at this moment in an incomplete way, are a Dutch prize essay on the Development of the Lampern, a Latin essay on the Cleavage of the Frog's Egg, on the Minute Structure of the Electric Organs of Fishes, on the Terminations of the Olfactory Nerve, on the Fibrillated Structure of Nerves and Nerve Corpuscles, on the Movements of the Diatomaceæ (in which the long disputed question as to its cause is finally disposed of). Ten years ago Max Schultze started the quarterly *Archiv*, which bears his name and has contained many of his own papers besides the choicest histological memoirs published by other writers during the decade. Max Schultze was the son of Professor Sigismund Schultze, who was still living a few years since. His brother is Professor of Midwifery in Jena.

In Mr. Lockyer's recent researches with the Spectroscope, communicated to the Royal Society on Dec. 11, there are several points of interest and importance. The application of the method to quantitative analysis is extended, and its results confirmed. An electric spark is made to pass between an alloy and a charcoal point above it, and the spectrum of the spark is observed; the composition of the alloy determines the distance from it at which the spectra of the two metals can be seen, i.e. the length of the lines. Molecules of gold and copper, for example, are constantly

flying off from the alloy in a state of vibration; the proportion in which they are mixed determines how far each shall carry sufficient vibration to be visible. Certain lines had been observed in the spectra of two or more metals; and it was exceedingly improbable that these exact coincidences should have occurred in such numbers. Mr. Lockyer renders it extremely probable that the coincidences are all due to impurities in the metals operated on. A revision of the evidence for the existence of certain substances in the atmosphere of the sun has also been undertaken. It is concluded from this that nearly all metals of the iron group, which form stable compounds with oxygen, are present, but not the elements forming unstable oxides or combining with hydrogen. The metalloids, which belong to the latter class, have spectra analogous to those of compounds; hence Mr. Lockyer conjectures that these bodies are really compounds, and that the temperature in the solar reversing layer is too great to admit of their existence there. The paper concludes with some interesting speculations on the gradual formation of complex molecules in cooling stars: the supposition being, that at a sufficiently high temperature all matter is reduced to an exceedingly simple form, from which the bodies which we call elements arise by cooling and pressure.

WE have received a new edition of the *Treasury of Botany*, edited by John Lindley and Thomas Moore (Longmans). Everyone who has had occasion to consult the *Treasury* must have come to regard it as a most useful and trustworthy authority. Even the professed botanist will sometimes be at a loss to run down a colloquial or vernacular name. For this purpose especially it is peculiarly useful, and very seldom at fault. The different articles contain an immense amount of accurate and often recondite information. Although the first edition was stereotyped, the new one has evidently been carefully corrected, while a supplement of 100 pages gives the systematic gleanings of various contributors over the ground from which the contents of the *Treasury* were first harvested. To all who want a book of reference for matters relating to the vegetable kingdom, this may be very confidently recommended.

The Ocean: its Tides and Currents, and their Causes. By William Leighton Jordan. (London: Longmans, Green, & Co., 1873.) "This present work is, to a great extent, a third edition" of a book which has already been published under two other titles. The author thinks it may "be observed, that gravitation considered as a static force is vis-inertia; and that the centrifugal force acting from the axis of rotation is gravitation, and that this latter force of gravitation, as also that which draws the earth onwards in its orbit, is a dynamic force caused by vis-inertia in consequence of the action of the dynamic force there termed *evanescence*." This is from the Preface; we have searched, but among many things equally foolish, could find nothing quite so funny in the succeeding pages. "Vis-inertia" has failed to prevent this one book with three titles from being written; but as the *Budget of Paradoxes* has long come to an end, the author may hope that some dynamic force of evanescence will carry his views into oblivion.

MR. HARRY SEELEY has nearly finished his Text-book of Geology, and intends to follow it up by a text-book of Natural History, based on his lectures to his students for the Indian Civil Service.

ACCORDING to the *Freie Wort* of Murten, one of the most extensive pile structures, rivalling in close proximity of stations any other known in Swiss lakes, is situate in the Murtensee, near the Greng Island. It represents several kinds of construction, and belongs to the Stone age. Near Montelier is a station which has proved a rich mine of objects indicating the Bronze age. Piles

have likewise been discovered in the lake not far from the Custom-house, near the outflow of the Broye, in the Broye, near to the Fehlbaum, and above Motiers. So-called stone hills have been found near Pfauen, near to the Greng Mill, not far from Merlach, between Motiers and Guevaux, and three near Guevaux. At present thirteen stations are known to exist in the Murtensee and in the Broye, which is a large number for so small a lake.

WE learn from the Annual Report of the works on the St. Gothard Railway, that the line has been projected 520 mètres on the North or Göschen side, and about 530 mètres on the Southern or Ariolo end. The borings on the north side have exhibited damp schistose strata, but the water nowhere caused any serious obstacle to the progress of the works; on the southern side, however, considerable difficulty presented itself in compressing and diverting the water which filled the borings. Here granite and mica-schist alternated with hornblende and granite, while at a depth of 499 mètres, where a seam of iron was struck, traces of gold in thin plates were found embedded in quartzose crystals.

WE (*Nature*) regret to announce the premature death of two eminent French savants, Dr. Legros, who has been poisoned in the course of histological researches, and M. Fernand Papillon, well known for his physiological investigations.

SIR SAMUEL BAKER has been appointed Rede Lecturer in the University of Cambridge for the ensuing year. Sir Samuel, upon whom the University conferred the honorary degree of Master of Arts in 1866, will deliver the lecture in the Easter Term.

Engineering states that a scheme for a new Transatlantic telegraph cable is being promoted. Surveys and soundings have already been made, and the proposed line decided on, the place of landing being Rye Beach, New Hampshire.

A DEPUTATION has waited upon the Colonial Secretary of New South Wales with a view to the construction of a railway from Shoalhaven to Port Jackson. Coal-seams have for some time past been known to exist in the Illawarra district of thicknesses varying from 4 to 17 feet. The annual output from the different mines collectively amounts to upwards of 125,000 tons. The managers of the mines in the district complain that the miners are frequently interrupted in their work for want of sufficient facilities for the carriage of the coal. The quality of the coal is so good that it is preferred to any in the district by the Admiralty authorities for use on board ships on the Australian station.

COLEBROOKE'S *Life*, which was published in 1872, by his son, Sir E. Colebrooke, has been followed by a new edition of his *Miscellaneous Essays* (published by Trübner). If one considers that these papers, chiefly on Sanskrit literature, were written in the beginning of this century, and that they were first published in a collected form by the late Dr. Rosen, in 1837, nothing can afford a more powerful testimony to their intrinsic value than the fact that a new edition of them should have become necessary at the present moment. "Good advances have been made in our knowledge of ancient India and its literature," so writes the present editor of these *Essays*, Professor Cowell, "but these essays still retain their ground. I have endeavoured," he adds, "to correct any important error, and to give notes on those points, respecting which new facts have come to light, and to subjoin references to other works where the reader may find further information." How few papers are there, written by Sanskrit scholars, only ten or twenty years ago, that would now be re-edited with so few emendations and additions as Professor Cowell has felt obliged to add to Colebrooke's *Essays*! For calm judgment and minute accuracy he has never had his equal. His reading was most comprehensive, but he was never satisfied with putting before the

public a huge mass of undigested matter. He worked up his materials till they assumed a perfect shape; he did not rest till he had made the most abstruse inquiries intelligible to an educated reader. This explains why there is so little in his essays that has proved mortal, and why one feels confident that they will maintain their ground for many years to come. Professor Cowell has acquitted himself of his task with great credit. He has added a valuable contribution in the translation of part of the two chapters on the philosophic tracts of the Jainas and Chár-vákas from Mádhava's *Sarvadartana-sangraha*. This new edition contains several papers which are not in the first, but it has one defect, it does not give the plates of the inscriptions which were given in the original editions.

DR. OPPERT informed the members of the Société Asiatique that he had discovered the name of *Cyrus, the son of Cambyses*, on a brick in the British Museum. This would be strange indeed, for hitherto Cambyses was thought to be the son of Cyrus.

THE chair of Sanskrit at Strassburg, vacated by Professor Max Müller, is not yet filled. Professor Roth and Professor Aufrecht have both accepted, and afterwards declined it. In the meantime the University has founded a triennial Prize for Vedic scholarship out of the money (2,000 thaler) which was paid to Professor Max Müller for the course of lectures delivered by him in the summer of 1872, and which he presented to the University for that purpose.

THE notice that the second edition of Professor Wright's *Arabic Grammar* is now "in the press" will be received with great pleasure by all students of the language. For several years the first edition has been out of print, and there is no Arabic grammar in English that can pretend to take its place. It is to be hoped that in the second edition Professor Wright will modify the system of arrangement, so as to agree in some respects with Lumsden's splendid work, rather than with the Japhetic school, as represented by De Sacy. There is also room for much improvement in the Syntax, where a logical and comprehensive treatment of the sentence in all its possible forms is needed. When is the promise of a glossary to Professor Wright's *Reading Book* to be fulfilled? The notice of the printing of the grammar is a hopeful sign for the coming of the glossary.

M. HIPPOLYTE RENAUT, one of the most eminent of Fourier's disciples, has just died at Epinal. He was the author of several works, one of which, *Solidarité, vue synthétique sur la doctrine de Fourier*, went through six editions.

MESSRS. AUSTIN & SONS, the well-known Oriental printers, of Fore Street, Hertford, have in the press the following works:—The *Catalogue of the Chinese Books in the British Museum*, the titles in the Chinese character (royal 4to); the *Catalogue of the Arabic MSS. in the India Office Library* (demy 4to); an *Arabic Grammar*, by Professor Palmer, of Cambridge (demy 8vo); a *Hebrew Exercise Book*, by Professor Mason, Cambridge (demy 8vo); a *Pali Dictionary*, by Professor Childers; the *Epistle to the Romans*, translated into Sindhi, for the British and Foreign Bible Society. (Messrs. Austin have already printed the Four Gospels and Acts, and Genesis in Sindhi.) Of English linguistic works, Messrs. Austin have in the press, among others, a translation of August Schleicher's *Comparative Grammar of Indo-German Languages*, by Herbert Bendall; *Early English Pronunciation*, by A. J. Ellis, Part V.; &c.

MEETINGS OF THE WEEK.

THE INSTITUTION OF CIVIL ENGINEERS (Jan. 13).

THE new President, Mr. Thomas E. Harrison, delivered the customary address at the lecture-room of the Institution on January 13, on his election to that post. He stated that although there

was certainly less employment for civil engineers in this country at present than formerly, there still remained a great deal to be done in improving and adding to existing works in connection with the various ports and harbours, which were generally insufficient to supply the wants of the shipping trade. India, China, and Japan afforded ample fields for the employment of young engineers. He said he had been connected with the construction and working of railways for a great many years; he would, therefore, make some remarks on this subject, which was attracting so much public attention. Having been at one time the general manager of a railway, he was compelled to speak of the difficulties connected with the position. Newspapers were in the habit of asserting that managers, directors, and officials had no feeling, and paid much more attention to the subject of expenditure than to the public safety; this he thought a most ungenerous and unjust charge; and far from deserving the character they got, they deserved sympathy. Referring to the reports of the Government Inspectors, he said they occupied the position of *ex post facto* judges; and far from being the first to suggest various improvements, such as the block system, interlocking signals, &c., as was often imagined, they only recalled the attention of the directors to subjects which had already been carefully considered, or upon which they were perhaps at the time making experiments. He thought that in the case of the Government becoming the purchasers of the railways, the Inspectors would find themselves in a very different and much more difficult position when they would have the full weight of the working responsibilities upon them. Another great difficulty directors at the present time had to contend with was the unsettled state of the labour market. New works cost thirty or forty per cent. more than they used to formerly, and take twice as long to do, from the great difficulty, except in the neighbourhood of large towns, of obtaining a sufficient supply of labour.

At the meeting on Tuesday, the 20th, Mr. Archibald Carnegie Kirk's paper on "The Mechanical Production of Cold," was read. The paper was an account of Mr. Kirk's apparatus for that purpose, which is a reversal of Stirling's air-engine; viz., the machine compresses air which is cooled down to the temperature of the surrounding atmosphere, and is then further cooled by being suffered to expand. Mr. Kirk has frozen mercury and paraffin oil spirit with the machine, which is in use for cooling paraffin at the Bathgate Works.—Dr. Siemens gave a short historical account of cooling engines. Four methods have been employed: the evaporation of ether or alcohol; the evaporation of ammonia subsequently absorbed by water, and then released by heat; the solution of crystals; and the mechanical method of expansion of gases. Of the latter he remarked that it must be far more economical for small changes of temperature than for large ones; it would be a cheap method of cooling the air of a room, when it might be a dear method of making ice. The discussion will be continued next Tuesday.

CHEMICAL (January 15).

PROF. ODLING, President, in the chair. Mr. W. C. Roberts handed in a table, supplementary to his paper read at the last meeting, and containing complete analysis of all the Standard Trial Plates still extant, dating from A.D. 1477; namely, seventeen gold plates and fourteen silver ones.—The following papers were read: "On the Action of Trichloroacetyl Chloride on Amines. I. Action on Aniline," by Dr. D. Tommasi and Mr. R. Meldola. This reaction gives rise to a substance called *phenyl-triacetamide*, which crystallises in lustrous plates. It is acted on by nitric acid with production of *dinitrophenyl-triacetamide*, crystallising in yellow needles.—"Note on the Action of Sodid Ethylate on Ethylic Oxalate and other Ethereal Salts," by Dr. H. E. Armstrong.—"On the Products of Decomposition of Castor

Oil, I. Sebacic Acid," by Mr. E. Neison, giving an account of the preparation and properties of pure sebacic acid, and of many of its salts.

STATISTICAL (January 20).

DR. GUY, President, in the chair.—Mr. R. D. Baxter read a paper "On the Recent Progress of National Debts."—In the discussion that ensued, Dr. Hyde Clarke, Mr. W. Fowler, M.P., Sir G. Balfour, M.P., the Right Hon. H. C. Childers, M.P., and others, took part.

GEOLOGICAL SOCIETY (January 21).

MR. JUDD, of the Geological Survey, read a valuable paper on the "Volcanoes of Ancient Scotland."

The igneous rocks of the regions Mr. Judd more especially referred to were those which Professor Zirkel, of Leipzig, has already examined microscopically, and fully described.

Mr. Judd, thus secure with regard to the materials he was dealing with, supplemented Professor Zirkel's work by his own extensive and masterly study of the district.

He showed that during the Tertiary period there were certainly five volcanic centres in the west of Scotland, viz. Mull, Ardnamurchan, Rum, Skye, and St. Kilda.

He traced the different lava streams that had issued from these centres, showing that whereas the actual cones and upper portions of the volcanoes themselves had disappeared, the eruptive character and gradual transition from a more to a less crystalline condition was manifested by granites and felsites which belonged to the same volcanoes that had poured out the lava streams: thus establishing a complete continuity in the rocks themselves. He showed also that whereas the earlier eruptive action of these volcanoes produced granites, quartzose, felsic, and pitchstone-lavas—that is to say, supersilicated or so-called acidic rocks—their later outpourings were of a basic character, and also formed a continuous series; the more crystalline gabbros and hypersthénites in lowest depth (that now form the ruggedly grand rocks of Skye and Mull) becoming under less pressure dolerites and basalts, while in some cases they passed into tachylite.

Mr. Judd further showed that a quite analogous series of igneous rocks had been produced in Palaeozoic time by volcanic centres now represented by the igneous masses of the Grampians; and that over the great region of central Scotland on which these masses occur, "acid" rocks were again the older, and basic rocks the later products; the latter being poured out from subordinate craters like the Puys of Central France, but of Carboniferous and Permian age.

The agency to which Mr. Judd attributed the exceptional opportunities the volcanic centres of Western Scotland thus offered him of showing granites at the root as it were, and trachytic rocks as the stem and branches of these tertiary volcanoes, was the subsidence of the central seats of the volcanoes themselves. This subsidence, which in the Mull volcanic centre amounts to a depression of at least 3,000 feet, Mr. Judd showed by reference to Mr. Darwin, and other observers, to be a general feature of old volcanic centres in many parts of the world.

In the case of Mull, it has been the means of preserving the whole of the central core, as it were, of the volcano, so that, while the lavas remain all round to attest the former presence of the volcano itself, all the upper portions of the volcano have disappeared under the influence of denudation, and the deeper-seated igneous rock is seen in juxtaposition with the sub-aerial lavas which represent the form it assumed when erupted.

To these subsidences, furthermore, Mr. Judd attributed the depressions that, filled with water, formed the lakes of ancient times, and which have by some distinguished geologists been accounted for by the agency of ice.

It would seem as one result of this remarkable paper, beyond the confirmation of the continuity

of the so-called plutonic and volcanic rocks and their general uniformity of character in different periods of geological time, that we may assume it as probable that the matter poured out by a volcano is drawn rather from local sources than from an imaginary central sea of molten rock, the subsequent subsidence representing the falling in of superincumbent matter on the void thus formed.

METEOROLOGICAL (Jan. 22).—Annual Meeting.

DR. R. J. MANN, President, in the chair.—The Report of the Council dealt principally with the various alterations made at the Society's library at 30 Great George Street, and with the efforts which the Council have been making to extend the operations of the Society, and rest them upon a broader basis than heretofore. The Council took advantage of the presence of their Foreign Secretary, Mr. Scott, as one of the delegates from this country at the Meteorological Congress at Vienna, to request him to represent the Society. The Congress was duly held from September 1 to September 16, when Mr. Scott presented a paper on the replies received in answer to a series of questions which the Council issued to the Fellows on several points in connection with the hours of observation, instruments, &c., and which has been printed in the Report of the Congress.—The President then delivered his address.—The following gentlemen were elected officers and council for the ensuing year: *President*, R. J. Mann; *Vice Presidents*, C. Brooke, G. Dines, H. S. Eaton, Lieut.-Col. A. Strange; *Treasurer*, H. Perigal; *Trustees*, Sir A. Brady, S. W. Silver; *Secretaries*, G. J. Symons and J. W. Tripe; *Foreign Secretary*, R. H. Scott; *Council*, P. Bicknell, A. Brewin, C. O. F. Cator, R. Field, F. Gaster, J. K. Laughton, R. J. Lecky, W. C. Nash, Rev. S. J. Perry, Capt. H. Toynbee, C. V. Walker, and E. O. W. Whitehouse.

FINE ART.

Thoughts about Art. By Philip Gilbert Hamerton. New Edition, revised. (London: Macmillan & Co., 1873.)

THE new edition of Mr. Hamerton's *Thoughts about Art* will be welcome both to the more cultivated portion of the general public and to the critical reader. Mr. Hamerton possesses to perfection the happy knack of hitting the middling point of view, the point of view which M. Sainte-Beuve declared to be the only safe passport to general success and popularity. He is always readable. Too sensible to talk of what he does not understand, and so cultivated and well-read as to be conversant with a considerable variety of subjects, Mr. Hamerton writes with ease, spirit, and simplicity. With the same fluent and polite intelligence he discusses Transcendentalism in painting, or turns to give the reader practical hints on picture framing, or entertains him with a significant selection from the portraits of artists to be met with in the pages of French and English fiction. His manner is so harmonious, the transition from one topic to another is so easy, and the point of view in each case so entirely within the reach of even a lazy intellect, that we read on pleased and passive, turning the page now at "Fame," and now at the "Housing of National Art Treasures," hardly noting when the subject-matter changes. The matter may change, but the same charm of treatment continues to hold us.

Thoughts about Art were originally published in one volume, together with *A Painter's Camp*, by the same author; the

chapters relating to the camp being merely intended, as Mr. Hamerton afterwards told us, as a vessel to float the essays into circulation. The plan was successful, the essays were floated, and then cast adrift to maintain an independent existence. Since then nearly ten years have elapsed, and Mr. Hamerton now comes forward with a new edition, enriched by an introduction, additions, and notes. The notes were written during the course of the past year; they are for the most part dated, and fortunately are not incorporated in the text. From these notes, the book derives its chief interest for the critical reader.

Mr. Hamerton is not only an author but an artist—an artist who has passed with his fellows beneath the influences which have so seriously affected the conditions of artistic production during the last twenty years. We can see for ourselves in any great gathering of modern art how those influences have ultimately issued, moulding and fashioning the product, but it is also of interest to know something as to how they have told on the tone and temper of the producers. By the aid of the notes to Mr. Hamerton's book, we get some light on this; we may compare the Mr. Hamerton of 1873 with the Mr. Hamerton whom we knew in 1860, and in so doing we may remember that Mr. Hamerton is no unfavourable specimen of the more intelligent and thoughtful class in the profession to which he belongs. When he has changed or modified his opinions, he avows the change with admirable frankness. Thus, he leaves his essay on "Painting from Nature" exactly as it was written in 1860, but adds in a note, dated 1873, severe and just criticisms on the method of work previously advocated. In speaking of actual landscape-painting direct from nature he says, "I did a good deal of hard work in that way, as the younger English artists used to do, fourteen or fifteen years ago. . . . We lived most happily in the wildest solitudes, and we attempted to paint effects which the elder landscape-painters had never recorded upon canvas. But our ardour was not really and fundamentally artistic, though we believed it to be so. It came much more from a scientific motive than from any purely artistic feeling, and was a part—though we were not ourselves aware of it—of that great scientific exploration of the realms of nature which this age has carried so much farther than any of its predecessors." Then, at p. 91, he says, "We were all beginning art from nature," a statement which he prefates with "a beginning which, so far as human faculties were concerned, was decidedly at the wrong end," and adds, "Our predecessors in all ages of the world had begun art from the most independent conventionalism, gradually adding more and more of nature as their senses became more acute." Again and again in the notes he dwells on the fact that some ten or twenty years ago too much importance was attached to the positive science of natural aspects, and not enough importance to the technical art of painting; or reiterates in substance the sentiment, that thought is good, novelty is good, veracity is good, but that they cannot produce art, or remarks that the finest pictorial quality, though not quite independent of natural truth, is bound

to it very loosely. He even goes the length of doubting the truth of Mr. Ruskin's dictum that "nobility of subject is a main thing in painting," and asks, "Why are fine pictures treasures?" and answers, "Because they have quality. The men who painted them may not have been either thinkers, or travellers, or historians, or men of science, but they were artists." Finally in an essay on "Analysis and Synthesis" occurs this statement, "A great inventive artist never in a picture draws anything exactly as it is, but compels it into such shapes as he wants in that place, having reference all the time to all the other shapes, either already put, or to be put, in all the other parts of the picture."

Throughout the last paragraph we have allowed Mr. Hamerton, as much as possible, to speak for himself, and it will at once be seen how widely different his attitude towards his work is now, to that which he, like others, accepted fifteen years ago, in the days when he spread his sails on Loch Awe, and in the days when "Mr. Ruskin did great harm to many of the youngest landscape-painters." When Mr. Hamerton comes to write that a great inventive artist draws nothing as it is, but compels his subject-matter to take the shape he wants, we feel how near he is to holding the innermost secret of art; we only add, that the shape which a great inventive artist wants is that which enfolds perfect science. Keeping this statement before us, we are inclined to desiderate some farther additions to the note on the essay on "Art Criticism," written in 1864. In that essay the author recapitulates the learning and accomplishments which might fitly qualify those who desire to fill honourably the office of art critic. And first he requires that the art critic must have some technical training. This is indeed desirable, for it is difficult to teach the eye to appreciate subtle gradations of tint and harmonies of colour, unless we quicken the sense in striving to produce them, and it is equally difficult to train it to swift apprehension of space-patterning, and sensitive perception of the quality of large lines, unless it has guided the effort to lay them down. But, in order to judge the art of any given work, need the critic be a judge of the truth of the facts which it interprets? Wide knowledge of all sorts of fact is a desirable portion for the critic, as this knowledge alone can enable him to estimate rightly the labour of many industrious and enterprising men, but it is not in virtue of this knowledge that he can judge their art.

Yet Mr. Hamerton is aware of this, and by and by, perhaps in another edition, will give greater prominence to a truth now somewhat pressed out of sight, and crushed beneath the burden of more conspicuous matter; and by and by, too, Mr. Hamerton will, we think, come to modify much which he has here permitted to stand concerning Leonardo da Vinci, of his aims and of his temper as an artist. Leonardo was one of those to whom it was given to know that results, or what a man can produce, are infinitely little, when set by the side of what a man can be. But the temper in which Leonardo worked was nevertheless purely artistic.

E. F. S. PATTISON.

M. SHAPIRA'S COLLECTION OF MOABITE POTTERY.

MR. GEORGE GROVE writes to the *Times*:—

"All the world has heard during the past eighteen months of the astonishing discoveries of 'Moabite pottery' and inscriptions reported from Jerusalem, of the doubts of English archaeologists, and the raptures of German ones thereon.

"Acting mainly on the advice of Mr. Vaux, who from the first maintained that they were forgeries, the Committee of the Palestine Fund has throughout declined to lend its support to the alleged discoveries, and has contented itself with printing the reports received on the subject from its agents in Syria. It is fortunate it did so, for I have the pleasure (or shall I say the disappointment?) now to inform you that in a letter from M. Clermont-Ganneau, dated Jerusalem, December 29, and received this day, the complete disappearance of this enormous piece of humbug is reported. The bubble has utterly burst; in fact, these nasty articles turn out to have been, according to the good joke of an eminent scholar on a somewhat similar occasion, a mere bundle of fallacies. They prove to have been throughout the forgery of a certain Selim el Gari, a painter of Jerusalem, whose first efforts in his interesting art appear to have been devoted to the fabrication of neo-Byzantine pictures for the Greek Pilgrims, and who has at last risen to his recent loftier flight.

"M. Clermont-Ganneau's letter contains the detailed confession of Hassan-ibn-el-Bitar, one of Selim's chief tools in the manufacture. A full translation of the whole document has been forwarded to the *Athenæum*."

The document (*Athenæum*, Jan. 24) is as follows:

"Jerusalem, Dec. 29, 1873.

"Before detailing the results obtained on the spot in the elucidation of this question, I may be permitted to record the fact that my opinion on the subject was formed at the outset, and has never varied. The first papers printed in Germany, on the subject of this inscribed pottery, produced upon me the immediate impression that it was the work of a forger, while the drawings sent to London, and shown to me, served to confirm this first impression. Nevertheless, my judgment being based on indirect, and, so to speak, personal proofs, I did not think myself justified in pronouncing my opinion publicly, although several times invited to do so. Before the verdict of scientific authority so considerable as that of Germany, I thought it wise to reserve an opinion which might have seemed rash, or even inspired by a sentiment of jealousy or envy. I had, however, several opportunities of speaking confidentially to members of the Palestine Fund Committee, who can bear witness to my assertions. I had even gone so far as to point out *à priori*, and without any information, the probable forger—the author of the mystification. The event has proved me right. The name of the person very soon figured in the official Reports (which accompanied and authenticated many of the specimens) as the principal agent employed by M. Shapira, whose good faith, I hasten to say at once, I have no intention of suspecting, and who appears, so far as I have gone, to be the first dupe, and not the accomplice, of this colossal deception. The forger in question, as I have always said, is Selim el Gari, a painter by trade, to whom the habit of daubing bad Neobyzantine pictures for Greek pilgrims has imparted a certain readiness and skill. I had to do with him at the commencement of the Moabite Stone business. He had copied a few lines from the original seen by him at Diban, and I have always carefully kept this copy, which was rough but faithful, and which at least enabled me to detect from the very first, in the fantastic inscriptions of the Shapira Collection, the characteristic and peculiar manner in which our artist sees, understands, and designs the Moabite letters; among other things, there being a certain manner of drawing the *min* peculiar to him, which, coupled with other facts of the same kind, enabled me to recognise his workmanship with as much readiness as one recognises a man's handwriting.

"In addition to this, the examination of the inscriptions was, according to me, amply sufficient

to show that they were apocryphal. How to explain, for instance, that hundreds of texts found in Moab written in characters sensibly similar (much too similar) to those of the *stèle* of Mesa should be completely unintelligible? For it is impossible to receive as serious translations certain unfortunate attempts made in Germany and England to make sense of these inscriptions—attempts often contradictory, which have served to show, not only the ingenuity and erudition of their authors, but the impossibility of translating texts, supposed, from the alleged circumstances of the 'finds,' and their palaeographic appearance, to be contemporaneous with the Moabite Stone.

"At the date, then, of my leaving France, my mind was perfectly made up on the question, although I had as yet communicated my opinion only to certain scholars of France and England who did me the honour of asking it. I knew beforehand what I should find at Jerusalem, when I proposed to bring to light the whole of this tangled bitherto, and to find material proofs of what, hitherto, I had only advanced with great reserve.

"One of my earliest cares, therefore, on arriving here was to visit the new collection of M. Shapira, at present in course of formation, and intended to join its elder sister in the Museum of Berlin. It was not without trouble that I obtained the necessary authorisation; and it was only through the good offices of Mr. Drake that I was enabled to overcome the scruples of the owner, who believed me, I do not know why, animated by some hostile sentiment. I visited the famous collection in company with Mr. Drake, and in presence of M. Shapira himself. It is composed of statues and vases, covered with inscriptions, supposed to be Moabite, lavished in suspicious profusion. The figures are rudely formed, and yet betray the hand of a modern. It is quite sufficient to compare them with the statues, certainly rough, but authentic, of Cyprus, to see immediately the difference between a work simple and rudimentary, but spontaneous and sincere, and that of a modern Arab reproducing mechanically models more or less disfigured. I at once recognised, in these models of badly baked earth, the manner and style of our artist, of whom I already possess certain drawings, which I propose to publish with his copy of the Moabite Stone, for the edification of the learned.

"Not only the form of the objects, but the material itself of which they are made, cry aloud, 'Apocryphal!' The clay is absolutely identical with that used now by the Jerusalem potters; it is hardly baked at all, and yet you will observe under the faces of the little discs of properly-baked clay with which some of the vases were full, and which are taken for coins and *tesserae*, the mark of the threads of the linen on which the soft plate had been laid in order to be cut into circles. I have also seen on some of the specimens the famous deposits of saltpetre, which play so great a part in the question, and which have been produced by the partisans of authenticity as proofs of their extreme antiquity. These saltpetre deposits are only superficial, and must have been obtained, as I have always said, by plunging the things in a solution of nitre. If in some of these specimens which I have not seen the saltpetre has penetrated through the whole mass, it is because the clay was still baked and the bath was longer prolonged.

"In short, I did not see, in the whole collection, one single object which could be regarded as genuine, so that I remarked to Drake when we came out, 'There is only one thing authentic in all that we have seen, the live ostrich the Arabs have brought here with the pottery. And as to the pottery itself, it only remains for us to find who is the potter that made it.' My opinion is, and always has been, that the collections of M. Shapira, all derived from the same source, are false from beginning to end, not only the inscribed pottery, but also that which has no letters on it, and is like the other in form and material.

"The proceeding may be regarded as furnishing no sufficient proof. Accordingly, since my arrival here, I have been looking about for arguments more positive and material, and for palpable proofs. Convinced that the pottery was the work of Selim el Gari, and that it was made at Jerusalem, I took measures to surprise him, *la main dans le sac*. It was evident to me that Selim himself made the statues; as to the vases, he might either make them himself, or cause them to be made by a professional potter, adding, for his own part, the inscriptions intended to make them valuable; in either case he must have recourse to a potter, in order to get his things baked in a proper oven. Starting with this certainty, I looked about among the potters of Jerusalem, five or six in all, and very soon found out the whole truth.

"The first piece of information, which put me in the right track, was given me by a certain Abd el Bagi, surnamed Abu Mansura, a journeyman now in the employ of the potter Hadj Khalil el Malhi, whose shop is between the Spanish Consulate and the Damascus Gate. This man, whom I questioned with the greatest care, for fear of his discovering the object of my curiosity, told me that he had once worked for a certain Selim el Gari, who made statues and vases in earthenware (*terre cuite*) with writings, but that he had left off working for him for some time. In order not to awaken suspicions, I did not press my questions any further, but confined myself to asking him if he knew to what potter Selim now sent his vessels to be baked. Abu Mansura indicated a potter by name Bakir el Masry, to whom I then went. This information was not correct. Bakir, whose name and accent indicate his Egyptian origin, had never worked for Selim, but he had, and still has, in his service a young apprentice, Hassan ibn el Bitar, who has for a long time worked at the pottery of Ahmed 'Alawiye, at the present time employed by Selim, whose shop is between the Mawlawiyeh and the Damascus Gate.

"What follows is the exact narrative which I took from the mouth of Hassan, always being very careful to let him speak, without suggesting anything by injudicious questioning:—

"Hassan entered into the service of Bakir about four months ago: he was formerly apprenticed to Ahmed, with another boy named Khalil, son of Said the barber, and Abu Mansura, journeyman.

"Selim el Gari got soft clay of Ahmed, made out of it, at his own house, statues of men, dogs, and women, with noses, hands, feet and breasts, the whole covered with writings: he also made little discs of clay like *sahout* (pieces of money): then he sent them to Ahmed's to be baked. Ahmed also made vases for him in turn, and Selim wrote letters on them.

"It was Hassan and his fellow-apprentice Khalil who were charged with carrying the things from Selim's house to the shop, and *vice versa*. The first time Selim himself took him to his house to make him know it; he was then staying in the street called *Harat el Djowalide*, near the Latin Patriarchate. He has since moved, and has gone to the street *Agabat el Battikh*, near the Spanish Consulate.

"Hassan has only been once in the latter house. Selim at first addressed himself to the potter, Hadj Khalil el Malhi, but could not come to terms with him.

"Selim, after having shown his house to Hassan, gave him two *bechliks*: for every journey he made he gave him one *bechlik*, or a *bechlik* and a half, sometimes two. To the workman, Abu Mansura, he gave one or two *mejdies*, and to Ahmed, a sum much larger (a pound, if I remember right).

"The journeys were made between the *Maghreb* and the *Icha*; that is to say, in the three or four hours which follow sunset: Hassan, for his part, carried the things under an *abaya*, hiding them as much as possible, as he had been instructed. He even asserts that he left Ahmed in order not to continue an occupation which made him fearful of being arrested by the patrol.]

"Not only were the objects minutely counted, but if any one got broken, the very smallest fragments were carefully picked up. Selim gave, one day, two piastres to a boy who picked up a *sahout* in clay that Hassan had dropped.

"Once they gave Hassan to carry a large statuette, still hot, which burned his hands, his chest, and his arms.

"When he brought the things to Selim, he saw him on many occasions dip them into a caldron filled with water; one night Hassan himself, at the request of Selim, drew water from the cistern to fill the caldron. Selim left them to soak for some time, and then took them out to dry: he said that it was to make them grow old."

"I insist particularly on the *spontaneous* character of this narrative, which I have purposely reproduced in its own simple and methodless style; it contains details which cannot have been invented, and the exactness and veracity of which I have been able to establish by other means. I believe it conclusive: it is notably instructive as to the process adopted by Selim in order to impregnate his things with that *couche* of saltpetre which was to be their brevet of authenticity. I think that we can henceforth, with these elements of information, consider the matter as settled.

"C. CLERMONT GANNEAU."

In forwarding the above extract from M. Ganneau's letter, it will perhaps be well to state the line of action taken up by the Committee of the Palestine Exploration Fund from the first announcement of the "find." It is to Mr. Tyrwhitt Drake that the Committee owed their first sketches and copies of the jars, idols, and inscriptions. Other copies were very kindly sent by Dr. Chaplin. On Lieut. Conder's arrival in Jerusalem, he made careful water-colour sketches of the more important objects; but the figures and vases failed to carry with them, to the eyes of English archaeologists, any evidence of their genuineness. Still, as nothing but copies had been sent home, opinion was withheld until specimens could be seen and handled. With the inscriptions it was different. Mr. Vaux, himself a member of the Executive Committee, at once declared, without hesitation, that these were, one and all, forgeries. Acting chiefly on his opinion, the soundness of which is now clearly established, the Committee refused to have anything to do with the collection. Meantime, fresh intelligence arrived. Two German travellers, with M. Sapia, had dug up similar fragments of vessels themselves in Moab. New specimens came in freely. It was reported that whole camel-loads of pottery were habitually transported to Damascus to be broken up; pamphlets were written on the inscriptions; and then the German Government, buying the whole of the first collection, gave a stimulus to the production of a second, which has since been proceeding rapidly. Against this evidence were to be placed the facts that recent travellers had found nothing similar in Moab; that the American survey party in Moab had positive assurance from all quarters that nothing ever had been found; that Mr. Wright, of Damascus, had disproved the camel-load story; and that the English archaeologists refused to be convinced.

It is due to another gentleman, now in Jerusalem, to state that corroborative evidence of the strongest kind will also be shortly forthcoming. This it is hoped to publish in a week or two.

W. BESANT.

ROYALTY THEATRE.—"OUGHT WE TO VISIT HER?"

"We spend our lives in making mistakes, and in repenting of them afterwards," says Lady Rose, in the new comedy—remembering, possibly, that there had been moments when she had neglected the opportunity to flirt. In another sense the saying might serve as motto for the comedy itself. Everyone makes mistakes all through it: no one is sure of his own mind; but common sense comes in opportunely towards the end of the third act, so that all bad results are avoided,

and we are sure that every one will live quite wisely after the fall of the curtain.

The piece played for the first time last Saturday night is a stage-setting of a novel by Mrs. Edwardes, but this is a fact with which, as we conceive it, the playgoer must not much to do. The work, ascribed upon the play-bill to Mrs. Edwardes and Mr. W. S. Gilbert, must be judged simply by what it is as we see it on the boards of the Royalty Theatre. If the piece be interesting, it may send us to the novel, as to the source of its interest; but it cannot be required of us to know the novel in order to judge of the piece. Stage adaptations from the works of Dickens are produced, of course, under different conditions. All the world knows the story from the beginning, and the pleasure is in seeing the embodiment of conceptions already familiar. But that is not the pleasure most of us are looking for when we go to see *Ought We to Visit Her?*

Ought We to Visit Her? is a capital title, and much may be forgiven to those who get capital titles, now that capital titles are things past invention. Perhaps it is a question, though, whether the attractiveness of a title is quite a sufficient excuse for its inappropriateness. At all events the playgoer must be warned that the title in this case does not convey any hint whatever of the main theme of interest in the new play. The interesting social question, whether Mrs. Francis Theobald ought to be visited, is indeed asked, and finally answered; but neither question nor answer involves any story which might not be told with ease in five minutes; and that with which we are really occupied in the play is the perilous flirtation in which all the characters seem inclined to indulge, but from the consequences of which they are wholly saved by the timely interposition of the authors, in a way that is fuller of benevolence and consideration than of stern fidelity to nature.

Francis Theobald was a soldier—in the Guards—who, on some provocation not thoroughly clear, left the "great world" and took to that other one, which as those of us believe, who cherish the amiable weakness for a mild Bohemianism, is so much more sincere and outspoken, genuine and delightful. In the little world of Bohemia, Francis Theobald has done uncommonly well; for he has married a second-rate actress, whose sister remains upon the stage, and whose uncle plays the trombone every night in the orchestra. The second-rate actress, who was addicted to burlesque, and who still seasons her conversation with anecdotes of the ballet, is a thoroughly well-meaning, good-hearted person. Theobald deems himself happy in the possession of her, or has so deemed himself while they have lived abroad; and now they are returning to his place in Chalkshire, and the question is, How will she be received? A section of Chalkshire society has met her at Spa—has made overtures to her under the impression that she was a foreign Princess, and has promptly withdrawn on receiving the information that six years ago she danced in the ballet. Rawdon Crosbie, the son of the most pronounced time-server in Chalkshire, who has already given to Mrs. Theobald at Spa the "cut indirect," happens to be an old comrade of Theobald's, and he is quickly fascinated by Theobald's wife. He is engaged to one Emma Marsland; but then, that does not greatly matter. And Theobald, back in Chalkshire, meets an old love at a croquet-party, and Lady Rose—this old love—finds pleasure in the renewal of what is more than a friendship with her. Lady Rose is without scruples—till the end of the third act—yet Chalkshire society makes much of her; and when, in order that she may be with the husband more easily, she offers civility to the wife, one of the women observes that the question presents itself in a new light: "Would it," she asks, "be good *trade* not to visit anyone who is recognised by Lady Rose?" Clearly, then, Mrs. Theobald is on the point of being visited; but there are difficulties ahead, and these increase. They are simply the

misunderstandings and foolish doings of the parties chiefly involved. Theobald flirts with Lady Rose till the end of the play; Rawdon Crosbie forgets the existence of his little *fiancée*, Emma Marsland; and Mrs. Theobald is very near to forgetting her love for her husband and seeking consolation with Rawdon Crosbie, at whose declarations she was at first inclined only to laugh, for was he not one of that army of martyrs who had uselessly laid siege to her? The complication is of some interest, but it would be of greater artistic value if it were allowed to have its proper ending, which is not, we opine, a general reconciliation. The proper end is not, probably, that which pleases most the common playgoer and the average English novel reader. But that is not to be helped. The critics are almost unanimous in saying that the present end is not the natural one. An artist, treating a given subject, owes it to himself and the subject to be fearless when his choice is once made. Nobody imposed the subject on him. If he were timid, he might have let it alone. But Mr. Gilbert is too strong a writer to be timid. He is not given to dispose of his characters to suit conventional and Philistine requirements. Only a fortnight ago, we were praising his boldness, and rejoicing in the work of a man who will tell his audience that which he really feels. Therefore we wonder all the more at the sudden happiness and contrition of the four chief characters in *Ought We to Visit Her?*

There is much good work in the play, and there are one or two somewhat prominent faults of detail, besides the main weakness, which we think we have already indicated. The satire, which is healthy satire, seems perhaps a little wildly aimed. Thereby it loses some of its force. It is meant to be directed at the wearisome prejudice of a certain class of unlettered country squires—"who resemble the Greeks," says Mr. Disraeli, "because they are devoted to manly games, and know no language but their own"—and yet we are told that the woman whose offensiveness is most visible, and whose pride is most apparent, is the daughter of a manufacturer or tradesman. Mrs. Crosbie undoubtedly is the person from whom one would expect this offensiveness and stupid pride; but then we are not to be asked to consider her as a leading representative of county society. Why should we lose the distinction between the actual county-people and the *nouveaux riches* who play at being county-people? It is surely lost here, and lost again when the author or dramatist makes the ex-actress notice in the croquet-ground the bad taste of the women's dress. The Stage, in England as in France, may set an example of extravagance; but it is scarcely required to set an example of simple good taste—unless, indeed, to the class which we do not understand it to be the object of this play to satirise.

The acting is unequal, and it has been blamed, we think, just where it does not deserve to be. Miss Emily Thorne has been taken to task for caricaturing some mannerisms current in good society; but in truth, as we have pointed out, the caricature is Mr. Gilbert's or Mrs. Edwardes's. It is not really a woman of fashion that the authors have enabled Miss Thorne to represent, but a person who is to do duty for a woman of fashion in a certain village in Chalkshire, and whose imitation of her model is indeed a very bad one. As a matter of fact Miss Thorne's performance is at least upon a level with that of the other representatives of the Chalkshire ladies—we allow that the playgoer's experience will prove that word of praise to be a cautious one. The most flawless performance just now on the Royalty stage is that of Miss Brennan, who, in the character of the Lady Rose Golightly, has a part that is perfectly within her range, and at the same time a more agreeable one than that of the acrid old maids she is wont to personate. Miss Brennan's style is clear and thin and sharp—if those adjectives may be understood when they are applied to acting.

As an actress she shows something of Charles Mathews's incapacity to understand emotion. She may be moved by reason or moved by caprice, but by passion—never. So it is, that of the Lady Rose she is an admirable representative. With Lady Rose, love-making is an occasional, or even a frequent amusement; but it can never be anything much more. She might ruin herself many times by a whim, but never by a serious attachment. Her love is like that with which the too incredulous Laertes credited Hamlet:—

"A violet in the youth of primy nature,
Forward, not permanent, sweet, not lasting,
The perfume and supplianee of a minute:
No more."

But that does not at all prevent, nay, it is even a reason for, her keen enjoyment in passing *amourettes*. Society is primarily designed for purposes of flirtation; yet not as *well* designed as one could wish. "Why isn't there a rule," asks Lady Rose, "that no party shall ever consist of more than two people?"

Unequal in the mass, the acting of nearly every individual is also unequal. Miss Hodson impersonates Mrs. Theobald with a certain amount of power and a certain amount of inconsequence. Her worst point is the laugh with which she receives Mrs. Crosbie's intimation that she has been mistaken for the Princess. "*Me!*—the Princess?" says Miss Hodson, with a most exaggerated rendering of a ballet-girl's free carelessness; and Mrs. Theobald, remember, has ceased to be a ballet-girl for now four years at least, and has spent the interval as the wife of a gentleman. At this moment and others like it, Miss Hodson shows a certain angularity and awkward restraint of movement—assumed, no doubt, in the idea that the part requires it of her, but really thoroughly out of keeping with the representation of a young person who, if she was sometimes mentally at a loss, would never have been physically awkward. But at other moments Miss Hodson is strangely near to excellence: strangely near indeed to the attainment of a subtle and subdued art to which our English stage is too much a stranger. The delivery of all her theatrical reminiscences is admirable. One feels that she is proud of her Past, and proud of that distinguished uncle who won his fame with the trombone. That dear old life that was *not* "respectable," but only simple and impulsive—it had its charms then, and there are times when one would fain return to it. But Miss Hodson is best in the first act. It is here, in the first talk with Rawdon Crosbie, that there is most of subtle meaning and delicate intention, in changed tone, lowered voice, or the laugh that breaks in timely upon the graver reflections. Mr. Charles Wyndham enters with some vigour and interest into the representation of Rawdon Crosbie, but in the first act he does not sufficiently remember that he is talking to a lady: at all events to a woman who has the common woman's claim to be treated chivalrously. He is too much his mother's son in this respect. He wears his hat too much, when he has not been told he may be covered. Just the little outward marks of respect are wanting, though the admiration is plainly enough implied; and it must be remembered that Mrs. Theobald would have noticed particularly any omission of the everyday courtesies which it takes more effort to refuse than to bestow. Later in the play, Mr. Wyndham acts with sufficient *entrain*; but in his most passionate pleading to Mrs. Theobald the actor overdoes his gestures. If he would wish to be persuasive, he must moderate them. Mr. C. F. Peveril plays the unheroic Theobald carefully and competently; and Mr. Bannister would represent sufficiently well a country gentleman—Crosbie *père*—if the limited stage at the Royalty afforded him more room for liberty of movement, in which at present he seems lacking. One or two of the characters who appear on the stage, in the scene of the courtyard of the hotel at Spa, are delightfully true to a well-known weakness of our fellow-

countrymen abroad—that of wearing their best clothes exclusively at home.

FREDERICK WEDMORE.

CRYSTAL PALACE SATURDAY CONCERTS.

AFTER the usual interval during the "Christmas Festivities" at the Crystal Palace, these excellent concerts were resumed last Saturday, when a programme was provided, the only possible fault to be found with which was its length. It included eleven numbers, and lasted nearly two hours and a quarter—the last quarter of an hour, on such occasions, being often just sufficient to mar the enjoyment of the rest. That this is largely felt by the audience is shown by the numbers who, when the concert is somewhat longer than usual, leave before its close. In every other respect, however, the concert of last Saturday left nothing to desire. Mention should first be made of the special novelties, one at least of which is seldom wanting from a Saturday programme at the Crystal Palace. On the present occasion there were two, the more important being the late Henry Hugh Pierson's overture to *As You Like It*. There is no place in England at which so much English music is to be heard as at these concerts; and one is at a loss which more to praise—Mr. Manns's invariable readiness to bring forward any work of an Englishman possessing the least claim to notice, or the minute care and attention he bestows on the preparation and rehearsal of such works, which it is not too much to say that he could not surpass were the compositions his own. A more perfect rendering of Pierson's overture than that heard on this occasion is simply inconceivable; and it is no small advantage, in recording the impressions produced by a new work, to be able at least to feel sure that its reproduction has been adequate and faithful to its composer's intentions.

Henry Hugh Pierson, who died at Leipzig in January of last year, was chiefly known in this country by his oratorio *Jerusalem*, which was produced at the Norwich Festival of 1852 with only partial success. The same fate was shared by a selection from his second oratorio *Hezekiah* (which he did not complete), on its production, also at Norwich, in 1869. An attentive hearing of the overture played on Saturday renders the want of appreciation, which, in spite of his undoubted talent, Pierson met with in this country, perfectly intelligible. The subjects of the overture are not only original, but thoroughly pleasing; but they are treated in the vaguest and most unsystematic way. The music, though full of isolated beauties, is "without form and void." Many musicians, not possessed of half Pierson's natural gifts, could out of the same themes have constructed a piece of music which would have been at least twice as effective as the overture in its present form, which furnishes one more proof, if such were needed, that there is nothing to gain, but everything to lose, by departing from the standard forms of art. Even Beethoven, so often pointed to as having opened altogether a new field in music, did not destroy the established forms; he merely enlarged them; but the overture to *As You Like It* is nothing more than a clever rhapsody without internal coherence. It seems worth while to express this opinion plainly, because Pierson is often spoken of as an unjustly slighted genius. It would be more accurate to attribute his non-success to the fact that he was a man of misdirected though undoubted talents.

The second novelty last Saturday was a graceful little trifle, entitled a *Liebesliedchen* from the music to Shakespeare's *Tempest*, by Wilhelm Taubert, the Ober-Hof-Capellmeister of Berlin. It is a simple but most pleasing little air, with a prominent obligato part for the oboe, which was most exquisitely played by M. Dubrucq, the first oboist in Mr. Manns's band, and one of the most finished performers in this country on his difficult instrument. The *Liebesliedchen* was encored and repeated.

The symphony on this occasion was the ever-

welcome "No. 9" in C major by Schubert—a work which, it may safely be said, can be heard nowhere in such perfection as at the Crystal Palace. It is dangerous to make any remarks on this glorious symphony, simply because, if one once enters on a discussion of its beauties, it is all but impossible to leave off. It must therefore be sufficient here to say that its performance was one of the finest to which we ever listened. As an interesting illustration of the certainty with which time renders justice to really great works, it is worth noting that on the first production in London of this symphony (by the late Musical Society of London, in 1859) it was all but unanimously decried by the musical critics of the time, even the most competent. Schubert has since taken a glorious revenge; and there are but few now who would dispute the right of this work to a place by the side even of Beethoven's masterpieces.

The other instrumental pieces at this concert were the overtures to *Figaro* and to *Camacho's Hochzeit*, by Mendelssohn—the latter being one of the many good things for the first hearing of which the public are indebted to the managers of the Saturday Concerts.

The vocal music was entrusted to Madame Patey and Signor Agnesi (both of whom are too well known to need praise here), and to Miss Anna Williams, the young lady who gained the first prize at the National Music Meetings in 1872, and who on this occasion made her first appearance since her return from Italy. She possesses a very good and rich mezzo-soprano voice, which gives evidence of careful training. Her selections were Handel's "From mighty kings," and a very weak cavatina from Pacini's *Steffo*, which was certainly not worth the trouble she bestowed upon it.

This afternoon's programme will include a symphony by Haydn not hitherto played at these concerts, and Mr. Henry Gadsby's new organ concerto, the solo part being performed by Dr. Stainer.

MONDAY POPULAR CONCERTS.

MADAME NORMAN-NÉRUDA, the first of lady-violinists, reappeared at last Monday's concert, which opened with Schubert's lovely quartett in A minor. Though in the printed copy entitled "First Quartett," it is, according to Kreissle von Hellborn (not always, by the way, a reliable authority), the fifteenth of nineteen such compositions from his pen. The biographer gives its date as 1824, and from the internal evidence of the work he is probably correct. In any case, it is the first of Schubert's quartetts in which we find the genuine man himself. Of the nineteen works above referred to, only nine are as yet published; and some of these (those in D, B flat, and G minor, more especially) are interesting rather as showing the gradual development of Schubert's style than from their intrinsic musical value. But in the quartett in A minor, the whole originality of the composer comes prominently forward. Less grand in conception and elaborate in form than the later quartetts in D minor and G, it possesses in quite as high a degree the exquisitely poetic fancy, the richness of harmony, the sudden turns of modulation—in a word, the indescribable charm which renders Schubert's best works so dear to all true musicians. Madame Norman-Néruda's playing was simply perfection; probably no piece could have been chosen in which she would appear to more advantage. Admirably supported by Messrs. L. Ries, Straus, and Piatti, she gave a rendering of the work which excited real enthusiasm.

The pianist, as at the previous concert, was Dr. Bülow, who played magnificently. For his solos the Doctor selected two preludes and fugues—Bach's in A minor—originally composed for the organ, and transcribed for the piano by Liszt—and Mendelssohn's in E minor (Op. 35, No. 1). Besides joining Madame Néruda in Beethoven's well-known sonata in G (Op. 30, No. 3), he also, with

the same lady and Signor Piatti, played, for the first time at these concerts, Molique's Trio in B flat, Op. 27. The work is a very pleasing one, written with the skill of a thorough musician; in short, with every quality of a masterpiece—except what Beethoven called the "divine spark." Like much other sterling music, it seemed to interest without warning the audience; nevertheless, all thanks are due to the director for its revival, which is certainly a move in the right direction. The execution of the trio was, as might be expected with such artists, most admirable; especial mention should, however, be made of the perfect balance of tone between the three instruments. Modern grand pianos are so powerful that great discretion is needful in playing with stringed instruments, otherwise the latter will be altogether overpowered. Dr. Bülow once more proved himself a true artist by showing that he knew how to be abased as well as how to abound.

The vocalist was Miss Enriquez, whose fine voice was heard to advantage in Mozart's "Quando miro" and Schubert's "Adina."

Next Monday, among other things are announced Brahms's piano quartett in G minor, and Bach's sonata in A for piano and violin.

EBENEZER PROT.

NOTES AND NEWS.

PROFESSOR OVERBECK, in a recent lecture at Leipzig, advanced the view that the well-known statue, long familiar to us as the *Dying Gladiator*, represents a Gallic warrior who, on the field where his legions have met defeat, has inflicted upon himself the fatal thrust from which he is dying. The learned Professor on the same occasion endeavoured to show that this statue belongs to that series of sculptures which Brunn has identified with the gift of Attalus I. to the Athenians mentioned by Pausanias, and of which the figures were each about three feet high, a peculiarity of size which first led to their identification. The sculptures sent by Attalus represented battle scenes, in which gods or Greeks appeared always victorious over a barbarian race, his object being to perpetuate the memory of his splendid victory over the Gauls. In Naples and Venice are a number of figures, about which there is only one doubt, and that is, whether they are the original figures given by Attalus, or copies made directly from them. After exhibiting to his audience an ideal sketch of this and of three other statues which he considered to be contemporaneous with it, Professor Overbeck proceeded to consider at length the characteristics of Greek art at that period, and the manner in which it treated subjects of current historical interest.

THE death of its talented editor, Dr. Albert von Zahn, has brought the *Jahrbücher für Kunstwissenschaft* to an untimely end. We have received the January number, which we regret to learn is the last that will be published. The series has extended over six years, and has contained many important contributions to art knowledge.

This last number is partly devoted to a loving lament over, and sketch of Albert von Zahn, by Dr. Moriz Thausing. In spite of their vehement controversies in matters of art, Zahn and Thausing seem to have been warm friends. The latter tells of an elaborate joke played upon him by Zahn at a time when they were disputing concerning the authenticity of the drawings supposed to be by Dürer in the Berlin Museum. One morning, he relates, he received a letter with the Nürnberg post mark, written on old paper, sealed with Dürer's device of the open doors, in a handwriting so exactly resembling Dürer's, that for a moment the learned critic was taken in, and imagined he really held in his hand some precious newly-discovered manuscript of his favourite artist. The letter, however, which was addressed to the "Fürsichtigen Hochachtparn vnd erbern Herrn Morizen Thawsingh," was dated from "St.

John's Churchyard on the day of St. Peter's deliverance" (August 1, 1871), so that its modern origin was quickly made apparent. It purported to be written by Dürer, to thank his "günstiger her vnd freunt" for his right understanding concerning the portrait sketches of the Berlin Museum which he, Dürer, "neither took nor sketched," (nicht hab conterfest noch abgerissen), and upon which the Netherland names have been written "by some thieving and deceitful rascal." But his dear Herr Thawsingh is wrong in thinking the sketches could have been done by a modern artist, for he had often when in life seen the artist who drew them, "he could do better in sleep than the new ones in waking," (vnd der wr pesser im schloff als euren neüwen im wachen.)

Dr. Thausing did not discover who was the author of this wonderful letter, which is printed in facsimile at the end of the *Jahrbücher*, until some time afterwards, when Zahn let it out by asking whether he had answered Dürer's letter. It is certainly a most clever imitation both of Dürer's phraseology and of his almost undecipherable handwriting.

M. RENAN has communicated to the *Académie des Inscriptions et Belles-Lettres*, a note from General Faidherbe, announcing the discovery of a Libyan inscription in the island of Ferro, one of the Canaries, by Don Antonio Padron, of the town of Palmas. The inscription has been partly copied, and two lines of it are given by M. Faidherbe. It is surrounded with a border of round and spiral designs, some of which might be taken as written characters; similar characters have already been found in the island of Palmas.

A REPORT has been submitted to the Academy of Inscriptions by M. Antonio Zannoni, concerning antiquities discovered at Certosa, near Bologna. Up to the present time there have been excavated 360 cases of interment, supposed to be from the ancient Etruscan town of Felsina, on the site of which Bologna afterwards rose. In some cases the bodies had been simply buried, in others they had been burned, and the ashes deposited in vases of various kinds. M. Zannoni considers the former the more ancient. Among the cinerary urns, there occurs a kind of bucket or *situla*, bearing curious bas-reliefs.

A SPLENDIDLY enamelled chalice, the work of Paul Raymond, the celebrated enameller of the sixteenth century, has recently been acquired by the Baron Alphonse de Rothschild. The chalice was discovered by M. Gérardau, an antiquary of Marseilles, who sold it to the Baron for 10,000 francs.

GREAT changes are contemplated in the Administration of the Fine Arts in France. *Le Journal Officiel* publishes a long letter addressed by M. de Chennevières, the new Director of Fine Arts, to the Minister of Public Instruction, in which he proposes a remedy for the discontent prevalent among French artists with regard to their annual exhibitions. This remedy is the institution of a National Academy that shall organise and regulate public exhibitions without the intervention of the State. Such an institution, under the name of "L'Académie Royale," was founded in the second half of the seventeenth century, and continued to exist for 140 years without receiving any aid from Government except the room necessary for its annual exhibitions. "During this long period no complaint, no demand for intervention," arose among the artists who composed it; but since the beginning of the present century, when the Government "mus par un sentiment généreux de protection" took the regulation of the "salon" into its own hands, endless complaints, both just and unjust, have been constantly made concerning the rules of admission, the prizes, and the system of recompenses. The State, M. de Chennevières points out, has been foolish in imposing its influence over such matters as these, and it would be wiser in future to leave the artists of France to govern their own concerns. A National Academy

composed of artists of every kind, painters, sculptors, architects, engravers, and lithographers, would be capable of undertaking such government, would regulate exhibitions, and would give satisfactory awards. More than 400 artists have already testified their adherence to such an institution, and M. de Chennevières proposes on the day after the opening of the salon, to again bring the projected plan of it before the minister, so that it may receive immediate attention from the President. "Libertas artibus restituta" was the motto of the old Royal Academy of France, and if M. de Chennevières' project is carried out, it will still be appropriate.

THE English and American Archæological Society of Rome, of which the leading spirit is Mr. Parker, and the principal aim to investigate and determine the age of walls and other examples of ancient construction, has lately attracted to its ranks Sir Gilbert Scott, from whom a contribution to the subject just mentioned is published in the *Swiss Times*, December 20, in the form of a letter supporting, among other views of Mr. Parker's, that on the antiquity of the wall discovered on the Palatine. The argument of Sir Gilbert is, that this wall is of the same construction as a wall which he observed at Tusculum; that the latter being obviously connected with a reservoir, vaulted over in the form of a pointed arch, must take its date from this arch, and that this date must be the same as that of the arch of the Treasury of Atreus, at Mycenæ, which there is no doubt belongs to a remote period of history. It would be a compliment to antiquaries when Sir Gilbert assumes a certain wall to have been built by Servius Tullius, because "all antiquaries call it by that name," were it not that names are often retained in archæology, as elsewhere, long after their meaning has evaporated. We do not suppose that his denunciation of the Roman authorities for their Vandalism in permitting so many important remains to be swept away to make room for a railway, will have any salutary effect, but it helps to soothe our irritation in the matter when we hear it soundly rated. The same paper contains a report of Mr. Parker's introductory lecture for the season at Rome, in which a characteristic feature is his endeavour to throw an air of reality over the tale of the she-wolf and the twins, by instances of children carried away in wicker baskets by floods, and of children being suckled by wolves. Under his fervid description the cave of the wolf, the Vallis Murcia, with its reedy cover for wolves, the inundation, and the hut of the shepherd Faustulus rise vividly before the imagination.

IN a letter to the *Times* of January 17, Mr. Charles L. Eastlake, Secretary of the Royal Institute of British Architects, makes what he justly terms a "melancholy announcement." On Wednesday next, the 28th inst., unless measures are at once taken to prevent it, the old building known as Ely Chapel or St. Etheldreda's Chapel, Holborn, will be sold by public auction, and either pulled down for building material, or utilised for commercial purposes as the advertisement suggests, in which case its crypt would afford "valuable cellarage." The chapel of St. Etheldreda, to whom Ely Cathedral is likewise dedicated, is the last remaining portion of the ancient "Ely place," or London palace of the bishops of Ely. It belongs to the early part of the fourteenth century, the noblest period of Gothic architecture, and Ely palace was of yet earlier origin, it having been built in consequence of a will made by John de Kirkeby, bishop of Ely, who died in 1290, and bequeathed to his successors a "messuage and nine cottages" situated in Holborn. William de Luda, his successor, added greatly to this property, and at his death in 1298, left twenty marks a year for the maintenance of "three chaplains to pray for his soul, and the souls of the future bishops of Ely for ever, in the chapel of St. Etheldreda," which must have been built at that time, though probably not as it now stands. (Did the Welsh

Episcopalians, who have for many years past used poor St. Etheldreda's chapel for their services, ever remember William de Luda's soul?)

The gardens of Ely Palace were famous for the production of early fruits and flowers. It was from these gardens that Richard III., at the impeachment of Lord Hastings, requested a dish of early strawberries from Morton, Bishop of Ely, who immediately despatched a servant to bring them. A neighbouring garden is now more famous for early strawberries, and dreary Ely Place occupies the site of the bishop's ancient palace, but still the chapel attached to it remains. The auctioneers, Messrs. Fox & Bousfield, write that the freehold is private property, and being, as part of a larger estate, the subject of a suit in Chancery, the Court has decreed its sale. They add that "the value of the building for ecclesiastical objects (probably to the congregation now using it) is almost as great as the site would be for 'commercial utilisation.' There ought not, therefore, to be any difficulty in preserving a structure so renowned." We trust there will not be.

A COMIC piece by M. Sardou was produced at the Palais Royal Theatre a few days since. It is entitled *Le Magot*, and is of the usual order of Palais Royal pieces, except that it is not thought so laughable as most of them. Not only is it devoid of the *finesse* which was always found in M. Sardou's earlier and better work: it is devoid of that *note du vrai comique* which sounds through all the extravagances of many a Palais Royal performance. Its story is no more worth telling than is the story of the *Roi Carotte*, and we lament that a writer of M. Sardou's serious ability should do injury to his talent (not to speak of his reputation) by the production of such work. His name gives the work momentary importance, and attracts the attention of critics and the presence of audiences; but the audiences are not quite worthy of him, and the critics frankly declare that if the work were not M. Sardou's, they would dispose of it very briefly.

BERTON is dead. We spoke of him in our last as lost to the stage, and as seemingly very near his end. The end came on Sunday. To such particulars as we have already given, we need only add one or two. He was born in 1820; he was married in 1842 to Mlle. Caroline Samson, the daughter of the renowned comedian. Madame Berton distinguished herself as a writer; and it is in this path, as well as in his profession of acting, that their son's advance has been remarkable. Berton was held in great regard by those who knew him, and not a few Englishmen are numbered among these, for the actor made at least a couple of rather long visits to London: one, as we said last week, in order to play *Rabagas* at the St. James's, and the other a year or so before, when he was the guest of Mr. Fechter. He died, aged fifty-four, at Passy, on Jan. 18, 1874, and was buried two days afterwards in the cemetery of Montmartre.

M. OCTAVE FEUILLET has just read a comedy to the company of the Théâtre Français. Two of the principal parts will be played by Bressant and Mlle. Croizette.

A LETTER from Bordeaux tells us that the seemingly immortal Mlle. Déjazet remains upon the stage after a hundred or so farewells. In that city she has just been amusing the great grandchildren of the people she amused in her youth.

M. DUMAS's *Monsieur Alphons* has got into the French provinces. When we hear of its performance at Etampes and Blois, we may be sure of its production at Marseilles and Lyons.

MISS LITTON, who has been unwell and absent from the theatre, has this week taken her place again, at the Court, in the comedy of *Alone*.

THE little Charing Cross Theatre closes tonight.

THERE was a rumour, a little while ago, that Mr. Bateman intended to have performances of Shakespeare at the Lyceum. The project is not officially announced, and may have been abandoned. But we understand that Mr. Henry Irving does hope, sooner or later, to act Hamlet.

IN the temporary absence of the lady hitherto charged with the representation of the Countess, Almaviva's wife, in *The School for Intrigue* at the Olympic, that character has been played for the last week or two by Miss Marion Terry. For a young actress the part is a difficult one, especially in the first act, where there is so much to look and so little to say. It is here that we like Miss Terry least. In the second act her performance is still unequal, but the level generally reached is higher than in the first. In the third act she leaves little to be desired, for here there is less demand upon the resources which can only be present along with experience and vigour. The Countess's naïve enjoyment of the harmless intrigue in the garden is pleasantly and gracefully shown. Miss Terry's whole performance, as may be imagined, evinces more of intelligence and of sensitiveness than of power. We are not of those who believe that the character needs to be represented as quite the dignified personage she is often assumed to be, for the Countess of the play in question was only three years ago the Rosina of *The Barber of Seville*, and it is too much to expect that in three years a character shall be wholly changed. In this respect, then, Miss Terry's Countess, though uncommon, is not, as we conceive it, at all incorrect. Still, a certain weight and importance may be wanting to her performance, especially, perhaps, when it is seen in juxtaposition with the Suzanne of Miss Fowler. To sum up briefly, Miss Terry's acting of her first prominent part is noteworthy, not only, as we have said already, for intelligence and sensitiveness, but also for the complete and uncommon absence of any tendency to exaggeration.

ANOTHER change of programme is announced for Monday at the Holborn Theatre, when *Le Démon du Jeu* will be produced.

THE little Théâtre de Cluny has got a new manager. The play-house, though small, and situated far from the "great world" of Paris, has been rather a famous one ever since Cadol's best play—*Les Inutiles*—was acted on its boards.

THE fates seem decidedly adverse to the production of *Lohengrin*, announced in the last number of the ACADEMY.

It is with much regret that we have to announce the death of Madame Parepa-Rosa, which occurred on Thursday morning last. In consequence of this melancholy event, the series of operatic performances at Drury Lane Theatre by Mr. Carl Rosa's company, mentioned in our last week's issue, will not take place as intended.

THE fourth of Mr. Ridley Prentice's excellent Monthly Popular Concerts at Brixton, took place last Tuesday. According to Mr. Prentice's usual plan, a novelty was introduced into the programme, the work selected on this occasion being Mr. E. Prout's recently published *Concertante Duet* for piano and harmonium, which was played, for the first time in public, by Mr. Prentice and the composer. The other artists engaged were Madame Rebecca Jewell, Mrs. Hale, and Signor Piatti. The whole performance was an exceedingly good one, though less well attended than it deserved.

THE *Cologne Gazette* speaks with enthusiasm of the success with which Herr Hiller has inaugurated at Cologne the first public performance of the Bach-Verein, which, under his leadership, has for some time been studying the works of the older classical composers of Germany and Italy. In addition to the chorus performances—which include, amongst many other gems, Palestrina's admirable but not generally well-known quintett, "Cogitavit Dominus," Felice Anerio's more ani-

mated "Libera Nos," and several splendidly-given chorales from the old German masters Eccard and Michael Praetorius—Herr Hiller and Fräulein Lehmann gave several solos, chiefly from Handel, with a finished excellence worthy of their reputation.

THE committee for the next musical festival, says the *Cologne Gazette*, has already been formed, and the programme fixed for the three concerts to be held. Dr. Ferd. Hiller has undertaken the direction. The programme for the first day consists of Beethoven's *Pastoral Symphony* and Handel's *Samson*. On the second day, Hiller's *Zerstörung Jerusalems* and Brahms' *Triumphlied* will be performed. The concert of the third day includes, amongst other pieces, the overture to Schumann's *Genoveva*, and a concerto for violin, which will be rendered by Joachim.

POSTSCRIPT.

MR. W. J. CRAIG of Trinity College, Dublin, is preparing an edition of Shakespeare's *Cymbeline*.

WE learn from Berlin the death of a veteran scholar, poet, and politician, A. H. Hoffmann. He was born at Fallersleben in 1798, and, in order to distinguish himself from the numerous Hoffmanns, and also as a kind of *persiflage* on the foolish use of *Von* by the German nobility, he called himself, and will go down to posterity as, Hoffmann von Fallersleben. He was a contemporary and friend of the Brothers Grimm, and one of the first to cultivate a scientific study of the German language and literature. He was librarian, afterwards Professor, at Breslau, but was deprived of his professorship in 1842, on account of his poems, *Unpolitische Lieder*. He then travelled about from place to place, well received by the people wherever he went, but generally after a time advised to leave by the police. In 1854 he settled at Weimar; in 1860 the Duke of Ratibor gave him a resting-place in his castle on the banks of the Weser, where he had the management of the Ducal library. His most important works were the *Horae Belgicae*, 1830; the *Fundgruben für Geschichte Deutscher Sprache*, 1830; *Geschichte der Deutschen Kirchenlieder bis auf Luther*, 1832; *Reineke Vos*, 1834; *Monumenta Elnonensia*, which contained the *editio princeps* of the oldest French poem, the "Song of St. Eulalia," 1837; and *Theophilus*, 1853. He was a great collector of old popular songs, and a constant digger in libraries. His own poems are numerous, and chiefly political; but the best are his lyric poems, some of which have become national property.

A CORRESPONDENT in the *Times* writes:

"The present position of the University of Athens is not so well known in Western Europe as it deserves to be. Although the University is not more than thirty years old, it possesses more than 1,200 students, who are gratuitously provided with education of a high standard in theology, law, medicine, and philosophy. Many of the *alumni*, when they have completed their University course, go to Turkey, Egypt, and Asia Minor, and there propagate the learning which they have acquired in Athens. Thus the city is once more resuming the character which she possessed before Justinian finally closed the 'Schools of Athens.' It is the centre of Oriental intelligence and culture. The University possesses a well-arranged library of nearly 200,000 volumes. It is, however, poorly supplied with English books. I would venture to suggest to Philhellens that it would be a graceful and becoming act on the part of those interested in the progress of learning, if we were to supply this deficiency by presenting to the University a good collection of standard English works. When I remember how readily this country came forward with its supplies of books for the libraries of Strasburg and Chicago, I cannot think that the same spirit will be now found wanting. No one needs to be reminded of the extent to which the world of letters is indebted to Attic culture; and we should surely recognise the great spirit of Renaissance in a country which, with a population of a million and a half, causes a large University to flourish in a city which numbers no more than 50,000 inhabitants."

SATURDAY, JANUARY 31, 1874.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

LITERATURE.

A System of Famine Warnings; or, Famine Aspects of Bengal Districts. By W. W. Hunter, B.A., LL.D., Director-General of Statistics to the Government of India. (London: Trübner & Co., 1874.)

IN the face of the impending calamity of the great famine in India which now seems inevitable, this work has received, as it was sure to do, universal attention at the hands of the public in this country. With hardly an exception the press has, from the very commencement, taken the worst possible view of famine prospects. Every telegram that has been received in London from the Viceroy relating to the famine has been thoroughly discussed, and in almost every case the result has been that the public writers have refused to find any consolation in them. They have earnestly, and ever more earnestly, lifted up their voice in a unanimous cry that the true proportions of the famine have been misjudged; that death, disease, and suffering will be on a far greater scale than the Government has anticipated; and that the preparations, not only for the transport and distribution of the necessary food, but also for the actual supply of food itself, are so notoriously insufficient and immature, that they can only result in the death of thousands and tens of thousands of helpless human beings. When the history of this famine comes to be written, therefore, it can never be said that it has taken us unawares. The Government of India has had ample time for preparation. The press has continuously sounded the tocsin of warning in its ears; and thoughtful people might well be content to believe that, notwithstanding the invariably gloomy tone adopted by our public writers in England, it was more probable that their prognostications would be wrong than that the Government of India—with unlimited credit and powers, with an admirable administrative machinery, with the means of getting absolutely trustworthy information on the spot, and with the certainty of having the entire public sympathy and support of England at its back in any measures, however costly, that it might sanction to meet the impending famine—should so fail in measures of relief as to justify any of the dismal prophecies which we have had ringing in our ears for the last six weeks. When, therefore, this book, compiled by the Director-General of Statistics in India, is published with all the weight of semi-official authority, it, no doubt, is looked upon by many as in some degree a sort of reply to those writers and thinkers about the famine who take a pessimist view of matters; and we may at once say that, could Dr. Hunter's statistics and rose-coloured deductions be relied upon unreservedly, the nation might indeed give a sigh of relief at the conviction that the

matter was not really so bad as it has been painted, and that the preparations which have been already made to deal with the calamity are ample and sufficient in all their details. In the limited space at our command, we are unable to criticise in detail the whole of Dr. Hunter's work; but in the first chapter we have noticed some points that seem to us to have such a vast influence on the value of his statistics, that we submit them here very briefly to our readers.

In this chapter Dr. Hunter deduces from various statistics at his command, and principally from those of the famine of 1866, that the impending famine of 1874 will cost, at the extremest possible estimate, no larger a sum than half a million sterling. If this be true, there is but little cause to be anxious whether the want can be successfully met; and the nation may begin to feel that it has been giving itself a great deal of concern about a calamity that may be combated with some certainty of success. Let us, however, consider what these statistics really mean, taking Dr. Hunter's own figures as the basis for our conclusions.

At page 21 we are furnished with a tabulated statement of the statistics of relief in 1866, from which we gather that, out of a total population, in eleven districts of Bengal, of 14,800,251 people, of whom 10,964,415 were labourers and agriculturists, the largest number who applied for relief in one month was only 144,059, or not more than .097 of the whole population; and this, Dr. Hunter informs us, is probably larger than will be the case during the present year. This statement does not, of course, deal with the whole forty districts, but it shows the statistics of the eleven most seriously affected in 1866, and it is on these statistics that Dr. Hunter's predictions are based. We confess that, at the first glance, we were utterly surprised at the small number of persons requiring relief, until we read on, and then the mystery began to clear. In page 21, Dr. Hunter says that a household of four persons reduced to one meal a day consumes $1\frac{1}{2}$ seers of rice, and that, if the father does his daily work, he would require a second meal of half a seer, making a total of 2 seers a day. At famine rates this would cost $7\frac{1}{2}$ rupees per month, and the statistics show that a fourth of the families in Bengal earn only 5 rupees a month. Therefore, it might be expected that, according to the above statistics, one-fourth of the total population of the eleven districts tabulated $\frac{14,800,251}{4}$, or 3,700,060, would have applied for relief; whereas the total number applying was only 144,059. How can the difference in these numbers be accounted for, even putting out of the question the two children out of the family of four, or 50 per cent. of the above number who might be estimated as not coming for aid, but as being provided for by the adult population? In two sentences which have called forth much well-merited criticism, Dr. Hunter gives us the key to the whole matter. "The children," he says, "and weaker members of the family, die at the outset of the famine, and those who survive eke out a very insufficient quantity of rice by roots and wild plants. The wages which would not suffice to feed

an average family of four, are sufficient for the two or three members *who survive*. [The italics are ours.] The rural population enters a famine as a frigate goes into battle, cleared of all useless gear and inefficient members."

These sentences have been most severely criticised, and with justice; for what is the sole deduction we can draw therefrom? To the population of 144,059 requiring relief we have now to add, according to Dr. Hunter's own statement, a vast number who have already perished. At the commencement he takes the population of 14,800,251 in the eleven districts tabulated as consisting of families of four persons. He proves that it is a fact that one-fourth of this number must suffer actual famine. And in the sentence above quoted, in which he speaks of the two or three members out of each family *who survive*, he at once destroys at the lowest estimate 25 per cent., or $\frac{3,700,060}{4}$, or one-fourth of the whole population which he before stated would inevitably require relief, or 925,015 souls. We do not see that this deduction can be evaded in any possible way; and if we are to accept it as true, and are determined to prevent as far as possible any actual loss of life, what becomes of Dr. Hunter's estimate of 66,000l. to feed a pauper population of 660,000 per month?

Again, at page 26, Dr. Hunter says that in 1866, with an expenditure of 254,869l., nearly 750,000 human beings perished of hunger and of diseases incident to semi-starvation, while the maximum number relieved during the severest month was only 144,059. It is, as before stated, this last number that he takes as the basis of his calculation, that Government will not in the present year be called upon to expend more than half a million of money for the relief works and gratuitous distribution required to deal adequately with a famine-stricken population of twenty-four millions.

But if the English nation declares, as it has already done, with unmistakeable voice, that no single human life shall be sacrificed to the pangs of hunger that can be saved either by timely expenditure of money or by human foresight, what becomes of these calculations? Where do they land us? It seems to us that they only serve to prove with startling distinctness that, in this compilation of statistics, the Director-General has taken for granted as inevitable an immense destruction of human life, and has merely tabulated those who had strength and vigour not to succumb to the first outburst of the famine. Let us recapitulate for a moment the figures with which, according to his own statement, we should have to deal, were we determined, as we are, to prevent the loss of a single human life that can be saved by timely aid.

In the year 1866, on the statistics of the famine of which Dr. Hunter bases his calculation:—

144,059 were relieved.

750,000 died of famine and its consequences.

925,015 are taken for granted by Dr. Hunter, at page 22, as having succumbed before the first severity of the famine was actually felt.

1,819,074

Instead, therefore, of 144,059 applying for relief in a total population of 14,800,251, we might, had our means been perfected, have saved the lives of nearly two millions of souls. Instead of taking as his basis a gross number of 144,000 human beings requiring relief in a total population of 14,000,000, and building his calculations thereon, it seems to us that Dr. Hunter would have been wiser had he looked the matter in the face and grappled with the fact that two millions is the correct number for whose lives we are responsible. Lord Northbrook, in his speech at Agra, announced, however, that it was twenty-four millions of people who were now in peril of famine. If, out of fourteen millions in 1866, two millions should have been supported by the State, we have therefore nearly double the number to provide for in 1874. How far will Dr. Hunter's sanguine estimate of half a million for the total expenditure of six months meet the emergency?

We would in conclusion express our entire confidence, that the Government of India must be better prepared to grapple with this fearful calamity at all points than we at home can at all understand. They have, we repeat, the most ample information: for reasons of State, they may have considered it advisable not to give their measures of relief a world-wide publicity: it is generally understood that the Home Government have given them absolute *carte blanche* to act in the matter; they are assured of public sympathy and support; every aspect of the case has been placed before them in every possible way; and they must fully recognise the awful responsibility which rests upon their shoulders.

EDITOR.

On Viol and Flute. By E. W. Gosse. (London: H. S. King and Co., 1873.)

To say of any work in literature or art that it bears the mark of a school, has generally in England been to cast the first stone at it. Schools, with their recognised leaders, their accepted theories of art, their acceptance of scholars' work, have been looked on with the same disapproval as that with which Turgot regarded sects. "Perhaps the greatest ill you can do to art is to drive those who love it to form themselves into a school," in this country, where we are in other ways so fond of mechanism, and where, if we have no Florence and no Bologna, we can point with pride to Birmingham and Manchester with their schools of politicians. This is all very well in politics, but in literature such circles are supposed to foster mannerisms and tricks caught at second-hand, and to encourage the sort of poetry which Charles Baudelaire was persuaded he could teach in twenty lessons. Mr. Gosse's poems are mainly remarkable for the striking examples they afford of the advantages and disadvantages which attend the existence of something like a school in modern English poetry. The disadvantages lie most obviously on the surface, and do his verses much wrong. Borrowed rhythms, borrowed mannerisms, expressions which once had the beauty of the *bizarre*, but

which are now neither strange nor sweet, are unpleasant themes to dwell on, and must be noticed as briefly as possible. It is a violence to speak of "the sunset, with her warm red flesh," to talk of a woman's mouth as the "rose-tree of the world's great rose!" the rose of the world's great rose-tree would have been intelligible. And it is surely a mistake to write verses so provocative of parody as "Guinevere,"

"When the autumn nights were hot,
(Peach and apple and apricot,)"

and so on, with a refrain rhyming on the names of all sorts of fruit. To end our list of objections the poem called "Renaissance" is too close an echo of Mr. Swinburne's "Laus Veneris," which has been written once for all, and loses by repetition.

These are faults which cannot be overlooked, and which are traceable to the study of one phase of English poetry. But the beauties of Mr. Gosse's verses, beauties often due to the same influences, are as much a wider theme as they are a pleasanter one to treat of. And first of the beauty of form specially manifest in these sonnets. It is not easy to praise too highly their careful structure, their music and colour. Only a few years ago such sonnets would have been, for their perfection and form, almost a new thing in English verse. It is owing to the revived study of Italian art, and greatly to the example of the master whom Mr. Gosse addresses on page 102, that a collection of fourteen casually rhymed lines is no longer considered good enough to call a sonnet, and that what is done in this way is done well. Mr. Gosse's sonnets are so much on a level of excellence that it is difficult to know which to select for quotation. Perhaps that which closes the series on "Fortunate Love" is as good an example as any other.

"EPITHALAMIUM."

High in the organ-loft, with lilyed hair,
Love plied the pedals with his snowy foot,
Pouring forth music like the scent of fruit,
And stirring all the incense-laden air;
We knelt before the altar's gold rail, where
The priest stood robed, with chalice and palm shoot,
With music men, who bore citole and flute,
Behind us, and the attendant virgins fair;
And so our red Aurora flushed to gold,
Our dawn to sudden sun, and all the while
The high-voiced children trebled clear and cold,
The censer boys went swinging down the aisle,
And far above, with fingers strong and sure,
Love closed our lives' triumphant overture."

It would be scarcely possible to surpass this blending of the triumphant passion of music with the colour and quiet of painting. Other sonnets, which it is a temptation to call masterpieces, are "Experience," "Perfume," "D. G. R.," and "Old Trees." "Perfume," especially, is worthy of one who loves sweet scents, and can trace and express their mystic "correspondences" with delicate emotions as subtly as Baudelaire.

Mr. Gosse's other lyrics are less perfect in form than his sonnets, but they have the interest of expressing a philosophy of life, which is perhaps as useful as any other mental audyne of our time. In his eclecticism there is a good deal of Goethe and of Walt Whitman, of Marcus Aurelius, and of Théophile Gautier. This philosophy is most definitely expressed in the prelude—

"I clasp, as bees do flowers, with amorous wings,
The spirit of life in moving, joyous things;
Where'er desire receives the boon it craves,
A new Athene from my forehead springs.

Lovers behind the haystacks, out of sight,
And peasants dancing in a barn at night,
Rough fishers chanting as they haul the net,
And whistling mowers in the fading light.

All these are more than my own life to me;
I haul the moonshot fishes from the sea,
I fiddle on the village green, I dance,
I thrill with others in their honest glee."

The same feeling is expressed in "Lying in the Grass," a poem which embodies those effects of evening light, and the contemplation of peaceful labour, which Mason loved to paint.

"I do not hunger for a well-stored mind,
I only wish to live my life, and find
My heart in unison with all mankind."

Disciples of this morality strive at once to live with the world's life and to enjoy each moment as it passes. After all, the perfectly dispassionate spectator might unite these aims, might appreciate the harmony and the vivid contrasts of experience. But none of us are dispassionate enough for this, and Mr. Gosse is found complaining that "Satanic passions stab him through." This makes a discordant note in his lotus-land of art, a land lit with the long twilight of the North, and musical with memories of the songs of Ibsen, the Norwegian poet. Even vaguer than this paradise of art, and more remote is the "Paradise of a Wearied Soul," a poem describing the shores where the shadows of dead lovers are no longer tormented, a frequent motive with the poets of the French "Renaissance." To dwellers in these tranquil countries, the great war, "the year when Henri Regnault died," came with a more cruel shock than to other men. It was as when the seekers for the Earthly Paradise in Mr. Morris's poem, encountered the fleet and the warlike array of Edward III. going to spread the realities of death, while they were sailing to a fabled immortality.

"For us, the very name of man,
Grew hateful in the mist of blood;
We talked of how new life began
To exiles by the eastern flood,
Flower-girdled in Japan."

Obviously, any one who thinks it a demerit in literature to be literary, who wants to be "grand, epic, homicidal," will find no pleasure in Mr. Gosse's book. But he shows every promise of becoming a poet whose verses may well be read to loungers beneath the trees, like those whom Mr. W. B. Scott has designed for the frontispiece. There are, however, blemishes enough, and irritating affectations to be cleared away before listeners will be as complacent as the *Auditor* addressed in the interludes.

"You do not stir? you will not rise and go?
Then listen longer, if it must be so."

A. LANG.

A General Sketch of the History of Persia.
By Clements R. Markham, C.B., F.R.S.
(Longmans, Green, & Co.)

MR. CLEMENTS MARKHAM has rendered a service to literature by the production of this interesting volume; and impart critics will consider that the title adopt

is fully warranted by its contents. As a general sketch of the history of Persia, it contains far pleasanter reading than could be presented by bare, persistent historical narration; and of all chronicles none can be more wearisome to the English student than those of an Eastern people. The profuse and prosaic detail which characterises Oriental annals cannot have escaped the notice of the most conventional readers, and with this in view it is unlikely that the public would be disposed to see revived a class of publications remarkable for monotonous genealogies and the lack of interesting incident.

Sir John Malcolm's *History* and Sir William Jones's *Grammar* are both exceptional books; but they belong to a period when Persia had an especial charm of novelty which inspired the writer quite as much as it encouraged or attracted the reader. Mr. Markham, while disclaiming to be a critical Orientalist, has written with a hearty appreciation of the labours of these distinguished men, whose intimate association with every phase, in the one case of Persian character, and in the other of Persian literature, has made them worthy models for imitation. Treading more or less in the steps of one or the other, he has brought scientific disquisition to bear upon the rise and fall of turbulent dynasties, or utilised snatches of national poetry to illustrate the genius of a highly imaginative people. Of the twenty chapters into which the volume is divided, about one-third are devoted to matter which, without being extraneous or irrelevant, expounds rather than participates in the main subject. It represents, as it were, the chorus and not a distinct person of the drama. Chapter III. on the Zend Avesta, and Chapters XVI. and XVII., on the Persian Gulf and Central Asia respectively, may be cited as notable examples of our meaning. As orthodox component parts of a general historical sketch, they are not misplaced; as aids to the general reader, they are of great value.

Chapter III. touches a theme of religious and scientific importance, and introduces questions which cannot be fitly dismissed with brevity or in general terms. The indications of a contact between the two "monotheisms of the Aryan and Semitic races" obtained from Scripture, are, as Mr. Markham says, "very interesting;" but these few words open a field of enquiry of almost indefinite extent, and the references to the books of Jeremiah and Ezekiel (pages 65, 66) point only to its entrance gate. For the Biblical student an apt illustration of the necessity of a Commentary, or it may be a Revision such as that now in progress, is afforded in the rendering of the third verse of the 39th chapter of Jeremiah, wherein Rabсарis and Rabmag are mentioned as mere names, instead of titles belonging to the names immediately preceding them, and signifying "Chief of the eunuchs" and "Chief of the Magi" ("high priest," as conjectured by Sir Henry Rawlinson on a new etymology). It speaks well for the British and Foreign Bible Society that its latest Arabic translation of the Scriptures has corrected this defect in the translation of 1848,—a defect which, presuming the Arabic taken from the Hebrew,

should at least have been apparent in converting one form of Semitic expression into another. Here we may remark that the testimony of scholars to the Persian origin of the word "Paradise" (p. 67) is certainly not strengthened by Freytag, who, quoting largely from the *Kamus*, treats it as pure Arabic, i.e. "Firdaus," plural "Faradis" or "Paradis;" but he may have been content to find in it a legitimate formation corresponding to Lamsden's augmented Quadri-literal, without need of closer investigation.

Between twenty and thirty pages are given to the history of the Sassanian monarchs. If there is little novelty in the details or treatment of this section, there is at least sufficient light displayed for the reader's guidance, to fix attention on the more important reigns and surer landmarks of a dim and remote period. For, notwithstanding the high testimony of Sir William Jones to the comparative value of the data available in recalling the achievements of the descendants of Sassan, it is impossible to believe that any narration derived, as this one, from the most imaginative of narrators, can be void of romance and fable. We could have wished something said about Bahram Chobin, leader of the armies of Hormazd IV. (miscalled by Malcolm, Hormazd III.); a brilliant episode, on whose exploits is attributed to Firdausi, and may be found in some copies of the *Shah Namah*. But his accession to the throne is not admitted by all critics, and the fact of partial exclusion by the editors of the poet-historian may have caused rejection in the present instance. If we are to credit Richardson, the Pahlevi dialect, which had for many years been falling into disrepute and disuse under the early Persian monarchs, was formally proscribed by Bahram, or, as Mr. Markham calls him, "Varahran" Gor, in the fifth century of the Christian era. The "Dari," on the other hand, or court division of the common "Farsi," was fostered by the Sassanian kings, who published works in it, and encouraged others to follow their example. According to the same authority, the fanciful derivation of "Nishapur" noted in the volume under review (note, p. 73), becomes considerably modified. "Nai" in the one case is accepted in its literal Persian signification of "reed," thus: "the reeds of Shapur." Richardson, on the other hand, finds a word "nih," meaning "town" or "city." We venture to think the first syllable may really be "nāo" or "nū," Indianised or vulgarised into "Nāi" or "Ni," and that the name implies the "new" city of Shapur, called by Mr. Eastwick the modern town, in reference to a very great city, "one of the most ancient in the world," south-east of the present one, and destroyed by a convulsion of nature or the violence of man.

The History of the Caliphs is clear and concise, and much reading and research are exhibited in the Lives of Baber and Taimur. But in all earlier Persian annals, until the times of the Safawi kings, there is a vagueness in respect of geographical limits, and as to what particular places are within the actual empire of the day, which cannot but perplex the practised student as well as the neophyte. There is no question that the

statement that Persia fell to this or that invader on such and such an occasion, must be taken with much reservation. In most cases less, in some few cases more, than the Persia of the modern map is probably intended. Where the latter hypothesis would apply, moreover, it must be assumed that the sovereignty is based rather on a dominant influence than a direct controlling power. Neither Samarkand (pages 137, 207) nor Sultānya (page 72) is a fitting site for the capital of a country extending north and south from the Caspian to the Persian Gulf, and west and east from the Kurdish mountains to those of Baluchistan. As regards Balter, Mr. Markham introduces him among his historical biographies, not as a ruler over any part of Persia, but because of his intimate connection with that country.

The chapters on the Safawi Dynasty and the Kájars, on Nadir Shah and the Zends, are legitimate Persian history, and agreeably put together. It is not so much that the main facts are new, but they are well and instructively combined. Separate relations have been blended in one, and statistics thrown in, with occasional disquisitions in appropriate places, to relieve the monotony of narration. We are glad to find that the useful and intelligent labours of Mr. Watson have not been ignored; and that confirmation is accorded to the accuracy of this gentleman's *History of Persia from 1800 to 1858*. Those who have watched his career from the position of a subaltern in a Company's European regiment to that of Chief Secretary and Acting Chargé d'Affaires in Greece and Japan, will not fail to acknowledge that the chance which brought him to Persia during the short war of 1857 has been turned to good account. Strong and practical arguments are adduced in favour of the Euphrates route to India, while a railroad in that quarter is looked upon as a certainty. But the project is viewed as a whole in its connection of the Mediterranean with the Persian Gulf: not as a mere nucleus of a full land-line by Kurdistan, Persia, and Makran. If one be a certainty, we cannot but consider the other equally so.

Where the author excels is, we think, in his own special field of geographical research, and in utilising the labours of old and comparatively little known travellers for purposes of historical illustration. These timely *excerpts* impart flavour to the chronicle as it stands, put into an English dress; and bring direct evidence from trustworthy witnesses to men and manners of a bygone period, for which we might vainly look to native annalists. And in the description of towns and countries, Mr. Markham has hit on a happy, popular, and attractive style. As comprehensive as it is concise, it seems to grasp the cardinal and noteworthy points of the best and most recent authorities. The chapter on Central Asia is highly instructive, and may be instanced as a fair specimen of the book, and the information to be acquired from its perusal. In these days of geographical school examinations, few better volumes could be placed in the hands of students.

Passages might readily present themselves

in support of the opinions here expressed, and short, vivid accounts of Yezd, Bokhara, Mashhad, Shiraz, Northern Khurasan and many towns, provinces, or districts be quoted. In the concluding apostrophe of the book, Mr. Markham addresses himself to the land he has been describing. "Iran," he says—

"where the palace of Persepolis reared its beautiful pillars on high; and where Sa'ady and Hafizh wrote their soul-stirring poetry,—must ever be an enchanted land, full to overflowing of the most delightful associations.

"We picture to ourselves the mighty kings of old, the heroes as generous and merciful as they were brave, the lovely maidens and the inspired poets of Irân, until the whole history rises up before us like a wondrous mirage. The traveller over the sands of Mesopotamia may sometimes behold its counterpart in the ruined palace of the ancient kings of Irân, at Ctesiphon. Gazing from the opposite shores of the Tigris, he will be astonished at the sight of vast arcades, which will change into a beautiful tower reaching to the sky, and pierced from base to summit by innumerable arches. Suddenly this fairy vision will be converted into a magnified image of the palace, with an exact counterpart upon it, upside down; and finally the naked ruin is seen in all its desolation, standing alone in the sandy plain.

"Just in the same way we may dwell upon the past history of Irân; the age of Rustam and his heroes, the precepts of Zoroaster, the gorgeous line of Sassanian kings, the age of poets, the restored magnificence of 'Abbâs, and finally the stream of history brings us down to the naked deformity of the Kâjar rule, and the desolation of modern Persia."

But we cannot take leave of this interesting volume without remarking on the adoption in it of a mode of spelling certain words unfamiliar to most European readers. The innovation is part of a question provocative of warm discussion among Indian officials, and sufficiently important to affect the reading public at large.

Mr. Badger deserves the thanks of all who desire to see a uniform as well as critically correct system applied to Oriental names when put into a Roman character, for bringing the results of his knowledge and research to bear upon the subject; and Mr. Markham, by illustrating this gentleman's theory in his own pages, has challenged opinions on its aptness or otherwise. Nothing can be sounder than the reasoning, but we demur to the practical conclusions attained. Arabic is a language so diffused in non-Semitic languages and among a non-Semitic people, that we must accept it in some cases as belonging to the alien tree on which it has been grafted. Its proper names, like its commonest parts of speech, have, it is true, become distorted both in Turkish and Persian, especially the former, by oral peculiarities; but these verbal distortions are recognised in Turkey and Persia to the prejudice of original sounds, and even grammatical axioms; and either we must have a separate rendering of words applicable to separate countries, or a rendering which meets as nearly as possible the common exigency. The first procedure would be singularly inconvenient, and therefore we should strive to make the second feasible.

Now the letters which it is proposed to represent in English by *dh*, *dz*, and *zh*, are, both in Persia and India, little distinguishable to foreign ears from the simple *z*; and

as Mr. Badger's aim is to give "the nearest approach to the right sound," the object is not achieved, in respect of a History of Persia, by the means prescribed. Had Mr. Markham strictly availed himself of it, he would have spelt Afzal (p. 455) and Faizabad (p. 456) Afdhal and Faidhabad, as he had before spelt Fadhl (p. 172), a similar derivative to Afzal, and Kadhi (p. 130); so also he would have spelt Azam (p. 370), Zil (p. 471), and Nizam (p. 491), Azham, Zhill, and Nizham, as he has done Hafizh (p. 175) and Kazhim (p. 263). Azarbaijan (p. 322) would in like manner have been Adzarbaijan; and it may be remarked, *en passant*, that Razha (p. 313, &c.) should be Radha. But deviations have been found advisable: and the rule would, we think, be better honoured by general breach than partial observance.

Again, it is conceived that the *i* would answer all ordinary purposes in the rendering of Persian or Persianised Arabic words for which a *y* is now substituted: except in cases of "tashdid," or doubled letters, such as in "Sayid," where the introduction of *y* is compulsory.

Nothing need be added of supposed misprints; and as Mr. Badger has not remarked on the letter pronounced *s* in India and *th* among Arabs, we might conclude he prefers the latter sound, as in Othman (p. 104); but as Masnavi (p. 157) should follow suit, and be "Mathnavi," we are uncertain whether he would apply it in all cases.

As we have before said, Mr. Badger's theoretical reasoning is too sound to be impeachable. We do not presume to cavil at his interpretation of Arabic letters. Our objection is to the too general application of the strict rules of the critic and grammarian to words which have passed, as it were, from such supervision, into a more cosmopolitan sphere, where Custom reigns supreme, and where simplicity is a clear desideratum. In grammatical and philological works letters should naturally be given with original form and signification. F. J. GOLDSMID.

From the Indus to the Tigris: a Narrative of a Journey through the Countries of Baluchistan, Afghanistan, Khorassan, and Iran, in 1872. By Henry Walter Bellew, C.S.I., Surgeon Bengal Staff Corps. (London: Trübner & Co., 1874.)

DURING the unfortunate, because premature, occupation of Afghânistân in 1839–42, that country was traversed in every direction by British officers, and a flood of light thrown upon its geography and the habits and relations of the various races who till its valleys, or graze their flocks over its mountains. Among the few districts which remained imperfectly explored was Sistân, the classic land of Persian romance, the birth-place of the hero Rûstam, whose exploits, told in the glowing pages of Ferdousi, are the pride and delight of Persia.

It is curious, therefore, that it should be the first scene on which the British Government has felt the necessity of active interference in Afghân politics since the withdrawal of Pollock's avenging army from Kâbul in 1842. Situated in the lowest de-

pression of the Iranian plateau, Sistân is surrounded by desolate wastes on every side but the east and north-east, where the waters of the Halmand and Harîrd bring down the alluvial deposits which form the finest corn-growing soil in Western Asia. This boundless fertility, in spite of a climate so bad that horses cannot live through the summer months, made the valley of the Halmand, at one period of its history, the seat of considerable civilisation; and until the decay of the Persian monarchy at the close of the Sûfi dynasty, it appears to have enjoyed comparative peace and prosperity under its native Kayâni chiefs, ruling in the name of the Shâh.

Since the beginning of the last century, its position on the neutral ground between Persia and Afghânistân—where, as on our own borders five hundred years ago, there is always war—has reduced the greater part of the country to a waste, where nomad Balûch and Afghân graze their herds and cut each other's throats amid ruined villages and choked-up watercourses. Sistân proper, the delta of the Halmand, which had been colonised by Nâdir Shâh with Persians from the neighbourhood of Hamadân, still retains some semblance of prosperity, and was either independent or owed allegiance to Herât or Kandahar, until taken forcible possession of by Persia in 1865.

The civil war which then raged in Afghânistân prevented any notice of this invasion at the time; but as soon as the 'Amîr Shîr 'Alî Khân regained possession of the throne of Kâbul, remonstrances were addressed to Tehrân, and, finally, the British Government was compelled to interfere to prevent a war. The result was the despatch of Afghân and Persian commissioners, with Sir. Frederic Goldsmid as arbitrator on the part of England, to settle the dispute on the spot.

Major-General Pollock, a distinguished political officer from the Punjâb, was ordered to accompany the Afghân envoy, and with him was sent Dr. Bellew, whose knowledge of Pashtû, the colloquial language of Afghânistân, added to his having been a member of the only recent English mission to that country, admirably qualified him for the journey.

The book before us contains the record of their travels. Leaving the British frontier at Jacobâbâd, in Sind, on the 8th of January, 1872, they found it prudent to adopt the longer and more difficult route to Kandahar, that by the Miloh pass, Kalât and Quetta, the regular road through the Bolân being dangerous on account of the rebellion of the Brahûi chiefs against their suzerain the Khân of Kalât. At their first halting-place the travellers found proof of the wisdom of their decision in the shape of a caravan which had lost one hundred and fifty camels carried off, six men killed, and fourteen wounded, in fighting its way through the Bolân pass. Dr. Bellew makes no comment on this deplorable disorder close to the frontier of India; but we cannot help thinking that British interference would be more than justified to prevent such outrages in the dominions of a chief, the mainstay of whose power is the moral and material support he receives from the Government of

India, if, indeed, he be not, to all intents and purposes, as much our feudatory as Holkar or Scindia. At Kalât, where they arrived on the 23rd of January, in intense cold, the travellers exchanged visits with the Khân, whose inability to keep his subjects in order had caused their roundabout journey; and on the 29th reached Quetta, a few miles beyond which they were met by the Afghân commissioner, with an escort to conduct them to Kandahar. That this was not a mere compliment is clear from the following extract:—

"At a mile beyond Hydarzai we halted half-an-hour near the village of Yâr Muhammad at a *Kârez* of the same name, and had a fire lighted to warm ourselves while the baggage passed on. Whilst so engaged, Yâr Muhammad, the founder of the village and *Kârez* (water conduit) bearing his name, with half-a-dozen villagers, came up, and with genuine Afghân freedom seated themselves amongst us. He was a rough old man, with bleary eyes and snuff-stained nose.

"Without taking any notice of us, he bluntly enquired of the Saggid who and what we were. On being told our errand, 'That's all right,' he replied; 'our book tells us that the Christians are to be our friends in the hour of adversity; but it's well for them that they are travelling this way under your protection.' The Saggid laughed, and said, 'Such are Afghans! they put me to shame;' and his secretary, to prevent any further disclosures of sentiment on the part of our visitor, jocosely observed, 'You talk too fast, old man: your speech is understood,' tossing his head in my direction. The old man gave me a full stare, and enquired where I had learned Pushto.

"A minute later he put his face towards me, asked me to look at his eyes, and give him some medicine to restore his failing sight."

On the 9th February, General Pollock and his party reached Kandahar, where they remained four days to recruit. Here Dr. Bellew found himself amid familiar scenes, having passed fourteen months in semi-captivity at Kandahar in 1857-58, when a member of Major Lumsden's Mission to the 'Amir Dost Muhammad. Although every effort was made by the Afghân authorities to show their city under a favourable aspect, even to having the bazaars swept and stored with extra merchandise for the occasion; and although access to the English officers was denied to all but officials, Dr. Bellew could see that the condition of the peaceable classes was even more wretched than at the time of his former visit. Authority is divided between the civil and military governors of the town, and the ruler of the district.

"The consequence of this triangular arrangement is that the people are effectually crushed and bewildered. They know not who are their rulers, and in vain seek redress from one to the other, only to find themselves fleeced by each in turn. As my informant pathetically remarked, 'There is no pleasure in life here. The bazaar you saw to-day is not the every-day bazaar. There is no trade in the place. How should there be any? The people have no money. It has all been taken from them, and where it goes to nobody knows. There is no life (or spirits) left in the people. They are resigned to their fate, till God answers their prayers, and sends them a new set of rulers.'"

It is not astonishing that the Kandaharis look back with regret to the British occupation, and sigh for a change of master.

"Even a fresh set of their own rulers," says Dr. Bellew, "would afford them temporary relief;

but a foreigner, whether British, Russian, or Persian, they would hail with delight, and their city would fall to the invader without even much show of resistance, for the garrison would look for no support from the people they had so hardly oppressed."

Should England be forced to occupy Kandahar as an outwork against Russian advances towards Herat, a contingency hardly to be avoided, it is a comfort to know that the occupation would not be distasteful to the people. From the 9th of February to the 8th of March the expedition marched steadily down the valley of the Halmand, reaching Sir Frederic Goldsmid's party on the latter date at the village of Banjar. Dr. Bellew's account of this part of his journey is full of interest, but we have no space to describe it, or to follow the combined party on their journey through Western Khorassân to Mash-had, *via* Kaiân, or Ghayn, and Birjantiand, towns never before visited by Englishmen, and whose position is inverted on our maps; or on the comparatively beaten track from that holy city to Tehrân. Times are changed since Christie, Conolly, and Ferrier passed Sistân at the risk of their lives; but though there is little exciting adventure in Dr. Bellew's volume, and less of that pleasant chronicling of trivialities which serves nearly as well to amuse in some books of travel, it is crammed with interesting facts in political and physical geography, and some useful scraps of botany. His zoology is decidedly weak. The stag of North Persia is not the *barasingha* of India, but the nearly allied "*Cervus maral*;" and the tiger is as certainly found in the Elburz, as the lion is not. We fancy Dr. Bellew must have been misled by the word "*shir*" or "*sher*," which in India is applied to lion and tiger indifferently, but in Persia is confined to the former; the tiger, which is very numerous in the forests of Mazandarân and Ghilân, being called "*babr*." After Dr. Bellew's confession in his preface that he has published his book without personally revising the proof-sheets, it is difficult to find fault with the errors in the transliteration of Oriental names, which are discoverable with sufficient frequency in well-known words to taint with suspicion the accuracy of all new to us, and neutralise to a considerable extent the value of a work of greater interest to the geographer and the Orientalist than to the general reader. The regular occurrence of "*Saggid*" for "*Sayyid*"—or, as it is generally written, "*Syud*"—is enough to throw a doubt on every *g* in the book, if indeed it be not a deliberate eccentricity. As such we cannot help classing the use of the letter *C* for the Arabic or two-dotted *Kâf*, in such words as Kalât, Kasr, which Dr. Bellew writes Calât, Casr. The difference of pronunciation is almost indistinguishable to a European ear, and we do not know why *K*'s should be singled out for distinction while the equally troublesome *Z*'s are left alone. The Appendices contain a valuable grammar and vocabulary of the Brahûi language, the colloquial tongue of Eastern Baluchistân, and a table of meteorological observations taken daily throughout the journey.

O. B. ST. JOHN.

The Life of John Milton; narrated in connexion with the political, ecclesiastical, and literary History of his Time. By David Masson, M.A., LL.D. Vols. I.—III. (Macmillan, 1859-71-73.)

It is too late now to think of recommending Professor Masson's book to anyone who cares about Milton. But it is possible that there may be some who may not care about the biography, but who would gladly take up the book if they were aware that from the beginning of the civil war onwards it contains the best history yet written of one of the most momentous periods of English history. Let the author tell in his own words how this came about.

"Again and again," he writes, in the Preface to the second volume, "in order to understand Milton, his position, his motives, his thoughts by himself, his public words to his countrymen, and the probable effects of those words, I have had to stop in the mere Biography, and range round, largely and windingly, in the History of his Time, not only as it is presented in well-known books, but as it had to be re-discovered by express and laborious investigation in original and forgotten records. Thus, on the very compulsion, or at least by the suggestion, of the Biography, a History grew on my hands. It was not in human nature to confine the historical inquiries, once they were in progress, within the precise limits of their demonstrable bearing on the Biography, even had it been possible to determine these limits beforehand; and so the History assumed a co-ordinate importance with me, was pursued often for its own sake, and became, though always with a sense of organic relation to the Biography, continuous in itself."

That Professor Masson has in the main carried out this programme satisfactorily to his readers as well as to himself no one who reads the book will deny. He has filled up a gap in English historical literature as it has never been filled before. Yet, in spite of all the merits of this portion of the book, it is hardly to be wondered at that the vices of its origin should cling to it to some extent: for the history of a great country can never be quite worthily approached through the life of any man, however great; and even Professor Masson's book is heavily weighted by the difficulty in which he finds himself when he comes to speak of men and parties who were counted vile and base by Milton. It cannot, indeed, be said that he looks merely with Milton's eyes. His knowledge is too great and his sympathies too wide for that. But we cannot help fancying that when the inquiry is commenced, Milton's enemies have a certain amount of odds to contend with.

The first volume opens, of course, with Milton's surroundings in his London home. Then we are carried to Cambridge, and we have a most interesting glimpse of that old College life so different from our own, in the days when there were neither triposes nor University eights. For all things that may have influenced Milton's career and character, Professor Masson is especially sharp-sighted. But there is one incident which has escaped his notice, and which certainly occurred whilst Milton was at College. In 1627, the year of the expedition to Rhé, when men were beginning to look disrespectfully upon the King's mode of government, Lord Brooke—Fulke Greville, not Robert, as

the editor of Laud's Works fancied—be thought him of establishing a readership of history at Cambridge. Historians were scarce in England then; and after angling for Vossius, Brooke fished up Dr. Dorislaus, a man of some notoriety afterwards for the part he took on the King's trial, and his consequent assassination. When the new lecturer first opened his mouth to expound Tacitus, he declared that though he revered the English monarchy above all other forms of government, he held that it derived its right from the voluntary submission of the people. One can imagine the flutter amongst the Dons; how Laud was appealed to, and how poor Dorislaus was only let off on his excusing himself as a foreigner. Whether Milton listened to this remarkable lecture, it is impossible to know. But one cannot help fancying that something of Dorislaus' teaching must have reached him, and that in this may, to some extent, be found the explanation of the circumstance that he took no part in those "complimentary verses to Royalty" (i. 214) which were at that time fashionable in the University.

We have, indeed, been recently told, on the authority of the *Kölnische Zeitung*, that the University of Leyden intends to prove that Milton was on their books when he was about the age of twenty. It need hardly be said that Professor Masson accounts satisfactorily for his presence in England till 1638, when he was thirty years old, and that the University will have to show, not merely that they have had a John Milton on their books, but that the young man was the particular John Milton whose proceedings are so minutely traceable in Cambridge and London.

When his education was finished, Milton had to choose a mode of life, and turned his back upon the Church. Amidst a most interesting review of the literature of the day, we come upon an account of Laud and the Churchmen of the time, which, however, is the least satisfactory part of the book. Not that Professor Masson ever relapses into the shallowness of Macaulay. He tries to understand Laud, and the picture which he presents to us is, to a great extent, copied from life. But it leaves out of sight entirely the best points in Laud's character, his desire to place the welfare of the nation above the influences of wealth and position, and that dislike of dogmatism which was probably the real ground on which he erected his sacerdotal system, as something fixed to which he could cling whilst he was extending the province of reason in theological matters.

With the second volume we enter upon the reaction against Laud, whose system, however it may be explained, had become clearly intolerable. The story of the civil war, of blows dealt by the swords of the men of Marston Moor and Naseby, and with equal vehemence, if not quite with as great effect, by the pen of Milton in Aldersgate Street, is told with every evidence of the most careful research into all sources of history accessible to the writer. It is not Professor Masson's fault if the civil war is rather dispiriting to those readers at least who have anything of Falkland's feelings in contemplating the scene. It was doubtless neces-

sary that Charles should be struck down; and the idea of Essex and Manchester, that the King was not to be beaten too much, was plainly suicidal. And it was probably in a sort of way unavoidable that Milton should worry Bishop Hall and the Anti-Smectymnuans as a cat worries a mouse. But these ecclesiastical pamphlets of Milton's, if certain splendid bursts of rhetoric be excepted, are not very pleasant reading for all that; and most readers will be well satisfied when the struggle is over, sufficiently at least to enable us to look about us to ask what is to replace the ruins that have been made.

From the fact that the men who are to do their best to solve this problem are upon the stage as the second volume closes, Professor Masson's third volume derives its surpassing interest. In the struggle of Milton and Cromwell against the Presbyterians, he sees the whole future of English liberty bound up; and, if we should like him to remember that when Milton wrote that "new presbyter is but old priest writ large," he was only re-discovering what Laud and his friends had been proclaiming in vain when Milton was an undergraduate at Cambridge, we can at least acknowledge the vigour with which he tells us of the struggle which deserved to succeed, without thinking too much of the struggle which deserved to fail. Laud's religious freedom was a freedom for learned men to discuss difficult points in a quiet, respectable way. Milton's religious freedom was a freedom for each man to speak out what he had got in him, whether it were wise or foolish.

A reference to a judgment given by Laud in the High Commission Court, which has recently come under our notice, will explain what we mean. A clergyman was charged, amongst other things, with preaching openly that Christmas-day ought to be kept in September. Laud punished the man for airing his crotchets in public, but took care to invite him to prove his point, if he could, by the records of the early Church. Milton would doubtless have told the man that no earthly authority had a right to interfere with his declaring that Christmas-day ought to come in any month he liked to fix upon, but would have overwhelmed him with a torrent of mingled learning and abuse for presuming to have an opinion differing from that which he himself entertained.

The story of Milton's unhappy marriage is told by Professor Masson with great consideration for both parties. He protests worthily against those who find mere matter for laughter in the poet's misfortune, and he uses the incidents, so far as they are known, to throw a brilliant light upon Milton's character. Who can avoid a smile when he reads (iii. 259) how Milton, having discovered that Bucer had maintained opinions similar to his own, "was evidently divided between delight in having found Bucer his predecessor in the doctrine, and a proud feeling of his own self-earned property in the cause?"

Yet in this continued reference to self, which was the shadow of his noblest qualities, lay undoubtedly the chief mischief in his relations with his wife. "And yet show I you a more excellent way," are the words

which involuntarily rise to the lips, as one reads of the strong, self-restrained man carried away by the pretty face of the young Royalist girl, and then sitting down in his study, whilst her foot was still on the stair, to write a learned argument to prove to all men that he would be in the right in flinging her away.

This hardness of Milton's nature is capitally brought out in the story which Professor Masson tells of the publication of the first collected edition of his poems (iii. 458). William Marshall, the engraver, was to copy for it a certain portrait representing the author at the age of twenty-one. The work when finished was sent for approval, with the following result:—

"The face is that of a grim, gaunt, stolid gentleman of middle age, looking like anybody or nobody, with long hair parted in the middle and falling down on both sides to the lace collar round the neck, and the arms meet clumsily across the breast. . . . The legend said" that he was "twenty-one years of age; the portrait looked somewhere about fifty. What was to be done? What ought to have been done was to cancel the plate and print the book without it."

Milton, however, allowed the book to appear as it was, and "took his revenge in one of the most malicious practical jokes ever perpetrated." He gave Marshall four lines of Greek to engrave under the portrait, and Marshall, being ignorant of Greek, quietly set down what Professor Masson gives us in the following form:—

"That an unskilful hand had carved this print
You'd say at once, seeing the living face;
But finding here no jot of me, my friends,
Laugh at the botching artist's mis-attempt."

The bright side of all this is the authorship of the *Areopagitica*, wrung from Milton by the reception of his divorce tracts by the notables of the Westminster Assembly, and which has become the most widely read of his prose works, not merely, it is to be hoped, because the liberty of the press came to be a popular watchword in England, but because in defending the liberty of the press Milton touched on the principle of all liberty, the principle that a man ought to be allowed to talk folly and untruth without fear of temporal consequences. Such a principle, no doubt, is not suited for all societies at all times. But it was the thing most needed in the England which had been drilled into discipline by the Tudors.

Professor Masson has done good service in pointing to the bead-roll of obscure worthies whose words and acts had led up to this avowal; and he takes good care to remind us that Cromwell's arm is there to protect the pen of Milton. In the "Heads" of proposals sent in by the Army to Charles in 1647, he sees (iii. 559) the most comprehensive settlement proposed during the whole course of the struggle—

"as not only inspired by a far wiser and deeper political philosophy than the 'Nineteen Propositions' of the Parliament, but really also as magnanimously considerate of the King in comparison."

They form, in short, with their re-established King and reformed Parliament, the ideal of Cromwell and his officers. As for the Church question:—

"They say nothing about Episcopacy or Presbytery as such, but stipulate for the abolition of

'all coercive power, authority, and jurisdiction of bishops and all other ecclesiastical officers whatsoever extending to any civil penalties upon any.'

Such was the theory of Cromwell and his party. In his next volume Professor Masson will have to tell us how far this theory was toned down in practice. And the sooner, consistently with honest work, we have his fourth volume in our hands, the better pleased his readers will be.

SAMUEL R. GARDINER.

Henry Fothergill Chorley: Autobiography, Memoir, and Letters. Compiled by Henry G. Hewlett. Two Vols. (London: Bentley & Sons, 1873.)

As Lord Lytton observed in *The Parisians*, "six well-educated clever girls out of ten keep a journal; not one well-educated man in ten thousand does." The subject of these volumes was the one in ten thousand who did, and to this peculiarity, with all it betokens, his fragmentary autobiography and the supplementary memoir are more indebted for their undoubted interest, than to "the claim of the press to rank as a 'Fourth Estate,'" which he himself thought was the more than sufficient apology for "recording the career of a journalist, however uneventful." The career of a journalist as such is recorded when we have been told what he wrote about, in which journals, the date of his connection with each, and the extent to which his writings brought him personally into relation with his more considerable literary contemporaries. Chorley's regular connection with the *Athenæum*, which continued undisturbed and unbroken till within three or four years of his death, began in 1833, at a time when that journal and its older rival the *Literary Gazette* enjoyed between them,—or spent their time in contending for,—a practical monopoly of the criticism of current literature. The existence of the *Athenæum* itself was a protest against the tyranny of the *Literary Gazette*, which, having acquired, as a journal that lives long enough almost inevitably must, a variety of hereditary feuds and friendships, was currently supposed to abuse its authority with the public by condemning or ignoring some writers, and lavishly extolling others under the influence of extra-literary considerations. The competition of the *Athenæum* was perhaps, at first, more advantageous to authors than to the general reader, who felt himself little advantaged by having the trouble of deciding on the merits of a book taken off his hands by a review, if he had instead to decide for himself the scarcely less difficult question whether the review was honest. For the years on either side of 1830, when there were practically only two reviews, it was worth while to corrupt critics, and not easy even for the most conscientious critic who belonged *bona fide* to one clique, to be incorruptibly deaf to the suggestions of its attendant *claque*. Balzac describes in the *Illusions perdues* the effect of a similar monopoly (artificially produced) under the monarchy of the Restoration in Paris; and we can only understand the virulence of the attacks to which Chorley was for a long time exposed, by remembering that a criticism in itself insigni-

ficant wears a very different appearance when it can at worst damage the reputation of the writer attacked, and when it may seriously and directly affect his income; it was only natural that critics should be sometimes hated, while they were always feared. If Chorley's reviews excited rather more than their fair share of animosity, the reason is to be found not so much in the habitual severity of his judgments, as in the fact that when he was severe it seemed to be from taste rather than principle. He was strictly and scrupulously honest as a writer, but his conscientiousness took the form of insisting upon saying always exactly what he thought of a book (or a singer or composer) without stopping to reflect whether his own first impression was infallible. A writer of education and intelligence who has cultivated a talent for forming and expressing opinions about books, only needs honesty of purpose to make him, in the long run, a fairly reliable guide of the public judgment, or finger-post to the latent public taste; for the generality of readers do not ask to know more than whether a book is good or bad, and are content to have the quantity rather than the quality or shade of its merits (or demerits) appraised for them; and such a critic's judgments, as long as he can keep the power of sincerely liking and disliking fresh, are sure to be much more often right than wrong, and in any particular instance are more likely to be right than the unpractised, unprofessional opinion with which they may sometimes come into collision. But except in the case of such heaven-born critics as Lessing, with whom sound general principles of criticism are a matter of intuition and keep the taste from straying, the judgment is certain sometimes to be wrong; and then the annoyance that it will give depends chiefly upon the way in which it is defended. The imaginative style of criticism of which Mr. Ruskin set the fashion, consists in giving more or less far-fetched reasons for spontaneous likings or aversions in things aesthetic; and though it might be objected that the taste seemed sometimes more unimpeachably sound than the reasons by which it was defended, on the other hand, if the taste was in fault, the habit of arguing in support of its dicta made its most paradoxical conclusions seem to be the result of a harmless, because involuntary, error of judgment. But Chorley, as his fierce review of *Modern Painters* sufficiently proves, was not an imaginative critic, and his method when he disliked a work was not to describe it in such wise as to make it appear that, according to antecedently fixed canons of his own, it was demonstrably bad, but, taking it as he found it, to say with more or less emphasis that it was bad in itself. In this way he gave offence to the lowest class of authors and musicians, who could not believe that his animosities were disinterested, and to some more distinguished but irritable writers, who thought their own merits too conspicuous to be overlooked by any competent critic, and were dissatisfied if a work of theirs chanced to go to swell the moderate numerical average of the reviewer's misjudgments.

It was, however, as a musical rather than as a literary critic that Chorley was best known and most influential; and in this

department, in spite of his systematic depreciation of Jenny Lind and an exaggerated partiality for Gounod, his real candour and diligence were acknowledged by the esteem in which his authority was held by continental as well as English musicians. If he had his crotchets, he was too honest to generalise them into paradoxes, committing him to repeat or perpetuate a particular injustice for the sake of consistency. His memory was so remarkable as to astonish even Mendelssohn, and by its help he was able to speak confidently of a new performance, however long, in its entirety after a single hearing, while he had the advantage over mere musicians in the power of giving intelligible literary expression to his views on purely technical points, as well as upon general questions of musical taste.

A successful and industrious critic naturally runs some risk of losing, or of not acquiring, the habit of mental concentration, without which, failing genius, it is scarcely possible for original production of any kind to rise above mediocrity. Chorley's verses were mediocre; his plays unsuccessful; his novels, for the most part, positively bad; while his least unsuccessful books, containing musical recollections and criticisms, were carelessly put together, and without unity of plan or thought. He passed through life as a disappointed man, because his ambition had always been in advance of his performance; and the temperament which led him to ruminate overmuch on the causes of the repeated failures, which he persisted in regarding as accidental, while it was perhaps one of the obstacles to his success—successful men do not write journals—enables us to account for those failures without reflecting either on the candour of his contemporaries, or his own intellectual distinction. He had too obtrusively sensitive a personality to be a considerable artist, since it was personal rather than aesthetic impressions that he felt with exceptional keenness; at the same time he was conscious of possessing an amount of diffused, undeveloped power sufficient to make a quite respectable reputation, as reputations go, if only he could have found the one right direction to give it. Having adopted literature as a profession, naturally his first ambition was for literary success; but when that threatened to prove of difficult attainment, he consoled himself by the belief that he would have been more fortunate as a composer, if his early taste for music had been intelligently indulged and cultivated. It is significant that nearly all his romances deal with the fate of unfortunate men of genius, or pseudo-genius, in an uncongenial world,—a subject that seems to have a fatal fascination for writers whose strongest wish is for a little more genius than they have been endowed with by nature. Without committing ourselves to the optimistic view that everyone has a special talent, only waiting to be discovered to give its possessor an assured success in his own peculiar line, it may be admitted that the degree of success actually attained in any case will depend upon the accident whether circumstances allow the aspirant to make the best of all his natural gifts or not. This memoir on the whole gives the impression that Chorley, and those of his friends who agreed with him, were

right in their belief that, in some way or other, fortune was unkind, if not exactly unjust, to him. Mr. Hewlett, who does not allow his sympathies to lead him into exaggeration, observes at the close of the work, "To lament the mistaken application and imperfect training of powers that might, under wiser culture, have yielded richer fruit, may be permitted to his friends alone."

"The World, which credits what is done,
Is cold to all that might have been."

If we demur to the implied conclusion that his powers could, under any circumstances, have yielded richer fruit of the kind which he demanded from them, it is because we believe that under really favourable circumstances he would not have wasted himself in unsuccessful attempts at production at all, but would have found adequate and congenial occupation in appreciating and encouraging more muscular talents than his own. As a patron or an amateur, he would have been eminent, and perhaps happy; and it is only the prejudice of a generation too much given to writing that takes for granted that the composer of any moderately readable book must have a talent generically superior to that of the man who can only appreciate, but appreciates the highest class of work so adequately, as to be unwilling to produce anything second-rate to compete with it. There was nothing in Chorley's circumstances to prevent his becoming as popular a novelist as Lord Lytton, in whose works he might have recognised—and did not admire—the magnified realisation of what was suggested or attempted in his own fictions: but his creations had no vitality; he never succeeded in *showing* what was in his mind, though he might sometimes *describe* it with some analytical skill. The high praise which Dickens and Browning gave to *Roccabella* may be accounted for, without exactly condemning the reading public for its indifference to that work: for two such imaginative critics, reading the work of a friend, could scarcely fail, on the one hand, to guess what was the effect he had meant to produce; and, on the other, to supply from their own resources what was wanting to it in objectivity of presentation.

Besides the account of his intercourse with Dickens and Mr. and Mrs. Browning, the Memoir contains letters or reminiscences of many literary, social, and musical celebrities, such as Mendelssohn, Moscheles, Lady Blessington, Count D'Orsay, Sydney Smith, Lady Morgan—whom Chorley accuses of having congratulated Mrs. Sarah Austin on her amusing novel *Pride and Prejudice* (after which it is odd that Mr. Hewlett should persist in spelling Jane Austen's name as if she were a relation of the translator of Raube, and editor of the *Province of Jurisprudence determined*)—Miss Mitford, Campbell, Rogers, Lord Lytton, Nathaniel Hawthorne, Michael Angelo Titmarsh and G. P. R. James, who acknowledge favourable reviews; Sir William Molesworth, Mr. Grote, Mr. Carlyle, &c.; so that the volumes are not wanting in interest even apart from that which it is impossible not to feel in the person and character of their main subject.

EDITH SIMCOX.

MISCELLANEOUS LITERATURE.

Count de Montalembert's Letters to a School-fellow. Translated by C. F. Audley. (Burns, Oates & Co.) These letters are addressed to M. Léon Cornudet (the author of the report against the confiscation of the Orleans property), who left St. Barbes two years before his friend. The first series of letters belongs to this separation; the second to the writer's residence at Stockholm, and his journey through Germany to Besançon with his dying sister; the third to his visit to Ireland in 1830. All the letters bear the stamp of very early youth, not only in the extreme effusion of feeling, but in an eager self-importance which it would be easy and unjust to confound with self-conceit. An ardent passion for setting the world to rights is natural to all virtuous, generous, and instructed youth; it is only very exceptional temperaments who can maintain it without artificial support. If it is so desirable as to be worth maintaining generally, it cannot be maintained better than by studying this record of the enthusiasms to which Montalembert was faithful through life. It would have added to the value of these letters—and of his other writings—if he had ever asked himself—in a passing fit of scepticism—what he meant by liberty.

Veritas. By Henry Melville. Edited by F. Tennyson and A. Tuder. (Hall.) Mr. Melville was struck first with the possibility that something was meant by the figures of the constellations, and that this meaning might be the key to a great deal of ancient mythology; then it struck him that this meaning was the same as that of Masonic symbolism (which, it seems, if it exists, is unknown to modern Masons). With this clue he plunged into a farrago of coincidences of the kind which exist in inexhaustible quantity to delude or reward investigators of the school of Bryant or Higgins, and came out with a conviction that the Laws of the Medes and Persians were astrological and the long-lost key to universal knowledge. He got the Irish Freemasons to appoint a committee to confer with him about his discoveries; but as the committee did nothing for a month, he printed without waiting for them, having been previously informed he might publish anything except Masonic obligations. Of course his book is amusing and absurd.

Studies of Man by a Japanese. (Trübner & Co.) The "Japanese," if he is a Japanese, is much more preoccupied with the problems of Europe than with those of his own country. He is curiously free from most of the biases against which Mr. Herbert Spencer warns the student of sociology, except, perhaps, the anti-religious bias. He thinks that systematic education might do a good deal to inspire a precocious admiration for thrift and industry, and even instil sound notions as to what ought to be done with the money they earn. It does not strike him that average human nature would find thrift and industry, even in the service of such social instincts as average men possess, very dull and tiresome; that the desire for real enjoyment is, at any rate in youth, one of the strongest and most constant elements in human nature, and can only be subdued by being adjoined; if this were not so, it might be as easy as he thinks it to inculcate morality apart from religion.

A Life's Love. By George Barlow. (Chatto & Windus.) Mr. Barlow proposes in one of his sonnets to follow his lady like a lapwing; in another he suggests to her that they had better both be kestrels and fly up to heaven together; and yet the book is not quite ridiculous. There is a sort of genuineness in the stir of confused heated feeling that sets in motion a mob of fancies, sometimes strange and quaint, sometimes pretty if not unfamiliar, always musically expressed; only the far-fetched incoherence of the fancies makes one feel that the passion is not really very profound, though it overmasters the writer's limited power of thought.

My Kalulu: Prince, King, and Slave. A Story of Central Africa. By Henry M. Stanley, Author of *How I found Livingstone*. With Illustrations. (Sampson Low, Marston, Low, & Searle, 1873.) If any readers of Mr. Stanley's first book, descriptive of his finding of Livingstone, may have ever admitted a thought into their minds as to the proportion of fact and fiction to be found in that interesting work, they should at some personal sacrifice read *My Kalulu*; they will then be able to see what Mr. Stanley's imagination can really do, when given over unreservedly to fiction; and by a process of deductive reasoning may be led to understand how the glowing imagination which has created such unapproachable marvels in the latter story, could only have been confined to the comparatively sober narrative of the former by the stern bonds of a veracity which the author's conscience as a historian and traveller alike forbade him to exceed. *My Kalulu* is indeed a wonderful book. Much as we may admire the courage which published it in the first instance, this feeling almost deepens into respect when we read in the preface the startling assertion that none of the scenes described therein are improbable or impossible. It may be so; but if this is the case, then the exploits of the fabled heroes of our youth, of Munchausen, the Admirable Crichton, Sinbad the Sailor, and the like, must all vanish before the prowess of *My Kalulu*,—even as did the magicians' rods of old before the all-devouring staff of Aaron. Mr. Stanley has spared himself no pains in the preparation of this romance. With an enthusiasm for his subject somewhat akin to that of the amateur actor who, in playing *Othello*, had himself dyed black all over, he has apparently collected in a heterogeneous mass every scrap and tittle of experience or information, or native lore, or linguistic smattering that he attained during his late expedition into Africa, and has coloured his story with this until he has succeeded in giving it the outward semblance of picturing the land of which it treats. Those who had the advantage of listening to Mr. Stanley's oratory while in England will remember the peculiar unction with which he used to roll out uncouth African names and sounds, signifying nothing to the prosaic English ears on which they fell, but conveying a vague sense of unlimited intelligence and information on the part of their speaker. In the present work his long names and barbaric speeches are so numerous that one stumbles over them at every page, with an ever-increasing sense of weariness, and this is much heightened by the characters invariably speaking to each other as "thou" and "thee," and never conversing without having "posed" for the occasion, and enforcing their remarks with any amount of oriental metaphor and hyperbole. What the author's endurance can have been ever to have written these wonderful conversations we cannot tell; we can only imagine it by a painful knowledge of what it has cost us to read them. It may be presumed that this book was written to utilise as it were the materials which remained over after Mr. Stanley's first work had been published; and that they were found insufficient for the purpose without this fearful amount of conversational padding. The author says that *My Kalulu* is exclusively addressed to boys, as being lighter and fresher than his first work, with which we do not agree, and he also remarks that they might find worse food. In this last sufficiently modest remark we concur, but we must warn our readers against accepting all the stories as fact; if all Africans were like Kalulu, our look-out with the Ashantees would be a bad one indeed. With regard, indeed, to his assertion that in the work nothing is improbable or impossible, we would simply refer our readers to one or two of the less startling incidents which are described, and ask them how far their experience would sanction their endorsement. At page 76, a crocodile, catching a sleeping man's leg, "swings the limp warm body around as a man would swing a cat by the tail." This swinging movement, however, proves

his victim's salvation, for he has the chance of clutching a strong young tree, and it becomes a question between him and the crocodile of "pull devil, pull baker," while he gives vent to the full power of his lungs in cries so alarming and shrill that they are "heard at the camp of the caravans, two miles off." Of course assistance gets up in time; the man is saved and the crocodile killed. Again, at page 221, "the three boys Kalulu, Selim, and Abdullah are attacked in a boat by a hippopotamus; and when they see that it must turn over, they rose to their feet with their guns in their hands, sprang into the water in different directions, and dived to the bottom, dragging themselves towards their island beneath by clutching the tenacious mud."

In the other instance, at page 223, Abdullah is taken down to the bottom of the river by a crocodile which seizes hold of his leg, and then lies on the top of him. Kalulu dives down, gets hold of the crocodile's back, and stabs him behind; and then to this sub-aqueous trio descend two other friends, who pay similar attentions to the crocodile, until the whole five come to the surface, all smiling, with the exception of the crocodile, who is killed; the gallant Abdullah alone being a little the worse. After this, heroic speeches from the actors follow for three pages.

We have very cordially appreciated Mr. Stanley's wonderful and undoubted pluck, energy, and determination, as well as his powers of graphic description as a special correspondent. He is so successful in his own peculiar line, that we think it almost a pity he should venture on any other department of the literary profession. In *Robinson Crusoe* and *Captain Singleton*, occurrences are dealt with quite as marvellous as any met with in *My Kalulu*; but they are described in such a way as ever to bear the semblance of probability and truth, and give a never-failing impression of reality. No one who reads the disjointed incidents which make up the story of *My Kalulu* could ever believe it possible or probable that they ever have happened or are likely to happen.

EDITOR.

NOTES AND NEWS.

It is so seldom that the sage of Chelsea utters his voice nowadays, that the following words, which occur in a letter to Sir J. Whitworth, published in the *Times*, would be refreshing, were they not also only too solemnly and disastrously true: "The look of England is to me at this moment abundantly ominous, the question of capital and labour growing ever more anarchical, insoluble by the notions hitherto applied to it, pretty certain to issue in Petroleum one day, unless some other gospel than that of the Dismal Science come to illuminate it. Two things are pretty sure to me. The first is, that capital and labour never can or will agree together till they both, first of all, decide on doing their work faithfully throughout, and like men of conscience and honour, whose highest aim is to behave like faithful citizens of this universe, and obey the eternal commandment of Almighty God who made them. The second thing is, that a sadder object even than that of the coal strike, or any conceivable strike, is the fact that, loosely speaking, we may say all England has decided that the profitablest way is to do its work ill, slimly, swiftly, and mendaciously. What a contrast between now and, say only, one hundred years ago! At the latter date, or still more conspicuously for ages before it, all England awoke to its work with an invocation to the Eternal Maker to bless them in their day's labour, and help them to do it well. Now all England, shopkeepers, workmen, all manner of competing labourers, awaken as if it were an unspoken but heartfelt prayer to Beelzebub, 'Oh help us, thou great Lord of shoddy, adulteration, and malfaisance, to do our work with the maximum of slowness, swiftness, profit, and mendacity, for the Devil's sake. Amen.'"

MR. JULIAN SHARMAN has recommended to the

Early English Text Society, for printing, a manuscript collection of King James I.'s unprinted and unknown pieces, Additional MS. 24,195 in the British Museum. It appears to have become the property of the Museum in 1861, at the sale of the Tennyson MSS., and Mr. Shorman believes it to be in the handwriting of King James, with notes and erasures by his son, afterwards King Charles I.

THE tenth anniversary of the German Shakspeare Society is to be held at Weimar, on Friday, the 24th of April.

As it has been widely stated that Hans Christian Andersen is suffering from mortal disease, and as even in Denmark very conflicting statements with regard to his health have been in circulation, we believe it will interest our readers to see the following extract from a letter Mr. Gosse has just received from the poet himself. Herr Andersen says:—

"My Muse has now for a long time slumbered. It is a whole year and five months since I was taken ill, and I am still suffering; my recovery progresses, but very slowly. My liver has been attacked, I am still asthmatical and rheumatic; it is only with great fatigue I move up and down stairs. I miss the enjoyment of visiting my friends, but they are faithful, and visit me instead. Notwithstanding all this, my physician is confident that the spring will restore me to health and strength, and then I shall travel as usual. How I long to visit England again, and see my English friends, but they tell me that would be too fatiguing, so I must be content to journey South, to the mountains."

THE Motherwell MS. of Scotch ballads, which the poet of that name left behind him, has just been copied by Mr. J. M. Gibbs for the Harvard College Library, by leave of the owner of the MS., Mr. Colquhoun Thomson, and for the use of Prof. F. J. Child. But the copy before going to the United States is to be re-read with its original by Mr. W. A. Dalziel, so as to ensure its thorough accuracy.

MESSRS. WILLIAMS & NORGATE have in the press the *Correspondence of the Rev. Dr. Channing and Lucy Aikin*. The letters of Miss Aikin were printed some years since in her Memoirs, but Dr. Channing's letters are now first published.

THE new Honorary Secretary of the Early English Text Society is Mr. Arthur G. Snelgrove of the London Hospital. This zealous gentleman was already Honorary Secretary of the Chaucer, Ballad, and New Shakspeare Societies, but on the appeal of his friend Mr. Joachim (who retires from the Honorary Secretaryship of the Early English Text Society), and at the urgent request of the Committee, Mr. Snelgrove consented to take into his hands the business management of the Early English Text Society too. The concentration into one hand of all the business arrangements of the four societies will, it is hoped, increase the efficiency of each. Mr. Joachim has rendered the Early English Text Society excellent service during his two years' term of office, and improved its financial position.

PROFESSOR MOMMSEN, who is a member of the Lower House at Berlin, made an interesting speech on the Berlin Royal Library at a recent sitting of the Budget Commission. He pointed out that the library is totally inadequate to the wants of the public, and that it is not only much smaller than the principal public libraries abroad, but even than that of Munich, which contains nearly double the number of volumes, and occupies a superficial area seven times as great as the Berlin library, besides which its catalogues are accessible to readers, while at Berlin this is impracticable. In London the sum appropriated for purchases is six times as great as at Berlin, although the demands on the Berlin library are much more considerable than those on the public libraries abroad. The library is so much used, especially by students, that it is very difficult to obtain

books recently published, and the *savants* of Berlin are compelled to supply their wants from private libraries. One book out of six asked for is generally missing, and the Professor said that he sometimes had to make journeys to other towns in order to refer to works which should have been at his disposal in the Berlin library. This deficiency in the number of books (he added) is also an evil from a financial point of view, since the value of works often increases after the date of their first publication. Since 1852 the *Times* and the *Journal des Débats* have been struck off the subscription list of the library, but it will be much more difficult, as well as more costly, to get complete sets of those papers now than if the subscription had been continued. The Minister only spends 20,000 thalers (3,000*l.*) in the purchase of books; he ought to spend at least five times as much. Moreover, the building in which the library is contained is utterly unsuitable for the purpose, and the Professor urged the Commission to recommend that a new building should be erected in the place of the present Berlin Academy. To this the Commission agreed, and they also passed resolutions for the erection of new buildings for the Academy of Art, the Ethnological Museum, and various institutions connected with the university.—*Pall Mall Gazette*.

THE Earl of Dufferin and Clandeboye, Governor-General of Canada, has joined the Vice-Presidents of the New Shakspeare Society.

AN effort has at last been made at Oxford to establish Lectures for Ladies. The Vice-Chancellor (Dr. Liddell) has granted the use of rooms in the Clarendon Buildings, and Mr. Johnson, of All Souls' College, began this week a Course of Lectures on English History, which was attended by about seventy ladies, belonging to the town, the University, and the neighbourhood of Oxford. A petition is also in course of circulation to ask the University to allow ladies to be examined at all the University examinations for which they may wish to offer themselves as candidates.

THE "Imperial Public Library of St. Petersburg" has recently published a special catalogue of its section of *Russica*, namely of books written in foreign languages about Russia. The idea of forming such a section occurred to Baron (now Count) Modest Korff, when he was appointed Director of the Library in 1849, and he watched over its development with a care and perseverance which were ultimately rewarded by deserved success. The catalogue now issued gives the titles of all the books contained in the section at the end of 1869, and it forms an invaluable guide to students who are desirous of gaining information about Russia, but are unable to avail themselves of what the Russians have written about their country in their own language. All books which treat of Russia, whatever their point of view may be, are included among the *Russica*, but the present catalogue does not embrace those printed in Greek, Oriental, or Cyrillic characters, nor does it at present include Lett, Lithuanian, Finnish, or Estonian books, to which a separate appendix will be devoted. All translations of Russian books are classed among the *Russica*, and also all dramas, poems, or romances dealing with Russian history or scenes of Russian life. The entire number of the books and pamphlets catalogued is 28,191. The titles are arranged in alphabetical order, according to the names of authors—anonymous books being entered under the first word (other than an adjective) in the title. At the end of the alphabetical catalogue comes a classified index occupying 58 three-columned pages. The whole work has been admirably compiled, and reflects the greatest credit on the learned Institution which issues it. It is exactly what a catalogue should be which is intended for use and not for mere show. It is meant to serve a certain purpose, and that purpose it will serve right well. Some day perhaps our own country may be able to boast of a similar work.

A MISPRINT in the fifteenth line from the end of Mr. Kebbel's article on the Life of Perceval, in our last number, makes him say that Mr. Perceval showed "himself capable of refusing emoluments which *worthier* men than himself would have seized without compunction." This implies an attack upon Mr. Perceval's character; and though the tendency of the whole article would show that none such was intended, it is only proper to say that Mr. Kebbel wrote *wealthier* instead of the word in italics.

WE note from the last issued catalogue of Record Publications that there is in preparation a calendar of the Home Office Papers of the reign of George III. As these papers have not hitherto been allowed to be open to public inspection, some considerable additions to our knowledge of domestic affairs during that eventful reign may be anticipated. We believe that the late Mr. Winterbotham, Under-Secretary of State for Home Affairs, took an especial interest in this work, and it was mainly owing to his influence that some of the documents in his department (now transferred to the Record Office) are about to be made more available for historical purposes. Two volumes are already announced as in the press, one containing abstracts of papers dating from the commencement of the reign in 1760; the other begins with the papers relating to the present century. The editing of these volumes has been entrusted to Mr. Joseph Redington and Mr. J. R. Atkins, of the Public Record Office.

THE publication of the sixth volume of the *Calendar of Carew Papers* marks the conclusion of a work which has contributed perhaps more than any other towards the elucidation of English relations with Ireland during the sixteenth and the early part of the seventeenth centuries. Moreover, it tends to show that our Government has not been unmindful of the claims of Ireland to have the materials for its history made public. These manuscripts are preserved in the library of Lambeth Palace, and all historical students owe a debt of gratitude to the Archbishop of Canterbury for the facilities he has afforded to Mr. Brewer and Mr. Bullen during the progress of their *Calendar*. The collection of the papers was owing to the care and diligence of Sir George Carew, Master of the Ordnance in Ireland in the reign of Elizabeth, and afterwards created Earl of Totness. To this work he devoted the closing years of an active and laborious life, bringing together all manner of documents connected with the history of Ireland and his own services in that country. Carew died at his house in the Savoy, in March 1629, and was buried at Stratford-upon-Avon. His "letters, muniments, and other materials belonging to Ireland," were bequeathed to Sir Thomas Stafford, of whom little is known beyond a suspicion that he was the natural son of Sir George, that he served under him in Ireland, and that he lies in the same grave with him at Stratford. Thirty-nine volumes of the collection found their way, by what means is not very clear, into the Lambeth library; four others are in the Bodleian. Mr. Brewer's original report upon them has been amply verified in the issue; he stated that, from a close examination of the contents, he was inclined to think that the attention bestowed upon them by the Government would be amply repaid. The documents in it emanate from the highest authorities, and consist, in many instances, of narratives of the proceedings of the Irish Deputies, which were intended for no eyes but their own or those of the Home Government; and, it might be added, such materials for the history of Ireland are not only unique in themselves, but bear on the face of them marks of their high value and importance.

THE Rev. Canon Jackson, of Leigh Delamere, near Chippenham, for many years secretary of the Archaeological Society, has long been collecting the modern and old names of fields and places in Wiltshire. He believes that he has now got

nearly every name which has anything distinctive in it, as he has ransacked every Wilts map, old and new, and all the indexes in the Public Record books, &c. As one instance of the changes that names undergo, he finds that a part of Chippenham Forest, now called "Hobbes's Heath," is in old documents "Horselapereth." Some years ago, by help of his old maps and field names, Canon Jackson found the very plain of Ethandun, where Alfred fought his decisive battle. It was not at Edington, but near Frome, and there was a large unhewn stone there.

It is expected that the first volumes of Messrs. Longmans' Epochs of History will be Mr. Cox's on the *Crusades*, Mr. Seeborn's on the *Early Tudor Reigns*, and Mr. Gardiner's on the *Thirty Years' War*. They will probably be issued about the end of March.

WE understand that in consequence of Professor Gindely's appointment as instructor of the Crown Prince of Austria, there will be some delay in the appearance of the second volume of his *History of the Thirty Years' War*, which is already in an advanced state of preparation.

KARL SIEGWART'S Essay on the Antiquity of Mankind (*Ueber das Alter des Menschengeschlechts*) has just been published in a third edition. It is dedicated to Sir Charles Lyell, Max Müller, Darwin, and Malthus.

MESSRS. ALLEN AND CO., of 13 Waterloo Place, have in the press a third edition of Sir John Kaye's *History of the War in Afghanistan*, which will be issued during February, in 3 vols. crown 8vo.

IN the *Yorkshire Archaeological and Topographical Journal*, parts ix. and x., is an important paper, by the Rev. J. T. Fowler, upon Hebrew *stars* in illustration of certain documents of this kind relating to Northallerton. The word *star* (Latin *starrum*, French *estar*) is a mediæval Hebrew term, and signifies a contract or obligation. *Stars* were written according to circumstances in Hebrew, French, or Latin, but in whatever tongue the body of the document was composed it was customary for the attestation to be in Hebrew. The paper is accompanied by clearly-executed facsimiles.

Robert Skaife, Esq., contributes a memoir of Francis Drake, of York, the author of *Eboracum*, which contains some hitherto unpublished facts concerning that industrious compiler and worthy citizen.

WITHIN a few days of Dr. Ruland, whose death is elsewhere noticed, died Dr. E. G. Gersdorf, for many years Director of the University Library at Leipzig, and well known to scholars as the compiler of the *Codex Diplomaticus Saxonie Regiæ*. It was to complete this work that Dr. Gersdorf retired from the chief directorship of the library in 1869, and from that time till his death he devoted the whole of his still unimpaired faculties to the completion of this labour, and to the compilation of a systematic catalogue of the Latin and Greek MSS. in the Leipzig collection.

THE *Athenæum* also states that the first volume of a complete *corpus* of Irish inscribed monuments of a Christian character, extending in date from the earliest known to the end of the twelfth century, has been issued to members of the Royal Historical and Archaeological Association of Ireland. It is illustrated by the plates, comprising 175 examples in fac-simile. The work is in quarto, on toned paper, and is edited for the Association by Miss Stokes, chiefly from the collections of the late Dr. Petrie. The inscriptions here given afford the most ancient Irish texts extant.

IN reply to Mr. Jervise's statements relating to Dr. Rogers's work on *Scottish Monuments*, Dr. Rogers has written to the *Scotsman*, stating that he has been engaged since 1861 in collecting inscriptions, and that though he was able to obtain a large amount of information from other parts of

Scotland, he could get very little from the Brechin district, where Mr. Jervise had influence, as Inspector of Registers, over the schoolmasters who had been chiefly applied to for information. Dr. Rogers thereupon personally visited part of the district, and acquired information in other ways. When, however, Mr. Jervise printed his "Churchyard Gleanings" in a Montrose newspaper, Dr. Rogers made extracts from them, acknowledging the source from which they came. If there were errors in them proceeding from Mr. Jervise himself, it is to be hoped that he will correct them in his forthcoming volume. Dr. Rogers adds that he does not "recognise the right of any man to use his official position so as to keep literary information from another, and then, when he has collected it himself, to prevent that other from quoting it."

A SUBSCRIPTION is being raised among the English Germans to provide a pension upon which Arnold Ruge may retire from the laborious profession of teaching by which he has hitherto maintained himself since his residence in Brighton. All Germans, Bismarck not excepted, now recognise the services which Ruge has rendered to the regeneration of the German nation; although at the time they cost him his fortune, and his professorship at Halle, and he had to part with his printing press at which he printed the celebrated *Halle Year-books*, and his mines—on the shortest notice, and therefore on ruinous terms. Ruge is a devoted Hegelian "of the left;" and the key to his whole life is the belief that the last word has been said in philosophy, the only possible step onwards being into the field of social and political action. *Hier hört die Theorie auf und beginnt die That*: the "theory" is the Hegelian philosophy as purified by the Halle critics, the "act" is the regeneration of Germany. Ruge has written an interesting account of his revolutionary operations and imprisonments, in four volumes, the last containing a succinct analysis of Hegel's seventeen volumes. Subscribers to the pension are referred to Mr. F. W. Heilgers, 22 Great St. Helens, London, E.C.

Races of Mankind. By Robert Brown, M.A., F.L.S., F.R.G.S. Vol. I., with upwards of 100 Illustrations. (London, Paris, and New York: Cassell, Petter & Galpin.) The first volume of the *Races of Mankind* is devoted to the tribes inhabiting the American continent. Commencing with the Eskimo, Mr. Brown describes in succession the Indians of North-Western America, California, and the Central Plains of North America, the "Pueblo" races of Mexico, the tribes of the North-Eastern States and of Canada, and the Indians of Central and South America, concluding with a very brief account of the Incas of Peru. As might be anticipated, the tribes of North America are described at far greater length than those of the southern portion of the continent; but the reason why no less than one-third of the whole volume is devoted to an elaborate account of the people inhabiting the north-western regions, and why ninety-five pages are occupied with the manners and customs of these tribes, whilst all the far more widely-known Indians of the North-Western States and Canada, the Delawares, Mohicans, Objibways, &c. are dismissed in twenty-five pages, is doubtless due to the greater personal acquaintance of the author with the former.

WE can confidently recommend the book as a well-written and interesting account of the American Indians. It is not an exhaustive treatise, though indeed, even in a popular work, we cannot but think that more space might with advantage have been devoted to such remarkable races as the Aztecs and the Incas. Amongst the excellent woodcuts which are scattered in profusion throughout the book, we often recognise old acquaintances, but they are well-selected and always admirably executed.

NOTES OF TRAVEL.

THE news of Livingstone's death has put an end to the primary object of Lieut. Cameron's expedition. And much as we would wish to hope even against hope, we fear that we must no longer refuse to believe that the great traveller has at last fallen a victim to his unyielding energy. The circumstantial accounts that have been published in all the papers bear the impress of truth; for no living untrained Africans would have thought of taking the wise means for preserving his body which it is reported have been put in force by the Nassick Boys. We trust, however, that this sad news will not have the effect of causing Lieut. Cameron's expedition to retrace their footsteps. Cameron's first duty will be to secure the papers and effects of Dr. Livingstone. He may find notes which should give him some clue as to how best to work out any unsolved problems the Doctor might have wished to clear up; but if he finds nothing to serve him as a guide, we can imagine no better subject for his researches than the question of the continuity of Lakes Tanganyika and Albert Nyanza. This is one of the most important questions that can now engage the attention of Central African geographers.

It may be feared that the present political situation is fatal to all thoughts of an Arctic Expedition this year. This should not, however, discourage those who have worked so hard to ensure its despatch. The question is one which cannot be shelved by any Government. So many interests are involved in it, that if Government persist in their refusal of aid, as we said before, private enterprise will step in, and Government will have to follow, as sure as night follows day. Disappointing as has been the result of the application to Government up to the present time, the friends of Arctic exploration may derive some consolation from the fact that they have now ample time before them for preparing for an expedition next year; and this time will enable them to send out their ships much more fully and completely equipped than would have been possible even had Government given a tardy sanction to their proposal last month.

THE United States' Government are unable from the ever-increasing nature of their requirements to plan one uniform and systematic survey for the whole Republic. All that can be done is to take up local surveys for a projected railway route, for a district where it is proposed to work mines, or for a growing town, just as fast as such emergencies arise. If the Government were to delay in such matters, emigration would undoubtedly be checked. Preceded by energetic bands of naturalists and topographers, a new population spreads with astonishing rapidity over a large extent of country. Of this population the chief component parts are Irish, Germans, and Scandinavians. But scientific survey is by no means neglected in the United States, as the excellent work of the Coast Survey will bear witness.

THE naval observatory of Washington has just determined the exact longitude of St. Louis with reference to the meridian of Washington. St. Louis is thus 13° 9' 13" west of Washington, and 92° 29' 46.50" of Paris.

CONGRESS has decided that geological and topographical surveys shall henceforward proceed simultaneously. Each exploring party is accordingly supplied with geologists working under the chief director, Professor Hayden. A survey will be commenced in May next of Colorado, and that part of Utah east of the Green River, under the direction of this officer. The triangulation then executed will serve also for filling in the topographical details.

THE United States' Engineer Department are conducting a systematic "exploration west of the 100th meridian," as it is termed. The results will be published in a map of eighty-five sheets, on a scale of eight miles to an inch.

Lists of elevations west of the Mississippi are published annually among the publications of the United States' Geological Surveys of territories.

THE idea of constructing a canal between the Atlantic and Pacific Oceans induced the Americans to start an exploring party, under the orders of Captain Schieffelt, to traverse the isthmus of Nicaragua and report upon its practicability. The survey was begun in November 1871, in the presence of a committee of Mexican engineers, and finished in May 1872, and proved most promising. Neither tunnels nor deep cuttings will have to be made, while good harbours exist on both sides—viz., Coatzacoalcos, on the Atlantic, and Ventosa and Santa Cruz on the Pacific.

It is quite refreshing to catch the *Saturday Review* tripping, and tripping rather badly too. In a notice of *The Land of the White Elephant* by Frank Vincent, contained in its issue of January 24th, the *Saturday Review* incidentally informs us that the writer visited "the cities of Pekin, Tientsin, and Hankow on the great Yang-tse-kiang river." The *Saturday Review* has evidently got very much out of its depth, for it could not well have contrived to make more mistakes in a single line. We are prepared to overlook the absurdity of calling the capital of China *Pekin*—the more modern spelling *Peking* is nearer the mark, though only a shade better—but the rest of the sentence exhibits ignorance which cannot be passed over. It will apparently be news to our contemporary that Hankow is not a city, but although a very important commercial emporium,—in fact, the most important of the five *chén* of China—it is simply a suburb of the city of Han Yang. Again, we thought that every educated Englishman nowadays was aware that *kiang* was the Chinese term for a "great river." *Verbum sap.* What the *Saturday Review* means by *tse*, we cannot be expected to understand; it certainly does not form part of the river's name. To avoid the use of diacritical marks, the sound of the second Chinese character is generally written *tse*. We have a great affection for the grand old stream, and we never dreamed that we should live to see it described—and by the *Saturday Review* too—as "the great Yang-tse-kiang river"! We can imagine the twang with which the reviewer would pronounce his mongrel phrase; but we will hope, that in future, if he must allude to the river, he will speak of it as "the river Yang-tse," or, if he prefers it, as "the Yang-tse-kiang."

MR. HART, the Inspector-General of Chinese Customs, is engaged in the production of an important work, entitled *The History and Geography of the Treaty Port Provinces of China*. It will be accompanied by a map, compiled by Dr. Hirth. The work will embrace a mass of information on the commerce, the geography, products, and means of communication of the different provinces, and will prove of great commercial and scientific interest.

CAPTAIN SENEZ, of the steam-ship *Bourayne*, was commissioned in the early part of 1872, by the Governor-General of Saigon, to explore the Delta of the Songka, and to reconnoitre the coast of Cochin China. He examined thirty-eight harbours and anchorages along the coast, and visited several places where no European, save a solitary missionary here and there, had ever been. A sharp encounter with seven pirate vessels resulted in their being all burnt, in the capture of 100 muskets, and the death of about 500 of the pirate crew. Captain Senéz returned to Saigon in the latter part of November.

News has been received by the Messrs. Petermann of the German traveller Rohlf, who is reported to have been at Tarafreh, in the Libyan desert, on January 1, having with him ninety men and a hundred camels.

It is proposed to erect in Germany a Central Institution for the record and signalling of storms, for the benefit of the maritime ports, and, as it is

suggested in the scheme laid before the Imperial Council of State at Berlin, to afford all persons engaged in agricultural and other pursuits depending upon atmospheric conditions, such indications of the approach of storms as may be of use to them.

MR. HALES'S SECOND LECTURE ON SHAKSPEARE.

I PROPOSE to-night (Saturday, Jan. 17)* to run quickly through the plays of each of Shakspeare's three decades, 1585-95, 1595-1605, 1605-1615, but dwell for a time on one play about the centre of each decade: the *Two Gentlemen of Verona*, about 1590, of Shakspeare's apprenticeship-time; *Hamlet*, about 1603, of his manhood; the *Tempest*, about 1612, of his quiet time, after his struggle with manhood's doubts. Of the first decade the plays are, the *Comedy of Errors*, before 1593—as we know from its allusions; a juvenile work, full of sportiveness;—*Love's Labour's Lost*—which has less dramatic unity than the *Errors*, little characterisation, and hardly any action—is no drama (which means "that which is done");—*Midsummer Night's Dream*—a play dear to Shakspeare's readers, not for its dramatic power or characterisation, but for its brilliant imagination, a very poet's dream. You can hardly distinguish between Demetrius and Lysander, or Helena and Hermia; yet these two types of gay and gentle ladies Shakspeare liked to contrast; see Rosalind and Celia in *As You Like it*, Beatrice and Hero in *Much Ado*, &c. (So did Scott, in *Ivanhoe* and *Guy Rannering*.) The best dramatic bits in *Midsummer Night's Dream* are those that contain Bottom, and these may have been added later; they cannot well be early; and we know that many plays, like the *Merchant of Venice*, were retouched. The *Taming of the Shrew* is early, because it is one-sided, belongs to the bad school that insists on one moral, one side of life, not all the sides, or complete life. *All's Well* is specially noticeable for its sketch of old age. Parolles must be a character drawn in early days. Of the histories, *King John*, *Henry VI.*, *Richard II.* and *Richard III.* are all early. You cannot judge the date of a play by single brilliant passages. "Beauties of Shakspeare," as books of extracts are called, ruin the true view of Shakspeare; specially when the passages are torn from their context. Take the famous "All the world's a stage," &c.; it is a cynic's view of life; not Shakspeare's, but Jaques's. In *King John* we notice a want of consistency and power in the King himself. Though Shakspeare was merciful to kings, as his age believed in them, yet here he is not certain what he means John to be; his touch is unsteady in his picture. The best character is Faulconbridge, but it is only in germ. In *Richard II.* are passages of splendid eloquence, but there is a want of characterisation in the play; it is a play of passion, like other early ones—like *Romeo and Juliet*, a play of abandonment to passion—not of self-control; it reminds us also of Constance in *King John*: these three plays are thus linked together. *Richard II.* is a kind of hysterical king—a wild, spoilt son. Of *Henry VI.*, Part I, Shakspeare perhaps wrote the Temple Garden scene (as Mr. Fleay says); of Parts 2 and 3 he wrote more, though Greene said of them (probably) that Shakspeare was beautified with his and others' feathers. *Richard III.* is marked by power rather than discrimination, strength rather than delicacy; there is no light and shade; the characterisation of all but the principal figure is weak. Richardson well said that you know more of the characters of Buckingham, &c., from the way Richard treats them than from Shakspeare's own sketch of them. If Shakspeare wrote *Titus Andronicus*, it was his earliest play; it is full of frightful bloodshed and horrors, a great contrast even to *Richard III.* The only tragedy of this period is *Romeo and Juliet*; it is the tragedy of passion, as *Hamlet* is the tragedy of thought. It was altered in later years. Let us

* We have been compelled by want of space to print this a week late.

examined the *Two Gentlemen of Verona* in more detail.

The tests of metre and language show us that the metre is fairly regular, 10 syllable. Try the lines "Cease to persuade, my loving Proteus," &c.; the sense is enclosed in each line; there's a ryming tag at the end; a certain want of freedom and mastery; it's the walk of a metrical infant when compared with the *Tempest*, i. 2, Miranda's "If by your art;" the two passages represent the metrical extremes of Shakspeare's life; the run of the latter lines is very much freer than that of the former; the sense runs on too, the metre is easier, nearer talk; lines end with *and* and such unemphatic words; the whole is one long line. (In Greek plays some have every line bound to its foregoer.) Also in half the lines there is an unaccented syllable at the end—an eleventh syllable. A like change takes place in Milton. In *Paradise Lost* are few lines of eleven syllables; but in *Paradise Regained* and *Samson Agonistes* are many. The language of the *Two Gentlemen* is very plain; you find no puzzles. Try an early and a late play—say the *Two Gentlemen* and the *Tempest*; mark with a pencil all the difficulties you find in each; then count up your marks, and you will find how many more there are in the late *Tempest*. Again, test the two plays by their vocabulary, and you will see how much more copious that of the *Tempest* is. By the dramatic tests of Action and Characterisation, the *Two Gentlemen* is not placed high. It is the work of a man with a growing sense of character, but not adequate power of expressing it. The play contains, too, the germs of several things which Shakspeare developed in his later plays: compare act i. sc. 2, Julia (and Lucetta) going through the list of lovers, with Portia's doing the same in the *Merchant of Venice*, act i. sc. 2, in which Shakspeare characterises the different nations of Europe. (Her handsome young English suitor, Fauconbridge, is capital hit off: "He hath neither Latine, French, nor Italian . . . hee is a proper mans picture, but, alas, who can converse with a dumbe show? How odly he is suited. I thinke he bought his doublet in Italie, his round hose in France, his bonnet in Germanie, and his behaviour euery where.") Also, as in the *Two Gentlemen*, Valentine is about to celebrate his marriage with Sylvia before his troubles; so is Romeo with Juliet. The greenwood picture of the *Two Gentlemen* is also developed in *As You Like it*. Valentine is like the Duke in the forest of Arden. Take another sign of early work in the *Two Gentlemen*, the abruptness of the changes in the characters, because Shakspeare was not then a complete master of portraiture. Sylvia is wooed by her lover's false friend Proteus (= the Arcite of Chaucer's *Knight's Tale*). She rejects him with scorn; but when Proteus asks for her picture, she sends it him. Later in life, Shakspeare would not have let her do that. Again, in the last scene, of Proteus's conversion to honour and his own love Julia; see Proteus's sudden remorse, Valentine's as sudden offer of Sylvia to him: we can't get reconciled to these things, but read them with a smile of derision. Later, Shakspeare doesn't believe in these sudden metamorphoses of character. Even Proteus's name is a sign of early work. The riper Shakspeare doesn't like significant names; he knows you can't sum a man up in a name, as Spenser or Bunyan does; he'll have no "connoting" names. Lastly, regarded as the work of a thinker, a man with knowledge of life, the *Two Gentlemen* is the work of one at the threshold of life; it abounds with questions of early years, not later ones, like *Hamlet*. Note here one thing: as Shakspeare celebrates the inconstancy of man, not woman, in so many of his plays, so in the *Two Gentlemen* he makes Proteus say, act iv. scene 5, "Oh Heaven, if were man but constant, he were perfect." This trait comes, no doubt, from the poet's own experience. In early life he may have broken loose from bonds which in later life he held sacred.

In Shakspeare's second decade comes the *Merry Wives of Windsor*, a play re-wrought and expanded—without toil is no thing of beauty that is to be a joy for ever, born,—*Much Ado* (written with complete power of characterisation, containing the wit characters that Shakspeare in his middle—not his latest—time delighted to introduce—Mercutio, Falstaff, Benedict, Beatrice, Jaques—in these you have the very flower of the poet's wit); *Merchant of Venice* (his most successful comedy, of wonderful vivacity, and fulness of character and life. Yet here, as in other plays of its date, Shakspeare represents a man worn down by despondency, Antonio, "Il Penseroso," "I am so sad"—one of Shakspeare's tenderest characters—and contrasts him with "L'Allegro," the merry man Graziano. Some of the sad men have a touch of satire, like Jaques, who is cynical, while Timon is a declared misanthrope); *As You Like it*; *Twelfth Night* (one of the most perfect comedies); *Henry IV.*, *Henry V.*, *Henry VIII.*; perhaps *Timon*; possibly *Julius Caesar*; *Hamlet*, and *Othello*; the best Histories, the best Comedies, and some of the best Tragedies. Shakspeare's genius was at its zenith about the year 1600. In *Hamlet* his mind is strained to the utmost in his wrestle with the problems of life. The hero has all the depression and sadness of Antonio, with a tendency to satire and sarcasm. This is an interesting "phase" (and that only) in Shakspeare's character, and was produced, not by his own excesses, but by the general state of things at the time. The metrical tests show this play to be of the middle period; the language is at its best, the imagination at its quickest; the characterisation is perfect, never excelled; there is no lay form in the drama. With the unity of action Johnson finds great fault; says the play wants action. So it does, because the secret of Hamlet's character is that he cannot act. Action, without thinking, you have in Laertes, who comes to base-ness. Thinking, without action, in Hamlet, who only fulfils by accident the duty that his father's ghost lays on him. Shakspeare wants you to admire neither character. The play is a sad comment on man's (Hamlet's) quick resolve to do right,—he'll "sweep to his revenge,"—and then delays, delays. Man in all the splendour, yet in all the fertility of his intellect, is represented here; the "quintessence of dust." This play can only have sprung from a mind at its best, greatest, noblest.

Of the third decade there is but time to name the plays: *Measure for Measure*, the *Tempest*, and *Winter's Tale* are the Comedies; while the Tragedies (for of Histories there are none) are *Troilus and Cressida* (part probably by some one else), *Coriolanus*, (perhaps) *Timon*, *Macbeth* (a most powerful, most graphic picture of a great moral catastrophe), *Lear* in 1607, *Antony and Cleopatra*, and *Cymbeline*. In the *Tempest*, Shakspeare's creative power is in its extremest comprehension. Caliban and Ariel are beings on the confines of this world.

THE ELECTIONS AT THE FRENCH ACADEMY.

THERE is nothing living and moving, in a literary sense, save the Academy and things academical. Bills pass, committees divide, the Bonapartist party splits, M. de Broglie's breast becomes a firmament of foreign stars—three-score events of equal importance may make the current week worth ten lines of history—but the Forty pursue the way they laid down for themselves six months ago: meet, adjudge prizes, bandy the chaste and elegant epigrams of "teacup times, and when the patch was worn," and are about as relevant to the actual world around them as Rip Van Winkle after his century-slumber. At the appointed date they received M. de Saint-René Taillandier—a born Academician—respectable, of good family, contributor to the severest serials, and guiltless of duels, debts, or *romantique* verses. The promise of his character and reputation was amply fulfilled. His reception was a fête for the Forty—a merry-making after their own heart; that is to say, one

in which the ordinary spectator is prone to enquire, "Where is the hearse?" The immortals' task is not in accordance with that of the Parisians generally. The Palais Mazarin was deserted: not a juvenile bonnet in the galleries; nothing below save one vast ocean of baldness—formed by scholarly relics of 1825, and the most staid of the Academicians. Such an audience must have been a bitter disappointment to the *récipiendaire*. He had purposed being popular. He had furbished up his feeble, flaccid, long-winded, and circumlocutory rhetoric of the *Revue des Deux Mondes*, to catch the infantine eye of the populace. He had relieved the dun brown surtout of the Collège de France with the rosettes and tunic of a meretricious eloquence hitherto abandoned to the goddess category that begins with About and ends with Aurélien Scholl. And the lovers of rosettes and tunics failed him. He was compelled to deliver his harmless thrusts at Germany before an audience that considers all such thrusts as just a shade less childish than battledore-and-shuttlecock. He was forced to address his little compliments to the "intelligent multitude" before an assembly that saw in the multitude but a collection of blouses normally redolent of garlic. The ordeal was neither easy nor pleasurable. M. Saint-René Taillandier has rendered some service to French literature—were it only by infusing into it a little of the literature of other countries; but his style is heavy and monotonous, and his subject—Père Gratry—did not inspire him. As usual, the answer was better than the Discours de Réception. But the passages in M. Nisard's speech which advocate a species of literary exclusiveness and protectionism, have been very rightly reproofed, and, despite the real talent and undoubted authority of their author, ridiculed. M. Nisard says: "Two civilised people can exchange with reciprocal profit merchandise, industries, the discoveries of science and erudition; but the things of the mind cannot be exchanged without loss to both peoples. I know of no literary importation that has added to the creative faculty of a country. At the time when the imitation of Italian and Spanish poets was the rule in France, I see the result of the fashion merely in the faults of our poets; their qualities are their own and those of France. The greatest epoch of French literature was when France imitated nobody."

The result of the elections to the Academy will be known at the end of the week. There is of course a talk of retiring candidates—claimants belonging to that vast category which "fears its fate too much or owns its deserts small," and wisely draws back at the last moment when it has enjoyed all the notoriety of a doubtful candidate, without the humiliation of a beaten one. M. Paul Féval is probably among this number. M. Taine persists, and smoothes his way across the Pont des Arts with a deft and prudent hand. He knows what influences are acting against him, and seizes the opportunity of counteracting them afforded by the publication of a few lines in the *Français*, which describe him as a materialist and atheist. His chief endeavour is to explain the *sens intime* of his famous phrase: "Le vin et la vertu sont des produits comme le vitriol et le sucre;" and this is the ingenious twist by which the candidate escapes: "To say that vice and virtue are products like vitriol and sugar does not imply that they are chemical products, like vitriol and sugar; they are moral products created by the concurrence of moral elements; and, as it is necessary in order to decompose or compose vitriol to know the chemical parts of vitriol, so, to create in man the detestation of falsehood, it is expedient to seek the psychological elements which by their union produce veracity." This explanation continues through several paragraphs, but it is doubtful whether the clerical part of the Academy will consider it perfectly conclusive.

M. Taine has need of all that can be said or done on his side—and one of his warmest cham-

pions is lying at this moment, it is said, between life and death. Jules Janin has been ill for many months past—sick with a “*feuilleton rentré*,” an amiable colleague has averred. The famous critic was formally declared to have retired from the *Débats* because of his declining health, but it is generally believed that he fell between the two antagonistic parties that own the first literary organ of France; and that he is not incapacitated from arduous and excellent work, is demonstrated by the two or three graceful and scholarly criticisms that he has recently given to the *Liberté*. Janin suffers doubly, I am told: he is wounded in all the ties of affection and association that connected him with the *Débats*, and in his pride as the first living critic of France, by the fact that he is replaced by an obscure contributor to the *Charivari*. And then he says, “*J’ai parlé de tout le monde, et tous m’oublient*.” He avers that his one remaining desire is to assist at the reception of Dumas fils, his dearest friend and devoted admirer.

EVELYN JERROLD.

P.S. *Friday*.—The elections took place yesterday. For the chair of M. Saint Marc Girardin, at 1st poll: Weiss 9, Mezières 8, Boissier 7, Taine 5, Caro 2, Mary-Lafon 1, Blanc 1; at 2nd poll: Mezières 11, Weiss 9, Boissier 6, Taine 4, Caro 1, Blanc 1; at 3rd poll: Mezières 18, Boissier 6, Weiss 5, Blanc 2, Taine 2.—For the chair of M. Lebrun, at 1st and only poll: Alexandre Dumas fils 22, Ségur 8, Caro 1, Mary Lafon 1, de Latour 1.—For the chair of M. Vilet, at 1st poll: Blanc 10, Caro 9, Taine 9, Boissier 1, Froissac 1, J. J. Weiss 1, Ségur 1, and Mary Lafon 1; at 2nd poll: Blanc 12, Caro 12, Taine 9; at 3rd poll: Caro 16, Blanc 11, Taine 6; at 4th poll: Caro 18, Blanc 11, Taine 4.—M. Caro, M. Mezières (whom the *Times* seems to regard as forming a composite candidate under the name of Caro de Mezières), and M. Alexandre Dumas fils, were therefore elected.

A PAINTER'S WEDDING.

Paris, Jan. 22nd, 1874.

The marriage of Charles Edouard Frère, only son of Edouard Frère (the celebrated painter of Ecouen), with Mdle. Giulia Robecchi, daughter of M. Robecchi, the well-known decorative painter, was celebrated yesterday at the church of St. Jean Baptiste (Belleville), the parish church of the bride's parents. The marriage was a fête for the quarter, and we found ourselves beset by Ecouenites on all sides; indeed, Ecouen appeared to have turned out *en masse* to assist. The artists and their models alike were there, for they were all friends of Frère fils, himself well known as an artist. The bridal party were *très précis*, as the invitation announced they would be; we had only one false alarm before they actually entered the church. The organ rolled; we all rose while they passed through the nave to the altar, nodding to intimate friends and giving an occasional shake of the hand. The young bride, tall, straight, with dark hair and eyes, and finely cut features, wearing a dress of white satin heavily triumphed with lace and orange blossoms—the lace, as rumour informed me, came expressly from London—walked on, leaning on her father's arm, while Frère fils followed with his stately mother; then the relations and friends, among whom Mdle. Dequien, daughter of the sculptor, and Mdme. Schenck, were conspicuous for the elegance of their toilettes.

The wedding was a fitting occasion for an artistic reception, and here friends met who had not seen each other for months or years. Everyone appeared in good spirits, and little jealousies, which do exist sometimes in the artistic world, seemed forgotten amid the cordial greetings. In fact the ceremony was performed amid an incessant buzz, which, however, did not disturb Monsieur le Curé. One of Frère's friends near me, who had been his fellow-pupil in the studio of Couture, was very much interested in the ceremony; standing on a chair, he could see, and gave us occasional reports of its progress. “Ah!” he exclaimed, in a voice audible to all around, “la bague est passée; c'est fait!” He had lost his *garçon* companion, he was married; and “when one is married in France,” some one whispers in my ear, “one is not only married, but *bien marié*.” The *Gloria* was sung by an intimate friend of

the bridegroom, Depassion, whose rich voice sounded well in the church, and for a few minutes stopped the hum of conversation.

The ceremony over, we crowded into the sacristy to congratulate the happy pair. MM. Richard and Todd, the artists, were signing the register, and Todd almost forgot his last *d* as he saw an old friend to welcome. Schenck, Duverger, Daugelas, Bertall, Bouguereau, and Paul Soyer were among the familiar faces. M. Surville, who has travelled between Ecouen and Paris so often during the last twenty years; M. Formstecher, an old friend of the family; Wahlberg, the celebrated painter of Stockholm; and Adolf von Becker, the eminent artist of Finland, were also there. The sacristy was more than full, and yet they came; the din of voices mingled with the bridal salutes, Monsieur le Curé asked us to circulate; prayed us to circulate. “We shall see you to-night at the ball.” “We won't fail;” and with “à ce soir” we separated.

What an invitation! A ball of “Ecouenites” at the Grand Hôtel! But so it was, and we who together had danced in the elder Frère's studio—our weekly ball-room years ago—met here in Paris. The last ten years have not changed the artists much; a few grey hairs, an increase of flesh, and an occasional decoration in the button-hole mark their advance in life. But among the ladies surrounding the bride we have difficulty in recognising the little misses we had seen so often in the quiet village of Ecouen, some of them now grown to be recognised painters, whose signatures possess a market value. Making enquiries for old friends, I am told they are travelling in distant lands. Mdle. Bourge is in Italy, and Théodore Frère sends his congratulations from Cairo. We converse with a stranger whose accent is foreign, but who appears to know the Ecouenites intimately; they call him “Docteur,” and I learn that he is the new doctor of Ecouen.

The ball was not ceremonious, as Madame Frère expressed it; we were all intimate and *en famille* here. The dancing was not left to the young people; but Madame E. Frère and Monsieur were always ready to take a *vis-à-vis*. It was kept up to a late hour, and when I left about three o'clock, the music did not lag nor the dancers show signs of weariness, and the *consommé* and grog were being still carried in. Frère père was still upon the floor, and the bride and bridegroom were walking arm-in-arm in the corridor. They leave to-day for a tour through Italy.

The thoughts of some of us could not but revert to the time when Ecouen life was new to us, and we were admitted as pupils to Frère's home and danced at the weekly ball. We went early, for our work ended at sundown, each carrying a lantern and wearing wooden shoes, which we knocked off in the entry, ascending the stairs in our slippers, as free from mud as if we had driven under a *porte-cochère* to the hall-door. The bell which rang with a clang announced us, and Madame Frère met us with a pleasant word of welcome on the landing above, which was hung round with engravings, lithographs, and etchings of M. Frère's paintings. Amic was lighting the lamps in the studio, our ball-room; so we joined the early guests in the library, where we had passed so many pleasant evenings with cards, readings, and *cinq points*. What albums might have been selected from the scraps of papers used in that last amusement! We sat round the library-table in antique

high-backed Louis XV. chairs, by the soft light of the reading-lamp; the ladies dotted pieces of paper with five irregularly-placed points, the task of the gentlemen being to draw a figure with the head, hands, and feet respectively upon these dots. Many a grotesque figure was produced, and in a moment of glee the author was called upon to sign his production. Several of these drolleries I found lately in an old scrap-book—one, a lady in the latest fashion, is signed with "E. F.," and another, a springing deer, has under it "Schenck," in great letters, as if that painter of large canvases was not to be confined by space, even in a signature.

In our balls of those days the musicians were not professionals; each of the dancers in turn took his place at the piano, and we were not hypercritical. Airs from the *Belle Hélène* were in great favour; but we danced just as well to "Cadet Rousell le bon enfant," and nothing was so merry as the last strain, when we joined hands, dancing in and out in a grand circle, singing, "Vive la boulangère!"

We hear the clanging of the gate bell, and the bark of a dog; an English bull terrier precedes his master into the ball-room (poor "Misse," her nose is out of joint now!). The door is thrown open by a young man carrying a big stick, dressed in a blouse, and wearing leather gaiters; he has a pleasant face, a hearty greeting for everyone, and a *poignée de main* such as must have been dispensed with had we been fettered with gloves. "Misse" entrenches herself amid the cushions of an old *bergère*, and her master joins in the dance. And how he danced! for this was Frère *filé*, the son of the house, and hilarity seems to have entered with him, as well as his constant companion "Misse." The studio window rattled, the furniture was crowded further into the corners, the *bobèches* danced on the candlesticks, and the piano rang out, "le bon enfant!"

The youngest of the party was a black-haired, bright-eyed child, the same who wore the orange blossoms last night, then scarcely in her teens; she kept confidentially at her mother's side, but, young as she was, gave promise of the beauty which we now behold. Many of the guests with whom we crossed hands at those cordial but unceremonious parties are here. They are disguised somewhat in robes of silk and in white neck-ties; for at Ecouen such trains were not *de rigueur*, and our velvet coats and loose neck-ties were much more comfortable than this evening dress. What a shout of merriment we should have caused in those days had we entered with a *claque* under our arm! Heigh-ho! Why is it so many men of the world look back with a sigh to *la Bohème*? The host and hostess are the same to-night as then, and those who have had the good fortune to enter their home remember those days as among the green spots in their lives.

Schenck, the animal painter, was always present, the heaviest man but lightest of foot in the room, quick to praise as well as blame, lover of large pictures. How could one of his size enjoy anything small? He would dare to criticise some unfinished picture of Frère's, which stood on the easel in a sheltered corner, and in the same breath turn and extravagantly admire another by the same master. Should we differ from him, he would turn upon us with his knit brow and huge voice, which ended in a hearty laugh as he thumped

us in the ribs. Fortune has favoured Schenck since those years, and the sheep of his fold have increased in value. Soyer, the attenuated member of our artistic colony, with his long curly hair and courteous manner, would utilise the pauses of the dance to study the sketches on the walls, and call upon us with his earnest manner to appreciate and admire some point or effect which was then beyond our comprehension. His curls are a little thinner and streaked with grey, but otherwise years touch him lightly. Seignac, Arnoux, Aufray, well-known pupils of Frère, left their *galoches* and blew out their lanterns at the Frères' door on those evenings. Dansaert, also a pupil of Frère, was among the guests. He had just then built his new house, which, the peasant children said, "looked like a church." The cottage once occupied by Frère, and where the bridegroom was born, he had remodelled into a studio, expecting perhaps to find inspiration among the old walls, for it was here that the first pictures of the "Ecouen school" were painted. Here the painter, ordered by his physician from the crowded city that he might breathe purer air and gain strength, knew not what to paint away from professional models and city influences, for then the romantic school of Eugène Delacroix was in vogue. Putting all *grand art* aside, he painted young Charles eating soup. The picture was accepted at the Exhibition, and the "Ecouen school" of Art established; and how many have turned from a gallery of fine paintings, weary to death, to admire a little picture of a peasant child by Frère or one of his pupils!

At different times foreign disciples have come to study like ourselves with Frère, and have always found his door open to welcome them; amongst these Thom, Boughton, Becker, Johnstone, and Champney, all and each of whom have danced and made merry in the old studio. They have passed out of the old ball-room when the mirth was ended, and lit their lanterns, and their *sabots* have echoed along the streets of the slumbering village, many a time; and though most of them have made way for new faces at Ecouen, and have parted more widely than when they uttered their *bon-soirs* in those evenings, it is doubtful if fame and fortune have brought them happier days and nights than these lines may recall should they ever see them.

HENRY BACON.

CORRESPONDENCE.

UNPRINTED WORKS ILLUSTRATIVE OF SHAKESPEARE.

ALLOW me to suggest a series of publications to which I think the attention of the New Shakespeare Society should be directed.

1. The works of Robert Greene. A comparison of the passages in the *Groatsworth of Wit* (1502) with passages in previous publications of Greene has thoroughly convinced me that the antagonism between him and Shakespeare dates at least from 1580, if not from 1587. The complicated allusions could scarcely be verified except by a republication of his works, or at least by a republication of all the prefaces, introductory epistles, and panegyric poems attached to them, together with all the novels first published or recast after 1585 or 1586.

2. The works of Thomas Nash. They are most valuable from their multifarious allusions to all kinds of literary doings from 1580 to 1598; and if those works of Gabriel Harvey which were

answered by him, or were answers to him, are intercalated in their proper places, I think a very curious proof of the chronology and the allusions of *All's Well that Ends Well* will be the result. Nash, I should remark, and not Lodge, must be the "young Juvenal" of the *Groatsworth of Wit*. Lodge was almost of Greene's age; he had written his *Looking Glass for London* in conjunction with Greene several years before; and when Greene wrote his *Groatsworth of Wit*, Lodge was in the Straits of Magellan. On the other hand, Nash was much younger than Greene, who might have naturally called him "boy," had probably written anti-Martinist plays with him during 1590 and 1591 (perhaps the *Knack to Know a Knave*), and was at home with him in London; and the two had been employed together by Bancroft, under the direction of Whitgift, to fight Martin Marprelate with his own weapons.

3. But though Lodge is not one of the three whom Greene addresses in his last work, he was one of the school, and his works are almost as important for the literary history of his period as those of the two others. His lyrical poetry, moreover, is of a very high order, and he is unquestionably the earliest of our regular satirists. His works are important for the chronology of *As You Like It* and *Hamlet*, and probably for many other plays, when students have the opportunity of poring over his allusions at home.

4. Chettle's works.

5. Then, to come to a different kind of collection, we ought to have a series of the doubtful plays of Shakespeare; of those which are certainly not his, but have been attributed to him by early testimony; of those which, or parts of which, have been judged to be his by fair critics on internal or constructive evidence; and lastly, of the few anonymous plays which can be shown to have belonged to the Lord Chamberlain's players, the company of which he was the presiding genius.

Besides *Titus Andronicus* and *Pericles*, which are often, but wrongly, put amongst the doubtful plays, we have this list:—

The Arraignment of Paris. (Peele's.)

Arden of Feversham. (Attributed to Shakespeare on internal grounds only by Edward Jacob of Feversham, and since by many writers.)

George-a-Greene. (Attributed to Greene by Dyce.)

Locrin. (Written by Charles Tilney, who was executed with the other Babington conspirators in 1586, and edited by "W. S." in 1594.)

King Edward III. (Attributed on internal grounds to Shakespeare by Capell in 1760. The 2nd Act bears traces of his hand. It contains a line of one of his sonnets.)

Mucedorus. (A foolish old play, with additions in much better style, made for the King's players after 1605 and before 1610. Attributed to Shakespeare in the time of Charles II.)

Sir John Oldcastle. (Written for Henslowe and the Lord Admiral's players by Munday, Drayton, Wilson, and Hathway. Its object, as appears by the prologue, was to rehabilitate the fame of Oldcastle, befouled by Shakespeare in the character of Falstaff. The title-page to the first issue bore the name of Shakespeare.)

Thomas, Lord Cromwell. (A biographical play of peculiar construction belonging to Shakespeare's company.)

The Merry Devil of Edmonton.
The London Prodigal.
The Puritan.
A Yorkshire Tragedy. } (All these belonged to the same company.)

Faire Em. (Attributed to Shakespeare in the time of Charles II., and to Greene by Phillips, Milton's nephew. But the play was criticised with great virulence by Greene in 1591.)

The Two Noble Kinsmen. (Fletcher, helped by Shakespeare.)

The Birth of Merlin. (Attributed to Shakespeare and Wm. Rowley.)

To these I add:

The Siege of Antwerp. (Founded on Gascoyne, written by Marston under the tuition of Shakespeare, as shown by Chettle.)

Life and Death of Thomas Stucley. (A play belonging to Shakespeare's company, on the same principle of biography as Lord Cromwell.)

A Warning to Fair Women. (A play by the same hand, belonging to the same company, and containing many imitations of Shakespeare.)

To these I add

The Prodigal Son, extant in a German translation, and attributed to the poet Post-haste (identified with the author of *Trilussa* and *Cressida*) in the anonymous play of *Histrionastrix*.

Hester and Ahasuerus, played for Henslowe by the Lord Chamberlain's company in 1594, and extant in German.

6. Then would come a list of *allusionist* plays, in several classes, as

(a) The Martinist and anti-Martinist plays of 1589-91, by which Shakespeare was driven from the London stage for a time.

(b) The plays relating to the quarrel between Decker and Jonson in 1600; a quarrel founded on the rivalry between the common stages and the private theatricals of the children of the chapel, and this again on the political rivalry of the Essexian and Cecilian factions.

7. Then, to come to a different but kindred matter, we want full chronological lists

(a) Of all the companies of players.

(b) (So far as can be ascertained) of the directors of each, and of the players who composed the company at any given date.

(c) Of the plays which belonged to those companies, and the poets who habitually wrote for them.

Henslowe's diary furnishes us with full information concerning the Lord Admiral's men. The other companies must be sought in all manner of different documents.

8. On this might be founded an estimate of the political and social tendencies of each group of plays. This would give great assistance in interpreting the occult political and personal allusions of Shakespeare's plays; and thus, after the political and personal references of the Shakespearean stage are fully made out, we shall have an invaluable criterion for determining the dates of his plays, or of the additions he made to them, to be used in conjunction with the mechanical metrical criteria which have been before described.

The following publications on the *stage controversy* at Oxford, during the last decade of the 16th century, should be added to the list:—

Gager, Dr. Wm.—*Meleager*, a tragedy, printed Oct. 1592. A copy of it, with two letters, was sent by Gager of Ch. Ch. to John Reynolds, D.D., of C.C.C. Reynolds drew up an answer dated Queen's Coll., July 10, 1592. Gager replied last of July 1592. (These letters are in University Coll. Ox. MS. J. 18; also in C.C.C.) Reynolds published his rejoinder in 1593, "The Overthrow of Stage Plays," &c. . . . "Where to are added certain Latin letters between him (J.R.) and Dr. Alb. Gentilis concerning the same matter." (Gentilis' letters were published separately at Oxford in 1629). Also Albericus Gentilis, *Disputatio de Actoribus et Spectatoribus Fabularum non notandis*. Hanov. 1659. This may be found in Gronovius' *Thesaurus Graecarum Antiquitatum*. To this series should be added

Fucus sive Histrionastrix, a play against Reynolds, performed at Oxford before James I. or some royal personage in the early part of his reign. Lambeth MS. 838.

Another thing that should be published is Robert Chester's *Love's Martyr*—from which Shakespeare's lines to the "Phoenix and Turtle" are taken—with introduction showing who Salisbury was, to whom the Chorus Vatum dedicates the book, and showing the relationship between the poem (Chester's) and *Cymbeline*. The introduction ought to be very important with reference to Shakespeare's connection with the Essex faction.

There is a good transcript of the book in the Dyce library at South Kensington. I think one of the two (?) known printed copies belongs to Mr. Huth.

In conclusion, let me say, that if all this mass is to be printed, it seems to me very important to print the matter in definite series, as wholes, and not sporadically; for the Shakespearean stage is to be considered as part of a great whole, and not as an isolated phenomenon, and it is only intelligible (historically) when so considered.

RICHARD SIMPSON.

SHAKSPERIANA.

Junior United Service Club.

The following is one of the few quotations from Shakspeare that I have met with in perusing many thousands of the Civil War tracts. It is from the *London Post*, January 1644. The passage containing it is as follows, the italics being my own. It refers to the death of Archbishop Laud:—

"Although he came with confidence to the scaffold, and the blood wrought lively in his cheeks, yet when he did lye down upon the block he trembled every joint of him; the sense of *something after death*, and the *undiscovered country* unto which his soul was wandering, startling his resolution, and possessing every joint of him with an universal palsey of fear."

GEO. COLOMB, Col., F.S.A.

THE "PREESTES THREE" IN CHAUCER'S PROLOGUE.

May I venture to suggest that the Nun-chaplain really corresponded to the Custos Capellae in caputular and conventual foundations of men, whose duties were that of a treasurer of its furniture, ornaments, and necessities of divine service.

(2) There was a famous school for ladies in a Nunnery near Perth, of which I give a brief account in my *Scotti-Monasticon*, which will be shortly published by Messrs. Virtue.

(3) At Romsey there were two chaplain-priests of a parish church formed out of the north aisle of the nave, but subsequently rebuilt as a lateral building. These, if joined to the Nuns' priest, who served as Celebrant and Confessor to the community, would exactly make up the number in Chaucer's retinue.—MACKENZIE E. C. WILCOTT.

1 Oppidans Road, N.W.

MR. FURNIVALL has certainly increased the already great obligations of all Chaucer students to him by the illustrations of the *Prologue* he has lately drawn from the Paper Survey of the Abbey of St. Mary's, Winchester, and from Ducange, of which an account is given in the last number of the ACADEMY. Certain features in the portrait of the Prioresse are for the first time explained; the term Chaplain as applied to a Nun is satisfactorily defended, and it is shown that there might be several attendant priests. Yet it may remain, and in my opinion it does remain, a question whether we have the original text in l. 164. Was not Tyrwhitt right after all as to that question, however he may have erred in condemning *chaplain*? See his valuable note in his *Introductory Discourse*. The facts to be considered are these:—

(i) Chaucer, in the poem of the *Prologue*, undertakes to describe for us the condition, the quality and degree, and the array, of each one of his pilgrims. And this programme it may be said he carries out in every instance, except in those of the Nun and of the "Preestes three." Surely this imperfection excites and justifies a suspicion that the text has been disturbed? Let any one who knows the *Prologue* decide for himself whether there is not a perceptible and an unusual abruptness in this couplet:—

"Another Nonne also with hire hadde she,
That was hire chapelliche, and Preestes three."

Does not everybody feel that the sketch of the nun is maimed and mutilated? Chaucer is just

beginning a portrait that might have held artistic rank with his other masterpieces, when something or other knocks the brush out of his hand; or, more probably, he had finished the portrait, when somebody's sponge, possibly his own, for a reason that may be conjectured, descends ruthlessly on the canvas and leaves nothing but the first strokes.

(ii.) There is not elsewhere a trace of more than one priest. See the *Nonnes Preestes Prologue*:—

"Than spake our hoste with rude speeche and bold,
And sayd unto the Nonnes Preest anon:
Come nere thou Preest, come hither thou Sire John."

Is it satisfactory to say that the Host picks out Sir John as being the chief of the priests? Mr. Furnivall suggests that he was the Magister; but surely "Sire" answered to "Dominus"?

(iii.) We are expressly told that there were 29 pilgrims assembled at the Tabard. Now, if we admit the Preestes three, there were 31! And it seems absurd to say, as has been said, that 29 must be taken as a round number. What then is an unround number? Chaucer is always singularly exact in details; and, when he says 29, it must be taken to mean 29.

This is a question which, though it may at first seem trivial, is not without its ultimate importance for those who are interested in Chaucer and his age. And for my part I think the above considerations cannot be ignored.

ὅτι δὲ μὴ τὰδ ἴσθιν ἐν γνώμῃ φίλα,
κείνός τ' ἐκείνα στεργέτω κἀγὼ ταῦτε.

J. W. HALES.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Jan. 31,	3 p.m.	Crystal Palace Concert; and Saturday Popular Concert.
		" Revival of "Amy Robsart," at Drury Lane.
MONDAY, Feb. 2,	4 p.m.	London Institution; Mr. John Evans on "Ancient Stone Instruments" (ii.).
	7 p.m.	Entomological.
	8 p.m.	Monday Popular Concert (Billow and Santley).
		" Medical.
	8:30 p.m.	United Service Institution. Dr. Leith Adams on "Recruiting." First night of "Rough and Ready," at Adelphi.
TUESDAY, Feb. 3,	7:45 p.m.	Statistical.
	8 p.m.	Civil Engineers; Anthropological.
	8:30 p.m.	Zoological; Society of Biblical Archaeology. Mr. Sayce on "The Astronomy of the Assyrians."
WEDNESDAY, Feb. 4,	7 p.m.	London Institution; Mr. Hales on Milton's earlier Poems and Prose works.
	8 p.m.	London Ballad Concert.
		" Geological; Microscopical (Anniversary); Pharmaceutical; Medical.
		" Society of Arts. Dr. Dresser on "Eastern Art and its Influence on European Taste."
		" Society for the Encouragement of Arts, Manufactures, and Commerce. John Street, Adelphi.
THURSDAY, Feb. 5,	6 p.m.	Royal Society Club.
	8 p.m.	British Orchestral Society. <i>Elijah</i> at Royal Albert Hall.
		" Linnean (3rd Report from Mr. Moseley, of H.M.S. "Challenger"). Chemical.
	8:30 p.m.	Antiquaries. Royal.
FRIDAY, Feb. 6,	1 p.m.	Sale Sir Richard Frederick's Collection of Old China at Christie's.
	4 p.m.	Archaeological Institute.
	7:30 p.m.	"Elijah" at Exeter Hall (Sacred Harmonic Soc.).
	8 p.m.	Royal Institution. Mr. Garrod on "The heart and the Sphygmograph."
		" Philological.

ELY Chapel was brought to the hammer under an order of the Court of Chancery on Wednesday last, by Messrs. Fox and Bousfield, auctioneers, of 24 Gresham Street, E.C. It fell to Mr. P. St. Quinton, of the Royal Exchange, and it was understood that the persons represented by him are likely to retain it as a place of Divine worship. The treasurer of the Welsh chapel and the representative of the Institute of Architects were amongst those present. The price realised was 5,250l.

SCIENCE.

MAEDLER'S HISTORY OF ASTRONOMY.

Geschichte der Himmelskunde von der ältesten bis auf die neueste Zeit. Von Dr. J. H. v. Mädler. (Braunschweig: G. Westermann, 1873.)

THE rapid rate at which science has advanced in modern times is undoubtedly due in great part to the dissemination of its results, but this has proportionately increased the labour of the historian, since he has now to collect his materials from the voluminous proceedings of societies in every country in the world, a task demanding a patience and skill which are seldom found united. There is, therefore, cause for rejoicing among astronomers in the announcement that one of the nation which produced Niebuhr has undertaken a task which might well have daunted any but a German, and has carried it out with the accuracy to be expected from the author of the *Mappa Selenographica*.

On first taking up this work and remarking what a field the author has in modern astronomy, we felt inclined to regret that he had not left ancient astronomy to the ancient historians, but we must own that a further examination has convinced us of the soundness of his judgment. In fact, ancient science reads quite differently by the light of modern researches, and in turn often throws a new light on some of the obscurities which, like spots on the sun, darken our present knowledge. Without entering on the vexed question of the Pyramids, which Mädler discusses in the most temperate manner, there is no doubt that much knowledge of Egyptian astronomy has been gained by recent investigations, and that the Egyptians may claim to rank as the oldest of "Culturvölker," to borrow the expressive German term. But in any case the Chinese must take the first place (which in fact they do in this work) as careful observers, a matter of far more importance to us than relative antiquity. Perhaps one of the most interesting features in the progress of astronomy is the struggle between the rude accounts of old and the accurate observations of yesterday for the credit of the predictions for the morrow; and we must admit that in some points the ancients, and pre-eminently the Chinese, still have the best of the battle.

From their time we may consider that the dark ages, as regards the practice of astronomy, commenced, and continued (though enlightened by Ptolemy and many lesser lights) till Bradley's time; but as regards the theory of the science, this period was more like the twilight of an Arctic summer, of which Newton was the rising sun and Copernicus the herald of the dawn. Astronomy had long been sufficiently advanced for the wants of every-day life, and the shepherds of Arabia were content to leave the science in much the same state as they found it; but when the sailors of Europe, as Mädler well points out, called in its aid, astronomy received an impulse of which the lunar theory is a lasting monument.

The time of Copernicus is important for the triumphant vindication of the scientific method, though it was left for Bacon and Descartes to place it on a philosophic basis.

With regard to Copernicus, we may notice that the historian characteristically shows his love of the Fatherland by a rather amusing application of the principle of nationalities to prove him a German equally with the Holsteiners and Alsations. He was in fact born in Poland, at that time (under Casimir IV.) a flourishing kingdom, though Mädler prefers to call it West Prussia.

Tycho Brahe gives his name to one of the epochs into which the first volume is divided, but his observations, all important as they once were for establishing Kepler's famous laws, have now done their work; and the only relic which has any interest for astronomers now is his account of the flare-up of hydrogen in the variable star of Cassiopeia. Whether the predicted recurrence of this conflagration in 1885 will take place may be looked upon as very doubtful; but, however that may be, we know now, thanks to the spectroscope, that similar outbreaks, though on a very much smaller scale, are occurring every day on our own sun.

The increasing power of science was marked by the commencement of that struggle between science and dogma which has been productive of so much harm to both combatants. Galileo's famous "è pur si muove," probably, as Mädler supposes, never uttered aloud, has nevertheless been only too frequently inwardly repeated by persecuted seekers after truth. For the benefit of such as these, Mädler might well have supplemented the document in which Galileo abjures the truth, with the equally famous excommunication thundered against Spinoza twenty-three years after for his persistent devotion to it. The loss to science from this reign of terror was indeed great, as may be inferred from the fact that Descartes, terrified by Galileo's fate, suppressed an astronomical treatise which he feared might be considered heretical; and there is every reason to suppose that his example was followed by many other timid thinkers. But astronomy, more fortunate than her younger sisters, soon outgrew these swaddling clothes, and may now forgive the momentary weakness of a man to whom she owes her two chief instruments—the telescope and the clock. Kepler, more lucky than his friend, was for special reasons excepted from the persecution in which Protestants, Catholics, and Jews of that age equally indulged, and was allowed to follow out his speculations in comparative quiet. The earliest of these, in which, from a consideration of the five regular solids, he infers the existence of a planet between Mars and Jupiter, may be noticed as a good example of that fanciful reasoning—the legacy of the astrologers—which has more than once in times past hit the mark, though by a random shot, and is now in its legitimate form of empirical laws a recognised engine of scientific research. It was Bode's empirical law (really due to Titius, as Mädler points out) which led to the discovery of the minor planets, and did such good service in that of Neptune; and it was solely as empirical results that Kepler obtained his famous Three Laws. The way in which he did this—thanks to the large excentricity of the orbit of Mars, and the small excentricity of that of the earth—is very clearly shown in Mädler's work.

Our author next introduces us to Descartes, as one who "seeks not only for astronomy, but for all science a new foundation, new views, and new rules." Descartes is in fact better known in philosophy than in astronomy, though he may claim to be the founder of that long line of theoretical astronomers of whom France is so justly proud. We may mention in passing, that his celebrated vortex theory, after ages of neglect, has been recently revived in a modified form in the speculations of Sir W. Thomson and Professors Rankine and Clerk-Maxwell.

Newton naturally occupies a very prominent place in any history of astronomy, and, as Englishmen, we have every reason to be pleased with the treatment which he receives at the hands of Mädler, notwithstanding the temptation which a German might have felt to exalt the claims of Leibnitz at Newton's expense. But Mädler is singularly fair all through this work, and appears fully to appreciate that solidarity of science which ought to raise it above the petty jealousies of race and make it truly cosmopolitan. In fact, the only trace of bitterness we have found in his history, is in his reproach of the French for that national jealousy which prompts them to shut their eyes to the value of any discovery coming from abroad. The story of Newton's life is so well known that we cannot expect much novelty in any account of the "king of the realm of science," as our author felicitously terms him; but it would not have been out of place to have traced the progress of that reaction against the French school of analytical geometers which has led to the return of modern scientific thought, to Newton's method of fluxions, and to his almost unnoticed doctrine of energy, the fundamental principle of natural philosophy. The description given of the *Principia* is really nothing but a table of contents, useful indeed for reference, but more suitable for a Civil Service examination cram book than for a history of astronomy; on the other hand, the account of Newton's optical experiments is very clear, though we must take exception to the statement that the definition of a non-achromatic telescope is not improved by increasing its focal length; a very different result from that at which Newton arrived. How near Newton really was to the discovery of the achromatic object glass is not mentioned here. The action of the Royal Society in urging the publication of the *Principia* is well pointed out, for, like Copernicus and other great men, Newton was not fond of rushing into print, or of entering into disputes on scientific questions with those who had not the brains to follow his inexorable logic, and, but for the entreaties of his friends in the Royal Society, we should probably have had nothing but a few scattered papers in place of his noble exposition of the law of gravitation.

The period which follows is remarkable more for wide-spread activity than for any conspicuous discovery, though the discoverer of Aberration and Nutation is entitled to something more than the meagre sketch which Mädler gives of him, even if astronomers were not indebted to his industry for the only observations of any real value made during the last century. Bradley's observa-

tions are the starting-point of modern astronomy, and well deserve Bessel's title of "Fundamenta Astronomiæ;" for on them our knowledge of the motions of the heavenly bodies, whether planets or stars, almost entirely depends.

But the knowledge of one important element was still required for the application of Newton's laws, viz.:—the distance of the sun, the unit or base line of the solar system; and for determining this, the transits of Venus in 1761 and 1769 offered peculiar advantages. Unfortunately this determination has become a reproach to astronomers, through a popular delusion as to the accuracy to be expected in the result; and we cannot help thinking that Encke is to a great extent responsible for this erroneous idea, in publishing a result to 100000 of a second of arc, which he must have known was liable to an error of 10,000 times that amount. It is a great pity that Mädler has followed his bad example; for, though such statements do not mislead the *cognoscenti*, they get copied into popular works and give rise to an utterly illusive notion of the degree of accuracy attainable in such delicate measurements. The whole question has been the subject of so much discussion, since the first suspicion arose of a correction to Encke's value being required, that it is rather strange that no mention is made of Stone's recent treatment of the observations of 1769, from which he deduced a result in complete accord with those derived from physical considerations.

Herschel, the founder of extra-meridian astronomy, a branch of the science in which England has well kept the lead which he secured for her, fitly inaugurates the new epoch to which Mädler devotes his second volume. The catalogue of his papers in chronological order is the best proof of the extent to which modern astronomy is indebted to him, not only for the many rich fields he has opened out, but even more for the truth-seeking spirit in which he has explored them, never diverted from his path by the sneers of captious opponents, of whom he had many at home as well as abroad, yet ever ready to retrace a doubtful step. The account given of his labours is perhaps the best portion of the book, and Mädler has here evidently a congenial theme, and one on which he is entitled to speak with full authority.

From this point the work becomes really a history of astronomy, and no longer a collection of biographies of astronomers; and it is perhaps to be regretted that Mädler did not sooner adopt the plan which he has so happily followed of dividing the science into its different subjects, and tracing out the history of each *bis auf die neueste Zeit*. While making every allowance for the difficulty of carrying out this portion of the title, it is necessary to point out that the work has evidently been written some years ago, and additions afterwards made in the hope of keeping pace with the progress of science. Unfortunately for the historian, this advance has of late been so rapid in certain branches of astronomy as almost to revolutionise some parts of the science, and to necessitate re-writing instead of revision of the corresponding chapters. Properly considered, it is highly creditable to Mädler's

discernment that there should be so little requiring alteration in his opinions, formed at a time when the knowledge we now possess was not accessible; it is therefore in no spirit of fault-finding that we point out some of the omissions to be noticed and corrections to be made in the later part of his history, but simply to give what appears to be the explanation of a few defects which might otherwise strike the reader as remarkable. It is certainly unfortunate that this work was not published before the invention of the spectroscope, for the results of the application of a new method such as spectrum analysis are so striking as to render the comparative silence of Mädler on the subject all the more conspicuous, though we cannot reproach him with any such error as that into which Comte was led by his dogmatising spirit, when he declared that our knowledge was bounded by the solar system. To take another instance. We have a very elaborate account of solar eclipses up to 1867, together with a long list of observers; but no notice is taken of the very important results derived from the eclipses since that date, nor of the study of the prominences by the aid of the spectroscope.

It is a pity, too, that Mädler should have entered on a discussion of the dependence of aberration on the thickness of the refracting medium traversed, and consequently on the object-glass of the observer's telescope (an idea originated by Prof. Klinkerfues), without being aware of the observations made with the Greenwich water telescope in 1871 and 1872, which have completely disposed of the German professor's theory. Such a subject would have been better omitted in the absence of conclusive results, and in our opinion Mädler would have exercised a wise discretion in passing over crude ideas which will probably be forgotten in a few years' time, even by their authors. The value of this history would have been much increased if the mass of facts therein collected had been thus digested, and there would then have been no risk of an important result being lost sight of in the crowd. There is of course much to be said in favour of the plan of inserting everything, for it is extremely difficult to form a right judgment of passing events; and though the notices are generally too brief, they are yet extremely valuable as an index of reference. It would be well though, for this purpose, if Germans could be taught to spell English names correctly, as it is sometimes rather difficult to recognise them under the disguise adopted by the printers.

Of the many subjects discussed in the second volume we are compelled to pass over the greater number in silence, but the recent researches on the sun claim a passing notice, though we must own to a feeling of disappointment at finding no allusion to the spectroscope in this connection. To make up for this, however, we are introduced to the irrepressible sun-spot cycle, and are presented with a most instructive specimen of the abuse of the inductive method, which might well disturb the shade of Bacon. The magnetic declination at Munich is here *proved* by the observations of fifteen years to have an eleven year period, and therefore to obey the sun-spots; but, sad

to relate, the magnet at other observatories is not quite so dutiful. Very recently, we had a similar case in the discovery of a period of $26\frac{1}{3}$ days (corresponding with the sun's rotation) for the magnetic curves of one year, but those of the preceding and following years rebelliously shook off the solar yoke, and remain as independent as ever. We take it that, for a limited series of observations and a moderate range, it is not very hard, with the epoch at our disposal, to satisfy almost any simple harmonic function we please: for instance, the latitude of Greenwich might be shown by this style of reasoning to depend on the sun-spot period in common with temperature, rain, cyclones, *et hoc genus omne*. A cycle cannot be considered as established until it has gone through several periods, and it is by this test that meteorological as well as magnetical cycles break down. With due limitations, such hypotheses have their value as co-ordinating facts and suggesting crucial observations, but we must not adopt them hastily, and must be ready to lay them down as soon as we find them at issue with facts. Meteorology should beware of exchanging the thralldom of the moon, from which she has barely escaped, for that of the sun, which may prove equally oppressive.

The account of the origin of the Royal Astronomical Society, and the great influence it has had on the progress of astronomy, will be read with interest; and we are glad to see that Mädler has shown his appreciation of the value of its Annual Reports on the Progress of Astronomy by following their general plan in his really excellent analysis of its proceedings during fifty years—a record of its activity which would indeed have gladdened the hearts of its founders.

The sections which treat of the moon's aspect possess a peculiar value as coming from such an undoubted authority; and the modesty with which the author refers to his own work lends a charm to this portion of the book, which is enhanced by the generosity with which he speaks of those critics of his celebrated map who have sometimes hardly made allowance for the insufficient optical means at his disposal, a plea which he himself urges with much force.

A few words in conclusion on a point which may perplex the English reader. Naturally Mädler, in common with many Germans, adheres to the antiquated system of expressing right ascensions in degrees; though, when Nature kindly offers us a measure of this quantity in time, it does seem the height of absurdity to convert it into degrees of a divided circle with which it has no connection. But we are afraid there is little use in reasoning against national prejudice. As to the author's preference of declinations to North Polar distances, there is something to be said in his favour, and we can hardly complain of the Germans so long as our own Nautical Almanac, constructed confessedly for the benefit of ill-educated sailors, refuses to adopt the change; so that we must submit to the confusion arising from the dual system till the progress of education enables sailors to grasp the idea of an angle greater than a right angle.

W. H. M. CHRISTIE.

AFFINITIES OF THE ARYAN AND SEMITIC
LANGUAGES.

Studien über Indogermanisch-Semitische Wurzelverwandschaft. Von Friedrich Delitzsch. (Leipzig: J. C. Hinrichs, 1873.)

THE writer of the present article called attention in 1842, in his book *Ueber das Verhältniss der Aegyptischen Sprache zum Semitischen Sprachstammen*, p. vii., to the possibility of a connection between the radicals of the Indo-German and Semitic families, in spite of their structural diversity; and in 1869, in his *Geschichte der Sprachwissenschaft*, &c. p. 691, proceeded to point out how the way might be prepared for a scientific answer to the question, whether such a connection is to be admitted or not; namely, by comparing the most primitive bases discoverable in languages of both families,—their so-called roots. In the work before us the author has broken ground in this direction, and on that account, as well as from the whole mode of treatment, it will be found deserving of far more serious consideration than the previous rather incoherent attempts that have been made in the same field.

The scientific—that is to say, in this case, the philological evidence—that these two national stems, which in physical and psychical respects are so nearly allied, and may in general be regarded as belonging to one and the same race, are also closely related in the most important human characteristic—language—is not only of the greatest importance on its own account, but also as furnishing a presumption that the languages of other nations belonging to the same race, in spite of their still greater divergences, may stand to these and to each other in the same relation. Indeed, if the linguistic relation could be firmly established, the way would be prepared for speculations reaching much further than language into history, ethnology, and anthropology. But it can as yet be scarcely considered as established.

We are far from wishing to deny that the author has brought together—with much knowledge, acuteness, and power of combination—a considerable number of so-called roots from both of the two linguistic families, that agree substantially in their consonants and meaning. But the same thing, if not to the same extent, has already been done with regard to many other languages, without materially modifying the convictions of cautious linguists. To mention only moderns, Xylander, Wüllner, Edkins, Gustav Schlegel, Brasseur de Bourbourg, and others, have compared words, stems, and roots in Thibetan, Chinese, American, &c., with Indo-Germanic, Semitic, Basque, and Hamitic ones; and anyone who chooses to take the trouble to seek out similar resemblances, will have no difficulty in finding them in the most heterogeneous languages: for the number of consonants is really small, and the signification of roots extraordinarily elastic.

We are far from meaning to rank the decidedly scientific and methodical procedure of the author on the same level with the, for the most part, wild and fantastic attempts above alluded to; but even with him the comparison only rests upon complete or nearly complete agreement between the con-

sonants, and it seems to be very questionable whether linguistic relationship can be proved by such means alone. For instance, the comparison given on p. 88 ff., of the Semitic *kab*, “to be vaulted or arched,” with the Indo-Germanic *kubh* of the same meaning, has certainly no more value than that given by Gustav Schlegel (*Sinico-Aryaca, ou Recherches sur les Racines primitives dans les Langues Chinoises et Aryanes*. Batavia, 1872; p. 40) between Emoui *kap*, *hap*, *gap*, “devour,” and the Greek *καπ* in *κάπτω*. If the former comparison proves anything for the relationship between Indo-German and Semitic, the same right must be accorded to the analogous instances in Schlegel. If, however, the latter are partly to be accounted for by the coincidence that we call chance,—and no one will deny that there are many appearances that can be traced to no other agency,—partly by the linguistic transformation of natural sounds, or the like, then the same will hold good of the former.

There are many who will, perhaps, be surprised that we should allow so little decisive weight to complete agreement between words, and we must be allowed a few explanatory remarks on this point.

The original identity of the Indo-German languages was not established by means of such agreement; on the contrary, doubts soon began to be expressed on the validity of such agreement as a proof of original relationship, and other modes of explaining the fact, by later borrowing or otherwise, were preferred. The proof rests much more on the regularity of *disagreement*, the *laws of variation* in what was originally alike in the different languages of the group. The essential equivalence of sound and identity of meaning between the German *Kopf* and the Latin *caput*, for instance, is well known to be valueless as a proof of the original relationship between Latin and German, while words which have not a single sound in common, e.g. Latin *coquo* = Sanskrit *pachāmi*, Greek *πυστός* = Sanskrit *buddhās*, are amongst the most decisive examples leading to that conclusion. We are far from wishing to regard the nearly complete agreement of consonants in the Indo-German and Semitic words compared by Herr Delitzsch, as a proof that the agreement is accidental; for there are also in the Indo-German languages many cases in which the consonants correspond exactly, as, for instance, Greek *ἰδωμι* = Sanskrit *dādāmi*; but the following consideration will serve considerably to augment the aspect of singularity which the circumstance by itself must possess in the eyes of every philologist. In the form in which we become acquainted with the Semitic languages, a principle of formation entirely different from, and indeed almost opposite to that of the Indo-Germanic ones, is already completely developed, so that we both may and must conclude that, since the division of the two stems (supposing them to have been originally one), a very long, though not exactly calculable, period of time must have elapsed to allow the Semitic formation to perfect and establish itself: but that in this immense period, the roots, so far as their consonants are concerned, should have preserved substantially the same sound which they had in the original Indo-Germanic language, is—

not indeed impossible, but scarcely demonstrable or credible.

It is equally remarkable that, in spite of a not inconsiderable number of roots compared—in the present work the author restricts himself chiefly to *k* and *p*, and only incidentally deals with other consonants. No agreement appears amongst the commonest and most necessary nouns, such as the names of relations, &c.

As may be imagined, isolated objections to the comparisons instituted may be made on the Indo-Germanic as well as on the Semitic side, e.g. in reference to that of the Indo-German *kru* with Semitic *kar* (p. 91); Indo-German *smar* with Semitic *šamar* (p. 79): but even supposing such instances as these to be given up, enough would remain to support the author's view, if this kind of evidence were accepted as sufficient.

We cannot close this notice without expressly acknowledging that the author, in spite of our doubts respecting the linguistic evidence in support of his assumption, has done far more than any of his predecessors to establish its probability; while the lively interest with which we have read his work leads us to hope that he will bestow the promised continuation of these studies upon us as soon as possible.

THEODOR BENFEY.

THE MUSEUM OF PATENTS.

THE attention of the public has been recently drawn to the Museum of Patents, at South Kensington, both by Mr. Webster's paper read before the Society of Arts on January 14, and by the fact that a very influential deputation waited upon the Lord Chancellor a fortnight ago to request him to consider the condition of the Museum. The building is well known to all visitors to the South Kensington Museum. At one time the entire collection was housed in those unsightly buildings of corrugated iron known as the “Brompton Boilers,” but now the art collections are placed in really magnificent buildings well worthy of them, while the only remnant of the old “Boilers” is a little building on the right of the entrance, in which the models of inventions have always been, and still remain, exhibited. This is the Patent Museum. On entering the visitor finds, in the first place, that no catalogue has been published for several years; he finds a small space over-crowded with ill-assorted inventions and designs; in the centre of the group some extremely interesting and important remains of the earliest steam-engines; and at one end a library of reference works in connection with patents. He finds, moreover, if he visits the Museum in the afternoon, from two to five persons therein, and no one in the library; at least such was the case when we visited the Museum a few days ago.

There can be no doubt that the Museum was originally founded with a view of illustrating the progress of mechanical invention. As to the collection, it is, to say the least of it, very heterogeneous; we do not notice much method or order in it. As we enter we see a large cannon-ball, used during the American war, and fired into or from (remember we have no catalogue to guide us) Fort Sumter. A little further we see a curious clock constructed by a Monk of Glastonbury in 1325; it possesses a pendulum, which we know was first applied to clocks three hundred years later by Galileo, and we are rather misled than otherwise by the specimen. The majority of observers would certainly carry away the idea that pendulums were used in clocks in 1325. We find, further, models of quartz-crushing machines, telegraphs, guns, pumps, and other things,

but without any definite grouping; no single series is complete; there is no order or method. The mind has to jump in a moment from the composite parts of a gun to the mechanism of a screw-propeller. In one great group we find a series of objects which we would willingly see placed in the most conspicuous part of the most-frequented museum in London—the parent steam-engines. Here we have Newcomen and Crawley's Cornish pumping-engine, to which Watt, in 1777, applied a separate condenser and air-pump. Also Watt's first "Sun and Planet" engine, constructed in 1788, with a beam and connecting-rod of wood. In the same group are to be found Henry Bell's "Comet" steamboat engine, which, in 1812, propelled a boat upon the Clyde; Symington's engine, of 1787, the parent of steam navigation; the oldest locomotive (constructed in 1813), known as "Puffing Billy;" and George Stephenson's "Rocket" locomotive, which gained the prize in 1829. This is a great collection of good things, and we should be glad to see a new museum built for them alone. But as for the rest, the collection must be made more complete and methodical before it can be of any service. It is useless to have a collection of isolated and diverse models or specimens of inventions. Let them exist in definite series, each illustrating some one special invention, and the service rendered would be invaluable, both to the intelligent artisan and to the simple sight-seeing public.

In regard to the position which such a museum ought to occupy there is diversity of opinion. The Office and Library of Patents is in Southampton Buildings, Chancery Lane, and the authorities there naturally wish the Museum to be in contiguity to the Library. There is much to be said in favour of this, if a suitable building can be provided in that over-full portion of London. Unless the Government possesses ground in the immediate neighbourhood this would be a matter of extreme difficulty. In favour of South Kensington there is this to be said, viz., that the fact of the Art and Science Collections being housed there indicates it also as a suitable place for a collection of applied science, and certainly ensures for it a far larger number of visitors than it would have either in Southampton Buildings, or perhaps in any other place. For although we found less than half-a-dozen visitors in the afternoon, a number of people would appear to visit the Museum in the evening, on their way to the Art Collections. The statistics of last year show that no less than 323,616 persons visited it during that period; while since the opening, in 1858, 2,812,327 persons have visited it. The library in the Museum would appear to be used by between three and four thousand persons annually, but we find no statistics relating to this. It cannot be denied that the museum would not be visited by nearly so many persons, if removed elsewhere, and this is a great argument in favour of its remaining at South Kensington.

The excess of receipts arising from patent fees over expenditure is more than 50,000*l.* annually. A portion at least of this might well be applied to the erection of a suitable building; and a small sum—say 2,000*l.*—might be annually expended in making the collection more complete, and in filling up the gaps which now exist. We should like to see the collection like that of the *Conservatoire des Arts et Métiers*, only it should be more exhaustive, more methodical; and each special industry and the principal inventions appertaining thereto should be illustrated.

G. F. RODWELL.

COMMENTATORS ON THE RIG VEDA.

Parks End, Oxford, Jan. 26, 1874.

In Mr. Burnell we have once more a Sanskrit scholar, who will not only do over again what has been done before, but who will open new mines, and bring to light new ore. It is particularly fortunate that he should be stationed in the South of India, for the manuscript treasures of the South were never explored by Sir W. Jones, Colebrooke,

or Wilson, and they evidently contain not only literary works of which there is no trace at Bombay, Calcutta, or Benares, but give us texts which are decidedly more correct and more genuine than the Northern texts of the same works. A pioneer like Mr. Burnell is invaluable at Tanjore, and one regrets that his official duties could not be lightened so as to allow him more ample leisure for his researches.

In the edition of the *Vamsabrahmana* (The *Vamsabrahmana*, being the eighth *Brāhmana* of the *Sāma-Veda*, edited by A. C. Burnell. Mangalore, 1873) Mr. Burnell has tried to solve a problem which has puzzled Sanskrit scholars for many years, viz. the mutual relations of the three commentators on the *Rig Veda*, *Vidyāraṇya*, *Mādhava*, and *Sāyana*. I had myself, twenty years ago, corresponded with some of the Pandits at Benares on the subject; but though, after what they wrote, I was satisfied that *Vidyāraṇya* was only another name for *Mādhava*, I never could understand the connection between *Mādhava* and *Sāyana*, and therefore abstained from expressing any opinion on the subject. Now Mr. Burnell has solved the problem, or at all events proposed a solution which would remove many difficulties. He maintains that not only *Mādhava* and *Vidyāraṇya*, but *Mādhava* and *Sāyana*, too, are all one and the same person, that *Sāyana* was the ordinary, *Mādhava* the more sacred name of the Guru of *Sringeri*, and that the peculiar nomenclature which allowed *Sāyana* to speak of himself as the younger brother of *Mādhava*, though being one and the same person, has to be explained by a reference to *Vedānta* theories.

I confess that this explanation would remove many difficulties, yet it does not remove all. What shall we say when *Sāyana*, after having given his own interpretation of a Vedic verse, quotes a different one of *Mādhavabhaṭṭa*? In the hymn x. 86 there is considerable uncertainty as to the persons to whom each verse is to be assigned. The first verse is explained by *Sāyana* as being spoken by Indra. But after having done so, he adds:—"Mādhavabhaṭṭas tu vi hi sotor ityesham indrāyā vākyam iti manyante; tasmin pakṣe tv asyā rīko 'yam arthaḥ." The *Mādhavabhaṭṭas* think that this verse is the speech of *Indrāvī*, and according to this view the meaning of the verse would be as follows:—Who can this (or these) *Mādhavabhaṭṭas* be?

In his commentary on the *Baudhāyana-sūtras* *Sāyana* calls himself *Sāyana-kāryapadābhishikṭa*, and *Sringerana-kāryasūtagrahaṇya*, i.e. the best of the sons of *Singana*, while in the *Yagnatantrasudhānīdhī*, when he is no longer the family Guru of *Bukka*, but of *Harihara*, the son (*tanūga*) of *Bukka*, he calls himself the son of *Māyana*, and speaks of *Mādhava* as his real brother, saying: *Upendrasviya yasvavid indraḥ sumanasa-priyaḥ, mahākratūnām āharta Mādhavāryaḥ sahodaraḥ*,—He whose brother was *Mādhavārya*, the offerer of great sacrifices, beloved by the gods, an Indra, as it were, to an *Upendra* (i.e. to myself). I do not mean to say that even these passages would resist a *Vedantist* explanation, but I should like to know how, according to the *Vedantists* of *Sringeri*, it is to be applied. The question is one of great importance, and Mr. Burnell, living so near the monastery of which *Sāyana* was the head, is probably the only person who could clear up our doubts.

There is little more to be said about Mr. Burnell's valuable Introduction. As Mr. Burnell is engaged in searching for MSS. of commentaries on the *Rig Veda*, anterior to *Sāyana's*, I may mention that, besides those which I referred to in my *History of Ancient Sanskrit Literature*, and in the Prefaces to my edition of *Sāyana*, I possess a considerable portion of *Gayatīrthabhikṣu's* gloss on *Anandatīrtha's Rig-bhāṣya*, and *Ātmananda's* commentary on the *Vāmiya-sūkta*. I should also like to call Mr. Burnell's attention to a statement made in 1846 by the Pandits of Benares, that *Mādhava* wrote a commentary on the *Atharva-*

vida-Samhitā, and that it consisted of 80,000 lines. Although there is little hope of recovering it, yet when the exact extent of the work is given, we can hardly doubt that it once existed. (See my *Introduction to the Science of Religion*, p. 109.)

I may add, in defence of *Sāyana*, who, as Mr. Burnell says, never quotes parallel passages, that in explaining difficult words he does quote, now and then, parallel passages.

On page xxxi. l. 26, I should propose to read *trividham* instead of *vividham*, particularly as on page xxxii. l. 22, we read *prakaraṇatraya*.

MAX MÜLLER.

NOTES AND NEWS.

THE year before last there was an imminent prospect of the loss of the potato crop from disease. There was a good deal of public interest felt about it, and Lord Cathcart, the President of the Royal Agricultural Society, offered a prize of 100*l.* for an essay which should contain some new contributions to its history. A proposal of this kind betrays a curious latent cynicism. For thirty years this scourge has been amongst us, and the ablest investigators have patiently worked out all the essential points in the life history of the parasitic plant which does the mischief. Yet it is still imagined that something remains to be done, and that the hope of gaining 100*l.* will be an adequate motive force to stimulate enquiry more successfully than desire for knowledge, and the obvious inducement of commercial and philanthropic interest. The advertisement found its way even into German newspapers. Ninety-five persons were at the pains to send in manuscripts, some of which were accurate digests of facts published again and again, others accounts of crotchety remedies. But no new observations of any value were brought forward, and the prize was withheld. It is now offered again for the production of a disease-proof potato of which the test is to be an immunity of three years. No doubt there is nothing *a priori* improbable in the existence of a race which would be more or less capable of withstanding the diseases to which others succumb. In the Mauritius red sugar-canes are much less liable to disease than white ones; on the other hand, in the United States purple plums become more readily diseased than green or yellow kinds. Colour, therefore, has no essential connection with immunity from disease, but the possibility of races enjoying it can hardly be questioned. But it is the interest of all who grow potatoes to obtain such a race, and it is hardly likely that the inducement of a prize of 100*l.* will much increase its chance of discovery. Nor would an immunity of three years be a very trustworthy guarantee. The whole proceeding displays a feebleness of purpose which is unworthy of a society representing a great national industry.

ONE of the most striking results of the facilities of intercourse necessitated by a complex civilisation, is the diffusion throughout widely distant countries of various animal and vegetable pests. Domesticated animals and plants are, compared with their allies which are undomesticated, apparently more prone to succumb to the ravages of their enemies. This has been attributed, no doubt with reason, to their artificially adjusted lives, the equilibrium of which only tends to maintain itself within very narrow limits, and is therefore easily destroyed. The history of the potato disease is tolerably well known; it may be paralleled by that of a parasitic fungus which has suddenly attacked one of the most stately plants of our flower gardens—the Hollyhock. Many years ago Montagne described a parasitic fungus under the name of *Puccinia Malvacearum*, which had been collected by Bertero in Chili upon the common Marsh Mallow. Its first appearance as a pest of cultivation was in Australia, where, whether accidentally introduced or not, it became exceedingly destructive to hollyhocks. The Rev. M. J. Berkeley remarks that until July 12 of last

year it was, as far as he was aware, entirely unknown in this country, and it does not appear in Cooke's *Handbook of British Fungi* as a British species. At the beginning of August it was mentioned as completely destroying the hollyhocks in the gardens near Sandown. It has lately made its appearance in the neighbourhood of London. During the past year it suddenly appeared in Western France, and spread with great rapidity. In the neighbourhood of Bordeaux it attacks the common mallow. There is no remedy apparently but to destroy the affected plants, and so try to stamp out the disease. The ills of hollyhocks will perhaps not disturb the majority of people very much, but the *Puccinia* will entail heavy loss on those who for trade purposes make a special business of their cultivation. Another species of *Puccinia* is the formidable wheat mildew.

THAT great authority on spiders, Professor T. Thorell, of the University of Upsala, has just published his *Remarks on Synonyms of European Spiders*, as a sequel to his *European Spiders*, Part I. "Review of the European Genera of Spiders, preceded by some Observations on Zoological Nomenclature" (1869-70). In the present book the author has given an account of the synonymous names of those species of spiders which are described in N. Westring's well-known *Araaneae Suecicae* (1861), as also of some other European species, partly described in J. Blackwall's *History of the Spiders of Great Britain and Ireland* (1861-1864), and partly registered in the *Catalogue synonymique des Araignées d'Europe*, given by E. Simon in his *Histoire Naturelle des Araignées* (Araucoides), Paris, 1864. Prof. Thorell's new book is done with admirable care, and is well worthy of his high reputation. It is like his former book, written in English. We may mention that a large collection of Indian spiders is being made by the Vice-Principal of the Rajkumar College, Rajkote, Mr. Moreshwar Atmaram Thirkhud, and his sisters. This college was founded a few years back by the native chiefs for the education of their sons; its officers and teachers were nominated by the English Education Department in India, and its success has been cheering. A school of industry for the boys of artisans has also been formed under the control of the college, but has not yet been able to overcome the suspicions of the poor natives.

AT the present moment it is impossible to take up a Bavarian or an Austrian paper without finding in the lists of those who have succumbed to cholera names familiar to us in art or science. Amongst these we are sorry to notice that of Professor Schleich, whose death by this fatal disease was recorded last week. He was well known, both to English and German connoisseurs, as one of the ablest of the Munich landscape painters, and his loss will be severely felt at the Royal Academy of Arts, where he was one of the most highly-valued lecturers. Another victim is Dr. Ruland, the well-known head librarian of the University of Würzburg. He was born in 1809, took priest's orders in 1832, and held the parish of Arnstein till he entered upon the University post, which he retained till his death. As a member of the Bavarian Chamber of Representatives he gained the respect even of his opponents, through the clear judgment and courteous moderation with which he advanced and maintained his views; and his death, on the morning of January 8, after less than twenty-four hours' illness, has excited universal regret amongst all classes. The question of the sudden and seemingly unaccountable outbreak of the disease at isolated points, is engaging the serious consideration of the general public, as well as of the profession in Germany. At Lanfen, in Bavaria, in the former palace of the Prince Bishop, which in olden times was the favourite abode of the rulers of Salzburg, but which, since 1862, has been converted into a prison for male convicts, cholera suddenly manifested itself in December 1873, and before the close of the week

had attacked forty-five of the prisoners, of whom fifteen had died. On Christmas Day the lists showed eighty-three deaths and eighty-one recoveries, or about fifteen per cent. of fatal, and as many cured, cases on the general number of the 560 prisoners. A careful examination of the local conditions has shown that salt-beds lie near the foundations of the prison-walls, which stand upon a loose gravelly soil, and that a range of stables once occupied the site of the prison infirmary. Instant removal from the infected spot, a more generous diet and warm clothing, seem to have been the only means on which the medical attendants were able to rely, and the scourge has abated; but this explosive outbreak of the disease, to which nothing analogous has as yet been observed in Europe, is worthy of serious investigation.

MR. COLLINS, a well-known worker at Economic Botany, leaves England on February 12, for Singapore. In connection with the business he goes out to establish, he holds a commission from the India Office to examine and report on the culture of gutta-percha and india-rubber trees, and any other vegetable products of Borneo and the islands of the Malay Archipelago which are capable of being introduced into India. The six india-rubber plants lately sent out for the first time to India were grown from six of the ten fruitful seeds out of 2,000 obtained by Mr. Collins from South America. He hopes that the cultivation of such trees will hereafter become one of the standard industries of India. Till that country's coal and iron fields are fully developed, the only chance of raising the social condition of the labourers is by the introduction of new agricultural products, among which gutta-percha, india-rubber, paper-fibres, &c., should find a prominent place.

THE Natural History Society and Field Club of the Working Men's College, Great Ormond Street, announce for their next month's work: Feb. 3, Lecture by H. G. Seeley, Esq., F.L.S., on the Method of Studying Geology; Feb. 10, Museum work, Mounting Specimens, &c.; Feb. 17, Lecture by Mr. C. J. Savage, on some peculiarities of the Genus *Antirrhinum*; Feb. 24, Museum work; and Field-days, Feb. 15 at Chislehurst (first train after 10 A.M. from Charing Cross), and Feb. 28, India Museum, at 2 o'clock.

THE *Nuova Antologia* contains a notice of the researches of the naturalists attached to the Italian natural history expedition in Papua and the adjacent islands of Aroo and the Timor Lant group, of the rich ornithological collections acquired by Beccari and Alberti; especially of new species of birds of paradise, one of which is figured in this journal. These last have been described in the *Transactions of the Zoological Society*; and the labours of Alberti have been already made known to us by a translation of his work by Mr. Bennett, styled *A Month among the Papuans of Mount Arfak, New Guinea*.

A MARINE and fresh-water aquarium is to be erected in the Central Park, New York, in connection with the Free Museum and Menagerie already established there, and under the direction of Mr. Saville-Kent, late curator of the Brighton Aquarium. The scheme was started by Messrs. Appleton, and is to be carried out by public subscription. It is proposed so to endow the institution that it may be available for the purposes of scientific research.

AT the Charter House, on Thursday, January 22, Dr. Richardson gave a lecture on the electrician Stephen Gray, who at the beginning of the last century discovered the facts of conduction, insulation, and induction. The lecture was illustrated by experiments performed with the simple means used by Gray himself.

THE accomplished translator of the *Danish Ballads* and author of the *Popular Names of British Plants*, Dr. R. C. Alexander Prior, has printed a very interesting little paper, "On the Somerset Dia-

lects." In this county the Doctor finds two dialects separated by the river Parret; the reason being that, as the *Anglo-Saxon Chronicle* says, under A.D. 658, "Cenwealh in this year fought against the Welsh at Pen, and put them to flight as far as the Parret." On the east of the Parret, then, remained the conquering West-Saxons alone; on the west the Britons, who for many centuries maintained themselves among, and intermixed with, the Saxon settlers, whose language they learnt. But they learnt it, says Dr. Prior, as the Spaniards learnt Latin: they picked up the Saxon words, but pronounced them as Welsh. Even to this day it is extremely difficult for a West-Somerset or Devon peasant to understand an East-Somerset one. The chief difference is in the vowels, a "roof" being *ruf*, "through" being *thru*, and "would" being *wid* in West Somerset; so that the two dialects might be called the "Langue d'ü" and the "Langue d'oo." In the West Somerset also *w* is *oo*. "Where is Locke?" "Gone t' Ools" (to Wells), "yer honour." "What's he gone there for?" "Gone zootniss" (as a witness), "yer honour." Or again: "Oolter, he com in, and drug him out" (Walter came in and dragged him out). But both the dialects have many peculiarities in common, as the transposition of *r*: *Purn* for "prin," "prince," *furs* for "fresh," *urd urbans* for "red ribbons," of *s* and *p*, as *waps* (wasp), *curps* (crisp); of *s*, and *k*, and *l*, as *ax* (ask), *halse* (hazel). *F* changes to *v*, as in *vire* for "fire"; *s* to *z*, as *zur* for "sir"; *th* to *d*, as in "What's *dee* doing here *dis* time o' night?" The Western "langue d'ü" also replaces an initial *h* with a *y*, as the Norwegians do—*yeffer* for "heifer," *Yeffeld* for "Heathfield." It also replaces initial *th* with *f*, as *fatch* for "thatch." Again, it changes the lengths of vowels, making a "pool-reed" a *pull*-reed, a "bull" a *bul* (*u* short, as in "cull"), a "nail" a *nal*, "paint" *pant*, &c. On the other hand, "mill" is made *meel*, "fist" *feet*, "pebble" *popple*, "Webber" (a surname) *Wobber*, &c. The Rev. W. P. Williams and Mr. P. A. Jones have undertaken to compile a glossary of both the East and West Somerset dialects, and have got far on with their work. That rivers are the natural boundaries of dialects is, of course, a commonplace, but every confirmation of the fact is still of interest, and the detection of the traces of the old separation of speech 1,200 years after its occurrence, and in this nineteenth century, is of more interest. Mr. G. P. R. Pulman, of the Hermitage, Crewkerne, tells Dr. Prior that at Axminster the river Axe, the ancient British and Saxon boundary line, still divides the dialect spoken to the east of it (seemingly the Dorset) from the Devon, on the west. You never hear a Devonshire sound from a native Axminster man. The difference between the two dialects existing within so short a distance of each other is very striking.

M. BRACHET (the well-known author of a *Historical Grammar of French*, reproduced in English by the Clarendon Press) and M. Gaston Paris have completed the first volume of their French translation of the last edition of Diez's *Grammar of the Romance Languages*.

PROFESSOR T. HEWITT KEY has, we hear, nearly completed the great *Latin Dictionary* which has been the labour of nearly all the later years of his life. His volume of *Essays on Latin Metre and Philology* will appear shortly.

M. CAZALS, of Bayonne, has just published a re-impression of the *Poésies Basques de Bernard Decheperre*: "Linguae Vasconum Primitiae," 1545. The only copy of the original known is that of the Bibliothèque Nationale Y¹⁰⁴. The reprint has been made under the direction of M. A. Hovelacque, at Paris, and of M. J. Vinson, at Bayonne, whose names are a sufficient guarantee for its exactitude. The text has been followed page by page, line by line, word for word, fault for fault. Only 200 copies are on sale, each numbered. We reserve a fuller appreciation of the work till the

appearance of the *Vocabulaire des mots contenus dans les poésies Basques de Dechepare, avec des notes philologiques*, par M. Julien Vinson, announced to appear shortly, by the same publisher.

MR. HENSLEIGH WEDGWOOD's paper before the Philological Society on Friday, February 6, will be on the derivations of the words "Lay Figure, Warrior, Lawn, Badger, Filibuster, and Bully."

MR. WILLIAM PAYNE of the Keep, Forest Hill, is, we understand, to succeed Mr. Danby P. Fry, of the Local Government Board, as the Treasurer of the Philological Society.

MR. HENRY SWEET has been for some weeks in Holland, studying the sounds of the Dutch language and its dialects. Two years ago he made a careful analysis of the standard and dialectal Danish pronunciations. His object is, we believe, to write a scientific history of English sounds, and to contrast the development of these with the changes that have gone on in the Scandinavian branches of the Low-German and Teutonic stock.

M. PAUL MEYER has been engaged for some time in preparing for publication a series of hitherto unedited Low Latin, Provençal, and Old French texts. The first part of this collection is now announced as ready.

A CHAIR of philology and Assyrian archaeology has been created in the College of France. M. Jules Oppert has been appointed professor.

THE *Revue de Linguistique* for January 1874 continues and concludes the important "Grammaire de la langue Tongouse," by L. Adam, commenced in the October number, 1873. It contains also a valuable essay on the Basque Verb, by M. J. Vinson, in which he combats the theory of M. de Charencey. An article on the Ethics of the Avesta, by M. A. Hovelacque, and one on "Deux publications récentes relatives aux dialectes de l'Italie Septentrionale," by E. Picot, make up a number of unusual interest. In the Bibliographie are short notices of Sayce's *Assyrian Grammar*, and of Hadley's *Byzantine Greek Pronunciation of the Tenth Century*.

THE chairs of "Classical Philology" and of Philosophy, vacated at Jena by the resignation of Professors Bursian and Kuno Fischer, have been filled by the appointment of Dr. Schöll, of Greifswald, to the former, and of Dr. Eucken, of Basle, to the latter. A new faculty has also been added to the University curriculum by the creation of a chair of Sanskrit and Comparative Philology, under Professor Delbrück.

LECTURES OF THE WEEK.

LONDON INSTITUTION.

MR. SAYCE read a paper on Wednesday evening, at this Institution, upon the "Results of recent Assyrian discovery." After a sketch of the way in which the inscriptions have been deciphered, he reviewed the early history of Babylonia, according to the latest researches. Its primitive population, the Accadians or "Highlanders," the inventors of the cuneiform system of writing, had descended from the mountains of Elam, at that time the most powerful state in Western Asia. Elamite tribes from time to time overran Babylonia; one of them, the Cassi or Kossaeans, conquered the country under Khammuragas in the sixteenth century B.C., and founded a dynasty which was overthrown by the Assyrians about 1270 B.C. Khammuragas gave Babylon its name, and made it his capital. Libraries were established in all the great Babylonian cities; Babylon itself possessed two; and the works collected in the library of Sargon of Agane formed a large portion of the library of Assurbanipal, at Nineveh, which is now in the British Museum. The tablets or books were translated from the

(Turanian) Accadian into (Semitic) Assyrian, and grammars, dictionaries, and phrase-books were compiled for the assistance of students. One of the largest of these works was upon Astrology, in seventy chapters. It was called the *Illumination of Bel*, and was afterwards translated into Greek by Berossus. The lecturer read extracts from the twenty-third chapter, and referred to a catalogue of the Astronomical treatises contained in Sargon's library, which directs the reader to write down the number of the tablet he wishes to consult, and the librarian will thereupon give it him. And this in the sixteenth century B.C. Some of the monthly astronomical reports sent to the king by the Assyrian astronomers-royal, from the observatories at Nineveh, Arbela, Ur, &c., were also read. Mr. Sayce then described the religious belief of the Babylonians. "Those whom the gods favoured would enjoy everlasting life in their presence, in 'the land of the silver sky,' feasting at richly-garnished altars, and wandering amid the light of the 'fields of the blessed'; while for the rest of mankind was reserved the lower world of Hades, 'the land whence none might return,' as it was called. Here Allat, 'the queen of the mighty country,' ruled together with Tu, the god of death; and Datilla, the river of the dead, flowed sluggishly along, nurturing the monstrous seven-headed serpent which lashes the sea into waves. Seven gates and seven warder-spirits shut it in; and in its midst rose the golden throne of the gods of the earth, the Anunnaci, or offspring of Anu, the sky. It was a land of darkness, and those who were within longed in vain for the light. Before reaching this dreary region the souls of the departed were stripped bare and empty; and though the waters of life bubbled up in its inmost depths, they were never allowed to taste them." The divinities worshipped were legion, epithets being personified and so forming new gods. Some of the myths thus originated were recounted, and the great epic of the Chaldeans, based upon an astronomical principle and pieced together out of twelve independent lays, was described. Translations were next given of various exorcisms and religious hymns, and extracts were read from the omen-tablets. Some of these are inconsequential enough. Thus, if a child has a nose like a bird's beak, the country will be at peace; while if the nose is wanting, evil will possess the land, and the master of the house will die. Others are as obvious as that "to dream of bright light forebodes a fire in the city," or "the sight of a decaying house is a sign of evil to its inhabitant;" but there is one occurrence which is never likely to happen, desirable as its consequences are. "When a sheep bears a lion," it is said, "the arms of the king will be powerful, and the king will have no rival." Accadian law was then discussed, more especially the laws relating to the family, in which we find that the father possessed the same despotic power as among the Romans. The private will of Sennacherib was also given. Mr. Sayce concluded with an allusion to the new light thrown upon the early history and migrations of the Semitic race; who are shown to have derived from Babylonia the elements of the culture which they carried to the North and the West.

MEETINGS OF SOCIETIES.

ROYAL GEOGRAPHICAL SOCIETY.

AT the meeting of the above society on Monday evening last, Lieutenant Julian A. Baker, R.N., who had accompanied his uncle, Sir Samuel Baker, in the late expedition up the Nile, read a paper on the geographical aspect of the expedition. He described the labour which had to be undergone in cutting a way through the enormous quantity of vegetable matter accumulated in the Bahar-el-Giraffe, a species of "loop-arm" of the Nile which they were forced to travel by, as the White Nile was completely choked up. Serious difficulties were encountered in the lowness of the river,

and at last the expedition was forced to return, and wait for a more favourable season. Eventually, on April 15, 1871, Sir Samuel and party reached Gondokoro. The first navigable point after reaching Ismailia is close to the stony dry ground north of Unyama and east of the Nile. Here is a good site for a station, and this will doubtless form the future dépôt for the ivory brought from the shores of Lake Albert. The Bahar-el-Giraffe cannot be considered a navigable river, but Ismail Pasha, Governor of Khartoum, has cleared much of the Nile stoppage, and intended to finish it in October 1873. Should he succeed and open the river to navigation between Khartoum and Ismailia, the grand difficulty of want of communication with Egypt will disappear. It will be easy then for steamers to run every month or so with the mails, or whatever is required to Ismailia, returning each time laden with ivory. A great future for the country may thus be in store.

Sir S. Baker gave full credit to the thorough explorations made by Grant and Speke. But it was his (Sir S. Baker's) duty to repeat all information supplied to him from trustworthy quarters. From a native of Karagwe he learnt most unmistakeably that it was quite possible to go from Chibero, on the Albert Nyanza, past Uvira to Ujiji by boat. This report was confirmed by a man who had been living with King Mtesa some years. The Victoria lake, moreover, was called Sessi, and known by that name only among the natives of the place.

Colonel Grant said Sessi was the name of an island in Lake Victoria on which he himself had been. He also expressed his concurrence with Mr. Stanley's theory that Lake Tanganyika is wholly unconnected with Lake Albert. If it were otherwise Captain Burton and Speke during their long residence at Ujiji must have heard of it.

Mr. Findlay pointed out that Dr. Livingstone himself in one of his former letters had said that he had ascertained beyond a doubt that Lakes Albert and Tanganyika were one.

Sir S. Baker suggested that if the two lakes were one, the slight annual rise to which the Nile was subject might be accounted for by the fact that the two lakes being north and south of the equator are not augmented by simultaneous rains. When Lake Albert is swollen by the down-pour, Lake Tanganyika is at a low level, and thus the reflux is from north to south. The increase of level in the Nile would thus be insignificant.

Mr. Major drew attention to the fact that in the old maps of the Portuguese in which the centre of Africa was laid down almost entirely from native report, Pen Gamitto had joined the two lakes, applying the word *layoa* (i.e. a morass, at times dry and at other times flooded) to the narrows at Uvira, and from this most interesting fact he deduced evidence in favour of Sir Samuel Baker's theory of the continuity of the water of the two great lakes.

ANTIQUARIES (Thursday, January 22).

MR. R. BURCHETT laid before the meeting a series of paper-moulds of the carvings on the stones of New Grange, a tumulus in the county Meath, Ireland, which is one of the most interesting antiquarian remains in Great Britain. Mr. Burchett also exhibited drawings and plans which, as well as the moulds, had been executed by himself during the space of six days that he spent inside the tumulus. Mr. Burchett also read a paper on the subject, consisting of an exposition of all the facts connected with this curious monument, which Dr. Petrie called one of the pyramids of Ireland. This is the first time that New Grange has been treated in a scientific way. The best account hitherto published was laid before this society by Pownall in 1770, and will be found in the second volume of the *Archæologia*. Everything tends to show that New Grange was a burial-mound of very remote antiquity, used by a royal race at that time. It is probably the same as the "Brugh na Boyne" of the *Irish Annals*, and spe-

cially of the *Sencha na Relic*, or *History of the Cemeteries*. Mr. Burchett showed that out of seven carvings figured in Vallancey's *Collectanea*, and purporting to be taken from New Grange, only one had any existence in reality, and that one was very inaccurately figured.

ZOOLOGICAL (January 20).

PROFESSOR NEWTON, V.P., in the chair.—The following papers and letters were read from Dr. O. Finsch, on an apparently new species of Parrot from Western Peru, which was proposed to be called *Psittacula Andicola*; and on a new species of Fruit Pigeon from the Pacific Island of Rapa or Opara: this unique specimen had been sent to the author by Mr. F. W. Hutton, of Otago, New Zealand, after whom it was proposed to name the bird *Ptilonopus Huttoni*,—by Major O. B. St. John, on the locality of the Beatrix Antelope (*Coryx Beatrix*), which was believed to be the south of Muscat,—by Mr. Edward R. Alston, on a new Bat of the genus *Pteropus*, which had been sent to him from Samoa for identification by the Rev. S. J. Whitmee: Mr. Alston proposed to call this species *Pteropus Whitmeei*,—from Mr. A. G. Butler, giving a list of the species of Fulgora, with descriptions of three new species in the collection of the British Museum,—from Mr. H. Druce, on the Lepidopterous Insects collected by Mr. E. Layard, at Chentaboon and Mahconchaisee, Siam, with descriptions of new species.

FINE ART.

An Introduction to the Study and Collection of Ancient Prints. By William Hughes Willshire, M.D. Edin. (Ellis & White.)

THIS is a stout volume of 570 pages, filled with a large mass of details bearing upon the various branches of its professed subject-matter. Dr. Willshire does not claim for it other credit than that of a compilation: it is at least a well-selected and well-arranged compilation, done *con amore* by an expert, and there was room for it. Among previous works in the same field, the one which our author considers as coming nearest to his own undertaking is *The Print Collector*, written by Mr. Mabery about thirty years ago: the same general design has been here followed out. German and French books have also been diligently consulted—especially Bartsch, Nagler, Passavant, and Charles Blanc, and, in our own country, Jackson and Chatto. The leading objects are to condense information for students of the history and processes of Engraving, and to instruct tyros.

Dr. Willshire, besides producing an efficient and serviceable book, replete with interesting particulars, writes a very modest preface, which should conciliate even those who may opine that the volume is not exhaustive of old information, or fertile of new. He does not often urge his own opinions; when he does express them, they are found to be mainly conservative—adhering to well-established and not generally contested views on questions of archaeology or of art, and backward in admitting any counter-theories for which individuals here and there have waged vigorous battle. Thus, for instance, Dr. Willshire is not minded to displace the Buxheim St. Christopher of 1423 from the position usually assigned to it as the first known woodcut bearing a date. He discusses at length the evidence regarding the so-called "Brussels Print" of the Virgin and Child with St. Catherine

and three other female saints, credited by some investigators with the earlier date 1418, and he shows that the arguments in favour of this date are by no means insignificant: but he concludes without adopting it, and indeed without expressing any very distinct opinion of his own on the details. We need hardly say, with regard to the St. Christopher, that he shows no disposition to second the crotchet of the late Mr. Holt, to the effect that this rude though not spiritless performance is an early work of Albert Dürer, and therefore far later in reality than the date engraved upon it. On these and other topics, Dr. Willshire, while cautious and "safe" rather than speculative, is not bigoted, but ready to afford candid consideration to what can be adduced from varying points of view.

This book shows forcibly that nations of Teutonic race, and in especial the Germans, have been the inventors of all the chief forms of ordinary engraving—wood-cutting, chiaroscuro-work, metal-graving, etching, and mezzotint. Such at least is the case, so far as researches reach at present: whether any new facts pointing to a contrary conclusion may at some future time be discovered, can only be matter of guess. The ancients did indeed produce works which are substantially works of engraving; but that they did not print off impressions of these originals is the conviction of all save a very few connoisseurs. Impressions from blocks have been found on textile fabrics of the early Middle Ages; and possibly this form of engraving and printing may belong in the first instance to Italy, and especially to Saracenic Sicily, rather than to Germany. Passavant and Weigel considered that the earliest impression of this kind that had fallen under their observation was proper to the end of the twelfth century; some other examples, however, have been assigned to the eleventh, or even the tenth. But, as regards wood-cutting for printing on paper, Germany, as we have seen, holds, with the St. Christopher of 1423, the first rank in point of definitely marked and fairly sustainable date. This print was found in 1769 in the Chartreuse of Buxheim near Memmingen: where it was executed and imprinted may be open to conjecture, but no doubt in some Teutonic region. Of chiaroscuro engraving, in which different blocks of wood are employed, and printed off in tints, the earliest known example is German, dated 1506, the earliest Italian being of the year 1516. Of the usual engraving on metal (copper) a German specimen—Upper German probably—exists, dated 1446: it represents the Flagellation of Christ. In Italy the earliest ordinary engraver on metal was Baccio Baldini, and nothing is known from his hand dating prior to 1465. Even the story of the proofs from niellos printed off by the Florentine Maso Finiguerra, so well known in Vasari's account, and so continually repeated as "the origin of engraving," only belongs to the year 1450 or thereabouts, so far as can be definitely traced, though some authorities would carry it back as early as 1440, or even earlier. The date of the invention of etching is uncertain, and its locality also. Wenzel von Olmütz, who etched the satirical subject named *Roma Caput Mundi* in 1496, is

possibly entitled to the priority, or else an old Netherlands master, known by a cipher containing a W, or duplicate V. The Italian painter Parmigiano, who has erewhile been called the inventor of etching, is certainly not entitled to that honour. Finally, mezzotint was introduced towards 1640 by Ludwig von Siegen, born at Utrecht of a German father, and a mother of Spanish descent.

There is a certain aesthetic fitness in this forestalling of the Latin races, and especially the Italian, by the Teutonic race, in the fine art of engraving. Craftsmanship goes hand in hand with fine art in all the graving processes. The spirit of the design may be artistic, or even ideal, in the highest degree; but the means of realising it by the burin, the biting-in fluid, or what else, is in some large measure a matter of manual dexterity; something between art and mechanism, fairly to be termed artisanship. The Teutonic races have produced, in all departments, some excellent artists, and many excellent craftsmen; and in the art-craft of engraving they anticipated the Italians, and in some instances excelled all or almost all the Italian practitioners of the work. The Italians, on the other hand, had a higher ideal form of art, and a far larger number of works of high style, which the engraving process could subserve, and to which it was by them applied in course of time: this must be their compensatory pre-eminence.

The only illustration given in Dr. Willshire's book (if we except a few specimens of monograms and cyphers) is a copy of the Buxheim St. Christopher. It must be admitted that the usefulness of the work, and its interest as well, are thus curtailed. A few explanatory engravings would indeed be almost necessary to completeness in such a treatise; something, for instance, to show what is meant by "*la manière criblée*," or the ancient "dotted style," by the "*manière au maillet*," and the like. Perhaps, in a second edition, it might be found advantageous to add some few illustrations of this class, and to divide the present heavy volume into two; the enhanced costliness of the work would be more than recouped to the purchaser. The possible opportunity of a second edition should also be utilised by correcting some far from elegant modes of speech which we find here and there. We give only a very few instances out of several which struck us unpleasantly in reading. "That nothing like a bookbinder's or our napkin and table-cloth press existed before the middle of the fifteenth century, and which was occasionally employed by the chaser on metal and engraver on wood, we cannot believe." "From the greater facility with which certain lines can be cut in soft metal to what they can be in wood, is derived one proof of the metal origin of such prints as we have alluded to." "They have not the exact and true ring of the Italians, save perhaps with one exception." "As this is not likely soon to happen, and as hopes of replica being found are only of the faintest character, there is no consolation to the votary of our pursuit than what he may procure from the best fac-similes." As regards the spelling of names, and such minor points requiring uniformity

of system, we find little to complain of in Dr. Willshire's work. There is, however, one artist much belaboured as to nomenclature by our author, as by many of his predecessors. On page 139 he is named "Jacob Wälch, Jacques de Barbarj;" on page 153, "Jacob Walch, Jacopi di Barbarj;" on page 281, "J. Wälsch;" on page 298, "Jacopo or Jacques di Barbari." Also Dr. Willshire would do well to enquire by what possible process of translation the under-cited Latin sentences can be got to mean that certain early works of art were intended "to assist those who had heard read, or were then reading, the Scriptures." The words quoted are St. Gregory's: "Quod legentibus scriptura, hoc idiotis præstat pictura cernentibus, qui in ipsâ, etiam ignorantes, vident quod sequi debeant: in ipsâ legent qui literas nesciunt. Unde et præcipuè gentibus pro lectione pictura est." We have had to reform, in some details, the punctuation which Dr. Willshire gives to this quotation.

These, however, are all small matters. We can heartily recommend the present treatise to those for whom it is more especially planned, and generally to all, whether learned or unlearned in engravings, who wish for sound and practised guidance; they will find the book both copious and readable. We will conclude by giving a brief extract that summarises Dr. Willshire's views on the main questions which have perplexed or divided connoisseurs:—

"Having referred in the preceding pages to all points in connection with the early history of engraving, deemed necessary so far, it may be well, before we close the chapter, to state in a *résumé* the conclusions at which we may arrive. They are as follow:—1st. During the thirteenth and fourteenth centuries, the use of the graver was common, and managed with great ability, for the purpose of engraving figures and other subjects on plates of metal destined for monumental and sepulchral purposes. The 'point' was used with like efficiency for tracing religious subjects on plates of metal intended for the ornamentation of the binding of books, and for the sides of reliquaries; and mordaunts were employed for the purpose of biting-out ornamental figures on the iron and steel of arms. 2ndly. That it is just possible engraving—in the modern acceptation of the term, i.e. the receiving impressions on parchment or paper, or like material—was practised by the Northern schools, though in a very limited way, at the end of the thirteenth or at the beginning of the fourteenth century; and it is probable that, in Italy, silk and linen fabrics were then imprinted from wooden blocks. 3rdly. That it was not until the beginning of the fifteenth century that engraving became what we may term (in relation to the art and period) well established. 4thly. That probably to Italy is due the credit of first employing wooden blocks for imprinting textile fabrics; and to the Northern schools that of first taking impressions both from wood and metal on parchment and paper. 5thly. That while to the Northern schools we can go back, *quoad* wood-engraving, positively to 1423, and, as respects metal-engraving, to 1446, we cannot reach, in Italy, as regards the first, farther than 1467; and, as relates to the second, 1450-52, nielli-proofs, and 1465 for metal plates engraved for the purpose of being printed from."

W. M. ROSSETTI.

SCHOOLS OF ACTING.

WE use the word "Schools" in its widest and most informal sense, and do not propose to write

for the most part either of the cliques that are accustomed to form themselves round this or that great actor, or of recognised training-places like the Conservatoire at Paris, but of the education in acting—now bad, now indifferent, and now good—which is picked up incidentally in the actual practice of the profession. And this, unhappily, is well-nigh the only "school" open to the actor in England. For we have never had, and do not now seem very near to getting, the endowed and recognised training-places in which an actor may learn before he begins to practise; and the beginner in the career of the theatre has no such good fortune as is within the reach of the beginner in the art of painting. A regular professional education is beyond the reach of the English beginner, unless he go to France; and there indeed, though matters are better, they are not wholly well for him, for the influence of education in Marivaux and Beaumarchais upon subsequent practice in Shakespeare or Sheridan is almost as indirect as is the influence of education in mathematics and logic upon subsequent practice at the Bar or in the Church. But though indirect, it is almost trite to say it may be immensely valuable; and if the English theatre afforded much scope for the display of such genuine and tranquil art as is taught by M. Régnier at the Conservatoire, we should be the first to advise those beginners in acting who could afford it, to go and profit by that careful and scholarly tuition and that semi-public lesson-taking.

But, in the first place, there are probably not more than three theatres in London where the delicate art that M. Régnier teaches to his most promising pupils would be likely to be appreciated; and secondly, until the profession of the stage becomes the first-rate profession that it ought to be, its recruits will not be drawn from a class which can either value or afford a foreign art-education. It is with present conditions that we have to do. What then are our actual, though generally informal, Schools of Acting?

First, there are the professors of elocution who prepare pupils for the stage. Most of them one imagines to be the Turveydrops of the profession: it is their mission, one supposes, to teach good manners as well as acting; and we all know what good manners are when they are learnt at half-a-crown or five shillings the lesson—not the easy manners of our own generation, but the more artificial manners of the last, hanging on their learners like a burden, and bringing self-consciousness in their train. There are of course exceptions to the general rule. One or two English players have taught extremely well all that they can teach of their profession. But in the main, of teachers of elocution who prepare their pupils for the stage in dull back drawing-rooms of Great Adullam Street, Mesopotamia, and kindred quarters, it may be safely said that they ruin all the sensitive and clever pupils who do not run away from them, and that their greatest triumph is achieved when they have turned a grocer's apprentice into a third-rate villain of melodrama. Most actors who do not belong to families with a traditional place upon the stage have had something to do with these teachers; but the shorter their acquaintance has been with them, the better it has been for their art; and as things are at present, we are almost inclined to congratulate those ladies whose friends have gone to the managers, audaciously, with a cheque for a hundred pounds, and who, thanks to these golden keys, have burst suddenly, without other preparation than that of the dressmaker and the singing-master, upon the stage devoted to the "break-downs" of burlesque. For these ladies, if they have brains as well as good looks—which is generally the case, in a world where there is nothing but appearance to trust to—can not only, like the ideal artist in Mr. Browning's poem, avoid conventional faults through pure ignorance of them, but can learn to rise through suggestions of their own, that are prompted by the experience of prac-

tice. Many people are virtuously indignant at the use of these golden keys to the possession of the stage; but actors and actresses find their own level presently; and it may seriously be questioned whether the public is a loser by a process which reduces to little or nothing the services of the teacher of elocution and good manners.

But the more habitual Schools amongst us are the schools of professional work in town and in the provinces. (Let us for once adopt the actor's favourite word, and speak of Liverpool and Bognor, indiscriminately, as "the provinces.") Each has its advantages, and each its drawbacks. But the ordinary schools of town and country—that is, the ordinary theatres of both—have this in common: that the learners who come to them in the usual course begin at the bottom of the class, instead of jumping to the top, thanks to the payment of a fee. The characteristic fault of the provincial school is hurry: that of the London school, monotony. The advantage of the provincial school is its variety; but we can hardly add that that of the London school is its thoroughness, because though constant change effectually prevents thoroughness, constant repetition of one thing does not ensure it; and we have seen a conception, originally inartistic, carried out as badly on the hundredth night as on the first. What is in favour of the beginner who can make his *début* in London, is, that unless fate is peculiarly against him, he will act in the company of about two somewhat gifted artists—a man and a woman—and if he is very wise he can generally learn something from them; but then he need not be very foolish to learn too much from them, and so must always run the risk (while gifted actors are few) of falling into imitation, not of their perseverance and painstaking and general culture, but of their manner or mannerism. Again, the long run which might be very much in his favour, if the performance were elaborately and delicately studied, is as a matter of fact less in his favour than it should be, because not only is it but rarely the result of special and artistic care in preparation, but during its course (say, roughly speaking, after the one-hundredth night) the performance itself deteriorates: becoming either more purely mechanical or more exaggerated. In a word, it quite loses for the young actor its educational power. There was just a touch of this—only a touch of it, but it is worth citing—at one of the best of our theatres (the Vaudeville) during the acting of the *School for Scandal*. The excellence of the acting—the combination of freshness and delicacy—was maintained uncommonly long; but on the last night of its performance (that was about the four hundredth) a change was visible. Much was played that night with remarkable vigour and seeming spontaneity, but bits of comedy were tending to become farcical, and even a performance that had long been admirable was at last, at some points, beginning to suffer. Again, a run of such immense duration tends to make of a player who has not some years of experience at his back, to enable him to withstand the influence, nothing else but the character he has so long been representing; and sometimes even an actor of established position is a loser, artistically, by the commercial success. Mr. Henry Neville, for instance, took a long time to throw off the Ticket-of-leave man. The ghost of that injured workman haunted many a subsequent performance.

On the whole, then, a young actor or actress does best to begin in the country, especially if the place that is selected has a character for being theatrical. The dangers here are of incomplete preparation, overwork without even the consolation of knowing that one's work is good, and the appeal to an audience presumably lower in intelligence than that of a West-end theatre. Dangers sufficient, it may be said. Yet we are not disposed to withdraw the opinion that the country school is on the whole the best, for in the first place the evil of incomplete preparation (the first of our

three dangers) is not so great to a beginner as it seems to be; because to a beginner even the fullest preparation would still be incomplete—one's conception of a part at twenty is not one's conception of it at twenty-five or thirty. One is *sketchy* at twenty years old, not because one *would* not be, but because one *cannot* be finished. Secondly, the overwork from constant changes, in the country, is not so bad as the enforced idleness from endless "runs" in town. Overwork is just the test which serious artists have to stand, in literature, in painting, and on the stage. The capacity to stand it is one of the qualifications for artistic success. It accomplishes the process of selection, in a cruel but, under present conditions, somewhat necessary way; and as it was well that the weakly children of an old-world State should die of neglect, leaving the Future to the stronger ones, so it is perhaps well—since it seems that only overwork can bring artistic success—that the feebler children of Art should leave a clear field for the vigorous. This at least is the consolation one may offer to the beginner in acting, who is about to grapple with the hardships of a provincial career. And then, the last of our three dangers—that of appealing to an audience less intelligent than that of the West-end—is often a danger only in name. The audience at Bath, if less demonstrative, is probably as intelligent as that which assembles at the National Theatre, to applaud lime-light and Shakespeare, and to refresh itself after this exertion with the last sensation-dancer. So, on the whole, he who chooses the provinces, for learning, but not for ultimate practice, probably does well. He does wisely if he is not ambitious to take the lead for many a year. "For," said a Frenchman who well knew, "it takes ten years to make an actor of comedy." Time is the best school. And in France it is not often admitted that an actress is great, until it is likewise admitted that she has ceased to be good-looking.

FREDERICK WEDMORE.

CROTCH'S PALESTINE.

DR. WILLIAM CROTCH, for many years Professor of Music in the University of Oxford, though he died so comparatively recently as 1847—within two months after Mendelssohn—belongs much more to the past than to the present age. Born in the year 1775, his most important works were produced early in the present century; and the larger number of them have shared the fate of many other excellent compositions, and been consigned to an oblivion which they certainly did not deserve. A few of his anthems and other church pieces are occasionally to be heard in our cathedrals; but to how large an extent his principal works have been neglected may be judged from the fact that, until yesterday week, *Palestine* had not been heard in London for upwards of forty-five years. Its revival, therefore, by the Sacred Harmonic Society was an event of no ordinary musical interest, and a somewhat detailed account of the oratorio may probably be acceptable to the readers of the ACADEMY.

The text of *Palestine* was selected by the composer from Bishop Heber's poem of the same name. The choice was a curious rather than a happy one; for the whole tone of the poem is sententious and didactic rather than lyrical; and the uniform employment of the decasyllabic verse gives a monotony of rhythm calculated to fetter rather than assist the composer. But Dr. Crotch, like his great predecessor and model, Handel, would seem to have been by no means fastidious as to the quality of his libretto; otherwise we can hardly conceive of his selecting for the words of a song such lines as the following:—

"For thee his ivory load Behemoth bore,
And far Sofala teem'd with golden ore;
Thine all the arts that wait on wealth's increase,
Or bask and wanton in the beam of peace,
When Tiber slept beneath the cypress gloom,
And silence held the lonely woods of Rome;

Or o'er to Greece the builder's skill was known,
Or the light chisel brush'd the Parian stone;
Yet here fair Science nurs'd her infant fire,
Fann'd by the artist aid of friendly Tyre;
Then tower'd the palace, then in awful state
The Temple reard its everlasting gate!"

Whatever literary merit these and similar passages which might be quoted may possess, they have no more musical inspiration in them than the multiplication table; and it is not surprising that the learned Doctor in setting such words should have been unable to soar above mediocrity. The only wonder is that he could set them at all!

In an interesting preface affixed to the book of the words, and written by Mr. W. H. Husk, the librarian of the Sacred Harmonic Society, he states that the composition of *Palestine* was finished on November 5, 1811, and that the work was first performed in the following April. In order justly to estimate the music, it is necessary to look back for a moment to the state of the art at the time of its appearance. Haydn's *Creation* had a few years previously made its way to England; Mozart's music was more or less known; but Beethoven, who, while Crotch was employed on *Palestine*, was working at his grand Trio in B flat, was still to a large extent "the great uncomprehended;" Weber was comparatively unknown—his *Freischütz*, which suddenly raised him into the first rank among composers, not being produced till ten years later; while Mendelssohn was almost an infant in arms. Handel's music formed the staple of English concert-programmes; and it is on Handel's style that Dr. Crotch's is distinctly modelled. It must not, however, be imagined that the music of *Palestine* is a mere plagiarism or reproduction of Handel's oratorios. It might rather be described as a modernisation of the Handelian spirit. Reminiscences are, no doubt, in places to be met with; as, for example, in the opening chorus, "Reft of thy sons," which has a strong flavour of "And the children of Israel sighed" in *Israel in Egypt*, or again in the very fine chorus "Not when fierce conquest," which in parts recalls the second movement of "When his loud voice" in *Jephthah*; but these are exceptions, and in general Crotch's ideas are his own, though the forms into which he has thrown them are unmistakably Handel's.

By far the best portion of the work (as with Crotch's great prototype) is the choral writing. This is always broad and effective, and sometimes very bold in its modulations. The most remarkable movement of the whole oratorio is the chorus "Let Sinai tell"—a piece of which Handel himself need not have been ashamed, which in the daring of its enharmonic transitions is, for the period at which it was written, really astonishing. Nowadays composers would think nothing of such a series of modulations as those which are to be found here—from F to E minor, thence to E flat minor, and with one bold step to D major—but sixty years ago the passage in question must have made the old theorists open their eyes!

Among other really fine specimens of choral writing may be named "O happy once," "Not when fierce conquest," the magnificent finale to the first part, "Then the harp awoke," the no less fine chorus in the second part, "Not vain their hope," and the concluding movement of the work—all more or less Handelian (generally "more"), yet with sufficient individuality to save them from the reproach of being mere servile copies. Very fine, too, and breathing a more modern spirit, are the chorus "Be dark, thou sun," and the highly original solo and chorus "In frantic converse," another curious example of Bishop Heber's muse, of which the words really deserve quotation:—

"In frantic converse with the mournful wind,
There oft the houseless Santon rests reclined;
Strange shapes he views, and drinks with wond'ring
ears

The voices of the dead, and songs of other years."
These most unlyrical words are set by Dr. Crotch to music of great beauty, the effect of the chorus

echoing *pianissimo* the words "the voices of the dead" being both novel and striking. Before leaving the choruses a word should be said as to the fugal writing. Of this there are many and excellent examples, and the learned Oxford Professor shows in this branch of his art a mastery and freedom of treatment which many modern composers might envy.

The solo music is, on the whole, far inferior to the choral portion of the work. It is to a large extent old-fashioned both in form and spirit, though a few numbers are exceedingly good. The best, undoubtedly, is the charmingly melodious quartett "Lo, star-led chiefs," which at one time used to be a great favourite at concerts, though of late years it has been seldom if ever heard in public. The airs, "Ye guardian saints," "Are these his limbs," and "No more your thirsty rocks," are also favourable specimens of their composer's powers; but many of the songs are, to use plain language, simply tedious.

Dr. Crotch's treatment of the orchestra is, for its age, very remarkable. He had probably heard Haydn's "Salomon" symphonies, and the *Creation* might also have furnished him with some hints in scoring; but his method of using his instruments is hardly Haydnish—it is as if it were a transition from the old Handelian orchestration to the modern style of tone-colouring. His employment of the wind instruments, especially the brass, is always happy, and frequently very brilliant.

So much has been said about the music itself, that the briefest possible record of the performance must suffice. The rendering of the unfamiliar music, both by soloists, chorus, and orchestra, was a highly creditable one. The solo parts were in the hands of Madame Sherrington, Miss Ellen Horne, Miss Julia Elton, Mr. Cummings, and Signor Agnesi—all artists of established reputation. The chorus was excellent; long practice of Handel's music having no doubt rendered *Palestine* easier to them than under other conditions it would have been. The oratorio was conducted by Sir Michael Costa with his well-known skill.

The production of *Palestine*, and the promise of Macfarren's *St. John the Baptist*, may be taken as a hopeful indication that the Sacred Harmonic Society has abandoned the musically conservative policy with which it has so long been credited. All musicians will join in the hope that it may go on and prosper in the new course upon which it has entered.

NOTES AND NEWS.

WE are happy to be able to state that the collection of Arabic calligraphy made by the late Mr. Frederick Ayrton, of Cairo, has been accepted for public exhibition by the South Kensington Museum. It will be remembered that the collection was refused by the trustees of the British Museum, possibly because Mr. Acton Smee Ayrton, M.P., one of the trustees, was ashamed to let the public know of his having had a brother a devoted student of Science and Art. It was then offered to the India Office; but the authorities refused to have anything to do with the public exhibition of the collection. As soon as this was known, the South Kensington Museum at once came forward, and in the handsomest and most liberal manner undertook to arrange the collection in one of their new galleries. The public will now have an opportunity of judging how ill advised the trustees of the British Museum were in refusing Mr. Ayrton's bequest. And the public also will be gratified to find that, although Mr. Cole's connection with the South Kensington Museum has ceased, his spirit still animates his policy—which, in a word, was to serve the public as a servant his master.

THE question of the best method of conducting prolonged examinations of the sea's bottom, by diving and other means, is at present engaging some attention in Holland, where the subject acquires direct practical importance from the well-

known fact that, amongst other stores, the *Zuider-Zee* still holds embedded in its sand the entire cargo of the ship *Lutine*, which foundered there about 100 years ago, burying with it ingots and bars valued at upwards of 15 millions of gulden. The discussion deserves the notice of all lovers of art who may put faith in the old and popular tradition of the Roman populace, according to which countless treasures lie buried beneath the yellow sands of the Tiber; amongst other relics of the past it is believed to contain the seven-armed candlestick, brought by Titus from the Temple of Jerusalem. Who shall say that there may not be some truth in these tales, crusted over as they are with the faith of centuries? At any rate, we would hope that if the Roman municipality are really in earnest about the canalization of the river, they will not disregard the appeal made to them more than a year ago by the Committee for the exploration of the bed of the stream, which numbered among its members the names of Odescalchi, Helbig, Vitelleschi, Story, Giordano, and others eminent in art and archaeology. The question of the canalization of the Tiber was under serious consideration thirty years ago, when Mr. Doyle, an Englishman, offered to undertake it at his own risk; but when the works had been planned and everything was in train for commencing operations, the Papal Government threw difficulties in the way, and the scheme had to be abandoned.

THE well-known Danish archaeologist, Professor J. L. Ussing, has sent us a charming little volume of antiquarian studies made during a recent journey in the south of Europe (*Fra en Rejse*, Hægel) and a more strictly scientific treatise on the Stoa of King Attalus in Athens, reprinted from the *Proceedings of the Danish Society of Sciences*. Both are written with the combined elegance and learning that mark all Professor Ussing's productions.

WE hear that Professor Brunn, of Munich, is prepared with an entirely new interpretation of the sculptures of the Parthenon, which he intends to publish soon. Professor Brunn also inclines to regard the famous bronze head acquired by the British Museum last year as representing Artemis, and not Aphrodite as first suggested. The two small locks on the brow remind him of the Pourtales' head of Apollo (in marble in the British Museum), and he thinks that the band round the head may have served for the attachment of a large knot of hair as on the marble head.

WE learn from the *Allgemeine Zeitung* that Nassi Pascha, Governor of the Dardanelles, has ordered a domiciliary search to be made in the villages Kalafatli and Jenischer, to which the workmen employed by Dr. Schliemann in his explorations belong. A large number of gold earrings, necklaces, bracelets, and other ornaments were found, which it would appear the workpeople had stolen, while engaged under Dr. Schliemann's orders, with the intention either of melting them down or converting them into trinkets for their female relatives and friends. The Government has confiscated the property found in the villages, and put the suspected men under arrest. Dr. Schliemann has had the inscriptions on the objects found by him photographed for the use of Professor Max Müller. He writes that the photographs are not so successful as they might be, and that the one on the vase has come out worst of all, owing to the yellow colour of the latter; but the vase has been taken in two positions, and the inscription, thinks Dr. Schliemann, can be detected with a magnifying glass. M. Burnouf, who writes a favourable article upon Dr. Schliemann's discoveries in the first number of the *Revue des Deux Mondes* for January, has had the great advantage of visiting and examining the collection itself "more than a hundred times." M. Eugène Piot, from Paris, has also visited the collection. We await the verdict of Mr. Newton on his return from Athens.

THE formation of the Musée des Copies last year in the Palais de l'Industrie gave rise to much discussion and dissension. It seemed a good idea certainly to unite in one exhibition copies of all the great pictures of the world; but unfortunately these copies were extremely unequal in merit, and some, there is no doubt, were atrocious libels on the old masters they were supposed to represent. French artists were very indignant on the subject, the more so because these copies took up space in the Palais de l'Industrie that they needed for the exhibition of their own works. This will not be the case at the next salon, for the best of the copies of the Musée are at once to be removed to the Ecole des Beaux-Arts, where they will serve for the instruction of the pupils, and will add to the number already collected there, executed by the scholars at Rome. The copies that remain, after the best are picked out for the Ecole des Beaux-Arts, are to be transported to provincial museums. Possibly even these establishments may not in all cases care to receive the convicts.

A CATALOGUE of the Musée des Copies, reprinted from the *Journal des Débats*, is commenced in the *Chronique* of January 3. There has been no official catalogue published.

THE catalogue of the Bibliothèque des Beaux-Arts is now finished, and will shortly be published. It contains, it is said, no less than 3,000 numbers.

AN exhibition of water-colour drawings is now open at the Cercle de l'Union Artistique. It is the first time, we believe, that an exhibition of water-colours exclusively has been attempted in France. It has had a great success. Among the exhibitors are MM. Th. Rousseau, Isabey, Lami, Vibert, Leloir, Berne-Bellecour, Detaille, and G. Doré.

A SPACE will be allotted in the Fine Art Galleries of the International Exhibition of this year for the exhibition of works of industrial art designed or executed by the students of the Schools of Art in the United Kingdom. The works may be in any material and executed at any period, but they must not have been exhibited before. The Society of Arts will award medals to those whose works have the highest artistic merit.

THE French journal *La Renaissance*, which apparently expired a little while ago, was, it seems, only in a trance, and has justified its title by coming to life again and being more vivacious than ever. M. Emile Blémont remains editor. It will contain henceforward twelve pages instead of eight.

A STATUE of Jeanne d'Arc is to be erected in Paris on the Place de Rivoli, Rue de Rivoli, in the axis of the arcades. This site it appears was the scene of one of the most remarkable exploits of the Maid of Orleans. It was here, at the Butte de Saint Roche, on September 8, 1429, during the siege of Paris by Charles VII., that she headed a most courageous though unsuccessful assault. "Elle ne voulait partir et se retirer en aucune manière," says the chronicler who describes this feat of arms; "il fallut que le duc d'Alençon l'allât quérir et la ramenât lui-même." The commission for this statue has been given by the French Government to M. Frémiet, in furtherance of the project mentioned in a previous number of the ACADEMY, of erecting monuments and statues in the public places and squares in Paris, to signalise memorable events in the history of the city.

PARIS seems to have been seized with a fit of heroine worship. Jeanne d'Arc is the heroine à la mode at the present time. While her history is being represented at the theatre with wonderful effect, and M. Frémiet is preparing the statue for the Place de Rivoli, M. O'Reilly publishes a really important contribution to our knowledge of the courageous maid, whose condemnation justly lies more heavily on the consciences of her countrymen than on ours. M. O'Reilly has translated into French *The Two Trials of Jeanne d'Arc*—that,

namely, of her condemnation, and that of her rehabilitation, and has added to the subject by the publication of several newly discovered documents. It appears that from a pecuniary point of view Jeanne d'Arc had no cause to complain of Charles VII., for in one of her examinations she valued her possessions at twelve thousand crowns (*écus*), which sum her brothers inherited.

M. PAUL DUBOIS, a sculptor who gained the grande médaille d'honneur in 1867, for his "Chanteur florentin," has been appointed joint conservator of the Luxembourg. M. de Chennevières still keeps the chief direction.

M. BALTARD VICTOR, a distinguished French architect, died a short time since in Paris at the age of sixty-nine. One of his last works, the *Chronique* informs us, was a design for the cradle of the Prince Imperial, commissioned by the City of Paris.

THE *Times* "understands" that Messrs. Christie, Manson, & Wood are making arrangements for the concluding sales of Turner's collection of engravings. The first sale of this year will take place early in March, when rare and early proofs of such well-known works as "Ancient Italy," "Modern Italy," "Carthage," "Mercury and Argus," "Waterloo," "Fishing Boats off Calais," and others of equal fame, will be offered to the public. On many of these there are notes written by Turner himself, which will no doubt greatly enhance the prices they will fetch. The last sale of this vast collection is fixed for the latter end of May. It will comprise the whole of the series of "England and Wales" in the "Columbia," "Imperial," and "Quarto" editions.

A NEW numismatic journal, the *Annales de Numismatique*, is about to be started in France, under the able direction of MM. F. de Saulcy, Anatole de Barthélemy, and Eugène Hucher, with the intention of filling the place left vacant by the now-discontinued *Revue Numismatique*; although, in the event of the *Revue* recommencing publication, the editors of the *Annales* expect to retain for themselves an independent position by the prominent place which they will give to the coinage of France. As soon as 200 subscribers have sent in their names, the first fasciculus of the *Annales de Numismatique* will be issued, and the publication will be continued every two months. It is proposed that each two-monthly part shall contain about five sheets (8vo), so that the yearly volume will consist of about 500 pages. A special feature will be the use of the Comte process for illustration, by which the editors will be enabled to give duplicate plates (at a nominal price) to contributors, who will thus be able to use the same illustrations if they describe the same coins subsequently elsewhere. The annual subscription in France is 20 fr., but in England the carriage-fee must be added, 2 fr. 50 c. Messrs. Trübner have undertaken to receive the English subscriptions.

We may be sure that, stamped with the high guarantee of M. de Saulcy and his colleagues, the *Annales de Numismatique* will merit the warmest support from all archaeologists and numismatists.

MR. F. LATOUR TOMLINE's *Committed for Trial*—the after-piece produced at the Globe Theatre on Saturday night—is rather wittier, and decidedly broader, than most burlesques, and accordingly will not fail to have a certain amount of success. Those who have seen the *Reveillon* at the Holborn Theatre, or elsewhere, will hardly need to be told, as the playbill tells them, that the "piece of absurdity" now presented is suggested by something in that comic drama; nor will those who have not seen the *Reveillon* need to be told, when witnessing the performance of this piece at the Globe, that its source is French, and French of the Palais Royal. How a certain gentleman of great outward respectability, being committed for trial for some offence against our long-suffering police force, was let out on bail—how he proposed

to himself to dine well on the last night of his freedom, seeing that it was impossible to say "how he should dine to-morrow"—how he received an invitation to a bachelor-party, and went to it, leaving his dinner to be eaten by his wife and the old *fiancé* to whom she has been faithless—how the police came to summon him away before the expected moment, and would not believe that the gentleman dining with the lady was other than the lady's husband and their proper prisoner—how in due time the husband, merry from his bachelor-party, surrendered to his bail, and found the old adorer of his wife in the cell destined for himself—all this, and more than this, is told briskly enough: the dialogue is smart, but not brilliant, and the acting is fairly good. Perhaps it is a thing to be regretted that the best Touchstone on our stage—Mr. Compton—should be engaged in the representation of a much-corrupted police-sergeant; perhaps, on the other hand, it is a thing to be rejoiced in, that the corrupted police-sergeant should find so popular a representative as Mr. Compton. But the main interest of the piece lies in the performance of Mr. Arthur Cecil, who in it makes his first appearance on the regular stage; he has been known for some time at the Gallery of Illustration. Mr. Arthur Cecil acts with keen intelligence and great ease. He has the variety of facial expression common to the better class of "entertainers"—Levassor had it very notably, as many readers will remember. The part which Mr. Cecil plays in *Committed for Trial* is one that would suit old M. Ravel excellently. It may, therefore, easily be inferred that it is a good part of its kind; and it is played to the satisfaction of the audience. Mr. Cecil will doubtless eventually show himself in a character more worthy of serious criticism. Meantime we have only to chronicle a successful first appearance. Mr. Montague and Miss Carlotta Addison somewhat strengthen the cast of the piece; but Miss Addison has very little to do, and Mr. Montague's part is such as to confirm the wisdom of the adapter in styling his work "a piece of absurdity."

Good measure, pressed down, and running over, falls to the lot of visitors to the Olympic, where *The School for Intrigue*, still followed by *Richelieu Re-dressed*, with a political caricature of the author of last Saturday's "prolix narrative," is just now preceded by *All that Glitters is not Gold*. This last piece is a little comedy which has held its place upon the stage for a good many years. Though old, it appears hale; nor is its vigour likely to be impaired so long as it is acted, as now at the Olympic, by Miss Fowler, Miss Marion Terry, Mr. Henry Neville, and Mr. Anson.

Le Barbier de Seville has been revived at the Théâtre Français, and the accomplished critic of one of the chief Parisian journals has devoted a column to prove that Beaumarchais could not have written Rossini's music, nor Rossini Beaumarchais' comedy. Furthermore, it is remarked—and this is more to the purpose—that the interpretation of the character of Bartholo by M. Talbot has something of novelty in it. Bartholo, as Talbot understands him, is not absolutely one of those old men who may be ridiculed with impunity. "Il échappe en quelque sorte au ridicule de son amour pour Rosine par une certaine énergie que l'âge n'a pu éteindre. L'œil est vif et dur, et la voix vibrante." Something of this new rendering of the character may be due to the actor's intention, but more, we should imagine, to his necessities. The representation accords with the *physique* of M. Talbot.

At the Théâtre de Cluny they have revived *Le Crime de Faverne*, that old Frédéric Lemaître—though the shadow of the Frédéric Lemaître of thirty years ago—may play his accustomed part. As the name denotes, the piece is full of horrors, and by the time the story ends most of the ten commandments have been broken several times. Lemaître, though a broken man, retains much of

the old intelligence and fire, so that possibly on this account the piece may be still worth seeing. It is mounted with care and taste, and the company is at least adequate to the performance of the play.

WHEN M. Sardou's *Merveilleuses* is withdrawn from the Théâtre des Variétés, there will be a revival of *Le Chapeau de Paille*, an adaptation of which, under the name of *The Wedding March*, is being played at the present moment at the Court Theatre in Sloane Square. It is said that the actor Dupuis requires rest.

THE newly-decorated "Stadt," or Town Theatre, at Vienna, inaugurated its season with Laube's *Demetrius*, one of the most successful of the twenty-five novelties which it has exhibited during the year 1873. The "Carl Theater," which supplies Vienna with high-pressure French sensational drama, has maintained its character for novelty and grand scenic decoration. Among the thirty-four new pieces put on the stage, those by Offenbach, Rosen, and Bittner were the favourites; while at the "Wien Theater," under the Geistinger-Fleiner direction, Offenbach's *Theater-Prinzessin* and *Wilderer* rose highest in favour amongst the new pieces of the season. Taken as a whole, the past year may be regarded as one of more than average importance.

IN Majolati, the birthplace of Spontini, that composer's centenary is to be celebrated in the course of the present year.

WAGNER's *Meistersinger* has just been produced at Cologne for the first time—"with a success," says the *Musikalisches Wochenblatt*, "which hardly the most sanguine friends of the master could have hoped."

IN Munich, the same composer's *Tristan und Isolde* is to be revived in February, under the direction of Capellmeister Levi.

RHEINBERGER's new opera, *Des Thürmer's Töchterlein*, was produced at Gratz on the 7th instant. The music is well spoken of.

TWENTY-FOUR new operas were produced in Italy during the past year.

THE *Neue Zeitschrift für Musik*, in a biography of the late singer Carl Wallenreiter, who died last October, having been insane for some time previously, mentions the curious fact that during his last illness he invariably sang, instead of speaking, even at times in which he was conscious of what was around him.

KIEL's oratorio *Christus* was to be performed at Berlin for the first time on Monday last, by the members of the Sternscher Gesangverein.

GRÜCK's *Alceste* is to be revived at Berlin next month, after a lapse of more than twenty years.

THE last number of the *Musikalisches Wochenblatt* gives two or three interesting items of intelligence relating to Richard Wagner. In reply to numerous enquiries, it states that the vocal score of the *Götterdämmerung* (the fourth and concluding portion of the great tetralogy *Der Ring des Nibelungen*, which is to be performed next year at Bayreuth) will appear in the course of the present year. The pianoforte arrangement will be by Carl Klindworth, who has already edited the previous parts of the work in such a masterly manner. The same paper also mentions a report from Cairo, to the effect that the Viceroy of Egypt has asked Wagner if he is disposed to write and set to music for the opera at Cairo a libretto, the action of which shall take place in Egypt, the subject-matter to be taken from the Old Testament. The terms offered are said to be munificent.

WE understand that Messrs. Macmillan are about to publish a *Dictionary of Music*, and thus supply a long-felt want in English literature. The work is to be edited by Mr. George Grove, whose name will be a sufficient guarantee for its excellence. We believe Mr. Grove has already

received a promise of assistance from several of our best-known and most competent writers on musical subjects. Not only historical but theoretical and practical matters are included in the scheme.

WE learn from the *Cologne Gazette* (January 17) that Madame Lina Schneider had announced her intention of taking for the subject of her public recitation, on Monday, January 19, the *Antigone* of Sophocles, according to Professor Donner's translation. She was to be assisted by her husband, Professor Schneider, and by Herr Behr, in the parts of Creon, Haemon, &c., while a pupil of her own was to give the parts of Ismene and Eurydice, Madame Schneider herself taking the remaining characters. Mendelssohn's choruses to the *Antigone* are to be given as the musical accompaniment to the recitation, and are to be under the direction of Herr Weber.

POSTSCRIPT.

ROYAL INSTITUTION (Friday, Jan. 30).

SIR JULIUS BENEDICT, the lecturer last evening, is universally popular in the concert-room, though less well-known as a lecturer on the history of music. A considerable gathering of concert-goers, however, attended his address on "Weber and his Times." The main theoretical interest of the lecture consisted in the attempt to show that Weber was the real originator of the modern school of music, which has found its culmination in Wagner. According to Sir Julius, he was the first to adapt musical theme to the expression of definite poetical ideas and dramatic character, and his opposition as a "Romanticist" to the old classical school of Cherubini surrounded the development of his genius with intrigues and hostility on the part both of musicians and the public press. The father, along with Schubert, of the German "Lied," his compositions for the pianoforte approached nearest to Beethoven, and were adopted by Mendelssohn as models. The remainder of the lecture was mainly occupied with a sympathetic sketch of Weber's character and surroundings, his meeting with Beethoven in Vienna, his last journey to London, and his energetic battling at the last with the fatal disease which carried him off; and included some interesting personal experiences of the lecturer in connection with the preparations for the first performance of Weber's most important operas.

THE *Athenaeum* announces that the death of Mr. Adam Black, the publisher, has just taken place in his 90th year.

A STATUE of St. Francis, by the great Spanish master, Alonso Cano, has been for more than ten years rigorously shut up in the treasury of the Cathedral of Toledo, and no one has been permitted to see it. Even the Emperor of Brazil, when he recently visited Spain, could not, it is said, get a sight of this famous statue, which is reckoned one of Cano's finest works in sculpture. The original being thus hidden (it is to be hoped it has not disappeared, as sometimes happens with valuable works of art in the care of the Church), it may be interesting to some of our readers to learn that an excellent copy of it of half life-size painted in terracotta may be purchased in Paris. It is to be seen in M. Goupil's shop-window.

A CO-OPERATIVE society of artists has been formed in Paris. It has for its objects: 1st. The organisation of open exhibitions, without jury or honorary awards, at which each member may exhibit his works. 2nd. The sale of the said works; and 3rd. The publication, as soon as possible, of a journal relating extensively to the arts. The society is composed of painters, sculptors, engravers, and lithographers. Its capital is variable, its profits arising from the entries to the exhibitions, commissions on the sale of the pictures, and any other receipts. These profits, after the payment of expenses, will be divided among members.

SATURDAY, FEBRUARY 7, 1874.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

LITERATURE.

Lancashire Worthies. By Francis Espinasse. (London: Simpkin, Marshall, & Co.; Manchester: Abel Heywood & Son, 1874.)

THIS is a title which gives rise to pleasant anticipations, for the county of the Red Rose has always been noticeable for the intensity and rude vigour of its public life, and its development has occasioned widely diverse social and intellectual phenomena. Lancashire, remarkable for its Puritanism and Nonconformity, has also been the stronghold of Catholicism. It is not a century since the mob burnt the house of a Manchester man who professed the doctrines now called Liberalism; it is even less since it required considerable personal courage to wear the "white hat," the symbol of Radicalism, hateful to the powers that were. From this hotbed of Jacobite Conservatism sprang the "Manchester School." Lancashire has also honourably distinguished herself in science, and has special reason to be proud of the long list of artisan students whom she has produced. Add to this that the progress of her commerce and manufactures is closely connected with the general progress of industrial science, and has proceeded at a rate hitherto unexampled, and it will be manifest that he who sits down to record the lives of Lancashire Worthies has a wide and varied field of labour before him.

In the present case Mr. Espinasse has not attempted to exhaust his subject. His volume comprises only thirteen lives, and whether it is to be regarded as a complete work or as a first series, is not stated. We hope that its reception by the public may be such as to induce its author to continue his labours. Mr. Espinasse writes with a care and sobriety which form an agreeable contrast to the provincial vulgarity which sometimes marks the biographer of county worthies. There is no disposition to exalt persons because they were connected with Lancashire, but an evident desire to ascertain the exact facts of each case. He also shows a laudable anxiety to give credit to each writer from whom he quotes. Indeed this is done with a minuteness which by its liberal use of inverted commas, gives an appearance of mosaic work to some portions of the text.

The first of the "Lancashire Worthies" whose deeds are here recorded, is Thomas, the first Stanley Earl of Derby. The Stanley motto of *Sans changer* was little justified in his case; his portrait, which is very carefully drawn, is that of a Trimmer, "Ever strong upon the stronger side." "Each change of dynasty, or extrusion of an occupant of the throne by a claimant added to his possessions and power." The Stanley power was so great that it was not wise to scan too closely the actions of a nobleman who could bring 10,000 men into the field. His support was

courted by each of the factions by which England was then torn. He managed to gain advantages from both. When Warwick the King-maker went to Manchester to ask his aid against Edward IV., it was refused. Yet Warwick was accompanied by Lord Stanley to the Tower " (6th October, 1470), whence Henry was brought 'with great pomp, apparelled in a long gown of blue velvet, through the streets of London to St. Paul's.'" When this puppet king "died," and Edward returned to power, Lord Stanley was in greater favour than ever. Much more interesting than this political Vicar of Bray is his second wife the Lady Margaret Beaufort, mother of Henry VII., whose memory is preserved in the benefactions with which she enriched the universities of Oxford and Cambridge. Her noble character was strongly tinged with the spirit of the age. With an ascetic disposition which made of her marriage with Lord Derby a simple formality, she could yet take sufficient interest in the pomps and vanities of the world to compose two elaborate ordinances of court ceremonial, in one of which she forbids the chin-cloth, called a *Barbe*, to be used by any lady under the rank of baroness. Not the least of her claims to honour and respect is that she was the patroness of Caxton and Wynchyn de Worde.

Hugh Oldham, the founder of the Grammar School at Manchester, owed his success in life in no small degree to the friendship and patronage of the Countess of Derby. "In Crumpsall," says Mr. Espinasse, "there stands or lately stood, an ancient house, called 'Oldham's Tenement,' in which according to tradition, the bishop was born." The house, we may add, stood upon an estate which belonged to the Manchester Board of Guardians, who were anxious to repair and keep in good preservation the Bishop's cottage; "but the roof, mainwalls, and timbers were so ruinous that the structure fell under the hands which would have preserved it." (See the privately printed *Memorials of Oldham's Tenement*, by Thomas Baker. Manchester, 1864. Fol.)

Mr. Espinasse quotes from Hollingworth a passage which states that about the year of Oldham's death there were "three famous clothiers living in the north country, viz.:—Cuthbert of Kendal, Hodgkins of Halifax, and Martin Brian (some say Byrom) of Manchester." This passage has often been quoted, but it has not been noticed that Hollingworth speaks very doubtfully of the matter, and in fact the statement is simply copied from Delony's *Pleasant Historie of Thomas of Reading*, 1595, not a good source to go to for genuine history. Delony places Martin Brian in the reign of Henry I., and says that he gave a "masse of money" to found a grammar school at Manchester. This is all purely mythical: Manchester had certainly no grammar school until Oldham, who had then become Bishop of Exeter, founded one to remedy the want of education caused by the "great poverty of the common people," and the lack of "schoolmaster and usher there, so that the children in the same country having pregnant wit, have been most part brought up rudely and idly, and not in virtue, cunning, erudition, literature, and in good manners." The provisions

made for the government of the school were wise and liberal in their nature. "Cock-penny," "Victor-penny," "Potation-penny," were alike prohibited. Oldham was no friend of monks, and orders that the master shall "be no religious man," a clause directed not against piety but monasticism. There appears also to have been a monitorial system applied to the teaching of "all infants that shall come there to learn their A B C primer, and forth till they begin grammar." Oldham's Grammar School still flourishes, and if it has not done all that its founder hoped, it has certainly contributed largely to the higher education of Lancashire.

John Bradford, the next worthy with whom Mr. Espinasse deals, is supposed to have been one of the first scholars at the grammar school founded by Hugh Oldham. He was born in 1510, and served as secretary to Sir John Harrington. The principles of the Reformation were eagerly embraced by Bradford, who abandoned the law to enter the church, of which he became one of the saintliest ornaments. He was chaplain to Edward VI., a missionary appointment which led him on a preaching tour through a district which included Lancashire and Cheshire. Bradford was no fair-weather friend of the Reformation. The accession of Mary tested the sincerity of those who had found Protestantism an easy belief under the reign of her young brother. Bradford was one of the first to feel the effects of the change. After lying in prison for fifteen months, he was condemned to death in January, 1555. Next month, Rogers the proto-martyr was burnt. It was intended at first to consign Bradford to the Earl of Derby to be burnt at Manchester. This is the man who "told George Marsh, the Bolton martyr, that the true religion was the religion which had the most good luck" (p. 69). He appears to have interceded for Bradford, who was not executed until July 1, 1555. Unflinching honesty and undivided devotion to the truth, courage that feared neither bonds nor death, make "holy Mr. Bradford" the noblest figure in this group of Lancashire worthies.

We could have wished that, as a counter-part to Bradford, Mr. Espinasse had given us one of the Roman Catholic martyrs of Lancashire.

The life of Jeremiah Horrocks is interesting as an example of the pursuit of knowledge under difficulties. The elaborate preparations which are being made for the observation of the transit of Venus over the sun in this present year recall the slender means with which the phenomenon was first observed by the poor Lancashire curate, who had received his education as a sizar at Cambridge. When his attention was directed to the study of astronomy—which, with its cognate sciences, was not then regarded as a part of academical learning—he says:—"Lack of means and appliances weighed down, and indeed still weighs down, my aspiring mind." For a long time he worked unaided, but in 1636 we find him in regular correspondence with William Crabtree, Gascoigne, the inventor of the micrometer, and some other students of science.

November 24, 1639—the most important day in Horrocks' life—fell upon a Sunday.

His watch upon the heavens for the expected transit had to be intermitted, whilst he paid attention "to matters of greater importance"—namely, conducting the service at the little church of Hoole. Having concluded prayers, he then returned to his post, and at a quarter past three the clouds dispersed, and he saw the wished-for sight. Horrocks died January 3, 1641, in the twenty-second year of his age, the only man who ever observed the transit of Venus across the sun, and whose powers of intellect led him to foreshadow some of the greatest discoveries of modern astronomy, and made him, in Herschel's words, "the pride and boast of British astronomy."

Of Humphrey Chetham we have a pleasant sketch. The grandest pen-portrait of the founder of the Chetham Library and Blue-Coat School is that given by Thomas Fuller in his *Worthies*. He had the charge of collecting King Charles's ship-money, and writes: "If you shall tax and assess men according to their estate, then Liverpool, being poor, and now, as it were, going a-begging, must pay very little." Chetham seems to have been a hard-working business man, with a taste for Puritan theology, and something of a disposition to act up to his family motto—"Quod tuum tene." Yet he was not one of those who think to atone for a life of mean wickedness by an act of death-bed benevolence. During his lifetime he took charge of the maintenance and education of a number of orphans, and by his will left 7,000*l.* for the continuation of this good work. But that which endears the memory of the old Manchester trader most is the bequest of 1,000*l.* and the residue of his estate to found a library, "for the use of scholars and others well affected." This library was probably the first in Europe which was freely open to all comers, without let or hindrance; and no one who has ever studied in its quaint reading-room—dim with a religious light—but will murmur a blessing on its founder, whose portrait—grimly tender—looks down from the wall.

Mr. Espinasse complains that the Chetham Society has issued no biography of the old worthy whose name it bears. The fact is the materials are lacking for such a work. There is another work which might with advantage be written, and that is a history of Chetham's Foundations. The archives of the library especially would yield much interesting matter. If their present learned custodian would turn his attention to this subject he would earn the thanks of all book-lovers.

Charles Worsley of Platt was a good type of the Lancashire Puritan. He was a Lieutenant-Colonel in Cromwell's army, and on April 20, 1653, was in command of some twenty or thirty grim musketeers who were called in to eject the Rump Parliament. Cromwell "lifting the sacred mace itself, said 'What shall we do with this bauble? Take it away!'" (p. 102); which was accordingly done, and the symbol of parliamentary authority remained in Worsley's hands until the meeting of the Barebones Parliament, in which he represented Manchester. When this was dismissed, Worsley was appointed Major-General of a district which included Lancashire, Cheshire, and Staffordshire. Two

centuries ago the liquor traffic was a source of danger and difficulty. Worsley calls the alehouses "the very bane of the counties." Speaking of the hundred of Blackburn he says: "We find that these alehouses are the very womb that brings forth all manner of wickedness. We have ordered at least two hundred alehouses to be thrown down in their Hundred, and are catching loose and vile persons" (p. 107).

Next to alehouses, the Major-General seems to have been most troubled by Quakers, who were then in the full vigour of their new-born spiritual enthusiasm. He was summoned to London to attend a conference of the Major-Generals, and died there at the early age of thirty-five. He was buried in Westminster Abbey, and his remains escaped the inhumanity of the restoration.

"A few years ago," says our author, "search was made in Henry VII.'s chapel for the missing body of James I., and in the course of it a coffin was opened, which, according to Dean Stanley, was most probably that of Worsley. Its contents, after examination, were carefully replaced in their original depository, and, in all likelihood, among the dust of the Kings and Queens of England, now reposes that of the Lancashire linendraper's son, the first member for Manchester."

It would take too much space to enter into details concerning each of the remaining lives. What has already been said may serve to show the quality of the work. The remaining portion is occupied with memoirs of James Stanley, 7th Earl of Derby—the Great Stanley, as his admirers call him—husband of the heroic lady who defended Latham House so successfully; * Booth, the player, who, although born at Barton, went with his father's family to London when three years old, and had no further connection with the county; "Dr." John Byrom, witty and wise, whether in verse or prose, whose writings—once perhaps overpraised—have now fallen into undeserved neglect; John Collier, the author of writings in the Lancashire dialect (under the pseudonym of "Tim Bobbin"), which have had an immense amount of popularity; the "Great" Duke of Bridgewater, whose disappointment in a love-affair led to England being intersected by that network of inland navigations which has been so beneficial to our trade and commerce; John Kay, James Hargreaves, and Richard Arkwright, whose memoirs include a careful survey of the rise of the cotton-trade, and a minute and singularly painstaking attempt to apportion justly the credit of the various inventions leading to the development of the British cotton manufacture.

This work, we hope, will be the precursor of a *Biographia Lancastrensis*. It is now almost a generation since Mr. C. H. Timperley (whose *Dictionary of Printers* is a monument of patient industry) issued a prospectus of a book which was to contain biographical notices of a thousand individuals—eminent in a greater or less degree—who had been connected with the county

* It may be noted that when he (then Lord Strange) was entertained by Royalists at a banquet in Manchester, an affray arose between the feasters and the trained bands of the town (then strongly Puritan), in which Richard Percival, a weaver, was slain by the Royalists. This is supposed to be the first life lost in the Civil Wars.

of Lancashire. It would be interesting to learn what has become of the materials which Timperley must have collected for this immense undertaking.

WILLIAM E. A. AXON.

The Dramatic Works of Thomas Dekker.
Now first collected. 4 vols. (London: John Pearson, York Street, Covent Garden. 1873.)

THE students of our dramatic literature have to thank Mr. Pearson for collecting the plays of Dekker—fifteen in all, besides masques and entertainments. Of these plays seven are ascribed to Dekker as sole author; eight were produced by him in collaboration with Webster, Ford, Middleton, Rowley, and Massinger. Four have been reprinted in this edition for the first time. They are 'The Shoemaker's Holiday,' 'The Whore of Babylon,' 'If this be not a good Play, the Devil is in it,' and 'Match me in London,' all of which are the work of Dekker alone. 'Old Fortunatus' and the 'Wonder of a Kingdom' have previously appeared in Dilke's *Old English Plays*; 'The Honest Whore' and 'The Roaring Girl,' in Dodsley's *Old Plays*, Scott's *Ancient British Drama*, and Dyce's edition of Middleton; 'Satiromastix,' in Hawkins' *Origin of the English Drama*; 'Westward Ho!' and 'Sir Thomas Wyatt,' in Dyce's *Webster*; 'The Sun's Darling' and 'The Witch of Edmonton' in Gifford's *Ford*; and 'The Virgin Martyr,' in the various issues of Massinger's plays. Mr. Pearson has done us the service of reprinting the whole series from early copies, so that we are able to survey in one book all that remains of Dekker's labours for the stage. He has followed the *fac-simile* system already adopted in the edition of Chapman's Works, and has added a biography and notes. It is to be regretted that he has not included 'The Comedy of Patient Grissil' in his collection, since it contains Dekker's most charming lyric, and many passages of the simple but soul-stirring pathos he could command so well. The absence of Dekker's name from the title-page of the Edition of 1603, is the reason assigned by Mr. Pearson for this omission. Fortunately the play may be read in the Shakespeare Society's publications. That Dekker also had a principal share in the composition of 'Lust's Dominion,' a tragedy falsely attributed on the title-page of 1657 to Marlowe, but written five years at least after his death, is rendered more than probable both by the style of the first act, and also by the proofs adduced by Mr. Collier ('History of Dramatic Poetry,' iii. 73 and 96). This play may be read in Dilke's *Ancient Drama*. Had Mr. Pearson included it among the works of Dekker as a doubtful play, his edition would have been still more complete. About the notes a word must be said. In the preface we are informed that "a few notes and illustrations (elucidative of difficult passages, and embodying the researches of Malone, Steevens, Reed, Collier, Dilke, Gifford, Fairholt, Dyce, and others) have been added to each volume; but the bickerings of rival editors have been carefully eliminated. Only a few of the notes are

entirely original, but those borrowed from the sources above indicated have in many cases been considerably altered, corrected, abridged, or amplified." The editor, when he has a scholar like Dyce to follow, is copious in his illustrations; when he is left to his own resources, he is very meagre. The notes, for example, to 'Westward Ho!' are selected and copied verbatim from Dyce's edition without any augmentation. Two notes only are appended to 'If this be not a good Play, etc.' and these only contain accounts of Ravallan and Guy Faux, which are useless for the explanation of material difficulties in the text. It might, perhaps, have been better to print no notes at all, or else to have prepared really critical elucidations of the plays which have not hitherto had the advantage of a scholar's care. But Mr. Pearson's edition is so valuable as a contribution to our Dramatic Library that it would be most ungrateful to insist on a point of this sort. We ought rather to hope that he may proceed in his venture, and republish such works as the tragedies of Tournear, 'Arden of Feversham' and the 'Spanish Tragedy.'

Dekker has suffered more than the usual vicissitudes of a poet's fame. In his lifetime he was a true literary hack, an Elizabethan Grub Street author, as familiar with prisons as with taverns, scribbling ephemeral pamphlets and hasty scenes with a fluent pen, caring but little for the future of his works, and taking no pains to secure their immortality by patient execution or by thoughtful planning. The printer's devil or the bailiff was always at his elbow while he wrote. He seems very early in life to have just missed catching time and opportunity by the forelock, and to have passed his years in a light-hearted but exhausting race after yesterday. Langbaine only mentions him as the antagonist of Jonson. Gifford tries to fasten on him all the foul and feeble scenes that occur in his joint plays with Ford and Massinger. Campbell dismisses his masterpiece with a pitying sneer; and even the judicious Dyce hardly does him justice. In compensation for so much neglect, Lamb and Hazlitt, the two most sympathetic critics of our dramatists, are enthusiastic about Dekker. Hazlitt extols him above Webster for "truth of character," "instinctive depth of sentiment," "unconscious simplicity of nature;" while Lamb assigns to him those passages of exquisite poetry which distinguish the 'Virgin Martyr' among all the plays that bear the name of Massinger. Mr. Swinburne, in his essay on Ford, gives Dekker the credit of the finest and most truthful portions of 'The Witch of Edmonton'—with justice, as it seems to me, if we may trust internal evidence.

The question of joint authorship and all the critical difficulties which surround it, render an exact estimate of Dekker's genius very hard to form. How far was a play which bears the name of two or more authors on its title-page, the product of one common literary effort, or the rehandling of an old composition by a new playwright? We may, for example, feel tolerably sure that Beaumont and Fletcher planned and executed many of their dramas in concert. But it seems clear enough that 'The Sun's Darling' was a *refacimento* by Ford of Dek-

ker's 'Phaethon:' the tragedy of 'Sir Thomas Wyatt,' again, is made up of two plays, called 'Lady Jane,' badly pieced together. Heywood, Webster, Chettle, and a certain Smythe, besides Dekker, had each a hand in it; but which came first, which last, and to whom the present piece of maimed deformity is due, we cannot say. There is, again, the question of a common style: to what extent did authors, writing comedies to be acted and not printed, content themselves with effacing their own personalities as far as might be by adopting the simplest language of the day in which their plot could be presented? 'Westward Ho!' and 'Northward Ho!' are two excellent old comedies, full of life and bustle from beginning to end, well seasoned with contemporary jokes and quaint allusions to the fashions of the day. Yet how difficult it is to trace in them either the meditative style of Webster or the breezy cheerfulness of Dekker's geniality! The sustained and well-knit plot in both these comedies seems to bespeak Webster; the rattling rapidity of the dialogue and action may be due to Dekker. But I find it hard to judge either poet by these compositions, remembering the complaint of Marston, that "scenes invented merely to be spoken, should be inforcibly published to be read;" and his frequent protest that "the life of these things consists in action," and "in the actor's voice." Webster commending 'Victoria Coromona' to the notice of posterity was a very different being from Webster lending a hand to Dekker in a comedy of cuckoldom. There is a further difficulty about interpolated scenes. The beautiful dialogue between Dorothea and Angelo in the 'Virgin Martyr' we may fairly take for Dekker's handiwork, just as Lamb is probably right in attributing the garden scene in Kyd's 'Spanish Tragedy' not to Jonson, but to "some more potent spirit," of the stamp of Webster. But who conceived the whole character of Dorothea? Massinger's hand is obvious in her argument with Calista: at what points, then, in the delineation of her portrait did Dekker intervene? Another important detail of joint-authorship demands attention. It would be a natural division of labour for one author to sketch and control the plot, while the other held the pen and filled the scenes with life. That a plan of this sort was pursued in some of the joint plays of Dekker, I believe. The chief weakness of his own compositions is their want of a firm and well-articulated fable. The turning-point, for example, in 'The Wonder of a Kingdom,' when both Tibaldo and Alphonsina abandon their mad project without adequate reason, is singularly inartistic, even in a play of this period, when the dramatist thought less of the development of motives than of the display of feeling. Now 'The Honest Whore,' in which Middleton had a hand, is tolerably well managed in both its parts: it has to my mind the movement of one of Middleton's acknowledged plays. At the same time, the mingled pathos and humour of Orlando Friscobaldo, the roystering rakishness of Matheo, the sweet humility of Bellafront, and the poetry put into the mouth of Candido, are all conceived and written in a strain above the faculty of Middleton. Dekker has, and must have,

the chief credit for the characters and language of the play, but I am inclined to think that he owed to Middleton's guidance the composition of its form. The 'Roaring Girl,' like the two comedies written in conjunction with Webster, belongs to the period rather than to separate authors. Yet, if an opinion has to be pronounced, I find in it more Middleton than Dekker. It is also worth noticing that Middleton, in his preface to the Edition of 1611, does not mention his collaborator.

That Dekker could "make inches better than ells," and compose single scenes of delicate beauty, while he was unequal to the production of a whole good play, is obvious from the comedies which bear his name alone. As Lamb said, he "had poetry for anything;" but this poetry appears in flashes. Nothing can be more pathetic and natural than the scenes between the lovers Angelo and Fiammetta (vol. iv. pp. 258, 283), in 'The Wonder of a Kingdom;' the splendid generosity of Gentile is set forth with exuberance of fancy; Alessandra's artless confession of love to Tibaldo disguised as a woman (p. 273), has a grace and purity that Fletcher, fond as he was of similar situations, might have envied. Yet the effect of this comedy is marred by the abominable plot laid between the brother and sister, Tibaldo and Alphonsina, by which she undertakes to help him to gain possession of Vanni's wife and he exposes her reputation to the greatest peril. 'Match me in London' has fewer beauties and more that is repulsive. The villain Gazetto seems outlined after the pattern of Webster's Bosola, the King after that of Tournear's Lussurioso. But they are both inconsecutive and feeble rascals. The salt of the play is the fidelity of Tormiella; who is one of those sweet, strong, and patient women, bearing all things, enduring all things, and conquering all things in their innocence, whom Dekker loved to draw. Tormiella, Dorothea, Susan, Grissil, Cælestine, and Jane are a charming sisterhood, from whom we need not exclude Bellafront in spite of her original shortcomings. 'Match me in London' contains, besides, one or two good shop scenes. In these Dekker excels. The mercer's store, kept by Candido and his apprentices, the shoemaker's booth of Master Simon Eyre, and the haberdasher's stall of Cordolente, are places which every lover of good comedy is glad to visit. Inns, too, taverns, and suburban pleasure-gardens are described by Dekker with notable felicity. Nor is he less at home in bedlams and bridewells, and places of a more questionable character. The pert 'prentice, the obliging merchant, the teasing wife, the overtasked drawer, the shrill shrew, the ruffling gallant, the fantastic gull, the swaggering captain, the insinuating bawd, the highflying spendthrift, the gaudy woman of the town, the jealous husband, come and go in these many-coloured scenes of City life with a fulness of vitality and truth to nature that we scarcely find elsewhere, except, perhaps, in Jonson's 'Bartholomew Fair.' Of course, there is much that is even more than gross in these vivid Dutch interiors. But we can pardon a coarseness which is obviously unstudied, which reflects the manners of the time, and which does not exclude sallies of real wit.

In this style of comedy Dekker was treading his own ground. Perhaps the most perfect example of his success is 'The Shoemaker's Holiday,' which, besides the exquisite portrait of Jane (see in particular the scene between her and Hammond), relieved upon a background of continual mirth and motion, contains the very amusing character of Simon Eyre. Like Matheo in 'The Honest Whore,' he must have owed some of his effect upon the stage to the repetition of catch phrases: he is always inventing hyperbolical names for his apprentices, "my mad Mesopotamians, Cappadocians, Assyrians, Philistines, Hyperboreans," and so forth—and exclaims on every occasion: "Prince am I none, yet am I princely born." But he is, notwithstanding, no mere humour; but a real man, full of genial kindness, merriment, and content—the qualities that Dekker loved above all others, and could portray more vividly than any of his contemporaries. The lyrics prefixed to this comedy are worthy to be mentioned with those in 'Patient Grissil.' Far less successful is 'Satiromastix.' This counterblast to Jonson cannot be named in the same breath with the 'Poetaster.' Though the episode of Cælestine is beautiful, it is out of place in a satire; the court of William Rufus is no counterpart for that of Augustus; and the caricature of Jonson is devoid of true causticity. The acting of the play must have been good; for the 'Untrussing of the humorous Poet' took the town. To read, it is a poor performance. Still more defective is 'The Whore of Babylon.' Nothing can be conceived more dismally wanting in wit or power than this allegory in five acts, which sets forth Queen Elizabeth as Titania, and presents the court of Rome, the kings of Europe, and the famous people of the day under various shallow and clumsy disguises. To see how a play of this kind should be written, we may turn to Middleton's 'Game of Chess.' Dekker could not manage the style. He is almost equally dull in his dramatic version of Machiavelli's Belphegor, which has for title 'If this be not a good Play, the Devil is in it.' The pranks played by three fiends in a court, a convent, and a country house, might have furnished excellent sport; and here and there by feeble flashes the real Dekker shows himself. But the plot is uninteresting, and the conclusion is absurd: the young king deserved to come to a bad end, instead of being half-sainted and restored to his injured mistress. The scene in Hell, tagged on at the tail of the piece, with Ravallac and Guy Faux undergoing torture, is grossly revolting, without wit.

Dekker was not merely a master of sweet April comedy. He was also a poet of silvery purity. Heywood alone approaches him in the tenderness of pathos, wrought out of the simplest language and the most artless situations, owing nothing to rhetoric, and putting no strain upon our sympathy; but Heywood is more sentimental than Dekker. His cheerfulness was all his own. And his fancy has a quality of lustre and limpidity combined, which distinguishes him from his Elizabethan brethren as an independent genius. The spirit-searching depth of Webster, the dark majesty of Ford, the

passionate magniloquence of Marlowe, the incisive phrase of Tourneur, the linked melodies and splendid volubility of Fletcher, the full and even flow of Massinger, were not his. Nature never meant him for a tragedian; he produced no tragedy, except those portions of 'The Witch of Edmonton' which he added to Ford's work: in those scenes his quick humanity bled, as it were, the ichor of infinite pity rather than of tragic terror. The question might also be raised whether Dekker had a hand in 'Lust's Dominion;' but its discussion would carry us too far. Soft and tempered fervour, as of some transparent gem—*dolce color d'oriental zaffiro*—with the light of morning and the tremulousness of dewdrops in it, bright and quivering rapidly, as of some swift mountain stream, made silver by spring sunbeams, are the qualities which mark him as a poet. These are best displayed in 'Old Fortunatus.'

This comedy is founded on the tale of Fortunatus and his magic purse. Dekker has preserved its allegorical character. Fortunatus, a poor old man, worn with despair, falls asleep in a forest, and is visited by Fortune and her train of captive kings. Fortune bids her ministers

"take instruments,
And let the raptures of choice harmony,
Thorough the hollow windings of his ears,
Carry their sacred sounds, and wake each sense
To stand amazed at our bright eminence."

Fortunatus starts up, and the goddess offers him the choice of her six gifts to men—'wisdom, strength, health, beauty, long life, and riches'—painting each in glowing terms. He may take infinity of one, but he must leave the rest. Fortunatus decides on riches:

"Beauty is but a painting; and long life
Is a long journey in December gone,
Tedious and full of tribulation.
Therefore, dread sacred Empress, make me rich;
My choice is store of gold; the rich are wise."

After this we are introduced in another scene to Ampedo and Anelocia, the two sons of Fortunatus, reduced to abject poverty, and with them their servant Shadow. These persons severally represent that cold show of virtue, which is a defect rather than a quality, and which makes no use of either wealth or wisdom; vicious folly, which abuses both; and the fleeting vanity of human life. Fortunatus himself stands for Fortune's favourite, the quick, active, fancy, eager for excitement, and smitten with Faust's yearning for experience. Though the chief personages of the play are allegories, Dekker has realised their characters and made them men. Fortunatus is the living type of Elizabethan restlessness, embodying the thirst for novelty, the passion of extravagance we find in Marlowe. Anelocia has much of the high-flying, devil-mcare heedlessness of Matheo in 'The Honest Whore.' Shadow is a witty body-servant, full of curious quips and excellent fooling. Ampedo offers less scope for poetic delineation. It is his function to bury his talents under a napkin, and to accept all buffets with a stupid Stoicism. This part he plays to admiration. While the three are pondering their ill fate, Fortunatus suddenly appears, jingling guineas:

"Peace, Ampedo: talk not of poverty;
Disdain, my boys, to kiss the tawny cheek
Of lean necessity: make not enquiry
How I came rich; I am rich, let that suffice."

Having stuffed their pockets with gold, he flies off again to

"revel it with Prester John,
Or banquet with great Cham of Tartary,
And try what frolic court the Soldan keeps."

This scene is succeeded by a Masque of Vice, Virtue, and Fortune; the two former plant trees with fruit of divers quality to attract mankind, while Fortune expresses her queenly indifference to both. A Chorus then enters to patch up the tale of Fortunatus' travels and to introduce him at high festival in Babylon. Here he steals the wishing-cap from the Sultan's treasury, and returns to tell his adventures to his sons at Cyprus. The description of a court which Dekker puts into the mouth of Fortunatus is remarkable both for its poetry and as an expression of sixteenth-century feeling:

"For still in all the regions I have seen,
I scorned to crowd among the muddy throng
Of the rank multitude, whose thickened breath
Like to condensed fogs does choke that beauty
Which else would dwell in every kingdom's cheek.
No, I still boldly stepped into their courts,
For there to live 'tis rare, O 'tis divine!
There shall you see faces angelical,
There shall you see troops of chaste goddesses
Whose star-like eyes have power (might they still
shine)

To make night day and day more crystalline.
Near these you shall behold great heroes,
White-headed councillors, and jovial spirits,
Standing like fiery cherubim to guard
The Monarch, who in God-like glory sits. . . .
In some courts shall you see Ambition
Sit piecing Daedalus' old waxen wings. . . .
Fantastic Compliment stalks up and down,
Tricked in outlandish feathers; all his words,
His looks, his oaths, are all ridiculous,
All apish, childish, and Italianate."

But the Destinies appear, spinning; and Fortunatus falls into a sleep, from which he never wakes. The rest of the play consists of the doings of Anelocia; who travels abroad with the magic purse, visits England, is wheedled by the Princess Agripyne out of his treasure, returns to Cyprus, steals the wishing-cap from his brother, and plays a myriad mad pranks to prove that neither wealth nor wisdom can profit him. In the end Ampedo burns the hat: both brothers are put to death by avaricious courtiers; and Fortune gives the purse to King Athelstane. The allegory of Vice and Virtue is carried on by Anelocia's eating of the tree of vice and bringing its apples to make mischief at the court. But Dekker has not wrought this portion of the play with any depth of meaning; the interest shifts between the sons of Fortunatus and the by-plot of Agripyne and her lover Orleans. Among the poet's most perfect achievements, however, are the scenes in which Orleans indulges a lover's lunacy in a passion of wild fancies. To quote passages would be to murder the effect. Nothing can be imagined finer than the paradoxes of this witty fanatic, in whose opinion the whole world is mad and he the only wise man left; who scorns the scorn of sober folk, extols deformity, and adores the very horns that sprout upon his lady's brow. The mastery of Dekker is shown throughout this comedy in the flesh-and-blood reality which he has given to abstractions; to love-lunacy in

Orleans, to pride in Agripyne, to policy in Athelstane, and to avarice in Longaville: even the subordinate characters embody each a clearly-defined quality. Fortunatus and his sons have a higher degree of reality; while Virtue, Vice, and Fortune, withdrawn from human action and anxiety, survey the world from thrones and feel such passion only as befits immortals. They enter and depart in pomps and pageants to solemn strains of music. The men and women of the piece, moral qualities though they be, run to and fro and live and die. To have conceived the comedy of 'Old Fortunatus' proves Dekker a poet of no common order. A little more firmness in its ground-plan would have made it a masterpiece; for the language and the fancy with which it is set forth are beautiful and vigorous. Take these lines as a last quotation:

"To-morrow? Ay, to-morrow thou shalt buy them.
To-morrow, tell the Princess I will love her;
To-morrow, tell the King I'll banquet him;
To-morrow, Shadow, will I give thee gold;
To-morrow pride goes bare, and lust a-cold;
To-morrow will the rich man feel the poor,
And vice to-morrow virtue will adore;
To-morrow beggars shall be crowned kings;
This No-time, morrow's time, no sweetness sings.
I pray thee hence; bear that to Agripyne."

This is Andelocia's exclamation at a chance mention by Shadow of "to-morrow." Is it not the comic counterpart of Macbeth's famous apostrophe?

It is not very easy to treat of Dekker's most considerable achievement, 'The Honest Whore,' two comedies connected by a common title and a common list of persons, without following in the steps of Hazlitt. Hazlitt has expressed his strong admiration of these fine plays in a panegyric marked by as much warmth of feeling as acuteness of perception. He is particularly happy in his characterisation of Dekker's style by a metaphor from painting: "There is the least colour possible used; the pencil drags; the canvas is almost seen through: but then, what precision of outline, what truth and purity of tone, what firmness of hand, what marking of character!" Indeed, in 'The Honest Whore' Dekker has managed to condense all the tenderness, geniality, truth to nature and vivid humanity, which we find in a less degree throughout his works. His power of copying from the life after the patient manner of the Dutch masters, is here not displayed in single scenes, but in whole characters. Very rarely has the heartless spendthrift—heartless because he is utterly thoughtless and selfish, rather than because he is cruel or reflective—been more livingly portrayed than in Matheo, who seduces Bellafront, marries her, robs her, ill-treats her, and seeks to drive her to the streets with equal imperturbability and swaggering nonchalance. The same minute care is bestowed upon the portrait of Orlando Friscobaldo, Bellafront's father, who hides his tender concern for his lost daughter beneath a rough exterior of seeming indifference. After the long colloquy between him and Hipolito (Part II. Act i. Sc. 2) the piteous exclamation with which he breaks silence when left alone, 'Las, my girl, art thou poor? has in it, like Webster's famous Cover her face: my eyes dazzle: she died young, and Tourneur's no less masterly

Mother, come from that poisonous woman there, an energy of simple nature, which proves that in the age of Elizabeth our dramatists had the gift of clairvoyance into the working of the heart. Bellafront herself is one of Dekker's highly-finished portraits, whether we consider her in the heyday of her early wantonness or in the cold gray shadow of neglected wifedom. The remaining characters are not distinguished by the same mastery. Hipolito is a cold-blooded moralist in the first part and a cold-blooded libertine in the second; but in both capacities he comes before us as an artificial prig. His very love-lunes (Part I. Act iv. Sc. 1) over the picture of Infelice are pedantic, and will bear no comparison with the companion scene in Tourneur's 'Revenger's Tragedy,' where Vendice moralizes over the skull of his dead mistress. Candido, the patient man, is a mere outline, humorous enough, however, and capable of being well filled in by a lively comic actor. It must not be forgotten, however, that Dekker has put into his mouth some of the sweetest lines of which our dramatic literature can boast:—

"The best of men
That e'er wore earth about him was a sufferer,
A soft, meek, patient, humble, tranquil spirit,
The first true gentleman that ever breathed."

In classifying the numerous comedies of the Elizabethan age we may discriminate several different species. First comes the comedy of pure fancy, in which Shakspeare stands almost alone, and near him Fletcher; next the Spanish comedy of mirth and movement, in which Fletcher excels; next the comedy of cuckoldom, whereof Chapman, Dekker, and Middleton are masters; then the Latin comedy, which derives its plot and style of treatment from Plautus, or Terence; then the comedy of swindling, in which Ben Jonson by right of 'Volpone' and the 'Alchemist' and the 'Staple of News' stands foremost; then the screaming farce, of which 'Gammer Gurton's Needle' and 'Bartholomew Fair' are good examples; and, lastly, the comedy of moral purpose. Massinger may be styled the prince of this last species; but Dekker's 'Honest Whore,' by reason of its earnest pleadings against vice, its tender sympathy for repentant frailty, and its firm belief in the restitution of a soul to virtue from the depth of disgrace, deserves to rank in this, the smallest class of English comedies. At the same time it is as bright a play of mere intrigue and movement as any which proceeded from the pens of Chapman, Heywood, Marston, Middleton, and Rowley, and the rest of Dekker's mates.

Dekker's masterpieces were 'Old Fortunatus,' 'The Honest Whore,' 'The Shoemaker's Holiday.' Next to these, as containing most of his specific quality, comes, in my opinion, 'The Wonder of a Kingdom.' But some of his best work is to be found in his contributions to 'The Virgin Martyr,' 'Patient Grissil,' and 'The Witch of Edmonton.' Exquisite touches survive all the mutilations of 'Sir Thomas Wyatt'—as, for instance, in these lines:

"An innocent to die, what is it less
But to add angels to heaven's happiness?"

And even in the comedies of intrigue, some passages of poetry like the following from 'Westward Ho!'

"Go, let Music
Charm with her excellent voice an awful silence
Through all this building, that her sphyry soul
May, on the wings of air, in thousand forms
Invisibly fly, yet be enjoyed;"—

reveal the master's hand.

We leave him with a keen sense of what our literature has lost by the necessities which forced a man of genius so rare and pure, to lead a dog's life in the slums of London, and to write when he was scarce past fifty: "I have been a priest in Apollo's Temple many years; my voice is decaying with my age; yet, yours being clear and above mine, shall much honour me if you but listen to my old tunes. Are they ill-set? Pardon them. Well? Then receive them."

J. A. SYMONDS.

Giraldi Cambrensis Opera. Edited by J. S. Brewer, M.A. Vol. IV. (London, 1873.)

WITH this volume, containing the 'Speculum Ecclesiae' and the treatise 'De Vita Galfridi Archiepiscopi Eboracensis,' the labours of Mr. Brewer, as joint editor of Giraldus, for the Master of the Rolls' series, are concluded, the remaining volumes, of which the fifth and sixth have already appeared, being entrusted to Mr. Dimock. Pending the completion of the work, when we may have some general remarks to offer on the author and his writings, the 'Speculum Ecclesiae,' both from the interest of its subject and from its being now for the first time printed, seems entitled to a separate notice. This treatise shares the misfortune of several other of the author's works in being necessarily edited from a single manuscript, no other copy of it than that now in the Cottonian Library being known to exist. Still more unfortunately, this unique copy has not only lost several chapters (the titles of which, however, have been preserved), but has suffered severely from the fire which proved fatal to so many valuable manuscripts of the same collection, and the effects of which, in the present instance, are only too plainly visible in the numerous *lacunae* which tantalize the reader. Apart too from the charred and mutilated state of the manuscript, the errors of an illiterate scribe and the often intricate style of the author have combined to render the task of editing peculiarly difficult. Mr. Brewer therefore deserves great credit for the general accuracy and skill shown in his edition, no less than for the admirable preface which accompanies it. At the same time we are bound to add that the text is disfigured by not a few errors, which, whether they proceed from the editor or the printer (and many can only be attributed to a careless collation of the copy with the original), ought not to be found in the volumes of a standard series such as the 'Chronicles and Memorials' profess to be. Ordinary care, for instance, would have rendered impossible, as it seems to us, such a misreading as "*idem clericis tanto conamine presbyteri semper et praeeminere nituntur*" (p. 83), where the real subject is "*idem sc. monachi*," and *presbyteri* is as plainly excluded by the argument as *praeferri* may be read in the manuscript. The original scribe, too, has enough faults of his own without being

made responsible for such blunders as "super corpulentiae priori" (p. 107) for "corpulentia priore;" "totis indulgentes studiis et laborant" (p. 246) for "indulgent;" "per diligentiam inquisitionem" (p. 251) for "diligentem;" and others of a similar kind.

But it is time for us to turn to the work itself. 'The Mirror of the Church,' in spite of its comprehensive title, is little more than a vigorous invective against the monastic orders, which is prolonged through three of the four books, or "Distinctiones," into which the work is divided. The fourth book is of a different character, consisting chiefly of remarks upon the condition of the Church and Court of Rome, with a description of the ecclesiastical buildings of the city. The whole is, or rather was, preceded by a Prooemium, which, to judge from the few remaining fragments, criticised severely the system of education pursued in the Universities, the evils of which Giraldus had already, in the 'Gemma Ecclesiastica,' bitterly deplored. The interest and value of the work, as in the case of the equally remarkable treatise just cited, are materially increased by the numerous anecdotes with which the author enforces his arguments, and which give a vivid, if one-sided, picture of the monastic life and character at the beginning of the thirteenth century. Mr. Brewer looks with suspicion on many of these stories, as fictitious or at least grossly exaggerated. That this is the case is not improbable; but at the same time it should be remembered that, incredible as some of them appear, they are but illustrations of a state of corruption in the monastic orders which undeniably existed, and the evidence of which is to be found not only in the pages of satirists such as Giraldus, Map, Wreker, and their successors, but in the confessions of monkish writers themselves and in the formal records of chapters and councils. Nor are we inclined, with Mr. Brewer, to question the earnestness of the author's satire. That he was not merely a satirist, but where he had the opportunity a practical reformer, he had already shown in his own archdeaconry; and if he lashes monastic abuses with an unsparing hand, he does not fail to suggest means for their remedy, nor again does he hesitate to give praise where it is due, even to the hated Cistercians. Prejudiced and intemperate as he certainly shows himself to be, there occur also throughout the work passages revealing a passionate yearning for reform, and for a return to primitive strictness and simplicity, which forbid us to doubt the sincerity of his convictions, however much we may blame the virulence of his language.

Of the three chief monastic orders then established in England,—the Benedictines, Cluniacs, and Cistercians,—the first-named are quickly disposed of, escaping with little more than a general censure on their pride and luxury. The latter vice is illustrated by a graphic account (p. 39; see also "De rebus a se gestis," ii. 5) of two dinners at St. Augustine's, Canterbury, one of which consisted of no less than sixteen courses (the king, as we learn from another anecdote, being content with three), while at the other such was the quantity of choice wines and other liquors, that no room was found for

beer, though, as Giraldus remarks, that of Kent was the best in England. Of the Cluniacs he has more to say. What he especially censures in them is the practice, not however confined to their order, of establishing "cells" at a distance from their monasteries, to which monks were sent, either singly or in small numbers under a prior, for the purpose of managing the detached property of the fraternity. The evils resulting from this system are vividly depicted by Giraldus. Freed from the wholesome restraint of the parent house, the tenants of these cells paid slight attention either to the letter or the spirit of the rules of their order. "Regardless," to use the words of Mr. Brewer, "of their vows and the sanctity of their profession, they gave themselves up to the pleasures and pursuits of a country life without restraint; too often indulging the gratification of their appetites, to the scandal of the order of which they were members." To be sent to a cell (Giraldus says, "ut ibi de caetero bestialiter vivant") no less than to prevent being recalled when there, was the great desire of the lazy and dissolute, and the easiest way of effecting this object was by bribing, too often with the proceeds of peculation, the abbot or those by whom he might be influenced. Among other stories of profligacy and intrigue we read (p. 33) of the prior of a cell on the Welsh border, who, having purchased his office for life, confidently handed over the attesting deeds, which he had been careful to secure, to the safe keeping of his friend the cellarer. But the cellarer had command of money, and "more monachorum officii illius" was quite ready to use it for his own advantage. As the abbot was equally ready to double his profits, the unlucky prior suddenly found himself supplanted, and that by the very man who alone had evidence to prove his superior title,—evidence which, it is needless to say, was not forthcoming.

But it was to the Cistercians that Giraldus, like his friend Walter Map, was most bitterly hostile, going so far indeed as to add to his daily litany the prayer, "a monachorum malitia, maxime vero Cisterciensium, libera nos, Domine" (p. 160). Richard I. (if we are to believe the story told of him p. 54) justly appreciated the besetting sin of this order, when he said he had married his youngest daughter Avarice to them, as he had married Pride to the Templars, and Luxury to the Benedictines. Founded at the end of the eleventh century, by a few earnest men who were scandalized at the prevailing laxity of monastic discipline, the Cistercians soon became by common consent the "ordo ordinum," whose austerity, devotion, and industry put their luxurious elder brethren to shame. The favour with which they were regarded on this account is shown by the fact that at the General Chapter of 1151, the number of their houses already exceeded five hundred, while this country alone, before the end of the century, contained upwards of one hundred and twenty separate foundations. When, however, the first enthusiasm had died away, the Cistercians, though still in a great measure free from the grosser vices of the older orders, became especially notorious for greed and rapacity. According to Giraldus (p. 120), this "pestiferum cupiditatis vitium"

originated in the pardonable wish to maintain their reputation for hospitality, for the exercise of which the product of their labour did not suffice. From whatever cause it sprang, the inordinate desire for wealth had a ruinous effect on the character of the new order. To enrich their houses they not only engaged in secular pursuits, which, even if honestly carried on, were inconsistent with their profession, but added to their possessions by every species of fraud and violence, by working on the superstitious fears of the dying, by appropriating tithes and ploughing up churchyards. Want of space precludes us from dwelling upon the many anecdotes by which these charges are supported. Some of them are more calculated to excite amusement than indignation or disgust: such as the account of the drinking-bout between Henry II. (not Henry I., as printed in the Preface) and the abbot; or the visits interchanged between Walter Map and his Cistercian neighbour, with the advice each gave the other when he supposed, or feigned to suppose, him to be dying. Others reveal greater depravity. To obtain possession of coveted lands, we have in one case (p. 152) a rich monastery shamefully robbing a poor nunnery; in another (p. 226) the monks extend their boundaries by carefully transplanting during the night a tree which served as a landmark; in a third (p. 203) a certain Gilbert is made drunk by the Abbot of Dore, and his seal stolen and affixed to a grant which, when disputed, the judges are bribed to maintain.

Not the least curious story, as illustrating a strange superstition, is that told (p. 201) of William de Ypre, Earl of Kent, in the reign of King Stephen. In his old age, this "maximus in regno mali machinator" becoming alarmed about his soul, consulted monks of different orders upon the best means of ensuring its salvation. Among these were some Cistercians, who hastened (prosilientes) to relieve his anxiety, offering to take upon themselves the whole burden of his sins if accompanied by the grant of the manor of Boxley, wherewith to found a house of their order. The penitent naturally closed with so good a bargain, and "quatinus promissi securior existeret" *blew his sins through a hollow reed into the mouths of his scapegoats!* With respect to this story it should be observed that other accounts, while still making William de Ypre the founder of the abbey, state that the grant of the manor was made by Richard I. It is possible, however, that this grant was merely a confirmation.

Some of the most scandalous tales are told in connection with the well-known custom of persons at the point of death assuming the cowl in order to share in the spiritual privileges of the religious profession. This indulgence, Giraldus affirms, was reserved for those who could pay for it, "quia pauperes non respiciunt;" and no promises, threats, or intrigues were spared by the monks to induce a sick man, by whose will they might profit, to join their fraternity. Even women from such motives were subjected to the tonsure (pp. 179, 200), a scandal which gives occasion to the author to ask how the monks would manage, supposing such a "monacha" should recover, seeing that, as an admitted member of the house, "in refectorio cum fratribus refici, et inter

eosdem in dormitorio cubiculum habere deberet"! One way of escaping from such an awkward dilemma is suggested by an almost incredible story (p. 241), which will at once remind the reader of a well-known scene in *Ivanhoe*. A rich knight of Leicestershire fell ill, and, despairing of recovery, caused himself to be carried to a neighbouring abbey, of which he had been through life the patron and benefactor. He there assembled his friends and made his will, leaving a large sum of money, together with other property, to the house within whose walls he had elected to die. As it happened, however, he began to recover. Hereupon the monks, feigning satisfaction at the happy change, secretly resolved to poison or smother him, in order to ensure themselves against all risk of losing their expected inheritance. Warned, however, of the plot in time by one of their number, in whom gratitude was stronger than avarice, he found means to summon his friends to his aid on the evening of the night fixed for the crime; but even then it was not without resistance and bloodshed that the baffled monks allowed him to depart. Such is the picture drawn by Giraldus of monkish morality; and if among the stories we have cited there are none which illustrate the special vice of incontinence, the omission arises by no means from a lack of examples. That the picture is a dark one, must be confessed; but dark as it is, the author, both in his eulogy of the orders of Grammont and the Chartreuse, and in many scattered passages of his work, permits us to obtain glimpses of that brighter side of monasticism which is the pleasanter one to contemplate. That there was a brighter side, and that civilisation and morality have benefited more by what was good than they can ever have suffered from what was evil in the monastic system, is nowhere more ably and eloquently insisted upon than in the Preface to the present volume; and although Mr. Brewer uses some arguments which may be proved, as we believe, fallacious, and occasionally indulges in somewhat extravagant language, there are few who will not acknowledge that his view is substantially correct. But into this question we have no time to enter, and for the same reason we must pass over both the remaining book of the '*Speculum Ecclesiae*,' and the treatise '*De Vita Galfridi*' which follows it. What we have already said, however, will be enough to show that the present volume of Giraldus contains one of the most interesting, if not one of the most valuable of the works of that author. That it has so long remained unprinted can only be attributed to accident, or the mutilated condition of the manuscript in which it is preserved.

G. F. WARNER.

Documents inédits sur l'Histoire du Languedoc et de la Rochelle après la St. Barthélemy (1572 à 1574): Lettres extraites des Manuscrits de la Bibliothèque Impériale de St. Pétersbourg. Par M. Jean Louchitzki. 72 pp. 8vo. (Paris: Sandoz & Fischbacher, 1873.)

WAS the Massacre of Saint Bartholomew a premeditated crime, prepared at leisure with infernal dissimulation, or are we to see in it

a sudden, unexpected, so to speak, inevitable explosion of political and religious animosities? Neither one nor the other, if we may believe the most recent historians of this ill-omened epoch.

The question of premeditation is decided so far as Charles IX. is concerned. The sincerity of the feelings of confidence and admiration which he professed for Coligny is no longer disputed; and if, at the last moment, he allowed a consent to the massacre to be wrung from him, which has earned the maledictions of posterity, he must at least be acquitted from the charge of hypocrisy that has so long helped still further to blacken his memory.

It is not so easy to acquit his mother. There can be no doubt that the idea of ridding herself in one day, at a single blow, by a general massacre, of all the Huguenot chiefs, had frequently crossed the mind of this woman without conscience and without honour. But there is no proof of her having laid a snare for Coligny and the King of Béarn; and it is more probable that, like a true Italian, she wished to keep a door open upon either side, and remained for a long time in a state of hesitation, reserving to herself the right of joining the Huguenots, or effecting their destruction, according to circumstances. Only at the last moment, so far as appears, did she resolve upon the latter alternative.

These suppositions are confirmed by the newly published documents for which we are indebted to M. Jean Louchitzki, a Russian writer, who has extracted them from the MSS. of the Imperial Library at St. Petersburg; and, after communicating them to the *Bulletin de la Société de l'Histoire du Protestantisme français*, has now published them in a separate pamphlet. They consist of letters from some of the commandants and governors of provinces, addressed to the King, the Duc d'Anjou, and the Queen-mother, and all bear witness to the unprepared state in which the government was found at the moment of action. If the Saint Barthélemy had been carefully planned beforehand, some measures would certainly have been taken to guard against the reaction, and to repress the inevitable revolt of those provinces in which the Huguenots were most numerous; but nothing of the kind had been done.

In his first part, M. Louchitzki gives fifteen letters of Villars and four of Damville. Villars (Honorat de Savoie, Marquis de Villars, Count de Tende) had received the post of Admiral of France, left vacant by the death of Coligny; he served the Court with zeal and intelligence, and was charged with the mission of repressing the revolt of Upper Languedoc, Rouergue, and Quercy. The correspondence shows him to have been entirely without means; it is true that, as he was allowed to levy money, he succeeded in procuring soldiers, but the Government alone could provide him with cannon, of which he would want many, to reduce towns like Montauban, St. Antonin, Milhau. He applies for them to the King, to the Duke of Anjou, and it appears that there is great difficulty in procuring them. "J'ai grande faute d'artillerie sans laquelle on ne les peut guères offenser. Il y a six

canons à Bourdeaux, dont l'un est esvantré; les autres sont mal montés et quasi point de munitions." (To the King; Agen, 22 Oct. 1572.) With these he might succeed in recapturing some châteaux, but to attack the towns, and especially Montauban, many more would be wanted, and "les affaires vont à longueur."

Villars' cousin, Damville, who afterwards became Duke of Montmorency, through the death of his elder brother, was in command in Lower Languedoc, and was equally ill-provided. He also asks for cannon, and expects some from Lyons and from Narbonne; but the artillery of Lyons does not arrive, and that of Narbonne is in such a bad condition that tedious repairs have to be executed before it can be used; meanwhile he is unable to attack Nîmes. (Letter to the Duke of Anjou; Lunel, 24th January, 1573.) All these nineteen letters testify to the destitute state of the provincial governors, and to the inactivity or impotence of the Government in coming to their assistance.

The second part of the pamphlet contains twelve letters; one from Villars, eight from Biron (Armand de Gontaut, Baron de Biron, grandmaster of artillery), and three from the Duc de Montpensier. All relate to the unsuccessful siege of La Rochelle. Biron had been appointed Governor of the town by the King, but the inhabitants refused to admit him. The Court ordered him to begin the siege without waiting for the Duke of Anjou, who was to take the command; but Biron, like Villars and Damville, was in want of almost everything: his troops were insufficient, yet he does not know how to maintain even the few he has, and he also complains with great energy of the extreme insubordination of a part of his forces.

Two other letters from Biron to the King (April 24 and 26-7, 1574) form the third part of M. Louchitzki's publication. As their date shows, they refer to incidents occurring a little later. The siege of La Rochelle had been raised—peace signed before the departure of the Duke of Anjou for Poland. In February 1574 war had broken out again. The heroic La Noue commanded at La Rochelle, and Biron received orders to enter into negotiations with him. In these two letters he gives an account of the negotiations, which did not come to an immediate result, but, after the death of Charles IX. (May 30), were terminated by a truce. They are documents of great interest.

M. Louchitzki has done a real service to the history of France in publishing this collection; the letters throw great light upon the situation of the Government of Charles IX., and the state of things in the south of France after the massacre of St. Bartholomew, and they will have to be consulted by everyone who wishes to write the history of this gloomy period in detail.

ETIENNE COQUEREL.

The Wild North Land: being the Story of a Winter Journey with Dogs across Northern North America. By Captain W. F. Butler. (Sampson Low & Co.)

EVERYONE who read the *Great Lone Land* will welcome another book of travel by the

same author, and will be ready again to follow Captain Butler and his train of dogs, with the gallant Esquimaux, *Cerf Vola*, at their head, in an arduous journey across Northern America. The track he followed was no new one, and the difficulties and hardships he experienced by the way have been encountered and overcome by hundreds of bold and enduring men before him—the traders of the Hudson's Bay and North-west Fur Companies, the pioneers of the Northern continent—and to their merits he pays full and generous tribute. But in spite of this want of novelty, Captain Butler succeeds in rendering his narrative extremely interesting and attractive by his wonderful power of description, enabling the reader to realise very vividly the varied features of the magnificent scenery through which he passed, the incidents of the journey, and the many new conditions of life in the Northern wilds, which strike so strangely on the mind of one fresh from a more complicated and artificial mode of existence. All these are portrayed with such truth and force, that the heart of the old traveller in that glorious country will leap within him as he lives over again in these pages the life of bygone days.

The least pleasing portion of the book are certain passages wherein the author criticises, in a somewhat flippant way, various public affairs, the commercial spirit of the age, and the degeneracy of modern travellers. That the race of the great travellers of old at any rate is not extinct, and their successors not mere "carpet knights," is sufficiently proved by Captain Butler's own career, and that of many other gallant spirits at this moment manfully at work exploring the unknown in distant lands. The illustrations are unusually good, with the exception of the map, which is so woefully meagre that the author's movements can only be followed very imperfectly, in spite of the red line which marks his route. The names of many most important places are entirely omitted, and the only new position laid down is that of *Cerf Vola's* birthplace. This wild North Land, of which Captain Butler writes, has a strange fascination about it, so that those who have once come under its charm seem to bear with them ever after a restless longing to visit again its vast prairies, its silent forests, and its snow-clad mountains, in spite of the toil and hardship and privation with which life in such a region is necessarily seasoned—sometimes so painfully. Here we have Captain Butler but just returned to England from a winter journey to the Rocky Mountains, after a brief fretful sojourn of a few months at home, eagerly setting out again on a long weary tramp of above a thousand miles through the snows of the same wild region. It was not merely the traveller's sense of unrest to which he confesses in the quotation on the title-page (and which has now carried him to Ashanti), which compelled him, but the singular attractions of that magnificent country, which drew his footsteps away to it once more.

One of the most striking and impressive of the new sensations experienced by the traveller in North-west America, and so picturesquely described by Captain Butler, is the sense of vastness and space, and of the huge

proportions of the land—in one part prairies over which a rider can steer for months without approaching the dim verge of the ever-shifting horizon; in another, forests "where sombre pines darken a region half as large as Europe;" in another, huge mountain ranges, "rent by rivers, ice-topped, glacier-seared, impassable." Then there is the absence of all boundaries, the freedom of marching on and on without fence or limit, with no one to say nay or interfere; and most awesome of all, the sense of solitude; when day after day, perhaps week after week, flits by without the sight of a single human being, or human habitation, or sign of man's presence to relieve the intense loneliness. In the glad summer-time this lack of man's presence is rendered less oppressive by the sounds of nature; it is

"a land echoing with the voices of birds, the ripple of running water, the mournful music of the waving pine-branch."

But in winter it becomes

"a land of silence; hushed to its inmost depths by the weight of ice, the thick-falling snow, the intense rigour of a merciless cold, its great rivers glimmering in the moonlight wrapped in their shrouds of ice, its still forests rising weird and spectral against the aurora-lighted horizon, its notes of bird or brook hushed as if in death, its nights so still that the moving streamers across the Northern skies seem to carry to the ear a sense of sound, so motionless around, above, below, lies all other visible nature . . . the land of stillness."

Starting from Fort Garry, on the Red River, in the beginning of October, Captain Butler travelled westward as far as the Forks of the Saskatchewan, where he spent the early months of winter in a log-hut awaiting the arrival of the "Winter Packet," with which he travelled as far as Fort Dunvegan, on Peace River. The "Winter Packet" is a sleigh, drawn by dogs, the animal post which once a year carries letters from Fort Garry to the chief trading posts of the Hudson's Bay Company; by the Saskatchewan Great Slave Lake, and the Athabasca, to the shores of the Arctic Ocean, a distance of nearly 3,000 miles. From Fort Dunvegan the author made his way across the Rocky Mountains, with a half-breed and two miners as his companions, through the huge cleft in the chain by which the Peace River has forced its way from the west, to the mining camp of Germansen, on the Findlay River, in Northern British Columbia; thence southward to the Fraser River, and so forwards to Victoria, in Vancouver Island. The journey, as far as Dunvegan, consisted of the ordinary routine of winter travel in the North-west; long marches on snowshoes of from twelve to sixteen hours, and from twenty to fifty miles at a stretch, sometimes when agonised and half-disabled by the terrible "mal de raquette," or snowshoe lameness; intense paralysing cold, often almost unendurable, when a bitter north wind blows untempered over a level shelterless expanse right in the teeth of the hapless traveller; the evening camp "sub Jove frigido," with the thermometer from 20 to 30 degrees below zero, under the lee of some friendly thicket; or, when less fortunate, on some plain bleak and bare, where as far as the eye can reach there is nothing but

hard drifted snow, and a few scant willow-bushes alone lift up their bare leafless twigs in mockery of shelter. As night advances still greater cold—"the frost comes out of the cold grey sky with still, silent rigour," so that just as the "dawn is stealing over the eastern pine-tops the thermometer may be down well into the forties"—

"You are tired by a thirty-mile march on snowshoes; you have lain down with stiffened limbs and blistered feet, and sleep comes to you by the mere force of your fatigue; but never goes the consciousness of cold from your waking brain, and as you lie with crossed arms and up-gathered knees beneath your buffalo-robe you welcome as a benefactor any short-haired shivering dog who may be forced from his lair in the snow to seek a few hours' sleep upon the outside of your blankets."

In this manner, travelling for the last 300 miles chiefly upon the frozen river, Fort Dunvegan was reached on the 1st of April. By this time there were signs of coming spring, and it became necessary to travel by moonlight, when the failing ice was strengthened by night-frost. Before long the dogsleights were finally abandoned for horses, which carried them to the foot of the Rocky Mountains.

The real difficulties of the journey now commenced. The great mountain chain had to be passed as soon as the ice broke up, by ascending in a canoe the Peace River, which cleaves its way through this great barrier by a mighty chasm, "whose steep cliffs frown down on the black water through 6,000 feet of dizzy verge." The noble river flows along on its journey of 2,000 miles to the sea in a broad powerful stream of 250 to 300 yards in width; and Captain Butler declares that the scenery of the Peace River Pass, with the great river flowing tranquilly through a stupendous mountain range, whose snowy peaks rise to a height of 10,000 feet above the water, possesses a singular beauty and grandeur unequalled by all the glories of Mount Shasta or Yosemite.

The work of forcing the canoe by pole and paddle, or hauling it by ropes from a rocky and precipitous shore against a current daily becoming more powerful by the inpour of melted snows, and down which crashed great blocks of ice, was one of extreme toil and danger. The difficulties and disasters which the party encountered reached their climax in the Black Cañon of the Ominica River; their canoe was swept away, and they were twice carried back far away down stream by the boiling torrent, losing all the ground won by infinite toil and at the peril of their lives. The story of these adventures, and how all obstacles were eventually overcome, and the mining camp at Germansen reached in safety at last, on the 20th of May, is told with great spirit and graphic power; and it would be unfair to detract from the pleasure the reader will find in perusing it by giving extracts here. The remainder of the journey was comparatively easy, and the account of it, and the various digressions in which the author indulges, afford no matter of special interest; but an appendix is devoted to the discussion of a question of considerable practical importance. In it the writer endeavours to show that the Peace River Pass offers a

better route for the Canadian Pacific Railroad than the one by Tête Jaune Cache, which has been adopted by the Dominion Government. It has been fully established that a railway can be carried across the Rocky Mountains into British Columbia without serious difficulty by these two passes, and by these two passes only. In each case the line would traverse the Fertile Belt of the Saskatchewan, on the eastern side of the mountains; and although Captain Butler is certainly correct in his statement that the road, as at present laid down, runs too far south, through some barren tracts of the Eagle Hills and South Saskatchewan, this might easily be obviated by carrying it north of the northern branch of the Saskatchewan, through the very centre of the Fertile Zone. The only point of real importance is with regard to the country west of the Rocky Mountains. From the western extremity of which of these two passes can a railway be carried by the shortest and easiest route through this rugged and mountainous land to a satisfactory harbour on the Pacific coast? Captain Butler states that at the western extremity of the Peace River Pass the line would enter upon an undulating plateau, which extends to the Coast Range of Mountains, and offers no serious impediment to the construction of a railroad. Through the Coast Range there is a practicable way to Dean's Inlet, or that of Bentinck Arm. But both these lie too far north—are too distant from the coal-fields of Nanaimo and from Vancouver Island. Neither of them is a satisfactory harbour, fitted to be the terminal port of a great interoceanic railway; the latter especially, according to the report of Captain Palmer, who examined it, being destitute of good shelter, good anchorage, and a good landing-place. The Tête Jaune Pass lies 200 miles further south than that by Peace River, and therefore in a more direct line between the Red River Settlement, through which the railway must necessarily pass, and the magnificent harbours of Southern British Columbia and Vancouver Island. The late Mr. Waddington, who devoted many years to the investigation of this subject, and the personal exploration of a route through British Columbia, seems to have proved very satisfactorily that the only practicable route across the colony to a good terminal port on the Pacific is by the Chilcotin Plains, and down the valley of the Homathco River, through the Cascade Range, to the magnificent harbour of Bute Inlet, opposite Vancouver Island, and near the coal-mines of Nanaimo.

From the Tête Jaune Pass to the Chilcotin Plains the railway might be carried either by the valley of the Upper Fraser; or down the North Thompson River, and thence along the Clearwater or Bonaparte Valleys.

The way by Peace River, and that by Tête Jaune Pass, have both been thoroughly explored by surveying parties, under the able direction of Mr. Sandford Fleming, the engineer of the Canadian Government, who will thus be furnished with ample data to guide them in the selection of the best route for the Canadian Pacific Railway.

W. B. CHEADLE.

Ivan de Biron; or, the Russian Court in the Middle of the Last Century. By the Author of *Friends in Council*, &c. Three vols. (London: W. Isbister & Co., 1874.)

Phineas Redux. By Anthony Trollope. Two vols. (London: Chapman & Hall.)

IN *Ivan de Biron*, as in most historical novels, we have two plots developed side by side, the one consisting mainly of fact, the other wholly of fiction: in this case the facts are decidedly the most interesting ingredient. The hero is a nephew and private secretary of the Duke of Courland, favourite of the Empress Anne, by whose will he was appointed regent during the minority of Ivan III. The narrative opens with his assumption of the office upon his mistress's death in 1740, and a sketch of his temporary ally and real rival, Marshal Münnich. The revolution by which Biron was overthrown and the regency transferred to the mother of the infant prince was considered remarkable even in Russian history—where almost every possible variety of revolution might find a precedent—for the disproportion between the means employed and the results effected, the strength of the power upset and the reckless levity with which the successful attack was planned and executed. The author follows Manstein's memoirs for the details of the plot and its execution, but improves upon his authority a little by making a gipsy's warning to the Duke, to "Beware of the night," the motive for his abrupt enquiry whether Münnich had ever conducted any great enterprise by night, as they were dining together on the eve of the conspiracy. The Marshal's self-command, though the question seemed to imply that his plot was detected, was such as to reassure Biron till, a few hours later, he found himself a prisoner, travelling to Siberia with the last batch of exiles condemned by himself. Ivan, the nephew, accompanies him, and takes the opportunity of recommending himself to the Princess Serbatoff, whom he has hitherto adored at a respectful distance, and now meets on a common level of misfortune. While the young people are philandering, another revolution was being prepared at St. Petersburg, of which the history is even more perplexing than that of its predecessor, so that we should have been grateful for a hypothetical account from Sir Arthur Helps of what went on behind the scenes, to prepare the way for it. Occurrences which fairly puzzle contemporaries, and *à fortiori* historians who are not contemporary, are the lawful prize of the historical novelist who can invent an explanation; for if the theory is moderately probable, there is no saying but what it may be true, while in any case a theory is *ben trovato* that arranges the puzzling facts in a portable shape. But the author misses his opportunity, and only incidentally mentions that Marshal Münnich had in his turn fallen into disgrace when Ivan de Biron is, by rare favour, recalled from Siberia, and at liberty to seek his fortune again at court. The Duchess-regent Anne and her young husband, the Duke of Brunswick, though neither able nor particularly popular (except so far as the exile of Biron gave them a claim on his innumerable enemies), found themselves strong enough, within a few months, to set

aside the Marshal, to whom their accession to power was owing. Biron was arrested in November 1740, and in March 1741 Münnich was deprived of his charges and banished from court. The army might have been expected to resist this affront to a victorious leader, and the revolution which shortly afterwards placed Elizabeth (the daughter, of questionable legitimacy, of Peter the Great and Catherine) upon the throne was mainly conducted by the common soldiers, with whom her easy manners and morals were a source of popularity. The unintelligible part of the transaction is that Marshal Münnich should have succumbed to the regent and Ostermann (a statesman of considerable ability, chiefly evidenced by a habit of taking to his bed whenever a revolution was expected) without making a struggle in favour of the Princess Elizabeth; and that Elizabeth, when the infant Ivan and his parents were secured, so far from taking the Marshal into favour, though the accusation against him (drawn up, it is true, at random, and signed by himself without reading, but still probably corresponding roughly to the suspicions entertained by his enemies) was to the effect that his intrigues against Biron were conducted in the name of Elizabeth, and for her advantage—that Elizabeth in spite of this should have allowed him to proceed to Siberia, while Biron's sentence was relaxed, we repeat, is so perplexing that we are a little aggrieved that the novelist, who might so easily have invented a few spare motives to fit the phenomena, has not thought it worth while to do so. The reason can scarcely have been that he was anxious not to depart too widely from his authorities; for in the second volume, when the hero is sent on a second trip to Siberia, for a supposed share in the Lapouchin plot, or intrigue, he goes out of his way to deprive Elizabeth of her one title of honour, the clemency which boasted that no political offenders suffered death in her reign, by asserting that the Countess, who was condemned to have her tongue cut out for speaking evil of her royal mistress's private life, died from the effects of the mutilation. Manstein mentions the sentence, with the addition of the knout and Siberia, and says nothing to intimate that the victim escaped the latter part of the penalty; and Levesque, who is almost a contemporary and must have conversed with eye-witnesses, expressly says that the same Countess Lapouchin, whose beauty had provoked Elizabeth's jealous rigour, reappeared at court eighteen years later in the following reign, still beautiful, and able to speak, though indistinctly. However, in *Ivan de Biron*, a visit to Siberia—which, as the author remarks, was only the recognised Russian way of "going out of office"—is not treated so much from the political side, in which case the political crisis between Mr. Gresham and Mr. Daubeny might seem tame by comparison, as from the domestic aspect, in which the reader is, indeed, still reminded of Mr. Trollope, but of Mr. Trollope illustrating another form of the immortal thesis that there are two sides to every question, and that there is so much to be said for each of them that it is really rather hard to tell them apart. In other words, Ivan de Biron is more or less in love with two ladies, and the

two ladies take it in turns to be more or less in love with him, and all three devote their energies, with quite arithmetical enthusiasm, to exhausting the number of combinations that shall mismatch the inclinations of all concerned at once. Their zeal is assisted by the shifting of the scene from St. Petersburg and Paris to Siberia and back, so as to multiply the combinations by an uncertain geographical factor, the result of which is to separate for the moment whichever couple seems to show a disposition to come prematurely to a final understanding. The motive of all these complications is similar to that of the same author's tragedy, *Ouida the Serf*. Two women—one noble, the other plebeian—love the same man, sink their rivalry out of pure disinterested affection, and conspire together to make its object happy in what they consider the best way, without reflecting upon the difficulty of making a third person happy in any way but his own, even though that be bad. In *Ivan de Biron* the hero loves the Princess Marie, who determines to educate the gipsy, Azra, so as to be a fitting bride for him in her stead. Ivan succeeds in transferring his affections as commanded; but by the time he has done so, Azra has grown fond of the stage, and no longer cares for him; he no longer cares for the princess, who is more in love with him than ever, and therefore will have nothing to say to him when they meet a second time in Siberia, and he would be very glad to be consoled for Azra's rejection. Again they return from Siberia, and it is Azra this time who, in conjunction with the Empress, endeavours to play the part of Providence to the coy pair: they strenuously refuse, still out of consideration for each other, to marry at the imperial bidding; but Azra having brought them together to listen to an undress rehearsal, in the hopes that pathetic music may melt their resolute indecision to agreement, they laugh so heartily together over the prosaic accessories to the tenor's declarations, as to come away excellent friends and engaged lovers. This is ingenious, but it must be confessed that the story lags a good deal towards the middle, and that the abrupt changes of mood ascribed to the actors are cursorily described and not at all accounted for. The book, as a whole, bears signs of hasty or careless composition; but few chapters are unrelieved by some sentence in the writer's characteristic manner, almost too mild to be called epigrammatic, and yet so acute that the absence of malice, which always makes acuteness seem to go further in proportion, appears in them as the result, more spontaneous than deliberate, of strong tolerance, not imperfect insight. A passing tribute must be paid to Kalynch, a sage Courlander, with an original theory of life, which possesses, in a remarkable degree, the two chief merits that can be desired in a theory on a subject too obscure to be theorised about profitably—namely, that of fitting most facts without any difficulty in its obvious sense, and that of being easily interpreted in senses that are not obvious to suit any possible vagaries of fact; but we should do injustice to its fine simplicity by an abridged statement shorn of illustrations.

It is to be feared that the friends of

Phineas Finn—when, a few years ago, sentence went forth that he should take a place under Government in Ireland and marry his first love, the Irish Rose—must have been nearly as much distressed as if the formula had been that which comes glibly, as a matter of course, to the pen of Manstein: "He had the knout, and was sent to Siberia." But even from Siberia exiles sometimes returned; and, though Rose has to be got rid of before Phineas can rise again upon the political horizon of Westminster, Mr. Trollope might possibly plead "killing no murder" in the case of characters who are never brought fairly on the stage themselves, but only hover behind the scenes as shadowy influences, to be invoked as the exigencies of the plot may require. The original Phineas, as we all know, was a clever young Irish M.P., chiefly remarkable for the *native* sincerity of his attachments to a succession of very eligible young ladies. We are not quite sure whether anyone making his acquaintance for the first time as a widower would acquire a very distinct idea of his personality; but the remedy for that is in the reader's hands, or rather in other two volumes, which rise up against the indolent amongst Mr. Trollope's admirers to point a moral lesson on the dangers of procrastination. Either *The Eustace Diamonds* or *Phineas Finn* the reader of *Phineas Redux* must really be acquainted with; and if anyone ventures to plead ignorance of both, we see no help for him but to make up for lost time, and begin meekly at the beginning of the *Last Chronicles of Barsest*. On his return to public life (by a contested election, the other candidate being unseated for bribery), he, of course, renews his acquaintance with Violet Chiltern, whose husband has found his vocation in life, and is the ideal M.F.; so much so that, when riding home with a young lady in whom he is interested, after a run in which he has copiously anathematised her beloved, he enquires whether the affair is really to come off; she thinks not. "I am sorry to hear that," said Lord Chiltern. "Why?" enquired Adelaide. "Because I thought, if you were engaged, you might be able to persuade him not to ride so forward!" Mr. Kennedy has gone mad with solitude, jealousy, and ill-temper—a result which his age and religion make more probable than the similar catastrophe in *He Knew He was Right*. Finn, partly at his suggestion, goes to see him before renewing his acquaintance with Lady Laura, who has also rather lost her head, and makes embarrassing declarations of her regard for Phineas. The scenes with Lady Laura, in fact, suggest a slight doubt—not anything so presumptuous as a criticism—as to the dramatic accuracy of Mr. Trollope's presentation of feminine emotion. He comments in another place, and with perfect truth, on the notable fact that, in the hunting-field or anywhere else, if a group of people are all talking at once, though the majority may be men, the sound that strikes the ear most forcibly will be a feminine treble. It might be said, perhaps, that a solitary bass voice will in the same way make itself heard above the shrill clatter of many maids and matrons: but our doubts refer to

the quality rather than the quantity of Lady Laura Kennedy's eloquence; it is not so much that she is too voluble, as that she is too articulate. Mr. Trollope is too generous to his ladies; he idealises them into a preternatural acuteness, by making them the mouthpiece of his own discernment, forgetting for the moment that, if they were really as discerning as their creator, they would not be the interesting but not conspicuously rational beings whose manners and customs he has studied with so much success. If they could explain in such neat sentences, indeed in whole paragraphs of coherent exposition, what is passing through their very becomingly illogical minds, their minds would be too analytically logical to be of the least use to the novelist, and he would have to fall back upon the other sex, the members of whom he does not credit with the same abnormal power of quantifying their own indecision, and distinguishing between the shades of unreason by which their conduct is determined. In a word, if everyone knew their own mind well enough to describe it, they would know it well enough for the practical purpose of acting upon it; and the reason that Mr. Trollope's young gentlemen and young ladies are more than commonly life-like is that they manifest a more than commonly perfect incapacity for performing that desirable feat: but the young gentlemen are, we venture to think, if anything, the more life-like of the two, because they describe their abortive attempts in that direction with less astonishing lucidity and detail. To take only one instance, Phineas, after his trial, is in a very natural and by no means rational frame of mind, of which he professes himself unable to give an intelligible account; the mood itself would be unintelligible if the subject of it could describe it while it lasted. The incidents in *Phineas Redux* are more exciting than usual. Mr. Kennedy shoots at Finn, and he is more or less libelled in the newspapers; his party is not kind to him, and as he has given up his place at a semi-official invitation he feels injured. Mr. Bonteen, who was nearly made Chancellor of the Exchequer by a fluke, is hostile to him, and there is a public quarrel (at the Century), immediately after which Mr. Bonteen is murdered. Phineas is apprehended on the charge, because Lord Fawn saw a man in a grey coat, who he afterwards thought might have been Finn, go towards the scene of the murder. All the ladies charge to the rescue, and Madame Max Goesler (who marries Phineas at last) does a little amateur detecting in Prague, which would be more interesting if the case against Finn were not all along so weak that no one except a distinguished criminal counsel (Chaffanbrass) could for a moment have supposed him guilty. The real culprit is Mr. Emilius, Lady Eustace's unsatisfactory husband, the motive being that Mr. Bonteen had taken up that lady's cause, and was endeavouring to prove the marriage void. It does not do to look a gift horse in the mouth, and when a useful murderer is provided gratis out of a former work no doubt matters are much simplified; but we should have thought that Mr. Bonteen was the last man in the world to go to Prague on business that was no con-

cern of his; and further, as Mrs. Bonteen and Lady Glencora Palliser had an aversion to each other, of intensity such as Christian ladies of fashion are alone supposed to be capable of entertaining, and as Lady Glencora with her usual rashness had espoused the cause of Lady Eustace while the matter of the diamonds was still *sub judice*, we do not quite understand how Mrs. Bonteen came to be Lizzie's dear friend in the present work; but no doubt there are mysteries in these drawing-room politics which no amount of explanation will enable the laity to fathom, and what look like inconsistencies may be as cunningly devised to impress us with a sense of the incalculableness of social vicissitudes as the cross-examination of hostile witnesses by Finn's counsel was to bring into relief appearances that he firmly believed to be misleading. Madame Max, as everybody knows, is a rich widow, pretty and not too old, with a charming house in Park Lane, so that Phineas is well provided for at last, and will doubtless live to be a distinguished member of the Cabinet, of which the history yet remains to be written. The only objection that can be made to the practice which is gaining ground amongst novelists, of reproducing current political events in a slight disguise, or parodying the famous trials of the day, is that the resource is equally open to everyone, and that it is tiresome to have to read about the same thing more than twice. Anybody can call Mr. Gladstone out of his name, and describe a real parliamentary debate with a difference; but Plantagenet Palliser, now, alas! Duke of Omnium, is his author's private property, and cannot be pirated; and though *The Way we Live Now* is cruelly beset with claimants and plaintiffs of most seductive ingenuity, we almost hope that in his next work Mr. Trollope will spare us any more trials, civil or criminal—or that he will describe them less veraciously. EDITH SIMCOX.

Essays on Freethinking and Plainspeaking.
By Leslie Stephen. (Longmans.)

The Fair Haven. By Samuel Butler, Author of *Erewhon*. (Trübner.)

MR. LESLIE STEPHEN'S essays are so temperately written that they may, perhaps, be criticised not unjustly, even by those who least agree with them. Though the subjects have no obvious connection, there is a unity of intention in the volume, consistently maintained in the earlier essays, but less easily traced in the later—in that on Warburton especially the aim is divergent. The exposure of his coarse and futile arguments is logically valuable only as abolishing a mode of criticism now happily defunct; polemically it might tend to discredit the sincerity of Christian commentation generally, but such illogical polemic does not form part of the author's plan. Mr. Stephen appears in this book as the opponent of theism, but not of the principle of religion; so far he is a disciple of Comte. He is a sceptic, but not a cynic, convinced that the time has come for unhesitating attack upon received faiths, because he sees his way to finding some other objects for the religious emotions, which he reckons among the nobles,

parts of human nature. In the first essay he appeals to "Broad Churchmen," on the score of honesty and of policy, to abandon the attempt to keep new thought in the old forms. His argument here and throughout is this—All the formulæ of Christianity are framed to fit a belief in the supernatural: that belief is abandoned; we must abandon the formulæ. The same is carried further in "Are we Christians?" which is the best essay in the book, and makes so many points against all creeds except that of the Church that one is tempted to hope that the author means to accept the alternative conclusion and declare himself a Churchman. But his alternative is the other. He is content to be for the present without a creed, confident that something will turn up to satisfy his spiritual craving; and, meanwhile, solaced by assisting in the progress of "Humanity." The essay on "Religion as a Fine Art" shows justly the worthlessness of an insincere religion, though fallaciously implying that all existing religion is insincere. Those on Shaftesbury, Mandeville, and Warburton attack certain forms of Theism and Deism; but systematic attack on Christianity is not the purpose of the volume, which is addressed rather to freethinkers than to believers. An apparent exception is "A bad five minutes in the Alps," where the experience of a person expecting immediate death is represented as proving the inadequacy of all creeds. This essay is rendered worthless by the fact that the experience is fictitious; for *a priori* conjecture does not touch the question.

It must be admitted that the author proves his point, viz., that given a disproof of the possibility of the supernatural, one ought to abandon all that is now called religion. But, that the supernatural is impossible he never attempts to show; that negative is obviously incapable of proof, and while it remains unproved his conclusion is unproved also. He assumes it throughout, and for those who assume it with him, and for them only, his conclusion has a logical value. But his book does not contain a single argument against the Faith of the Church, which rests on a belief in the supernatural, not as an exceptional or temporary agency, but as a permanent aspect of everything; not opposed to the natural but incommensurable with it. This hypothesis appears at least to explain many difficulties; it is obviously incapable of disproof; it is supported by the testimony of the vast majority of mankind, who have tried it and not found it wanting, while many think it is given them in consciousness as a *vera causa*: surely to assume its falsehood is unphilosophical. When its falsehood is assumed, there remains, as Mr. Stephen shows, very little, if anything, to mitigate the ills of life or the insolence of death. Is it not possible, if we may address an *argumentum ad hominem*, that this universal supernatural is the proper *pabulum* of those spiritual organs on whose existence Mr. Stephen insists? "Man possesses," he says, "certain spiritual organs, whose function it is to produce religion;" and he adds rather feebly, "religion could only be destroyed by removing the organs, not by supplying them with slightly different food." It all turns on the word "slightly." Is the natural only "slightly different" from the

supernatural? May it not be so utterly different that those organs will die of inanition? Our author longs to reverence and believe in something, and yet he assumes the non-existence of the only permanent object of reverence and faith.

It is with much respect that we leave a writer who, though separated from the truth by the gulf of a fundamental false assumption, has yet so much of true religion, that he has not written in all these essays a word that is irreverent or unkind.

From him we turn to a very curious book. *The Fair Haven* has been differently understood by different critics, and the preface to the second edition does not quite settle the question. The author tells us that some religious newspaper has welcomed his work as a masterly defence of the doctrine of the Resurrection, and that the writer of a certain pamphlet, on the other hand, has seen in it an exquisitely witty attack upon the same. The author makes merry with the perplexity of his critics, and, throwing aside the *alias*, under which the first edition was published, states in so many words that he now appears "in his true colours as the champion of orthodoxy." It may seem rude still to hesitate after this plain statement, but we will sketch the contents of the book, and leave it to the reader to decide in what category he will place Mr. Samuel Butler.

The subject treated is the Resurrection of Christ, with which, as is shown, Christianity stands or falls. The book begins with an introduction, in which the believing Christian is urged to give a fair hearing to the opponents of religion, that so he may be fitted to convert them, and encouraged to be confident, inasmuch as he will find the objections all easily refuted. This introduction is remarkable for an exaggerated use of the catchwords of the weaker orthodox writers, and reads like a burlesque of their style. Next comes a discussion of the "hallucination theory" of Strauss, in which the silliest fallacies are accepted as triumphant refutations of the mythical hypothesis. This is followed by a chapter on the value of St. Paul's testimony, the cogency of which as bearing on the reality of Christ's appearances after the crucifixion is fairly maintained, and the "hallucination theory" is here not ineffectively impugned. All this occupies eighty pages. Then we have forty pages on the feebleness or disingenuousness of orthodox commentators, the tendency of the whole being to shake belief in the reality of Christ's death. Then follow sixty or seventy pages on "The Difficulties felt by our Opponents;" these are occupied by a statement, entirely unanswered, of an elaborate theory of the origin of the myth of the Resurrection, the main point of which is the theory that Christ did not die on the cross, and which involves the most minute inferences from the particular words of documents, in which the author professes a general disbelief. Last, comes a chapter on the Christ-ideal, and a conclusion.

It must be evident that in all this the attack on Christianity preponderates over the defence. The answers, when any are given, are impudently futile, too much so for a good caricature; as when, on pp. 34, 35, "believed that they had seen miracles" is

fallaciously taken as equal to "had seen miracles;" that on p. 42, where the same thing is admitted and denied in one sentence; that on page 81 about *ῥῶθῆ*, or that on p. 235, where the doctrine of Christ's session at the right hand of God is supported by the question, "Where else could He be?" Add to this, that the tone throughout is one either of singular irreverence or of exaggerated cant. When we reflect further that no sane person could have reprinted as a defence of Christianity what some of its opponents had welcomed as an attack, we hesitate, in the face of Mr. Butler's own words, to accept him as "the champion of orthodoxy."

The other alternative has also its difficulties. It is difficult to imagine a man capable of so long excluding from his features every expression but a sneer. It is difficult to understand how a person, resolved to destroy in simple minds the opinions which, though erroneous, had been dear and sacred to them, could go through his work without one pang, without one expression of sympathy, with only a sustained grimace of elaborate mockery. But this is the least part of the difficulty.

If a proselytising believer, who thought he was offering salvation to the lost, should induce a sceptic to argue with him under pretence of readiness to be converted to scepticism, we should call him at least dishonest. Still the believer had something to offer which he thought valuable, and would do it for the sceptic's good. But if the sceptic, aiming only at destruction, should entice the believer into his toils by promises of being converted, one might call it cruel as well as false. What is to be said of the sceptic who invites the believer to hear him, by an appeal to his generosity?—who says, "I acknowledge that you run a risk, but for the sake of fitting yourself to bring souls to your Saviour you ought to face it?"

There is a story of an inhuman soldier, who, lying wounded on the field, beckoned to his side a surgeon of the enemy's army, that when he came near he might shoot him. The story does not add that he missed his aim, or it would be curiously parallel to the case before us.

Our author thus invites the attention of women, who, he says, often recoil from the task of weighing the arguments of the sceptic, but who might "thus, perhaps, be the means of bringing him into contact with Divine truths."

"O my sisters, my sisters, ye who go into the foulest dens of disease and vice, fearless of the pestilence, and of man's brutality: ye whose whole lives bear witness to the Cross of Christ and the efficacy of Divine love, did one of you ever fear being corrupted by the vice with which you came in contact? . . . Can you doubt that the foundation of your faith is sure also, and can you not see that your cowardice in not daring to examine the foul and soul-destroying den of infidelity is a stumbling-block to those who have not yet known their Saviour?"

Few men who adopt our second alternative, will think it a sufficient reason for adopting any set of opinions, that they are found along with the morality of Mr. Butler.

R. S. COPLESTON.

A *Life of Christ*, by the Rev. F. W. Farrar, will be shortly published in two volumes, by Messrs. Cassell, Petter and Galpin. Each volume will contain an illustration from an original sketch by Mr. Holman Hunt.

NOTES OF TRAVEL.

THE *Journal de St. Pétersbourg* reproduces from the *Moscow Gazette* an extract from a letter addressed by Mr. Ashton Dilke to a friend in Russia on the subject of Mr. Schuyler's criticism of M. Vambéri's works on Central Asia.

Mr. Schuyler, the United States' Secretary of Legation in St. Petersburg, who visited Bokhara last summer, took M. Vambéri to task on various points with reference to that city. Mr. Dilke now exposes several flagrant errors in Vambéri's description of Samarcand, and expects that other persons will be now forthcoming who can speak as to Khiva and to other places supposed to have been visited by the Hungarian traveller.

Mr. Ashton Dilke observes—

"If Mr. Vambéri has not been to the places which he describes, we must consider ourselves indebted to Mr. Schuyler for having unmasked one of the most remarkable impostures of our age; if it is otherwise, then it remains to be regretted that the task was not undertaken by a man with a better memory and less conversant with all that may have been written by his predecessors on the subject of Central Asia."

At a meeting of the Imperial Russian Geographical Society, held in December last, it was unanimously decided to apply to the Government for support in the equipment of an expedition to the Oxus, with the object of thoroughly examining the delta of that river. This expedition, or some of the military officers accompanying it, will ascend the river as far as may be found safely practicable. The declared purpose of this enterprise is the development of trade in Central Asia, and the treaties recently entered into by the Governor-General of the Russian province of Turkestan with the Khan of Khiva and the Emir of Bokhara give great validity to the arguments on which the Society's application to the Imperial Government is based.

The Grand Duke Nikolai Constantinovitch was in the chair on this occasion, and Colonel Glukhowski, a great advocate for the promotion of Russian trade and industry, read a short paper on the absolute necessity of taking immediate advantage of the provisions of the treaties above mentioned.

One of the members present, opposed to Colonel Glukhowski's views, attempted to prove by scientific argument the utter impossibility of diverting the Oxus into the Caspian, and of improving that river for purposes of navigation, and expressed his belief that the proposed expedition would lead to no profitable result as regards trade.

This member did not, however, appear to see the point at which Colonel Glukhowski, Colonel Veniukof, the secretary, and others were aiming. His objections were not taken into consideration, and at the end of the debate Baron Osten-Sacken read out the names of the various scientific and military gentlemen who should be selected to compose the expeditionary party; his Imperial Highness the Grand Duke being invited to head it.

The expedition is to start in the spring.

WITH reference to a paragraph which appeared in the *ACADEMY* of January 10, we learn, on the best authority, that Mr. Hopkins' journey to Tashkend really took place in the long vacation of 1870, and not, as was believed, during the last Christmas vacation. Mr. Hopkins went in no disguise of any sort, and met with no hindrance from anyone till he reached Tashkend. The authorities there were rather surprised to see him, and sent him off again by the Northern route without much attention to his wishes. Being compelled by his engagements to be in England at the beginning of October, Mr. Hopkins could not act with much independence, as, if anything had put it into the heads of the authorities to send to St. Petersburg for instructions as to the manner in which he was to be dealt with, he would, in all probability, have been detained the whole winter.

THE Survey Department in Vienna have just published the second volume of the account of their operations. It deals principally with the grand work of connecting the Austro-Hungarian triangulation with that of Italy, which has been so successfully achieved. A base of 1305·3 fathoms was measured by Sinji, and united with a chain of triangles extending from Monte Dinara to Giovanechio by Monte Gargano. The Apulian mountains are thus connected with the chief ranges of Dalmatia. The observations made on the refraction and reflection of the heliotrope flashes across the horizon of the Adriatic are valuable and interesting. Some idea of the accuracy of the measurements may be gathered from the fact that a re-measurement of the base-line gave an error under two millimètres only.

We learn that a very important work, called *Natural History of North China, with Notices of the South*, had lately been published in China, compiled chiefly from the travels of Père Amand David. Unfortunately, however, before the publication was complete, the printing office in which it was being brought out was burnt down, and there is now scarcely a copy of this work to be had.

Père David is a very able naturalist, who has been at work in China for about sixteen years. He is an abbé of the Lazarist Mission, and for several years past has been employed under a dispensation from Rome in collecting specimens for the museums. He has discovered some hundreds of new specimens of vertebrata and insects: notably a species of the cervides which is called after him "Elaphurus Davidianus." He sent a pair of these animals to the Zoological Society of London. They were of the same size as an elk. Though they came from Manchuria, however, both of the animals died of congestion of the lungs last winter. Other species of the same class which he discovered in the West are "Elaphurus Cephalophus" and "Cervulus lacrymans."

Père David has been at work this winter in the province of Kiangsai, which is reported to be very prolific in beetles.

SOME details received by private advices from China concerning Lieut. Francis Garnier's last work may prove interesting.

It appears that Garnier returned last July to Shanghai from a journey up the Songkoi river, through the provinces of Yunnan and Szechuen; and down the Yangtse. He then went by sea to Saigon, and was sent by the admiral of the station on a mission up the Songkoi to look after a French adventurer named Dupuis, who, contrary to treaty, had found his way up there with some small steamers loaded with arms and ammunition, which he was supplying to the local mandarins, to assist them in putting down first the Panthay and then the Tongkin rebellion. In China the general opinion is that the French authorities favoured, or at all events winked at, the illegal proceedings of Dupuis, and it has nowhere transpired what the exact object of Garnier's last mission really was. There is, indeed, a great deal of mystery about his relations with Dupuis.

When Garnier started on his first journey up the Songkoi, now more than a year ago, he was supposed to be making an attempt to penetrate Thibet on its south-eastern border; and it was authoritatively reported that he was provided with a passport for that purpose from the Central Government at Peking. It is not apparent why he came down the Yangtse instead of attempting Thibet.

THE *Yacht*, a new Russian paper, edited by M. Leer, Vice-President of the St. Petersburg River Yacht Club, announces that the expedition to the Oxus will consist of two different parties, one of which will explore the delta, and the other the river in its higher course. The expedition will be composed of 400 persons, and will be accompanied by two steamers, four barges, and a steam cutter. The expedition will last four months, and is calculated to cost 104,000 roubles.

CORRESPONDENCE.

THE TITLE "SIR" AS APPLIED TO A PRIEST.

There were three Sirs, King, Knight, and Priest (Watson *Decadord*, quodl. qu. 1602, p. 53). Bale speaks of "Sir Reynold Pecoock, Bishop of Chichester, Sir John Ball, etc., priests," and says, "the most ragged runagate and idle idiot among them is no less than a Sir, which is a lord in Latin, as Sir John, etc." (*Image of Both Churches*, ch. xi. § 9, ch. xiii. p. 447). Sir John was the ordinary nickname of a secular priest, of which it would be easy to multiply instances. It was an English rendering of the academical title of a B.A., which was coupled with the surname, and not the Christian name. Thus there is a story of Bishop Mawson, a very absent man, when master of Benet College, Cambridge, saluting aloud at Court Greene, afterwards Dean of Salisbury, to the astonishment of the bystanders as "Sir Greene."

As the friars were "Brethren," so the Benedictine was known as dom.; by the rule the abbot only was the dominus, but at length priors, properly called nonni, usurped the title, which in time passed down to inferior members of the order.

Cancellieri says that in the fifteenth century Don in Biscay was restricted to bishops, priests, and religious; and two hundred years later, in the dioceses of Pampeluna and Bayonne, it was given to simple clerks, as nuns were called Donne or Duena; in England the synonym was Dame. Muratori denies the right of Italian priests and monks to the title (*Antiq. Ital. diss.* 23, col. 345), but as a matter of fact seculars adopt it to this day.

In the Monastery of Sheppey there were a "Curat of the Paryshe Church," and two chaplain-priests, supported by payments out of the

House: whilst the Confessor occupied a chamber over the gate-house. The parish church was the south aisle of a double church. The rule required every nun, when travelling, including an abbess, to have a "collega ejusdem religionis;" and an abbot had always his chaplain as a witness to his character (*Lyndur*, lib. iii. tit. 19.)

In further illustration of the unusual and secondary sense of the word "chaplain" as a chapel-keeper, I may add that English bishops frequently bequeathed to their cathedral churches their whole "chapel," that is, not the private or domestic oratory—the structure for celebration of Divine Service,—but its ornaments and furniture.

It is a familiar fact that a new meaning here and there grew up side by side with the original, in the gradual mediaeval development of language, for instance, Bishop Sherborne's chantry priest at Chichester is called by him his bedeman, praecular, and orator. MACKENZIE E. C. WALCOTT.

THE PAHLAVI INSCRIPTION ON THE MOUNT CROSS.

Brighton, Feb. 3, 1874.

As I have recently submitted to your readers an attempt to explain the Pahlavi inscription on the Mount cross, lithographed in Mr. Burnell's pamphlet *On some Pahlavi Inscriptions in South India*, it is only fair to inform them that Professor Haug of Munich has published a different interpretation in a supplement to the *Allgemeine Zeitung* of January 29. His translation is as follows: "Whoever believes in the Messiah, and in God above, and also in the Holy Ghost, is in the grace of Him who bore the pain of the cross." No doubt this interpretation (which is dated January 15) gives an excellent sense, and the resemblance of some of the characters to the well-known Pahlavi word *yasharibo*, "holy," I have myself found very tempting; but as the learned Professor has reserved all details for publication elsewhere, it would be premature to offer any opinion upon the grammatical and palaeographical difficulties which his interpretation seems to involve.

E. W. WEST.

MR. HERBERT SPENCER'S SOCIOLOGICAL TABLES.

Dayswater, Jan. 27, 1874.

If Mr. Gardiner had confined his remarks to the issues raised in my letter, I should not have had a word more to say. But as one of his contentions is new, and only one side has therefore been heard, you cannot justly refuse space for the complete answer of which it admits.

Criticising the statement in *Descriptive Sociology*, "Intervention of King in Courts declared illegal," Mr. Gardiner says:—

"... nobody would be likely to guess from it, or from the quotation from Fischel at p. 16, that what really happened was not that an intervention which had been customary was declared illegal, but that a proposal made for the first time by Bancroft, and backed by James, that the King should intervene, was nipped in the bud by Coke."

Mr. Gardiner then quotes from *Coke's Reports*, which he describes as an "original authority," the statement that

"no king after the Conquest assumed to himself to give any judgment in any cause whatsoever which concerned the administration of justice within this realm."

Coke is certainly an "original authority" for the fact that the King's intervention was in this case "nipped in the bud;" but for the alleged fact that "no king after the Conquest" took part in the administration of justice, he is no more of an authority, original or other, than anyone else. That Coke was utterly mistaken admits of complete and decisive proof.

We need go back no further than the reign of Henry II. In the *Dialogus de Scaccario* it is plainly stated that both in the King's Court and in the Exchequer the king "makes decrees in his own person":—

"Habet [sc. Scaccarium] enim hoc commune cum

ipsa Domini Regis Curia, in qua ipse in propria persona jura decernit," &c. Lib. i. cap. 4; in Madox, (*History and Antiquities of the Exchequer*, vol. ii. p. 360.)

John is said, I know not on what authority, to have presided almost habitually in his Court; but I find the following fact in Madox:—

"The Abbot of Whithy fined in Cl. that the Plaint between him and the Burgesses of Whithy might be heard before the King"—[coram Rege]. (*Hist. Excheq.*, vol. i. p. 99.)

The presidency of the king, at all events in the Exchequer, was still frequent in the reign of Henry III.:—

"As in the first period, so also in the second, the King, if he pleased, sat and acted in Person at the Exchequer. K. Henry III. sat and acted in the Exchequer, in the 25th Year of his Reign, in the 31st Year of his Reign, in the 35th Year, in the 37th Year, in the 39th Year, in the 49th Year, in the 51st Year, and in the 52d Year of his reign."—Madox, vol. ii. pp. 10, 11.

As specific statements are desirable, I give the following list of cases from Madox (vol. i. pp. 100-2):—

"It appeareth by the Plea-Rolls . . . that K. Henry III. did several Times sit personally in Judicature. For Example: A Plea or Cause pending between the King and Thomas Peverell and others, was adjudged or determined before the King and his Council; the King declaring, that he desisted from further Prosecution in the Case. A Plea between James de Audeley and Henry de Lucy, who prosecuted for the King, was debated before the King. The Cause of Gilbert de Clare Earl of Gloucester and Hertford was rehearsed before the King and his Council; the King sitting on his Tribunal at Westminster. G. Mareschall was summoned [before the King], to warrant to John Mareschall the Manors of Folesham and Norton, which the King claimed against John as an Escheat. The Defendant pleaded, that this Plea ought not to follow the King, and that it was against the Charter of Liberties that it should follow him; because Common Pleas ought to be determined in a certain Place [to wit, in the Common Bench]. It was answered, that this was not a Common Plea, but a private one, and did especially touch the King's Person; and that a Plea which touched [or concerned] the King, ought to be determined before him. Whereupon, the Defendant's Exception was over-ruled. And Pleas were holden before the Queen and the King's Council, in the 37th Year of K. Henry III., whilst the King was abroad in Gascoigne. At this time the Queen was Custos regni, and sat vice regis."

If it be said that some at least of these cases were of a quasi-executive character, the reply is obvious and sufficient that all of them would, equally in Coke's time and now, be tried by the judges alone.

Even in the reign of Edward IV. we have unmistakable evidence that the administration of justice was originally, and continued to be, a royal function. Stow (*ann.* 1462) says:—

"In Michaelmas Terme king Edward sat in the King's bench three dayes together in open court, to understande how his lawes were executed." (Ed. 1580, p. 714.)

It is certainly not said that he took part in giving judgment, but we find proof fifteen years later (1477) that he tried criminal cases in person. The monkish chronicler of Crowland says:—

"Coactus est igitur ipsemet dominus Rex Regnum suum una cum Justitiariis suis perustrare, nemini etiam domestico parens, quo minus laqueo penderet, si in furto aut homicidio deprehensus existeret."—*Hist. Crowland, Continuatio*, in Gale, t. i. p. 559.

Thus so late as the last quarter of the fifteenth century we have evidence that the king actively intervened in the administration of justice. How the intervention of the king fell into disuse, and how the fact of his ceasing to give judgment was converted into the rule of law that he could not "give any judgment in any cause whatsoever," it might not be easy to show. But it was as indicating the final stage in the long process—the establishment of the principle—that Coke's effec-

tual protest was noted in *Descriptive Sociology* as "Intervention of King in Courts declared illegal." The statement would be mistaken by no one who took it in connection with similar previous statements, and with the illustrative extracts, including the Supplementary ones. So far therefore from being "entirely worthless," it is strictly accurate and full of significance; and anyone who "drew conclusions from the statement" would not "be likely to shoot very wide of the mark," but would hit it.

JAMES COLLIER.

I must acknowledge that Mr. Collier has made a point against me by showing that Coke, from his ignorance of early history, was wrong in saying that no king after the Conquest had assumed to give judgment in person; and, though some of his inferences seem to me hardly sustainable, I am quite willing to let him have his way, for the sake of argument, down to the end of the reign of Henry III. If indeed it were worth while to raise minor objections, it might be argued that Mr. Collier's statement that the king makes decrees in his own person in the *Erchequer* is simply based on the fact that he has only quoted half a sentence, the point of comparison between the two Courts being by no possible violence of construing to be got out of what he has thought fit to give us. The whole sentence is as follows:—

"Habet enim hoc commune cum ipsa Domini Regis Curia, in qua ipse in propria persona jura decernit, quo *duce recordationi, nec sententiae in eo latae licet alicui contradicere.*"

The words in italics, omitted by Mr. Collier, tell us what, in the opinion of the author of the *Dialogus*, the point of similarity between the two courts was.

What Mr. Collier says about Edward IV. is not more to the point. The first quotation is almost abandoned by himself, and it had already been defended in such a lukewarm way by Littleton (*State Trials*, iii. 92) that clearly nothing is to be made of it. The second quotation on which Mr. Collier relies does not show that Edward IV. acted as a judge, but merely that he went about with the judges, probably to secure respect for their authority, and to compel thieves and murderers to submit to hanging—a difficulty in those troublous times after the long civil war.

As far, therefore, as Mr. Collier's letter goes, what took place in James's reign was after an interval of some three centuries and a half; and though this length of time may possibly be diminished by the investigation of competent enquirers, I still hold that Coke's knowledge of the law as it stood within the legal memory of his time, backed by Littleton's failure in 1637 to prove the contrary, is sufficient to enable me to state, till I hear better reason, that it was not a customary intervention which was declared illegal.

My further position is that, as the special intervention in the Common Law Courts was practically obsolete, the mere repetition by Coke of the received doctrine of its illegality is unimportant. It is true that no king ever again asked in person to have his right of delivering judgment acknowledged in the Common Law Courts, though James did subsequently act twice as a judge in the Star Chamber. But in 1637 Littleton asked as Solicitor-General, on the king's behalf, to have the same claim acknowledged in spite of this resolution of the judges, of course with equal want of success. On the other hand, whilst the doctrine held by Coke was not unquestioned afterwards, his declaration was itself only an amplification of a resolution of the judges in the time of Richard III. about a claim of the Crown that, when a fine had been set "at the King's will and pleasure," the king might settle its amount. The judges decided against it, saying that:—"In terminis et non per legem per se" [*sic*, probably it should be, "et per legem et non per se"] "in Camerâ suâ nec aliter coram se, nisi per Justiciarios suos, et hoc est voluntas regis, scilicet per Justiciarios suos et per legem suam." (*State Trials*, iii. 862.)

The principle was thus laid down in the reign of Richard III., and the answer in James's time did little more than draw the inference from it.

But if the actual importance of this declaration that the king could not administer justice seems to me very little, its comparative importance is far less. Whether the custom denounced had been obsolete since the reign of Henry VIII., or since the reign of Richard III. does not matter much. But it does matter that the demand made by James was the beginning of a whole series of interventions. If we omit the sentences delivered in the Star Chamber by James, it is impossible to regard this demand apart from the taking of the opinions of the judges separately in Peacham's case, from the deprivation of Coke himself, from Bacon's argument on the writ of *de non procedendo Rege inconsulto*, from the letters and messages spoken of by Whitelocke in the Parliament of 1628; and last, though not least, from the dismissal of two Chief Justices, and the suspension of a Chief Baron by Charles I. If Mr. Collier had attempted to bring out the great facts of the interference of the Crown with the Courts of these two reigns, I should have had no objection to his stating what I have already acknowledged to be literally true, about the resolution of the judges.

And, even so far as that resolution is concerned, all that relates to the real question at issue is omitted by Mr. Collier. The demand that James might sit in the courts, was hardly more than an *obiter dictum*. What James and Bancroft seriously asked for was the right of the Crown to decide questions in which two courts were brought into collision, as may be seen by comparing the passage in Coke's reports with the *Articuli Cleri* of 1605 (*State Trials*, ii. 131). What Bancroft really wanted was that James should decide that the Court of King's Bench had no jurisdiction over the Ecclesiastical Courts. This kind of intervention Coke and the judges decided against in 1607. When the same question arose between the Courts of King's Bench and Chancery in 1616, James claimed the power of intervening between them, turned Coke off from the bench, and induced or compelled the remaining judges to acknowledge that he was in the right. Even in this particular case, therefore, Mr. Collier omits all reference to so much as relates to the living, burning question of the day. The real collision between the Crown and the judges about which men really cared, is left unnoticed, whilst the thing which nobody really cared seriously to claim, is noticed. All that I have thought right to say has been on the supposition that sociology is mainly concerned with the real, living movements of society. If this is not the case, the ground is, of course, cut from under my feet.

S. R. GARDINER.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Feb. 7,	3 p.m.	Handel's <i>Theodora</i> at the Crystal Palace. Saturday Popular Concert, St. James's Hall.
	"	Royal Institution: Prof. Croom Robertson's last Lecture on Kant.
MONDAY, Feb. 9,	8 p.m.	M. Goumard's Concert (St. James's Hall), <i>Jeune d'Arc</i> . First night of <i>Philip at Lyceum</i> .
	1 p.m.	Sale of China at Sotheby's.
TUESDAY, Feb. 10,	"	Sale of Engravings after Sir J. Reynolds, at Christie's.
	4 p.m.	London Institution: Mr. E. B. Tylor on the "Development of Civilization" (i.).
	8 p.m.	Monday Popular Concert (Bilow's last appearance).
	"	Social Science Association, Mr. Dowdeswell on "The Rules of Practice and Procedure to be framed under the Judicature Act of 1873."
	8.30 p.m.	Geographical. At this meeting it is expected that letters from Mr. Cameron will be read.
	1 p.m.	Sale of Hon. Mr. Molyneux's China at Sotheby's.
	"	Society of Arts; Cantor Lecture: Dr. Graham on "The Chemistry

of Brewing." Photographic (Anniversary); Anthropological.

• 8.30 p.m. Medical and Chirurgical.

WEDNESDAY, Feb. 11, 3 p.m. Royal Literary Fund.
4.15 p.m. Royal Society of Literature.
8 p.m. First Night of *Les Inuites* at the Holborn Theatre.

" London Ballad Concert (St. James's Hall); Society of Arts; Graphic; Archaeological Association.

THURSDAY, Feb. 12, 1 p.m. Sale of Mr. Teesdale's China at Christie's.

6 p.m. Royal Society Club.
8 p.m. Society for the Encouragement of Fine Art. Dr. Zerffi on "Darwinism in Art." Mathematical.

8.30 p.m. Antiquaries. Royal.

FRIDAY, Feb. 13, 1 p.m. Sale of Engravings, &c., at Sotheby's.

3 p.m. Royal United Service Institution: Professor Macdonald on "Ventilation of Ships."

7 p.m. Literary and Artistic.

8 p.m. Royal Institution: Dr. Donnan on the "Opponents of Shakespeare."

" Astronomical (Anniversary); Querkett Club.

8.30 p.m. Wagner Society's Concert, St. James's Hall.

" Clinical.

NOTES AND NEWS.

A SERIES of four lectures, on Early Russian History, will be given at Oxford during the present term, by Mr. W. R. S. Ralston, M.A., of Trinity College, Cambridge. The first, on "Legendary Russia," will be delivered on February 14.

THE works of another famous *Lundiste* are being gradually collected. MM. Charpentier have issued this week the *Critiques Romantiques* of Théophile Gautier—a series of dramatic criticisms which had hitherto lain *perdu* and forgotten in the columns of obscure and extinct newspapers. This volume is only one of a long series. A poet, M. Maurice Dreyfous, is engaged in a vast work of collection, selection, and arrangement, which shall, when completed, bring forth a perfect edition of Gautier's writings—all his early efforts in the ephemeral press of the Latin Quarter, as well as his more recent *Chroniques Théâtrales*, in better-known and more stable journals.

THE *Kölnische Zeitung* speaks in commendatory terms of a collection of Poems, Folk-Rhymes, Legends, and Sagas, by Matilda Wesendonck, which has just appeared at Leipzig.

AN interesting discussion is going on in the Imperial German Chamber of Representatives, with regard to the status and remuneration of the professors of the various German Universities. The House went into committee January 30, for the consideration of this question; and, in an interesting speech, Dr. Virchow showed what had been the course adopted by the University Commission, and what were the special points to which the attention of the House would have to be directed in considering the general question of University education in the German Empire. He pointed out the inadequate means at the command of the provincial authorities for maintaining institutions connected with education and literary culture. Thus, for example, Westphalia has but one large public library; and this institution, which is at Münster, receives only 100 thalers annually from the State. The low scale of the salaries obtained by the professors at some of the German Universities, is still more to be deplored. At Berlin, Halle, and Greifswald, for instance, the average remuneration is 200 thalers per annum, yet out of this they are called upon to contribute sixty thalers to the Widows' Fund, and have to render various compulsory services in the University. At present there is no uniformity of system, and at some places, as at Königsberg, a few new extraordinary professorships have been founded, with salaries of from six to nine hundred thalers, while the older chairs are not worth half that amount.

Dr. Virchow strongly recommended a careful consideration of the question of University fees, and of the scale of fees to be fixed for medical attendance at the Universities; but here he foresaw

the dangers to be apprehended from legislative interference, since a slight augmentation in the medical fee would inevitably be followed by a diminution in the number of visits required.

THE Guildhall Library Committee, at their meeting on Monday last, gave leave to Mr. Furnivall to search all the other City records for notices of Chaucer and his relatives, besides the Hustings Rolls which he has already searched. The committee subsequently, at the same meeting, also gave leave to Mr. J. O. Philipps to make extracts from the *Remembrancia*, a series of records, or copies of letters, sent to and from the Lord Mayor and sheriffs, of orders in council, warrants, petitions, &c., relating to the City of London, from A.D. 1580 to 1664. These are contained in nine stout folio volumes, the contents of two of which,—Vol. II., A.D. 1593-1609, Vol. VIII., A.D. 1613-1640—were calendared by Mr. W. H. Overall, the librarian, and Mr. H. C. Overall of the Town Clerk's office, some years since, and printed for the Corporation in 1870. The letters are calendared by subjects; and under the head of "Plays and Players," were notices of eight interesting documents, from 1593 to 1602 (with a ninth under "Plague" in 1607), relating to the stage during Shakspeare's time, which first drew Mr. Philipps's attention to the *Remembrancia* as a fresh source of information for his *History of the English Stage*. The Messrs. Overall are, by the authority of the Library Committee, gradually calendaring the remaining seven volumes of the *Remembrancia*, with the view of incorporating into one volume the abstract of their contents, and of the published book of 1870. They have placed their MS. calendar, so far as it is made, at Mr. Philipps's disposal, and he is examining the originals for himself. Mr. Philipps has also, for his *History of the Stage*, worked through the records of some sixty of our corporate towns, and intends to exhaust those of the remaining hundred and thirty or more such towns, so as to get all possible notices of early plays and players. His Shakspeare studies have convinced him that the stage of Shakspeare's time must be known as fully as possible before Shakspeare's own work can be rightly appreciated; and for that end Mr. Philipps has undertaken this long labour of love in tracing Shakspeare's companies, and all other players, all over England.

So Chaucer was feloniously despoiled ("felonice depredatus fuit") of 20*l.* "apud le foule Oke," wherever that might have been, on the third day of September in the 14th year of Richard the II. (1390)! And the King, of his special grace, forgave the said Geoffrey, Clerk of his works, the repayment of the said sum of 20*l.*, by Writ of Privy Seal dated the 6th of January, 1391, directed to the Treasurer and Barons of his Exchequer. This appears from the enrolment of the poet's accounts as Clerk of the King's Works at the Palace of Westminster, the Tower of London, the Castle of Berkhamstead, &c., from July 12, 1389, to June 17, 1391, in the Public Record office (just copied for Mr. Furnivall), which enrolment also contains a curious list of the dead stock ("mortui stauri") or utensils in the different palaces, &c., received by Chaucer, and given out by him, or handed over by him to his successor, John Gedney. Among these is "j. instrumento vocato Ranme, cuius stipes frangitur & devastatur;" "ij. coleris ferri nuper factis pro quodam ponte vertibili;" "j. ferramento vocato Grate;" "j. instrumento vocato bill;" "ij. slynges pur le Crane;" &c. During his nearly two years of office Chaucer received from the Treasury, to pay in wages, for materials, &c., 1,200*l.* 9*s.* 9*d.* His own wages were 2*s.* a day; those of the controller of the works, the master cements, and carpenter, 1*s.*; of the ordinary cements, carpenters, plumbers, plasterers, smiths, shinglers, and tilers, 6*d.*; glaziers, 1*s.*; daubers (of wattles, &c., with clay), 6*d.*; and other labourers, 4*d.*; the gardeners at Shene and Eltham, 3*d.* In May and October, 1390, Chaucer paid 8*l.* 12*s.* 6*d.* for making

two scaffolds in Smithfield for the King, the Queen, and other ladies, to see the jousts.

On the 12th of July, 1390, Chaucer was appointed Clerk of the works at St. George's Chapel, Windsor, "que minatur ruine, & in punctu terra cadendi existit, nisi cicius facta & emendata fuerit." For the necessary repairs he had power to impress workers in metal, carpenters, and other labourers, wherever he found them, and to set them to work. But though Chaucer held this office for a year all but four days, all he did was to spend 100*l.* 17*s.* 4*d.* in getting one John Paule to ride about and buy 101 "doliatae" (paniers, baskets) of Stapleton stone, and 200 loads (carectatae) of Reigate stone, and freight and draw them to Windsor Castle, paying also the wages of three labourers for sixteen days to load and unload the stone. Whether this neglect came from the poet's carelessness, or from want of proper supplies from the Treasury, does not appear; but one is hardly surprised at finding him superseded by John Gedney on July 8, 1391, when St. George's Chapel was still "on the point of falling to the ground."

On the City Hustings Rolls, Mr. Furnivall has found enrolments of more purchase-deeds, by the poet Chaucer's grandfather, Richard Chaucer, vintner: 1. On the Friday before May 1, 1339, a conveyance by Thomas Heroun, citizen and vintner (and no doubt the son of the said Richard Chaucer's wife, whom he mentions in his will), of a house in the parish of St. Michael's Paternoster church, in the Vintry Ward. 2. In July 1339, Mrs. Joanna Bercote's Release of her right of Dower in the house bought of Thomas Heroun. 3. On the first Saturday and Monday in April, after February 24, 1344, two deeds of conveyance and release by John Fort, of his tenement at the corner near London Bridge, at the place called the Bars. 4. On March 6, 1348 (the year before Richard Chaucer's death, in the plague year of 1349), a release by John Box, of his quitrent of two marks a year in Richard Chaucer's newly-built house, at the corner of Crown Lane.

An earlier conveyance by Philip le Chaucer and Heloise his wife, to John de Borham, is registered in 1322; but this Philip has not been as yet connected with the poet's family. He is no doubt the same man as is mentioned in the City Letter-books in 1308 (B. xxxviii.), and in 1312 (D. 68), noted by Mr. Riley.

MR. HENRY HUCKS GIBBS'S pleasant little book on Ombre, of which we gave a short announcement some weeks ago, is now, we are glad to find, not to be a privately printed book, but is published by Henry Jas. Smith and Co., 45 Julian Street. Though a hand of the Spanish Ombre cards is given in colours in Mr. Gibbs's book, yet the game is played with the ordinary English cards.

THE Shakspeare Society of New York has been recently incorporated under the laws of the State, for the reading, and encouragement of the study, of the works of Shakspeare.

A DUTCH translation of *Macaulay's History of England*, selling at six shillings, is passing through a second edition in the tiny kingdom of the Netherlands.

A BOOK is to be shortly published by Messrs. Macmillan on *Fifty Years of Greek History*, covering the years between the end of the History of Herodotus and the beginning of the History of Thucydides. The rise and development of Greek Art which this period witnessed will be treated of in narrative form.

THE next two volumes in Mr. Freeman's Historical School Series, will be *Germany*, and the *United States*. The *Germany* is by Mr. James Sime, whose proofs, we hear, have had not only the general supervision of Mr. Freeman, but a more detailed supervision by Prof. A. W. Ward. The *United States* is by Mr. J. A. Doyle, Fellow of All Souls', Oxford, who gained the Arnold

Prize in 1869 for an essay on *English Colonies in America before the War of Independence*.

It is rumoured in Holland that the long-expected bill for the better regulation of the three Dutch Universities is at last about to be discussed in the Second Chamber. It has more than once been suggested that one single University in a country of but three millions of people, would not only amply suffice, but would have this additional advantage, that all the Professors of first-rate power would be drafted to one common centre.

PROFESSOR CH. F. HART has published in the *Aurora Brasileira*, a journal conducted by the Brazilian students in Cornell University, a specimen of a larger work on the *Mythology of Brazil*, which he has been preparing for several years. He is able to speak the Tupi language, and has collected his materials from the nation on the Amazon. The article in the *Aurora* is written in Portuguese, and treats of the myth of *Curupira*. His great work will be in English.

MESSRS. BELL AND SONS will shortly publish a *Memoir of Miss Barbauld*, including unpublished letters and notices of her family and friends, by her great-niece, Mrs. Le Breton.

MR. FLEAY'S papers to be read to the New Shakspeare Society this session will be:—

1. and 2. On the Application of Metrical Tests to determine the Authorship and Chronological Succession of Dramatic Writings: Part 1, SHAKSPEARE; Part 2, Fletcher, Beaumont, Massinger.

3. On the authorship of the *Taming of the Shrew*.

4. On the authorship of *Timon of Athens* and *Pericles*.

5. On certain plays of SHAKSPEARE, of which Portions were written at different Periods from other Portions. For instance, *All's Well that Ends Well*, *Troilus and Cressida*, with some Considerations as to the Peculiarities of *Richard III.*

6. On the authorship of *Henry VI.*

WITH the January number, the *Revista de España* enters upon its seventh year; and we are glad to find that its career has not been closed owing to the recent unsettled state of Madrid. The historical notices of the University of Salamanca are continued, and the present number contains an interesting account of the connexion between Christopher Columbus and this ancient abode of learning. There is a spot near Valcubo, about two leagues from Salamanca—a grove of oak trees, where Columbus often retired for rest and meditation, while his proposals were under discussion in the Convent of San Estevan. The present owner of the spot, Don Mariano Solis, erected a simple monument to the memory of the great discoverer in 1866, and has since presented it, together with the plot of ground known as *El Teso de Colon*, to the University. Another memorable event in the history of Salamanca was the famous revolt of the *Comunidades*. The University joined heartily in the struggle for freedom, both professors and students, and seven graduates were excepted from the tardy and ungracious amnesty eventually promulgated by Charles V.

The present number of the *Revista* also contains the first of a valuable series of historical papers on the land tenures of Catalonia; and an article on the mineralogical products of Cuba.

WE drew attention last week to the important help given by the Government in furtherance of our knowledge of Irish history by sanctioning the publication of a very full calendar of the Carew Papers in Lambeth Library. In reference to the same subject it may not be amiss to remind our readers of the valuable materials for illustrating the affairs of Ireland chiefly at a later period, which have also been collected at the expense of the country. As these, however, are not placed in so accessible a form, they stand in more danger of being disregarded. We allude to the transcripts from the Carte Collection in the Bodleian Library, completed a year or two ago under the

superintendence of Dr. Russell, of Maynooth College, and Mr. J. P. Prendergast, of Dublin; one set of them is lodged in the Public Record Office, London, and a duplicate set has been very suitably transferred to the kindred office at Dublin. The collection takes its name from Thomas Carte, best known for his *Life of James, Duke of Ormond*; many of the papers in it, of course, served as materials for the biography, but a very large proportion is entirely unconnected with that subject, and was the growth of a long series of literary and historical undertakings in which the collector was engaged. Carte was born in 1686, at Clifton, in Warwickshire, where his father was vicar. He matriculated at Oxford at the unusually early age of twelve. When reader of the Abbey Church at Bath, he took occasion in a sermon to vindicate the conduct of Charles I. in connection with the Irish Rebellion, thus showing the direction in which his studies lay. A determined Jacobite, he refused to take the oaths on the accession of George I., and so lost his preferment at Bath. Seriously compromised by the Rebellion of 1715 and the Atterbury conspiracy, Carte was compelled to leave England, and lived abroad for many years under the assumed name of Phillips. During his residence in Paris he had free access to the State archives, and there formed the nucleus of his magnificent store of manuscripts. The years between 1728, when Carte was permitted to return to England, and the time of his death in 1754, were constantly spent in adding to these accumulations. By his will he directed that his corpse should be carried to the grave "without any ostrich feathers, or other unnecessary pomp, little becoming a mortal in the lowest state of humiliation." The University of Oxford acquired the manuscripts in 1778, whether by bequest, or for a "valuable consideration" to Mr. Jernegan, the widow's second husband, is somewhat doubtful. Among the papers which were not available for the purposes for which this selection of transcripts was made, are the correspondence, &c. of Sir Edward Montagu, one of Cromwell's generals at sea, afterwards Earl of Sandwich, and many documents relating to Philip, Lord Wharton, a great personal friend of Cromwell; they are said to throw a great deal of light on English affairs under the Commonwealth. To those who desire further information on this subject, we recommend the perusal of the thirty-second *Annual Report of the Deputy-Keeper of the Public Records*, which contains a short account of the contents of each volume of the Carte Collection.

SCIENCE.

Problems of Life and Mind. By George Henry Lewes. First Series. The Foundations of a Creed. Vol. I. (London: Trübner.)

THE progress of mankind from a lower to a higher state consists in the direction of conduct by the organised experience of the past. On the practical side, the conduct which is the result of this progress is called Civilisation; on the theoretical side, the consequent state of mind is called the Scientific View of Things. With these two sides to its results, the essence of true progress consists in their unity; its theory is derived from experience, and aims at action; its practice is directed by that application of past experience to new circumstances on the assumption of uniformity in Nature, which is the Method of Science. Every scientific judgment is a moral command; every precept of natural ethics is a scientific induction. He, then, who extends the range of the scientific view of things, who enlarges the possible applications of organised experience to the guidance

of new endeavours, performs the highest service which a man can render to men. It is this service which in the book before us Mr. Lewes claims, and we think rightly claims, to have performed. It is an advance of the empirical front; a successful use of the scientific weapons against enemies which men had well-nigh despaired of reaching. "Speculative results by inductive natural-science method:" this has been the motto of many; but to seek is not always to find. We do not mean that the book is rich in new doctrines, though there are one or two of very considerable importance; but ideas are more portable and potent than propositions, and no one who carefully reads these chapters will fail to feel that the explanatory armoury of empiricism is therein made far more powerful than it was before.

After an Introduction, treating of the Method of Science and its application to Metaphysics, and of fifteen "Rules of Philosophising," we find a general sketch of the chief doctrines to be maintained in the following volumes, under the title of "Psychological Principles." The remainder of this first volume is then occupied with Problem I., the Limitations of Knowledge; which in form is devoted to the negative work of decisively extruding the alleged *Metempirical** element of knowledge, but whose chief interest is in the construction from empirical data of the higher abstractions of science.

"Rules of philosophising" are admirable things if two conditions are satisfied: first, you must philosophise before you make your rules; secondly, you should publish them with a fond and fervent hope that no philosopher will attend to them. It is quite true that a man who can make a new and successful application of the methods of science must have passed through a training which organises in him the experience of preceding scientific work into an instinct of right generalisation; and that if he has the power of self-observation, he may state some of the main features of this instinct in the form of rules. But these rules are the *product*, not the *regulators*, of his habits of thought; they are *laws* in the empirical sense admirably expounded by Mr. Lewes in a later portion of the volume. And a subsequent investigator cannot be safely guided by these rules, but only by instinctive habits formed in the course of a similar scientific training. Young would have created the theory of Interference if no *Regulae Philosophandi* had existed; but every simpleton who explains the universe appeals to the canons of Bacon and Newton in support of the chimaeras that buzz in his brain. It is hardly necessary to say that these remarks are addressed to the world, and not to Mr. Lewes; who says distinctly that what his Rules profess "is no more than certain general results of philosophic reflection on

the conduct of Research, which are offered to the attentive meditation of the student."

The "Psychological Principles" open with a concise statement of a doctrine which is subsequently expounded at greater length as part of the Method of Psychology.

"Man is not simply an Animal Organism, he is also an unit in a Social Organism. He leads an individual life, which is also part of a collective life. Hence two classes of Motors: the personal and the sympathetic—the egoistic and the altruistic. From these chiefly issue the Animal sentient life, and the Human intellectual and moral life."

"Human Psychology, therefore, the science of psychical phenomena, has to seek its data in Biology and in Sociology. The great mistake hitherto has been either that of metaphysicians, seeking the data solely in introspective analysis of Consciousness; or that of biologists, seeking the data in the combination of such analysis with interpretation of nervous phenomena."

Obvious as the statement seems when made, the *sense of relative importance* implied in it amounts, we believe, to a revolution in psychology. The relation of the new view to that of Comte is partially stated in a footnote, where Mr. Lewes says:

"They differ primarily in this: he holds that Humanity develops no attribute, intellectual or moral, which is not also to be found in Animality, whereas I hold that the attributes of Intellect and Conscience are special products of the Social Organism, and that although animals possess in common with man the Logic of Feeling, they are wholly deficient in the Logic of Signs, which is a social not an animal function."

(The logic of feeling means those laws of grouping whereby elementary simple sensations are knit together into the perception of objects or things; the logic of signs, those laws of grouping whereby such perceptions are knit together into the general conceptions expressed by language.) The important part of the difference here marked out is the ascription of intellect and conscience entirely to the action of the Social Organism, not the denial of them to other animals than man; for some of these have also a social organism, and it would be very difficult to make out that intellect is entirely absent in ants and bees or in gregarious monkeys. But this is not the only advance; for the doctrine, verbally like that of Comte, is here restated in the midst of a Social Medium so newly related to it as to make the doctrine itself new: a medium impregnated with the ideas and language of evolution, vital and social, and of that analogy between them of which Mr. Herbert Spencer has made so good use; acquainted with a whole new science of language, and recognising its influence upon thought; becoming conscious that its motives to right action are natural ones, born in the light of day out of the Social Organism itself. This environment of contemporary thought, acting upon the mind of Mr. Lewes, has stimulated it to react by a statement of Comte's doctrine with the vastly deeper and broader meaning which now attaches to its terms, and by an extension of it which sufficiently marks the changed point of view.

The world as we know it is mainly that which we can talk about. Now the signs of language correspond to general conceptions, and only express particulars in terms of

* This admirable coinage explains itself; it was made necessary by the use of *Metaphysic* in a good sense, as coming after physis, and including the highest generalisations of research. We think, however, that a rather better division of knowledge might be made, if Physis were taken to include the science of the Object-World, Metaphysic the science which proceeds on the hypothesis of consciousness associated with other organisms than mine.

them; *this horse* presupposes the general term *horse*. The world in which we live, then, is mainly a world of general conceptions; these were originally evolved out of individual perceptions by a grouping and symbolising process, but are now rarely analysed into them. The doctrine of Mr. Lewes is that these conceptions were formed for the purposes of language—that is to say, by the action of the social medium; so that the very instruments of thought whereby we form a symbolic picture of the external universe have been fashioned for us by Humanity; and the picture itself only takes on its present aspect because it embodies the thought of thousands of generations. The physicist who finds order and harmony in the laws of motion is seeing with the eyes of Archimedes, of Galileo, of Newton; the physiologist cannot look at a tissue without perforce holding converse with Hippocrates, and Geber, and Vesalius, and Harvey. He must think by means of conceptions which his predecessors have helped to create. Hence it is that we cannot contemplate Nature without feeling that we are in the presence of an intelligence similar to our own; for the intelligence of antecedent Humanity has moulded Nature into the form in which we know it. Our fathers are ever with us; by no stretch of thought can we escape from the presence of the spirit of man. If we climb up into heaven, it is there; whether our heaven be a dome of clouds, or a crowd of stars, or a vast universe moving in accordance with laws, still the poet or the observer or the theorist has been there before, and has made heaven to be what it is for us. If we go down into the depths of the earth, it is there also; if we take the wings of the morning, and fly to the uttermost parts of the sea, the inheritance of ages will fly with us and await our coming. We cannot undo the work of the shaping centuries since man or his ancestor found it not good to be alone.

Mr. Lewes goes on to explain that he uses Vitality and Consciousness as pure abstractions, built up from concretes, and containing no more than is warranted by the concretes, in accordance with his most valuable Rule XI. The Rule really amounts to an adoption of thorough-going Nominalism; and it may be remarked that the error which it is designed to guard against is merely incapacity to form a certain abstraction as such. Certain bodies, moving differently from other bodies, are distinguished as *alive*; the adjective is an abstraction reached through numerous general names of kinds of plants and animals. The fact of belonging to this class is called Vitality; the adjectival noun is a most convenient and powerful artifice of language, but the conception belonging to it is proportionately complex and difficult to form, so that we naturally fall into the error of likening this noun to other nouns which mean things, and picturing *vitality* to ourselves as a *thing* distinct from the animal and residing in it. When Barrow defined Velocity as the power by which a certain space may be described in a certain time, he showed only that he lived among a generation which had not yet learned the use of adjectival nouns.

Passing over the remainder of the "Psychological Principles," we shall here note only two other doctrines contained in it—the Psychological Spectrum, and Reasoned Realism. Just as every colour in the optical spectrum (and, indeed, every colour whatever) is produced by the blending in proper proportions of three fundamental sensations, red, green, and violet; so, Mr. Lewes believes, every sensation, perception, image, or conception, every emotion, desire, or volition, is constituted by three fundamental modes of excitation—namely, Sensation, Thought, and Motion. Every psychical fact is a product of sense-work, brain-work, and muscle-work. All varieties among the several mental states are due to the varying degrees of energy with which Sensation, Thought, and Motion co-operate.

We may perhaps venture to translate this into the language of the current hypothesis, that consciousness co-exists with and corresponds to certain motions in the matter of the brain, and that the complexity of consciousness is parallel with the complexity of these motions. All such motions are preceded by peripheral disturbances which become grouped as they approach the centres associated with consciousness; in these also reverberation and further grouping of the disturbance goes on; finally it goes out along motor channels to the muscles, acquiring the further grouping which is necessitated by their functions. A feeling as arising in consciousness—the co-existent motion being aroused by the sensory current—is sensation; as transformed in consciousness—the co-existent motion reverberating and re-grouping itself—is thought; as passing out of consciousness—the disturbance passing into the motor channels—is motion. This is not to be accepted as Mr. Lewes's own view, which would apparently regard the sentient changes which go to make up consciousness as paralleled by the changes in the *whole* nervous system. When the doctrine of the Psychological Spectrum is developed (as is promised for a subsequent volume) from the physiological side, it will be important to notice its relation with Mr. Bain's theory of the muscular sense. Another remark which seems worth making is that Judgment appears to belong to the motive part of a psychic fact, to be the expression of the bundle of resolves which it suggests. When I frame the proposition that A is B, I mean that I am going to act as if A were B. For judgment is never connected directly with sensations, but always with the symbolic conceptions which interpose between them and the motions they produce.

The doctrine of Reasoned Realism is Mr. Lewes's contribution towards the solving of the great metaphysical question touching an external reality. On this question it is always exceedingly difficult to enter into the thoughts of another man; we do not therefore attempt to describe the present doctrine without grave fears that we have misunderstood it.

A serious cause of misunderstanding lies in the various senses given to the word *Object* by different writers. With Spinoza, as with Kant, the word was equivalent to *phenomenon*, that which is objected or pre-

sented, or which appears to me; it is a certain grouping of my sensations, and is therefore in my consciousness. This appears to be the sense in which Mr. Lewes generally uses the word. In some writers (Mr. Herbert Spencer for example) the word is used to mean a certain other thing, which is not in my consciousness, and which is the cause of the appearance in my consciousness—which gives rise to those feelings of mine that constitute the phenomenon. When two disputants use the word in these senses respectively, and are unaware of the difference, they do not as a rule explain things very clearly to each other. We shall here use the word in the former sense.

Another difficulty is in a restricted use of the term Feeling which Mr. Lewes here adopts. He seems to restrict it to mean Perception, as excluding Conception. It would apparently have conduced to clearness, if one might have spoken of a conception as a feeling which is habitually substituted for a group of other feelings and made a symbol of them. The words Perception and Conception, however, are used in the same relation to one another as Feeling and Thought.

Now the world is *thought of* as a world of conceptions; this is a symbol. But the symbol is valid in so far as capable of interpretation, and thought is true when representative of feeling. The world, *when so reduced to feeling*, is real, is what it is felt; within this region "we do know things as they are, know them absolutely, comprehensively—in any rational sense to which the term knowledge ever was applied." The distinction between Self and Not-self is given directly in Feeling; this is therefore a distinction *within* my consciousness, and does not transcend it. In this sense the Object, or Not-self, may abstractedly be considered under a different aspect from the Subject, or Self, but they are one and the same phenomenon. But we may sometimes use the words Object or Not-self to mean "the universe of existence, conceived in its totality, including that smaller section of it which is grouped by a Subject." Thus it appears that I am to infer an existence outside of my consciousness, but this is not, like the unknowable of Spencer, a counterpart of my feelings, the reality by which they are caused; it is that larger order from which my world is a selection—which selection, *so far as it is given in feeling*, I know absolutely and directly to be what it appears to be; so far as it is given in thought, I know it symbolically, indirectly.

It seems to us that there are here two points on which controversy may be raised; we do not intend to discuss them, but merely to indicate other views that may be taken.

In the first place, it may be maintained that the judgment of feeling which asserts an external reality, a not-self, is derived from the social medium. This table is an object in my consciousness; but I have reason to infer the existence of your consciousness, and of a similar object in that. Your consciousness can never be an object to me, nor can any part of it. Now this inference of a consciousness in other men, similar to my own, lies at the base of the social relations. Herein is a distinction between Self and Not-self, which is far deeper than that between

Subject and Object; the distinction between *You* and *Me*. My conception of your consciousness is a symbol that differs from all objective symbols in this; that they can be expressed in terms of my feeling: this never can. In the primary sense of the word object, then, I know directly one object, this table, which is in my consciousness; I infer symbolically a number of similar objects in the consciousness of other men. Out of all these there now arises a still more symbolic conception; the table, as object in the consciousness of man. Now it may be maintained that long before we are able to reflect, this very complex symbol has (through the action of the social medium) been substituted for the immediate object which can be expressed in terms of feeling, and that it is this which is regarded as a Not-self. Such, we believe, is the view of the Object propounded by Mr. Shadworth Hodgson. It is conceived as existing in Consciousness in general, not merely in the individual consciousness.

Secondly, it may be maintained that as a form of consciousness thought differs only from feeling in the complexity of its relations. An object as thought of is a symbol of the object as felt; these are two different facts of consciousness, and we know the relation between the two. But if the object as felt is real, and exists just as it is felt, may we not say that the object as thought of is equally real, and exists just as it is thought of? But this is subsequent and derivative. Granted; there are relations of time and complexity between the two facts. But does this prevent one from being as real as the other?

We have no space left to criticise the important Problem of the Limitations of Knowledge; but must confine ourselves to a particular doctrine—that of Necessary Truths. Mr. Lewes's view is that "every verified proposition, whatever its nature, is necessarily true, and universally true—*under the formulated conditions*." "All propositions are liable to a double contingency—first, the contingency of enumeration (i.e., whether all the factors are or are not taken into account); secondly, the contingency of application (i.e., whether the old formula is applied to the old conditions, or to changed conditions, which would require a new formula)." It seems to us that this is either not true, or an inconvenient way of stating the truth. The actually empirical position is a very simple one: No general statement is known to be true; if an apparently general statement is known to be true, it is really a statement about the equivalence of words. Let us take for example Rule VI. "Each cause must always and everywhere have the same effect; and never more than this." Let a given cause have on a certain occasion a certain effect; on all other occasions it will have the same effect, *provided all the conditions are the same*. But suppose Time is one of the conditions? Then there is no other occasion, and all we can say is that a certain event happened at a certain time and place; and it seems hardly worth while to call this a necessary and universal proposition. The axiom of causation, in fact, assumes that in the relations of events, time is not a condition. But all we know

is this:—the influence of time as a condition has been hitherto imperceptible; we are going to assume that it will continue imperceptible. So the principle of superposition in geometry asserts that in the distance-relations of bodies, *place* is not a condition; to which the homaloid hypothesis adds, *size* is not a condition. Again, the law of Force in dynamics says that in the relations between the acceleration of one body and the relative position of others, the *velocity* of that body is not a condition. In all these cases we are only entitled to assert that the influence of these circumstances has not yet been observed, and that for purposes of practical science we shall expect it to remain imperceptible. In Newton's words, "We shall look upon propositions collected by general induction from phenomena as accurately or very nearly true, notwithstanding any contrary hypotheses that may be imagined, till such time as other phenomena occur by which they may be made more accurate or liable to exceptions." But we shall decline to regard a limited experience and intuitions finite in accuracy and extent as adequate ground for universal statements.

W. K. CLIFFORD.

Chinese-English Dictionary of the Vernacular or Spoken Dialect of Amoy. By Rev. Carstairs Douglas, M.A., LL.D. Glasgow; Missionary of the Presbyterian Church in England. (London: Trübner, 1873.)

EUROPEAN scholars will be able to enter into the spirit of the Chinese language, and estimate with correctness the meaning of the roots and the variety of the derived forms, when dictionaries such as this by Dr. Douglas have been prepared in sufficient number. Much special work is needed on this language to exhibit it in its old dress. It needs to be rehabilitated in the robes it wore in the days of Confucius and earlier. Lexicon-makers must dig in the mines of old dialects to restore primitive words and forms. The varieties of verb compounds, perhaps the most curious and characteristic feature of Chinese grammar, if collected from all the existing dialects, and classified in a way suited for philological investigation, would illustrate in a style both novel and instructive the true position to be assigned to the language among the different families of human speech.

As Dr. Douglas has well remarked, the study of the Amoy dialect is of considerable importance, as contributing to our knowledge of the ancient Chinese pronunciation. A fourth part of the vocabulary appears in the mandarin tongue without final consonants, and in the Amoy dialect with them. This dictionary exhibits in full these lost letters, which are *k*, *t*, and *p*. We need a similar dictionary, constructed with as much care and persevering labour, of the Swatow or Tiechiu dialect. Goddard's small dictionary is much too brief and contains no phrases. The dictionary of Dr. Wells Williams of the Canton dialect is good as far as it goes, but does not approach in richness of examples the work now being noticed. The Fuchow dialect dictionary, by MacLay and Baldwin, is full and trustworthy, and has the advantage

of possessing the Chinese characters. Dr. Douglas, printing in England, was not able to add them, but promises an appendix in which they will appear.

It is very desirable that we should have copious dictionaries of the Shanghai, Ningpo, Suchow, and Hangchow dialects. The *patois* of these cities contains the whole of the lost initials *g*, *d*, *b*, *z*, and *dj*. A sufficient collection of the compound expressions there used would form a convenient link between the dialect dictionaries just mentioned and the works of Morrison and Williams, who have toiled meritoriously to illustrate the Northern Mandarin language.

The history of the changes that the general language has undergone enables us to assign to the Amoy dialect an approximate age of about two thousand years. This agrees with the statements of native historians regarding the settlement of the Chinese population in the southern parts of the country. When colonists went at that distant time, attracted by the richness of the soil and the scantiness of the aboriginal population, to Canton and the neighbouring province on the east, those of them who crossed the Bohea mountains would soon discover the advantages to be derived from a residence near a natural harbour so capacious and so safe as that of Amoy, and in a climate where two crops of rice in the year may be regularly expected. Their isolation between mountains and the sea would favour the preservation of archaic words and pronunciation. We find then, as stated by our author, that among the sources from which the ancient form of the Chinese has been to some extent recovered, a prominent place is held by the Amoy vernacular.

Let it not be supposed, however, that the vernacular language registered in this dictionary is all of it as old as the time of the first colonisation of the region by the Chinese population. The four tones have become seven by the subdivision of three of them. The initial letters *j*, *h*, *b*, *l*, are changed to a large extent from an older *ni*, *f*, *m*, and *n*. The final letters *ng* and *n* have been weakened into nasals. Many of the words formerly ending in *k*, *t*, and *p* have lost those letters in whole or in part. The old initial *ng* has become *g*.

In the medial vowels and diphthongs there is often combined with much that is old, and therefore valuable, an exaggerated provincialism.

Some of the colloquial initial letters are of the greatest philological value, as *kwai* "a *Hien* city." This tells us that the mandarin initial *k* is derived here from an old *g*, of which the Amoy equivalent is *k*. *Pu*, the colloquial for Buddha, shows that the mandarin initial *f* in *Fo* and *Fuh*, commonly used for Buddha in Northern and Western China, is changed from an older *b*, of which the Amoy equivalent is *p*. When *m* occurs in the colloquial for *b* in the reading sound, we learn that the true old initial is *m*.

Colloquialisms in all languages may be extremely archaic or extremely modern. When in Amoy vernacular the reading word *but*, thing, becomes *mih*, it drops the old final *t*, substituting for it a nasal in a most irregular manner. At the same time it retains the old *m*.

Dr. Douglas has not given an opinion on the question whether the words without characters are Chinese or aboriginal. Medhurst, in his *Hokkein Dictionary*, expresses his belief that they are aboriginal. This hypothesis is, however, scarcely necessary. For example, *phai*, "bad," "spoiled," may be referred to *hui*, "it is not," "no," "wrong." Probably no language in the world has borrowed so little from neighbouring languages as the Chinese. The preservation of its purity has been favoured by many circumstances, among which may be mentioned the vastness of the population, the civilisation of the race, the simplicity of the grammar, the absence of grammatical forms, the fulness of the vocabulary, the primitive character of the linguistic type. These things have rendered the Chinese language a giver without being a borrower. The only foreign words borrowed by the Chinese are the names of some things introduced from abroad. As to adjectives, verbs, or pronouns, there is no need to suppose that they have borrowed a single word. But it may be objected, there is the word *lung* used for "man" in that part of China and nowhere else. Surely this must be foreign? It may be derived from the Malay for "man," which is *urang*, as in *ourang outang*, "wild man of the woods." To this it may be answered that the same sound, *lang*, is used in mandarin for a "cowherd," and for a "bridegroom" in the expressions *nien lang* and *sin lang*, and that this is the word that the natives of Amoy make use of for "man," as it is that which the Malays, whose vocabulary often resembles the Chinese, also commonly employ in the same sense, merely prefixing a vowel after their way to lengthen it.

The standard with which the Amoy pronunciation, given in this dictionary, should be compared for purposes of philological investigation, is to be found, not of course in the mandarin—for that is the newest of Chinese dialects—but in that of the mediæval dictionaries. Of these the most valuable and most worthy of becoming known in Europe is the *Kwang yün*, a work of the sixteenth century. Its law of arrangement is, first by tones, second by final letters, third by initial letters. The word *Kwang*, "wide," being in the second tone class, must be looked for in the second volume. There it will be found under the thirty-second final, and the third initial. This is cumbersome. To make the system of arrangement strictly alphabetical for European use, it would be necessary to cut up the book with scissors and place the articles in alphabetical order. The articles are about 2,500 in number. The process would be something like making an index, and it would be facilitated by first writing in the ample margin, which the Chinese printers love, the pronunciation in Roman letter. After writing down these 2,500 syllables and a good deal of clipping and pasting, the book would be ready for the printer, and would extend to between five and six hundred pages. Clipping would be comparatively easy, since the Chinese print only on one side of the paper.

On comparing the alphabetical *Kwang yün* with the Amoy syllabary, it will be at once seen that the similarity is in many respects great. If we divide 2,500 by four,

to eliminate the distinction of tones, we obtain 625 syllables, about half as many again as in Morrison's *Syllabic Dictionary*. Dr. Douglas' syllabary is probably about the same in extent as that of the *Kwang yün*. The difference is due partly to the preservation of the final consonants and partly to the greater number of diphthongs. The old language (like the Amoy vernacular) had not only a larger development of final consonants than the mandarin, but also of diphthongs. In the modern language the syllabification is much less complicated; and, in consequence of the increased simplicity of the syllable, the number of word compounds has increased in proportion. Formerly, the word "thing" was simply *mut*. The *t* was dropped, and the *m* becoming *w*, the word was too indistinct to stand alone. The people, therefore, used *wu kien*, or *wu shi*, or *tung si* instead. The result of changes like this is that the translation of the Bible into mandarin occupies nearly twice as much space as in the old book language. The little rift in the poet's lute soon spoiled it for ever, but it is different with the minute alterations which take place in the syllabic system of the Chinese language. They work a beneficial change by promoting a tendency to polysyllabic development, from the want of which the Chinese language has always been a sufferer.

Enough has been said to show that Dr. Douglas' dictionary is not only well adapted to be eminently useful to official, missionary, and commercial residents, among a population of eight or ten millions, but also to the progress of linguistic studies in Europe and America.

JOSEPH EDKINS.

NOTES AND NEWS.

THE Council of the Royal Astronomical Society have, we understand, awarded their gold medal to Professor Simon Newcomb for his tables of Uranus and Neptune and other contributions to gravitational astronomy, foremost among which is a paper in the *American Journal of Science* for September 1870, on the "Inequalities of Long Period in the Moon's Motion," in which, after a masterly discussion of the discordances between theory and observation at the commencement of the last century, the author is led to the conclusion that the irregularity in the moon's motion may be accounted for by supposing the length of the day to be variable, in the same way as an apparent irregularity in the movement of the stars might be referred to the bad going of our clock. This supposed variation, however, amounts to such a very small fraction of a second that astronomers are quite justified in taking the day as the standard of time, though the accumulated effect may possibly, in Professor Newcomb's judgment, amount to half a minute by the end of this century. Though the quantity involved may seem minute, it must be remembered that such minute residuals have ever led to the greatest discoveries in astronomy, and every scientific man must be glad to learn that the French Academy of Sciences also has marked its appreciation of the high character of Professor Newcomb's researches by electing him a correspondent of their eminent body. We trust that the duties with which he is charged will admit of his being present when Professor Cayley, the President of the Royal Astronomical Society, pronounces the usual *éloge* on one of whose work he is so peculiarly well qualified to judge.

MR. HIND, the Superintendent of the *Nautical Almanac*, has been doing good service by com-

paring certain ancient observations of planets with modern theory. As a general rule, observations made before the middle of the last century are far too rough to be of any value now, but an occultation of a star by a planet, or even a near approach, forms an exception; for the star's place is, by means of modern observations, determined with great accuracy; and we are sure that in the case of an apparent occultation, even before the invention of the telescope, the planet must have been very near the star, whilst the exact time at which the phenomenon happened is, owing to the slow motion of the planets, a matter of minor importance. Mr. Hind has compared an occultation of Regulus by Venus, observed by Ebn Jounis on Sept. 9, 885 A.D. (as detailed in Delambre's *Astronomie du Moyen Âge*), with Leverrier's Tables, and finds that at the epoch given the planet was actually only 1'7 from the star, and that therefore the latter would be hidden by the blaze of Venus. Now, as these tables are based entirely on modern observations, this agreement naturally inspires great confidence in the accuracy of Leverrier's theory.

MR. BIRMINGHAM, of Tuam, has lately been examining the red stars comprised in the list formed by Schjellerup some years ago, and has already communicated some interesting results to the *Astronomische Nachrichten* and *Monthly Notices*. He finds curious changes of brightness in some stars, whilst others have disappeared altogether; and his results are confirmed by observations made at the Royal Observatory, Greenwich. The connection between colour and variability in stars is very curious. It would appear that the red stars are in the condition of a fire dying out, and that the embers are sometimes raised to a white heat by some unknown causes only to die down again in an equally mysterious manner. We are much in the dark as to the how and the when of many of these changes, but this much we do know, that solid bodies become brighter as they become hotter, and in doing so pass from red through yellow to bluish white. But what is the behaviour of gases under such conditions, is a problem of the immediate future, and it must be remembered that the changes in stars are probably due to gases; so that we are hardly yet in a position to speculate. The interesting question remains, whether we can justify a division of variable stars into two classes, the one of short period (a few days), showing the phenomena of rotation or of the interposition of a dark satellite; the other of periods ranging from a month to many years, in which the change has a physical origin. The stars of the latter class are generally red. Well have those who called attention to these interesting objects, insignificant as most of them appear, carried out the motto of the Royal Astronomical Society, "*Quicquid nitet notandum*."

THE vexed question of change in the Lunar crater Linné has been again raised, the disputants being Dr. Huggins and Mr. Burton; and, strange to say, the latter quotes Dr. Huggins's former measures as evidence of change, while the observer in question, on repeating his measures recently, concludes that there is no alteration. There is a white spot in the small crater Linné which appears to change remarkably with the changing illumination of the long lunar day of one month, and the effect of this change greatly complicates the question of a change of much longer period, supposed to arise not only from an alteration in the light and shade, but from an upheaval or subsidence of the moon's surface. Where doctors differ it is hard to decide, but in the present case we prefer the doctor's view of the question, although Mr. Burton's skill as a draughtsman was vouched for at the meeting of the Astronomical Society, by no less an authority than Mr. Brett.

BY way of spreading ideas of scientific accuracy, a balance for the use of the public has been placed at the entrance-gate of the Royal Observatory,

Greenwich, which shows by means of an index, on a large divided arc, how many grains too light or too heavy any ordinary pound weight is. Any person may thus test his pound at any time between 8 A.M. and 2 P.M. This will be a useful addition to the electric clock showing accurately Greenwich time, to the standards of length, and to the automatic barometer, all of which have been exhibited to the public for some time past.

WITH rare energy, considering the heavy official duties he has to perform and the additional labour which has been imposed on him in the preparation of the Transit of Venus expeditions, the Astronomer Royal has developed a new method of treating the Lunar Theory, and already proceeded some way in the laborious computations which, as he pathetically expresses it, he hopes to leave in such a form that a successor may bring the work to a successful conclusion. In the ACADEMY for January 10, there was inserted a notice of a paper in which Sir G. B. Airy called attention to certain defects in the present theory of the moon's motion, and now we are glad to see that, like a wise physician, he not only points out the disease, but suggests the cure. Hitherto the tedious computations necessary for the formation of tables of the moon's motion have required the personal labour of the most distinguished mathematicians of this and of other countries; the great feature of the method proposed by the Astronomer Royal is that it will admit of this drudgery being handed over to a mere computer, so as to carry out that principle of economy of labour which applies with as much force in scientific as in any other work. The real difficulty in the Lunar Theory is the imperfection of our analytical methods, which lead to such a fearful complexity in the expression of the results that there are but few minds indeed which can successfully carry out the process when great accuracy is required. We know perfectly well the conditions of the moon's motion, but the calculation from these of the moon's position at any time can only be performed approximately, and is even then a very troublesome matter, involving such a serious risk of error from the mere number of operations required, that there is no security that our solution of the problem will satisfy the original conditions.

Now, notwithstanding the fearful labour involved, the late M. Delaunay has worked out the problem with such skill that his results have been accepted as one of the greatest steps in the Lunar Theory, and have secured him the medal of the Royal Astronomical Society. Taking these, then, as the basis of his calculations, Sir George Airy's plan is to find how far they require correction in order to make them satisfy the original conditions; and this, though a laborious task, is easy as compared with Delaunay's work.

A VALUABLE report has been published by Drs. Vogel and Lohse, of Bothkamp, on the application of Photography to the Transit of Venus, to which Germans as well as Englishmen are looking forward with much interest. The conflicting claims of wet plates, dry plates, and daguerreotypes are impartially examined, and the verdict is given in favour of the dry plate process, as it appears to give a sharper image, and leaves the operator at liberty to develop when he pleases, a very important consideration, when we think of the nervous excitement to which most men are subject on such occasions, and also to the difficulty of working for several hours continuously in a developing room with the thermometer at 100° or more. The objection which has often been urged against dry plates, that they require a long exposure, loses all its force in this case, where the picture is obtained by an exposure of a few thousandths of a second; independently of which some of the new processes are quite as rapid as wet collodion photography. Of course the dry plates will be prepared on the spot, so that there will be no risk of accident to them in transit.

All this agrees with the experience of the English expeditions.

The rest of the report is devoted to a discussion of instrumental details, and of measures of solar photographs under various circumstances; the conclusions do not differ materially from those already arrived at in this country and in America by Messrs. De La Rue and Rutherford.

WE learn from *Nature* that a paper on Electrical Warfare will be read by Mr. Nath. J. Holmes, at the Society of Telegraph Engineers, on Wednesday, the 11th inst. The same journal states that the new Holmes' Shipwreck Distress Signal, of great power, will be exhibited from Primrose Hill on Thursday, the 12th inst., at 8.30 P.M., in presence of the Marine Secretary of the Board of Trade. This signal is self-igniting in water, and inextinguishable.

THE post of Hydrographer to the Navy has been bestowed on Captain J. O. Evans, R.N., C.B., F.R.S., by Mr. Goschen, in succession to Rear-Admiral Richards, C.B., F.R.S., who has retired.

Nature states that Dr. Schmidt, Professor of Astronomy in the University of Athens, has just completed his great Map of the Moon. It is *two mètres* in diameter, and is a marvel of accurate mapping and minute draughtsmanship. The shading is so exquisite that any part of the map may be examined by a lens without the appearance of coarse or rough work. The map represents the labour of thirty-four years, and is without doubt one of the greatest astronomical results of the century.

AN American correspondent of the *Cologne Gazette* writes from Cincinnati that the German sparrows, which some years ago left the immediate precincts of the town to escape the smoke of the chimneys, and spread themselves over the neighbouring farms, have now returned in large numbers, apparently because they had multiplied so extensively as to have exhausted their supplies of food. The present generation of sparrows seems to have become completely habituated to the bituminous vapour with which the air is so densely charged, and they, as well as several species of ordinary singing birds, which have been imported from Germany by the Society of Acclimatisation, bid fair to become thoroughly naturalised on the American continent.

A MEETING was held at Berlin, February 3, to receive the report of the Liebig Memorial Committee. The collection has reached the sum of 40,000 marks, but as this is inadequate to the purposes aimed at by the Committee, further contributions are earnestly requested.

DR. PISCHEL, after spending some time in London and Oxford, and examining the manuscripts in the library of the India Office and in the Bodleian library, has just published, in his *Dissertatio pro veniā docendi*, an interesting account of the principal Prākṛit grammarians. There are several important facts which he has established in his essay. On page 31 he shows that, with regard to the degree of phonetic corruption, the Paisāki dialect ranks next to Sanskrit, and resembles closely the Pālī; that next follows the so-called Apabhraṃsa, afterwards the Sauraseni, and, last of all, the Mahārāshtri. He concludes that these dialects followed each other chronologically in the same succession, a natural conclusion, which, however, requires further confirmation, for, on the same grounds, we might claim for the Italian dialect an earlier origin than for the *langue d'oïl*. He calls attention to the fact that the large collection of popular stories, the *Bṛhatkathā*, was originally written in Paisāki, and he actually gives some lines, quoted in Hamaśandra's grammar, which seem to have belonged to the Paisāki text of that collection. He doubts whether the grammatical passages ascribed to Bharata could have been taken from Bharata's work on rhetoric, the *Alaṅkārasāstra*; yet on p. 23 he quotes himself another work on rhetoric, which contained grammatical passages. In

Vedic literature, the authors of ceremonial Sūtras are sometimes quoted as authorities on grammatical matters, because, in discussing the changes of letters or grammatical forms required for ceremonial purposes, they incidentally touched on questions of grammar, and the same may apply to Bharata's work on rhetoric. Dr. Pischel, though denying the possibility of identifying Vararūki, the author of the oldest Prākṛit grammar with Vararūki, the Pālī grammarian, inclines to the opinion that the Prākṛit grammarian may be the same as Vararūki, the author of the *Vārtikas* to Pāṇini's grammar. Has not Dr. Pischel been carried away by his love of Prākṛit in translating the passage from Bharata, *Samskrītāt prākṛitām aśiṣṭham tato pabhraṃsabhaṣanam* by "Prākṛit is better than Sanskrit, Apabhraṃsa better than Prākṛit?" Should we not translate, "the best Prākṛit comes from Sanskrit, Apabhraṃsa from Prākṛit?" After the excellent specimen which Dr. Pischel has given in this dissertation of his careful study of a much neglected branch of Indian scholarship, containing several important criticisms on Professor A. Weber, M. Williams, and others, we look forward with great interest to a more complete statement of the results of his researches, and particularly to his promised edition of the Prākṛit grammar of Hemaśandra.

MR. CHILDERS, the author of the excellent *Dictionary of the Pālī Language*, is preparing the text and translation of the *Mahāparinibbāna Sutta* for publication in the *Journal of the Royal Asiatic Society*. The following passage from the work is of great interest at the present moment, when the missionary character of Buddhism is called into question, as showing the anxiety of Buddha himself for the propagation of his doctrine. Three months before his death, when Buddha's health and strength were fast failing, he was tempted by Māra, who came to him and urged him to bring his life and mission at once to a close by attaining Nirvāṇa. Buddha replied that he would not enter Nirvāṇa until his disciples were perfect on all points, and able to maintain the truth with power against all unbelievers. Māra replied that this was already the case, whereupon Buddha spoke as follows:—"O wicked one, I will not enter Nirvāṇa until this, my holy religion, thrives and prospers, until it is widely spread and known to many peoples, and grown great, until it is completely published among men." When Māra again asserted that this was already done, Buddha said:—"Strive no more, thou wicked one; the death of Buddha is at hand; at the end of three months, from this time, he will attain Nirvāṇa."

AMONGST the numerous changes that have been effected in the professional staff of the German Universities, we may instance the following:—Dr. Krehl, Assistant Professor and Junior Librarian at the University of Leipzig, has been nominated to the chair of Oriental Languages in that University. Dr. du Bois Reymond, late Professor at Freiburg, has accepted the chair of mathematics at Tübingen, while the directorship of the Observatory at the latter University has been given to Dr. von Reusch. Dr. von Holst has left Strasburg to take the chair of history at Freiburg; Dr. G. Rindfleisch, of Bonn, has been nominated by the King of Bavaria to the chair of medicine in the University at Würzburg; whilst Dr. Lüder, of Leipzig, has migrated to Erlangen, where he has taken the chair of jurisprudence. The members of the medical faculty in the University of Berlin have under consideration the question of raising the status of the private extra-academical medical teachers, which they desire to bring into harmony with the objects aimed at by the Austrian Board of University Reform. But hitherto the support which the Berlin medical faculty expected to receive from the assistant teachers in the other faculties has not been given to them, and at present there seems no chance of effecting any material alteration in the existing system.

In the *Augsburger Zeitung* of February 1, Professor Haug has published a short article on the Trojan inscriptions, discovered by Dr. Schliemann. He imagines he can see some similarity between their letters and those of the Cyprian inscriptions, which have just been so successfully deciphered by Smith, Birch, and Brandis. He even attempts to read one inscription as *εἰς Σίγῃ*, the divine Sigo, and suggests that Sigo may have been a Trojan god or hero. He imagines that he can discover traces of Sigo in the *Skaean* gate, in the name *Skamandros*, in *Sichaeus*, the husband of Dido, in *Sigon*, the name of a place in Phoenicia, mentioned by Arrian, and in *Sige* the harbour-town of Troy. He might have mentioned the *Sigeia tellus*; and considering that Achilles was supposed to have been buried at Sigeum, he might have represented the treasure, not as coming from a temple of an unknown god Sigo or Siko, but from the very cairn of Achilles! Another inscription, written with the same letters, Dr. Haug imagines to be in a Phoenician dialect, but he admits that the only word which he thinks he can read in it has not yet been met with in any of the fragments of the Phoenician language.

PROFESSOR SCHRADER has a paper in the last number of the *Theologische Studien und Kritiken* which will interest the students of Assyria and theology alike. He first shows that Amos v. 26 ought to be rendered: "So will ye take Saccuth, your king, and Chiun, your star-god, your images, which ye made to yourselves, and I will lead you into captivity." Chiun is the Assyrian *Caivanu* (Arabic *Kaiḍān*), the name of the planet Saturn, and *Saccut* is a synonym of the god Adar, the Assyrian Moloch or Hercules, who presided over the same planet. Like Moloch himself (Malik in Assyrian), these astral deities would have been derived by the Israelites from Babylonia. It is next shown that the Canaanite Sun-god Baal was not identical with the Babylonian Bel, or the "older Bel," as he is termed. Both words are of course etymologically one and the same, meaning "lord," and might be the title of any divinity; but whereas the Phoenician Baal, when applied to a specific deity, was the Sun, the Babylonian Bel was the second person in the first Chaldaean trinity, Samas, the Sun-god, being the second person in the second trinity. These two trinities, together with Dingir or Ilu in Babylonia and Assur in Assyria, formed "the seven magnificent deities" who headed the Pantheon; and when the gods of the five planets were added, the whole constituted "the twelve chiefs of the gods" mentioned by Diodorus. The list of the planetary deities began with Merodach (Jupiter), the patron-god of Babylon; and it was to him that the name of Bel was specifically transferred by the Babylonians during the later period of their history. Prof. Schrader concludes by pointing out the Babylonian origin of the week of seven days. The ancestors of the Hebrew and Canaanite tribes, and possibly of the Aramaeans also, brought it with them from Chaldaea; but it was unknown to the Arabs or the Aethiopians until a comparatively modern epoch.

MR. JOHN RHŶS has reprinted an interesting communication of his to *The Carnarvon and Denbigh Herald*, on "The Early Inscribed Stones of Wales." It gives a detailed account of his examination of the various inscriptions which exist in South Wales. Most of these, it is true, had been known and copied before; but the copies could not be depended upon, and a careful re-examination of them, therefore, was indispensable. Some of the inscriptions are bilingual, containing a line of writing in the so-called Ogham characters, the key to which has long been in the hands of the Irish antiquaries; but it was the Welsh legends which established the correctness of their traditional alphabets. Mr. Rhŷs was fortunate in discovering a new Ogmic inscription at Llandawke. At the end of his paper he refers to the inscriptions found in North Wales which he has also examined, and remarks upon the significant fact that

the Welsh counties bordering upon England are all but entirely devoid of any. The philological value of these inscribed stones is very great, as they are almost all that is left of Welsh earlier than the tenth century. They tend to prove that the language possessed declensions answering to the first, second, third, and fourth of the Latin, and that the peculiar sound which is written *ll* was originally also pronounced in the same way.

LECTURES AND MEETINGS OF SOCIETIES.

LINNEAN SOCIETY (Feb. 5).

THERE seems to have been something like a free fight at Thursday's meeting. Mr. Carruthers began by proposing that the proceedings of the previous meeting of the Society be hereby declared null and void. This Dr. Bentham, the President, refused to put to the meeting. Mr. Carruthers persisted in his motion, and succeeded in carrying a majority of the meeting with him; whereupon Dr. Bentham left the chair, and it is said that he has declared his intention of resigning the Presidency. We hope he will think better of this; meanwhile the temperature of the meeting rose too high to admit of the consideration of scientific questions, so that Dr. Parker's disquisition on "Woodpeckers," and Mr. Moseley's "Letters from H.M.S. *Challenger*," had to stand over.

PHILOLOGICAL SOCIETY (Friday, Feb. 6).

MR. A. J. ELLIS gave an account of a system of scoring sheep said to have been introduced by Scotch shepherds into Yorkshire, now nearly extinct, or only known to very old persons, and used in school games. Versions were adduced from Scotland, Durham, and Westmorland, as well as Yorkshire, and, strangely enough, from three North American Indian tribes (communicated by Dr. Trumbull, of Hartford, Conn., U.S.) The foundation of the system is Welsh (not Gaelic), as shewn especially by the words for 5, 10, 15, and the system of counting 11, 12, 13, 14 and 16, 17, 18, 19 as 1 + 10, 2 + 10 &c., and 1 + 15, 2 + 15 &c. The words for 20 are perhaps all deformations of the Welsh. The words for 6, 7 in some versions seem also to be deformations of Welsh; but in others, as well as 8, 9, differ much from the Welsh and follow several different systems, not yet traced. The 1, 2, 3 are generally mere varieties of *ane*, *t'one*, *t'other*, but 4 is clearly Welsh. The persons who use the system being perfectly ignorant of the meaning, deface the words *ad libitum*, run off into jingles, and often confuse the order.

ROYAL INSTITUTION (Friday, Feb. 6).

MR. GARROD read a paper last evening on the "Heart and the Sphygmograph." He commenced by stating the great importance of the Sphygmograph of Marey. As in the consideration of any working pump there are two different sets of actions which may be considered,—the mechanism of the cylinder itself, and the force which keeps that cylinder in motion,—so with regard to the heart, the attention may be directed to the action of the valves, or to the manner in which the muscular walls of the ventricles perform their function. Physiologists, in the employment of the sphygmograph, have devoted their attention almost entirely to the former of these two points, and have left out of consideration the second, towards the elucidation of which there is more to be learned from the study of the sphygmograph trace than by any other means at our disposal.

The lecturer then compared the action of the heart to that of a high-pressure steam-pump, heated by an ordinary and constant gas flame. He demonstrated practically how variations in the amount of work required of it produced changes in the velocity with which its fly-wheel revolved; the greater the task, the slower the movement. By placing the waste-steam tube into the funnel of the engine, he showed that the draught through the boiler tubes, and therefore the heat of the furnace, is increased, somewhat proportionately to

the power expected of the engine. It was proved that, in this case, only a limited degree of variation in the intensity of the furnace can be arrived at, and that when the engine was doing no work there was a great waste of heat.

The engine previously employed being connected with a pair of bellows, to which a large elastic reservoir was attached, was made to pump coal-gas instead of air. The burner which heated the boiler was then disconnected from the main, and put in connection with the elastic reservoir just mentioned, with a leakage into an empty gas bag admitting of regulation. On the engine recommencing work, the coal-gas which it was pumping distended the elastic reservoir, and so supplied the burner with gas, which, on being lighted, heated the boiler. It was evident that by simply varying the escape of gas from the elastic reservoir into the gas bag, the intensity of the flame which heated the boiler varied in such a way that the greater the resistance to the escape of the gas, the greater the heating-flame, and consequently the greater the efficiency of the engine. A minimum of resistance was attended with a minimum of steam-production; and on the pressure becoming *nil*, the engine could not of itself recommence work.

The lecturer then argued that this is the principle on which the ventricles of the heart do work, showing that the anatomical arrangement of the coronary vessels, through which the blood enters its substance, renders it possible and highly probable that such is the case; these vessels being in direct communication with the elastic reservoirs, the arteries, into which the blood, the fuel, is pumped; whilst the blood in circulation is variable in amount. This, however, does not explain that the force of the muscular fibres of the heart's walls varies, in any way, with the pressure of the blood in the arteries, and it is necessary to appeal to the sphygmograph trace for the proof of this proposition.

It is well known by physiologists that the blood-pressure in the arterial system is not in any way correlated with the pulse-rate, the same rapidity being possible with different degrees of blood-pressure. The lecturer showed how he had been enabled, by measurements of the length of the systolic and diastolic intervals in the sphygmograph trace, to prove that the length of the systole and of the diastole *never*, in health, varies when the pulse-rate is constant. Such being the case, and the length of the first or systolic portion of the beat being a direct measure of the cardiac systole itself, it is evident that the rapidity of the systole, or pump action, is not in any way dependent on the work to be done, and this can only be explained on the supposition that the nutrition of the walls of the heart varies directly as the blood-pressure in the arterial system, just as the size of the furnace flame did in the engine described above.

The duration of the systole does, however, change with that of the pulse beat, in an unexpected manner, varying in length as the cube root of the length of the beat; and this law, taken in connection with a somewhat similar law arrived at from the measurement of cardiograph tracings, indicates that duration of diastole, or, in other words, time of repose for nutrition, influences the power of the ventricles, causing it to vary approximately, as may be shewn, as the square root of the length of the diastole.

MICROSCOPICAL (Feb. 4, Anniversary Meeting).

THE Report of the Council and the Treasurer's Statement of Accounts were submitted and adopted, and the officers and council for the ensuing year were elected. The annual address to the Society was delivered by the President, in the course of which, after reference to their present position and future prospects, he gave a critical review of the most important papers brought before their notice during the year; alluded to the microscopical apparatus exhibited at the Vienna Exhibition; and concluded with obituary notices of Fellows deceased since the last annual meeting.

FINE ART.

Dictionnaire du Mobilier français, de l'Epoque Carlovingienne à la Renaissance. Par M. Viollet le Duc. (Paris: Morel.)

THIS work, of which the publication was commenced fifteen years ago, has been lately enlarged by a whole series of supplementary sheets, which enable us to judge how far the whole work will fulfil the promises made by the author in his first volume. After the first enthusiasm of the Romantic movement of 1830 had exhausted itself, so far as architecture and the domestic arts were concerned, in a rage for restorations, collections, and imitations, some of the most intelligent leaders of the new school felt the need, if their work was not to degenerate into idle antiquarianism, for a general survey or analysis of the materials they had jointly collected, from which it was hoped that some ideas would detach themselves, and prove profitable to the arts in the name of which the collection had been undertaken.

M. Viollet le Duc was pointed out, by the rare combination in his person of the talents of author and artist, for the leading part in the accomplishment of this task; and he promptly justified the confidence felt in him by the publication, in the form of a dictionary, of a series of articles, some of which had already appeared in the course of the paper warfare then raging between the Classic and the Gothic schools.

I do not propose to criticise the 'Dictionnaire d'Architecture,' and only allude to it here for the sake of observing that the defects with which it was charged reappear in the present work without the other qualities by which they were redeemed and the success of the book justified. It was said that the 'Dictionnaire d'Architecture' was not a dictionary, but an ingenious piece of special pleading on behalf of mediævalism, which half defeated its own object by the exaggeration that betrayed the writer's bias. But this fault and the misconception involved in the title were forgotten in the admiration felt for the remarkable pages devoted to the words—which we take at random—*construction, goût, peinture*. The author was full of his subject, and even where his ideas seemed disputable, the reader was content to refrain from criticism in order to profit by the solid studies of which the result was laid before him.

M. Viollet le Duc might have been satisfied with the admiration freely lavished on his great work, and the authority it had given him; but his ambition seems from the first to have taken a wider range, and we find him beginning in his 'Entretien sur l'Architecture' to appeal to the authority acquired by his studies of mediæval architecture in support of works on Greek and Roman art, which he had studied with much less care, and of the 'Dictionnaire raisonné du Mobilier français de l'Epoque Carlovingienne à la Renaissance,' which was announced immediately after the success of the first dictionary, and of which the mere announcement added to his reputation as an architect the fame of a man of universal knowledge in matters relating to the Middle Ages.

The title promised a full account of furni-

ture, arms, utensils, clothes, jewellery, tools, and instruments of all kinds, which, equally interesting to the historian and to the artist, suggest the idea of an encyclopædia, and would require the work of one. M. Viollet le Duc virtually promised an equivalent to the 'Encyclopédie des Arts et Métiers' of the last century, which was the work of a whole society of intelligent writers dealing with contemporary subjects, for which all the materials were at their disposal in abundance; while, in his case, the inherent difficulty of the task was aggravated by a comparative dearth of materials.

It is impossible not to be struck by the sameness in the collections and public museums which furnished the greater part of the evidence on which he had to rely. In spite of the immense sums expended, the enthusiasm of collectors, and the zeal and learning of most of those in charge of the museums, it has been found impossible to arrange the objects discovered in any instructive order. The ravages of time and human destructiveness have left *lacunæ* which forbid classification,—certainly the definitive, absolute, classification of a dictionary.

M. Viollet le Duc soon found himself confronted by this difficulty, which he had either not foreseen, or had reckoned upon evading by the help of a ready wit. By a too transparent stratagem, when notes or drawings failed him, the articles for which he had not materials were relegated on some pretext to another section or even to later volumes, the appearance of which has been delayed for more than ten years. Still, the attraction of his style and the cleverness of his illustrations enabled him to venture under these conditions upon a series of articles forming the alphabetical part of this volume, in which the objects at his disposal were discussed. This part was that least fitted for the hand-to-mouth method of composition followed by the author, while it had also to suffer from the consequences of his prodigious activity. Engaged at the same time in the publication of his 'Dictionary of Architecture,' the preparation of his 'Entretiens,' the numerous restorations he had undertaken, his duties as inspector of historical monuments, and finally the cabals and controversies in which he was engaged, by the envy of some and the severity of others,—he literally had not the leisure requisite for the satisfactory execution of all the work he had undertaken.

If we further consider that he was often obliged, in order to economise the few hours borrowed from other engagements, to make use of such memoranda as he had at hand, embellishing a rapid sketch or amplifying a marginal note to furnish a page for his book or one of the seductive compositions with which it is illustrated; and that in this way the help which he might have obtained in the work of compilation was lost to him, since his speculations could not be followed by assistants, and he had to do everything, down to the slightest sketch on the wood, for himself,—with the exception, that is, of a few plates in chromolithography and etching confided to M. Gaucher, a colleague rather than a pupil, and to M. Caresse, a decorator of merit,—after making allowance for these difficulties, we shall be disposed rather to

blame the undertaking itself than the manner of its execution.

The work bears fatal traces of the circumstances of its composition. Almost every page, and still more the loose pamphlets published from time to time, reflected with painful fidelity the influences of the moment at which they were written. The reader has but to turn to the Dictionary itself, to receive this impression, the more fugitive when it is most frequently repeated. With the slightest acquaintance with the museums and the world of art in France, he will not fail to recognise, as in a reprint of newspaper articles, the dates of such incidents as the acquisition of the crowns of Guarrazar by the Musée de Cluny, the formation of the Musée des Ruines at Pierrefond, even—*à propos* of arms of offence and defence—the late war; all facts of passing interest, which enabled the author to fill his pages without betraying the scantiness of his data, the dearth of really instructive matter.

All the words could not be as fortunate as "chanferette," which profited by the harvest of texts and drawings collected by Villars de Honnecourt; more often, as with the word "bidon," there was a total want of contemporary examples, the place of which was supplied by long descriptions based on the analogy of a production of the seventeenth century, to which it was impossible to ascribe any but a German origin; or again, as with the word "seau," instead of French instances, Italian examples are quoted, that happen to have been preserved in France or Germany. To distract attention from these failures, it was necessary to make a point sometimes, as at the word "brouette," and seize the fleeting occasion of defending the Middle Ages from the reproach of not having invented a thing so useful, which some had thought to be no older than Pascal, without stopping to consider whether the word would not be more properly placed in the part reserved for tools and instruments.

It is noticeable that out of the immense number of articles mentioned in the catalogues of public museums and private collections, but a small proportion can be said to have their use and origin accurately ascertained. M. Viollet le Duc can scarcely be blamed for not having discovered all that was unknown in this direction, but he might at least have analysed the knowledge already possessed, and have put his readers in a position to distinguish between the objects of every-day use, and the professional *chefs d'œuvre* of which the existence was a matter of fancy or luxury. Instead of this, he has not only done little himself, but he has seemed to ignore the existence of several works bearing less ambitious titles than his own, but quite as well worth consulting. The only use he has thought fit to make of the publications of the bibliophile Jacob, of M. Louandre, of Shaw, and of Cundall, consists in the occasional appropriation—not always acknowledged—of drawings given by them. He has not included in his Dictionary a variety of useful information contained in the 'Arts Somptuaires,' in 'Les Arts au moyen âge et de la Renaissance,' or again in the 'Livre d'or des Métiers,' and he has not even been at the pains of harmonising his statements with those of other authorities with an equal title

to respect, or of explaining the grounds of his dissent when the fact is apparent.

A word in conclusion on the subject of the drawings. All the illustrations of M. Viollet le Duc's works have a uniform character, and are remarkable for a brilliant and novel manner which not only fascinated the public, but has even influenced a considerable number of contemporary artists whose work is more or less remotely connected with architecture. I believe, however, that the style which he has introduced is not one to be safely imitated, and, with few exceptions, his drawings appear to me to be untrustworthy as authorities. The qualities which they possess are such as could only be of value in original works, while affectation and mannerism, dangers only to be avoided by a taste of great purity, too often threaten to obtrude; but however this may be, and though all original styles or mannerisms were equally allowable, there can be only one way, that of simple fidelity, allowable in reproducing the work of others in order to transmit the expression of it to the public.

In one of those articles in the 'Dictionnaire d'Architecture' in which M. Viollet le Duc shows himself for what he is,—an artist and a thinker,—he says, "Respect for the public is the first mark of taste in the artist who produces a work, but sincerity is the best way of showing respect. If falsehood were ever permissible, it would be towards those whom we despise." But to reason from the ideas of others after dressing them up to one's own mind, to copy works of art so as to give them the character one chooses them to have, is a real act of treachery against confiding students, unworthy of an artist of merit, unworthy even of a man of taste. Unfortunately M. Viollet le Duc seems to have lost sight of these truths which he had expressed so well himself, for the great majority of his drawings are in flagrant contradiction with them. The drawings are charming,—the favour with which they were received would otherwise be unaccountable,—but they lose in fidelity whatever they gain in skill and *esprit*. I have myself felt their fascination, and could only free myself from it with difficulty; but after comparing many of the objects themselves with his sketches, and consulting other works, English and German, from which the author has borrowed without much ceremony, I became aware of the extent to which some of the objects he professes to reproduce are misrepresented, and how often cuts which are quoted as original authorities really represent nothing but ingenious conjectures and unavowed restorations. Perhaps it will be said that his talent compelled him to embellish what he touched, but that is beside the question; for even if the drawings contained an amount of refinement and meaning of which the authors of the original work were unconscious, for better or worse the drawings are false to fact, and a dictionary does not want to be illustrated by imaginative compositions.

The art of every age has its mannerisms, and of no period is this so true as of the Middle Ages; and every artist who has given much time to the imitation of the works of one date, finds an almost insuperable difficulty in breaking the habits which the hand acquires, and freeing himself from the control of formulæ that are often applied uncon-

sciously in copying fresh work of a different character. This is the case with M. Viollet le Duc's drawings. In his attempt to seize the character of the object before him, he has sometimes applied, in spite of differences of date, the manner which he had found successful with works of the thirteenth century, and sometimes debased the same manner when he wished to produce a different effect, still however retaining enough of it to produce a painful feeling of monotony and unfaithfulness.

To sum up: the 'Mobilier' has been promised, written and published with a levity not to have been expected from an artist of M. Viollet le Duc's importance; it is the result of an imprudent promise, an engagement entered into when his reputation was less firmly established than now, fulfilled too late for it in any case to have added to his reputation, and, we must add, fulfilled too carelessly not to detract from it in the minds of those who will find themselves misled by his work unless, before consulting it, they are on their guard against the errors it may suggest. C. CHAUVET.

THE DUDLEY GALLERY.

THIS is the tenth annual exhibition of Water-colours at the Dudley Gallery, and the critic knows what he has to expect there. In previous years he has been not unfrequently gratified, and sometimes interested. He anticipates finding a few works, but only a few, aiming at poetic subject-matter, and more especially poetic style: a large proportion of landscape and other "bits" showing a good eye for effect and for the picturesque, and abundant manual tact; and, even after these, not many things that are absolutely stupid or incompetent, but also not many that have any strong significance. There is mostly a good amount of point in these exhibitions, but no wide scope. The present one is barely up to the average. It contains very little that can remain on the memory, as did, for instance, the pictures of Mr. Burne Jones last year, or the *Antigone* of Mrs. Stillman.

Mr. Crane and Miss Boyd contribute the works of highest poetic appeal this time. *Winter and Spring* is Mr. Crane's subject: Mr. Jones has been his model of style. Spring, a very tall woman dressed in full-tinted yellowish green, is engaged in wreathing with flowers the walls of a semi-ruinous classic villa: Winter, also a female figure, robed in sombre grey, and seated on the step of the building, sees that she must go. This is fairly well conceived, and there is a certain lyrical glow and choiceness in the carrying out of the idea which harmonises the manner with the matter. But painters of the knot to which Mr. Crane belongs are—in their ideal compositions, at any rate—too much afraid of clear lucid colour, though they all are, or aim at being, colourists. In another picture by Mr. Crane, *Mother and Child*, clear colour does indeed appear in the conspicuous pink dress, but not with a very happy result. In the first-cited work, Spring has flesh of the hue of brownish brick-dust—no "carnations" to speak of; the very almond-tree which proclaims her advent—that most exquisite revelation of renescent luxury of life amid the skeletons of last year's leaving—is dim and obfuscated. A London almond-tree that has lived for ten or twelve days exposed to smoke and grime would compare with it to advantage. Miss Boyd has got hold of a higher though less strictly ideal subject than Mr. Crane—higher, because imbued with human and legendary life, not merely embodying an abstract impersonation. She paints *Taliesin the Bard hearing his deceased Master's harp playing as it hung upon the wall*: "I hear again the sound of the songs of other years." Taliesin is seated by

the hearth, a man in the full vigour of completed youth, and two women are with him, in strong flame-light: in moonlight, mysterious but vivid too, the ancient master, the Bard buried years ago, has returned to the chamber, and strikes a thrilling and startling chord. He is grim, with his great beard, and sinewy arms and hands, and head thrown back, as the olden inspiration courses through him anew. Taliesin knows whose hand that must be upon the harp. Miss Boyd has been more intent, and rightly so, upon giving the antique half-barbarous force and remoteness to this work than upon conferring grace on its composition, or finish on its workmanship: its spirit was to be one of awe, not of sightliness, not indeed that the two aims need be incompatible. It is entitled to that much-abused epithet "weird." The *Israelites gathering Manna* of Mr. Clifford is a far more painstaking production than the preceding two, showing much attentive study in the drawing and posing. In feeling, it is a sort of cross between the classical and the religious, and not exactly satisfactory. The manna-gatherers go about their work almost as if it were a sacred rite—an opportunity for self-examination, and *recueillement*. This is not the sort of way the stiff-necked generation are likely to have provided their meals, in point of fact; nor is it the kind of advantage to which a vigorous painter would have turned the subject, for pictorial purposes. We have got a long distance away from old Bassano and his likes. Mr. Bateman is an artist whom we naturally couple with Mr. Clifford. There is purity of sentiment and method in his contribution named *Reading of Love, he being by*: some women thus occupied, and Cupid in *propria persona*, visibly invisible in the opposite compartment of the picture. Such work is, however, a sufficiently unnatural hybrid between Mr. Dante Rossetti or Mr. Burne Jones, and Overbeck or Fra Angelico. We cannot accept it as genuine subject or spontaneous treatment; it is the product of a mind which *supposes* something about passion, poetry, and castigation, and mixes these extraneous elements as best it can into a too insipid kind of curds-and-whey. If the recipient objects that he is not fond of the whey at the top, the caterer speaks up for the curds at the bottom, but possibly with no greater acceptance. Mr. Adrian Stokes sends a little picture, *In Spring Time*, representing a young girl by a budding apple-bough. It has a good deal of brilliancy, and no lack of style: Mr. Mason and Mr. Walker are probably the painters of Mr. Stokes's predilection.

Mr. Townley Green is one of the leading exhibitors. His picture is named *The End of the Journey*, and represents a young country-gentleman and his wife, of about the close of last century, coming up to town by the Bath coach: they are entering the courtyard of the old-fashioned inn, and the landlord advances to do the honours of his house, rubbing an obsequious pair of hands. This is a work of much even excellence of performance: everything is nicely touched and nicely realised; nothing is in excess, unless it be the demi-tint—itsself the very emblem of moderation and the *via media*. This is a good specimen of the highly educated tact (observant and spirited in a way, and yet withheld from really vigorous performance by a certain half-heartiness and reluctance) which is characteristic of a section of our present English School, and especially of Dudley Gallery contributors. Mr. Brewtnall may be classed in the same category. His principal work here, *Called before the Curtain*, shows how hard-driven our painters of social genre now are for a subject; nothing can well be less pictorial than such a literal rendering of an actress and the actor who has led her forward before the curtain, picking up bouquets. A small—not to say an insignificant—work by this artist, *A Stirrup Cup*, is a very obvious reflex from Meissonnier, who is indeed, in some respects, the ideal master of this school. Mr. Macbeth is not at his best in *The Vale of Health, Hampstead*,

which is rather a figure-piece with landscape background than a landscape proper. Late winter or earliest spring gives a character to the scene, but lends it no charm, as here treated: lights and shadows are discarded, and a scarified monotony of tint rules over all. There is perception of truth, but a wilfully graceless perception. The figures here are more satisfactory than those in another picture from the same hand, *Evening Practice*. Mr. Poynter sends a *Portrait of F. Hugh Bell, Esq., and Daughter*. The painter's name is a guarantee for much solidity of accomplishment in the work, which is not, however, among his more attractive productions though the expressions are given with spirit. Four small landscape studies by this painter are on the walls; three of them are but slight records, yet all four are well above triviality.

The following figure-subjects should also be observed. *Bergen Fish-Market*, by J. Reed Dickinson, containing a great number of figures, cleverly and rapidly touched off. The *Gentle Craft*, by John Parker, a fair specimen of a style in which Mr. Herkomer has proved himself to excel. By Mr. Knewstubb, *Violin-Player*, a handsome little girl, of some six years or less, painted with a sense of beauty, and even of grandeur, but with something too juice-like in the key of colour, and too clotted in handling; also *Her Majesty—Children at Play*, marked by a like kind of merit. Miss Phillott has taken her theme from the last couplet of Keats's *Endymion*:—

"Peona went

Home through the gloomy wood in wonderment."

We see Endymion's sister traversing the forest, with its pine-trunks red here and there in sunset; the poetical subject has been felt fairly enough to make the choice of it creditable, and not damaging, to Miss Phillott. Another lady, Miss Elizabeth Thompson, exhibits *The Ferry—French Prisoners of War, 1870*; painted with great brightness and precision—a noticeable success. The prisoners are chiefly Turcos, who kill the time with such grins and *badinage* as they can muster. From Mr. J. C. Moore come three separate portraits of children. We like best of these *Isabel, Daughter of John Roget, Esq.*, demure in her chubbiness: but in all the examples the handling is rather slim and faint. Mr. E. Buckman tries what can be done in the *Decorative Treatment of Modern Subjects: No. 1, English Sports, Football*. These hulking athletics are not exactly the kind of modern subjects that we should wish to see portrayed: but Mr. Buckman's attempt was a difficult one, and the measure of his success in it claims some recognition. The faces are all very blank. *A Young Greek Woman* is the best work we remember from Miss Edith Martineau's hand; carefully executed, and not wanting in that fulness of mould which pertains to the higher class of such treatments. *An Old Song*, by Mr. Hennessy—a lady in the costume of 1810 or thereabouts—is agreeably though rather gawkily done. We can hardly give the same term of praise to *The Old Squire*, by Mr. C. Napier Henry; "agreeable" is not the word for the faces of the squire's daughters, who accompany him in his boat on a fishing excursion, and one of whom has just hooked a fish. Of course, however, the work has much force and straightforward realisation, or it would not be Mr. Henry's. *Al Fresco Amusements* is the rather silly name bestowed by Mr. F. Smith upon a picture of a Punch show by gaslight: the hilarious expressions of the lookers-on, adequately varied, but with a right air of consent and a common motive, are very cleverly caught. Two bright water-colours by Louis Leloir hang close together,—*Pretty Cockatoo*, and *A Moorish Lady*. The painter is not afraid of very strong local tints of red, &c. in his draperies and other material; and his contributions, more especially the second, show a deal of skill, in a way appreciably different from the English practice. *Worn Out* is a faithful well-managed study of an old cottage-woman by F. G. Cotman;

and *In the Arsu Bazaar, Cairo*, an Oriental study of somewhat similar qualities, spite of the very different externals of the scene, by Charles Robertson. *Dan Cupid*, by Mr. George McCulloch, hangs at such a height that we cannot examine it; but there seems to be in it a something of fancy and of style that should have secured the work a better place. Similar superiority of feeling appears in the landscape-study by this gentleman, *A Weird Stem, Burnham Beeches*. The *Portrait of Master Walter Hill*, by Mr. E. R. Hughes, shows us a boy in blue, standing on one of the steps of the garden-door: on another a cat is seated. The boy's face lacks delicacy of execution: but the subject is well got together as a whole, principal and accessories combined.

We reserve the landscapes in this Gallery for another notice.

W. M. ROSSETTI.

"ROUGH AND READY," AT THE ADELPHI THEATRE.

A DRAMATIC writer may perhaps be animated by one of three objects. He may aim at impressing the public mind with some idea (moral, political, or social) through the medium of the stage; or he may be ambitious of sending his name down to posterity as the author of some sterling work; or he may write a play with the view of giving some living actor or actors an opportunity of displaying their talents in the representation of characters composed expressly for them. Mr. Craven and Mr. Robertson are examples of the last class. But it is difficult to tell which of these motives inspired Mr. Meritt, whose *Rough and Ready*, was produced at the Adelphi on Saturday night. The only moral that can be drawn from the piece is that an unmitigated scamp, who ill-treats his brother and insults his mother through the course of three long acts, and who, during that time, does not interest the audience by the display of one redeeming quality, may, by an ungracious and clumsy apology at the close of the last scene, not only escape the consequences of his misconduct, but be rewarded with considerable wealth and the hand of an attractive girl. That the play can make a reputation for its author, or enhance that of any actor in it, is not probable.

The plot, which is obviously borrowed from one of the latest works of Lord Lytton, is briefly this. A rich widow lady has two sons: one (by a secret marriage), whom she believes dead; the other by a second marriage, whom she brings up as the heir to a considerable fortune, gratifying every whim, and permitting every extravagance that his false position may lead him to indulge in. The elder and unknown son occupies the position of a gamekeeper on his mother's estate, from which he is suddenly discharged through the jealousy and dislike of his younger brother; the good-looking gamekeeper having captivated the heart of his brother's pretty and dependent niece, with whom both brothers are in love. The gamekeeper fights his way to fortune, notwithstanding the persecution he is subjected to from his unknown mother and brother (persecution which at last takes the form of accusing him of larceny and breach of trust), and finally, upon discovering his birth and recovering his estates, he generously makes over half of them to the brother who has struggled to deprive him of his property and his cousin's love.

Mr. Billington's rendering of the "Rightful Heir" was sufficiently genuine and hearty to enlist the sympathy and applause of the audience, and his delivery of the sentiments entrusted to the honest Yorkshireman was forcible, although in the second act he allowed himself to be carried very much too far. Mrs. Billington enacts the Mother; and she is wanting in the softness and pathos required by the part; but it is only just to say that to her the piece will probably owe any success it may obtain. Her acting in the scene where she discovers that her secret is known, and changes her sobs to hysterical laughter, is decidedly the

most effective in the play. Mr. Manton does well in the unthankful part of the younger brother. Mr. McIntyre, who takes a subordinate but amusing part, would be a greater success if he did not imitate the gestures of a villain in melodrama. Miss Ellen Meyrick plays the cousin. It is stated to be her first appearance in London. Her appearance is ladylike, but the part gives no scope for displaying any ability the actress may possess.

The piece—though, as we have said, not likely to make a reputation—is not without merit; the dialogue being occasionally smart and the situations dramatic. The author may write a better play; and if he does, he might well forego some peculiarities which occur in this one. Everything takes place at a lapse of three years: three years between the ages of the brothers, three years between each act, three years during the legal proceedings. Also—another detail—the actors and actresses spend an unnecessary time in giving each other roses, irrespective of the season of the year. In conclusion, *Rough and Ready* is not likely to be more than a temporary success in London, but it may, and probably will, retain its popularity in the provinces.

ISAAC BRISTOW.

RECENT CRITICISM ON DRAMATIC ART.

IN her article on "Art in its Dramatic Aspects," in the new number of the *Contemporary Review*, Lady Pollock gives us some reminiscences of recent visits to the Théâtre Français, and takes the opportunity to put in a plea for State aid to the acted drama. She rightly implies that the laws of the Théâtre Français are the only ones which can ensure among actors any great variety of accomplishment, and laments the conditions under which it is possible in London for an actor to fatigue himself and deteriorate his power by playing a part for three hundred nights because it happens to be successful. The traditions of the Théâtre Français, she justly adds, tend to make the result of a great actor's art a less ephemeral thing than it is generally known to be. When a dramatic artist, attached to such a theatre, throws new light on a character, the light never quite goes out, even when the artist dies. It is cherished by pupils and *confrères*. It might have been observed in the course of the article that since the days of the patent theatres there has ceased with us to be that continual accumulation of stage tradition which, so long as it does not overpower and repress individual effort, is of incalculable value to our performances. Of every part in Shakspeare and Sheridan we have traditions, we suppose; but they no longer gather round Modern Comedy, even when Modern Comedy is good enough to justify them.

Though Lady Pollock's appreciation of several of the artists of the Théâtre Français is sympathetic and vivid, that portion of her article devoted to living actors and writers will not find, perhaps, such general acceptance as the part on which we have already commented. Writing for those who know the admirable works of Emile Augier, she may make her meaning understood without doing him an injustice, but the too brief way in which she avers that his name "has protected a corrupt taste neither worthy of himself . . . nor in harmony with the position of the Français," fails to inform the uninformed of the exact position which his least successful pieces occupy relatively to his most successful, and fails to imply that M. Augier is in truth the most artistic and profound of living writers for the theatre. Personally, we should quarrel a little—but that is a small affair—with her estimate of Delaunay and Mounet-Sully, the actors, though in the main that is doubtless correct. Moreover, her whole criticism puts before the English public, in a popular, readable way, the manner of excellence to which the frequenters of the Français are so well accustomed. M. Talbot she quite truly describes as "not a sympathetic actor." But she is so much less sure of her ground when she discusses

Mademoiselle Sara Bernhardt that one almost imagines that her opportunities of observing that actress must have been confined to Mdlle. Bernhardt's recent days at the Français. To such qualities as Mdlle. Bernhardt has been able to show in the impersonation of the heroine of Racine, the writer of the article does justice; but had Lady Pollock seen Mdlle. Bernhardt in *L'Autre* of Georges Sand, or in the exquisite one-act poem *Jean-Marie* of André Theuriot, she could hardly have written that "tenderness is not her characteristic." It would be scarcely too much to say that the tenderness and simplicity of pathos of Mdlle. Bernhardt's performance in the short poetical piece we have named last, are wholly unapproachable by any actress now on the French stage.

FREDERICK WEDMORE.

RECENT CONCERTS.

THE number of interesting concerts given during the past fortnight has been so great, and the space which can be spared for their record in these columns is comparatively so limited, that the most salient points only can be touched upon. Those who wish for fuller details can find them in the papers more exclusively devoted to musical matters.

Taking the recent performances in the order of date, the first to be mentioned is the opening concert of the second season of the British Orchestral Society, which took place at St. James's Hall on the 22nd ult. The programme, though containing only one absolute novelty—a brilliant and clever "Saltarello" by Mr. Hamilton Clarke—was well-selected and interesting.

A picked band of some seventy-five of the best instrumentalists in London was assembled under the baton of Mr. George Mount, the conductor of the society. As regards its individual composition, it could scarcely have been improved; and it might naturally have been anticipated that its performances would have been of no ordinary excellence. Truth, however, compels us to state that the reverse was the case. The quality of tone of the strings was magnificent, while the wind left nothing to be desired; but unfortunately no amount of individual skill will suffice by itself to produce a satisfactory *ensemble*; and Mr. Mount, who is, we believe, a skilful musician, seems lacking in the power of imparting point, and what is technically termed "reading," to the works executed under his direction. In addition to this, nearly all the instrumental music was taken by him decidedly too slow. A more unsatisfactory rendering of the "Eroica" symphony it has never been our misfortune to hear. Not only was it in many parts coarse, thus destroying in places the balance of the instrumentation, and rendering the subjects at times altogether confused, but it was taken at such a deliberate pace that the performance actually lasted fifty-five minutes! The first movement especially (marked by Beethoven *allegro con brio*) played almost as an *andante*, and without a particle of brilliancy, was at first tedious, and at last exasperating. On the other hand, it is only just to the conductor and the band to say that the *scherzo* was splendidly given, with all requisite fire and delicacy. But this one movement only made the shortcomings of the rest of the work more striking by contrast, and increased the regret that, with such capacities as the orchestra displayed, so indifferent a performance of Beethoven's masterpiece should have been presented to the public.

The other principal features of the evening were Bennett's charming (though very Mendelssohnian) overture to *Les Noces*, and Mozart's rarely-heard concerto in E flat for two pianos, well played by Miss Linda Scates and Mr. Walter Macfarren. The vocal music was contributed by Miss Edith Wynne and Miss Augusta Roche.

On the following evening the third concert of the Wagner Society took place, into which a new

feature was introduced by the addition, for the first time at these concerts, of a chorus to the orchestra. It must be admitted that this chorus, though full of spirit and animated by the best intentions, is at present somewhat rough; but every allowance should be made for a first appearance; and increased familiarity with Wagner's music will doubtless bring greater finish and refinement to the performance. The idea is an excellent one; for there are many pieces from Wagner's operas, especially the earlier ones, for the proper presentation of which a chorus is an absolute necessity.

With the exception of two marches by Schubert, arranged for orchestra by Liszt, with which the concert opened, the entire programme was selected from the works of Wagner.

The selections given at this concert were taken from three of his operas—the *Meistersinger*, *Tannhäuser*, and *Der Fliegende Holländer*. These were presented in the order we have given, this being, as many of our readers will be aware, the reverse of the chronological sequence of the works. Musical reasons, however, justified this arrangement, as the two pieces given from the *Meistersinger* were much more effective where they were placed than they would have been at the end of the concert. They were two short chorales—the first that which in the opera immediately follows the overture, and in which the organ is combined with the voices and orchestra with remarkably fine effect; the second, the "Wach' auf," from the third act. The subject of the latter is introduced by the composer in the prelude to this act, which has been two or three times performed at these concerts. Though, like all Wagner's music, especially in his later operas, these little pieces lost much of their effect by separation from their context and the absence of stage accessories, they nevertheless created a great impression, the second being warmly re-demanded. Both were well sung by the chorus.

The extracts from *Tannhäuser* were three in number. First came the shepherd's song, and chorus of pilgrims from the first act. On the present occasion accompaniments were added to both song and chorus, which in the original are unaccompanied except by the corno inglese, which represents the shepherd's pipe,—a step which was undoubtedly judicious, as some of the modulations in the hymn (those beginning at the words "Ach schwer drückt mich der Sünden Last," which in a different tempo are also found in the introduction to the overture) are of great difficulty; and to judge from the somewhat uncertain way in which, even with the help of the orchestra, they were performed, it is highly probable that, had the voices been left to themselves, a break-down might have been the result. The second piece from the same opera was the final chorus, which was much better sung than the preceding number; after which was given the favourite march and chorus from the second act. This is one of the most popular of Wagner's compositions, but, though full of beauty, by no means one of the most original, the influence of Weber being distinctly traceable in the leading theme. As a masterly piece of instrumental colouring it has seldom been surpassed, even by Wagner himself.

The remainder of the concert was occupied by a large selection from *Der Fliegende Holländer*—Wagner's second opera, and the only one which has at present found its way to the stage in this country. It is the natural result of Wagner's musical theories and method of composition that his earlier works should be those the music of which is most fitted for transplantation from the theatre to the concert-room; and, accordingly, the present selection was, from an abstractly musical point of view, the most successful portion of the concert. These were, on the whole, very well given, the solo parts being taken by Mdlle. Nita Gaetano, Mr. Bernard Lane, and Signor Gustave Garcia. Space, however, forbids our entering into further details.

That the programmes of the society have shown no falling off in excellence will be evident from the above remarks. An equally interesting selection is announced for the fourth concert, when, besides other works, no less than nine pieces from *Lohengrin* are promised.

At the Crystal Palace Saturday Concerts the most important novelty produced during the past fortnight has been a concert for organ and orchestra from the pen of one of the most talented of our younger composers—Mr. Henry Gadsby. The combination of the "king of instruments" with the band was a common enough one a century ago. Handel's organ concertos are well known to all organists; but since his time both the organ and the orchestra have undergone such changes, and the resources of both have been so enlarged, that no comparison is possible between these works and "concertos" in the modern sense of the term. Moreover, of all solo instruments, the organ, from its very nature, is the most difficult to be made to amalgamate with other tone-colours. Hector Berlioz, in his work on "Instrumentation," compares the organ and orchestra to Pope and Emperor—the spiritual and the temporal monarchs—and says that the effect of their combination is mutually to obscure one another. Undoubtedly a considerable amount of tact is requisite both on the part of composer and performer to render the alliance acceptable; but that the task is not an impossible one was proved conclusively on the present occasion. Mr. Gadsby's work is, we believe, with one single exception, the only concerto for the organ written in modern forms and for our present orchestra. It consists of the orthodox three movements, commencing with an *allegro* constructed on very pleasing themes, the second subject being really charming. Many of the combinations of the solo instrument with the band are most effective and novel. Not less interesting is the succeeding *Larghetto*, founded upon a suave and graceful melody, and most delicately scored. The finale is, from an abstractly musical point of view, less striking than its predecessors, but it is full of fire and spirit, and brings the work to a brilliant conclusion. There is comparatively little contrapuntal writing in the concerto; and the organ being *par excellence* the exponent of counterpoint, somewhat more might have been advantageously introduced. This, however, is a mere matter of opinion, and all who heard the work on Saturday will agree with us that it is one which reflects the greatest credit on its composer, and which deserves to be heard again. The solo part was played by Dr. Stainer, the organist of St. Paul's Cathedral, who as a performer has very few equals and no superiors. The great charm of his playing, to ourselves at least, is its entire self-abnegation. When we hear Dr. Stainer, it is always the composer and never the performer who comes to the front. A more perfectly artistic rendering of the solo part of the concerto its composer could not have desired, and the orchestral portion of the work, under Mr. Manns's direction, was given with a precision and spirit to be heard nowhere as at the Crystal Palace. Mr. Gadsby was called forward at the end of the performance, and warmly and deservedly applauded.

The symphonies produced have been Haydn's little-known one in E minor, and Schumann's No. 1 in B flat. Mention ought also to be made of the exquisite performance last Saturday by Madame Norman-Néruda of Mendelssohn's violin concerto. With respect to Mr. Macfarren's overture to *St. John the Baptist*, also brought forward on that occasion, a final opinion must be deferred until the opportunity promised by the Sacred Harmonic Society is given of hearing the piece in its proper connexion with the oratorio. To-day Handel's "Theodora" is to be given.

The interest of the Monday Popular Concerts is more than sustained by the excellent variety of the programmes, for which all lovers of music

will heartily thank Mr. Chappell. Last Monday week the *pièce de résistance* was Brahms's great pianoforte quartet in G minor, heard on this occasion for the first—it may safely be predicted not for the last—time at these concerts. To any of the audience who might have been unacquainted with Brahms's music a first introduction to it could hardly have been made under more favourable circumstances, for the present quartet, the first of two which he has published for the piano with stringed instruments, ranks indisputably among his most original and successful creations. Lasting, as it does, some forty minutes in performance, it may perhaps to many hearers seem too long; but nothing is a more fallacious test of the length of a piece than its mere duration reckoned by the clock. Pieces might be named not half the absolute length of the present one which are far more tedious to listen to. The real question is whether what the composer has to say is worth the time he takes to say it; and in the case of Brahms's quartet the question can fairly be answered in the affirmative. The work consists of four movements, each laid out on the largest scale, but so full of power and imagination, and so overflowing with delightful melody, that the attention and interest of the hearer are maintained to the last bar. The first *allegro* might be described as a series of surprises; each fresh theme is so novel, so unexpected, yet in such perfect keeping with the general design of the whole movement. The second movement, an *intermezzo* in C minor, which replaces the usual *scherzo*, has a quaint wild beauty which is irresistible; and the use throughout of the *sordino* (mute) for the violin, but not for the other instruments, gives a most peculiar, half-shadowy colouring to the music. The various episodic subjects, too, especially that in F minor for the violin (p. 21 of the printed score), are most attractive. No less beautiful is the following *andante con moto* in E flat, the flowing melody of which seems like a reflexion (not an imitation) of the spirit of Beethoven and Schumann; while the middle portion of the movement, in such sharply-defined contrast to the principal theme, counteracts any feeling of length which might otherwise result from the ample development of the piece. The final Rondo alla Zingarese, with its marked rhythm and striking prevalence of three-bar phrases, is fully worthy of the rest of the work.

The performance (it is almost superfluous to say, in speaking of a "Monday Popular") was perfection itself. The difficult pianoforte part was in the safe hands of Mr. Charles Hallé, who played with all his usual finish and more than his usual fire; and he was admirably supported by Madame Norman-Néruda, Herr Straus, and Signor Piatti. The work was most warmly received, and the performers recalled at its close.

At the last concert no less than three out of the four instrumental pieces were new to the frequenters of the "Monday Populars." These were a string quintet in E minor, by George Onslow, the first movement of which is somewhat dry, but the rest of the work very interesting. It gives on the whole, however, like most of its composer's works, the impression of coming from the head rather than the heart. The second novelty was a sonata for violoncello by Veracini, admirably played by Signor Piatti, and full of quaint and old-fashioned beauty; and the concert concluded with Rubinstein's fine piano trio in B flat, Op. 52. Though in places diffuse, this is on the whole one of its author's best works, the adagio and scherzo being particularly fine. It was played to perfection by Dr. Bülow, Mons. Sainton, and Signor Piatti. Dr. Bülow's solo was the "Adieu, Absence, and Return" sonata of Beethoven, which he gave with such effect, that he was compelled to return and accept an encore. He chose the second movement of Beethoven's sonata in E flat, Op. 31, No. 3, his rendering of which was one of the most marvellous pieces of staccato playing ever listened to. The singer at this con-

cert was Mr. Santley; and as an indication of the temper of the audience it should be mentioned that in the course of the evening there were no less than four encores. EBENEZER PROUT.

NOTES AND NEWS.

MR. ARMSTRONG has recently completed a work which is not only the most important as to size which we have as yet received from his hand, but, as regards technical excellence, passes, perhaps, beyond the point which he has hitherto touched. The subject of this picture is a single female figure, an English nineteenth-century reading of the eternal Aphrodite. The composition has been already worked out by Mr. Armstrong on a small scale in a picture in the possession of Mr. Westlake; but in the present work he has made considerable modifications of the original design, both in the general treatment and details. He has draped his subject in gauze so transparent in texture that the modelling of the surface beneath (which has been carried to a high pitch of finish) is clearly visible. She stands on the elevation of two white marble steps, and leans to the left against the high arm of a marble seat; a wall patterned over with the delicate blooms of an apricot tree rises immediately behind. The base of this wall is embedded in a thickset border of double red anemones and violets, which accentuates the standing line and throws into relief the firmly-planted shapely feet; over the edge above, the leaves and fruit of a lemon grove fill the space to the utmost limits, where but a few touches of faint blue show through the clustering foliage. A line of crimson wound about the head sets it free against the branches, and repeats the tint of the flowers below. The yellow of the lemons is carried out into the picture by a scarf of the same colour, which, wound about the right shoulder, falls away at the back, to be caught up at last in close folds by the left hand. A basket gathered full of crimson blossoms let slip from this hand has fallen on the seat beneath. An air of dreaming languor pervades the whole attitude and expression, the eyes cast down, see, without seeing, the dark gleaming tortoise on the second step crawling slowly towards the water unseen, the presence of which is suggested by the sharp spears and foliated flowers of yellow and purple brown iris, which thrust themselves up from the lower left-hand corner. But it is as a whole that we see this dreaming woman and the chosen surroundings in which she is fitly enframèd. All the harmonies of colour and play of lines tend insensibly to bring into relief the broad sweep of the downward curve which passes from the inclined turn of the head on the long neck, through the supple outward bend of the right hip, down to where the feet have found their hold.

The proportions of the figure are, as usual with this painter, lengthy, even beyond what an accurately just perception of natural beauty would, we think, allow. But this defect, which is a blemish from a purely academic point of view, does not greatly vex the eye in an invention of which the sentiment and intention are, as in the present instance, truly artistic. And as the work in question has a set decorative purpose, the composition has necessarily been laid down in reference to the proportions of the given space, under the which conditions greater licence may be taken in employing the proportions of the figure than would be legitimate under other circumstances. The relief is studiously low throughout. This, too, is a usual quality with Mr. Armstrong, and one which seems to present a stumbling-block to the general public, who, looking always to be startled by the appearance of solid projection, cannot adjust the eye to perceive modelling which aims at subtle indication, or appreciate that refinement of quality which is a special attribute of work in which the artist has sought the full number of required equivalents within a tone scale of limited compass. A method of treatment which has a

special fitness when employed for decorative purposes, and which is valuable precisely for those qualities of lowness in relief, and unity with breadth of tone, which cause it to appear wanting in the amount of pictorial effect desired by the general public. This picture is, we believe, the property of Mr. Eustace Smith.

THE Art Museum at Cologne was indebted last year to Councillor Dagobert Oppenheim, for the presentation of an admirable portrait of *Karl Fabritius* (1624-1654), which shows advantageously the master's special Rembrandt-like power. A fresh and well-preserved picture of the *Chase of the Caledonian Boar*, by some disciple of Rubens' if not by the master himself, was also presented to the institution by Herr Leonardt, when he broke up his well-known collection.

MESSRS. CHRISTIE advertise for the 25th, 26th, and 27th of this month, the remaining portion of the collection of Mr. C. W. Reynolds. It contains some splendid examples of the faience of Rouen, Moustiers, and other interesting French manufactures, his fine vases of Le Nove, unique of their kind, and much that is curious in Liverpool transfer, on jugs and mugs, with inscriptions. Mr. Reynolds's collection of pottery consisted of perhaps the most complete series that has been ever formed of different manufacturers and their marts, and it is much to be regretted that it was not secured for South Kensington, to which it was offered, in the first instance, on most liberal terms.

HER MAJESTY'S Commissioners for the Exhibition of 1851 are fast bringing their annual Exhibition at South Kensington into contempt. In 1871 and 1872 they presented exhibitors and those who had rendered valuable services to the Exhibition with a printed certificate, which, if not original in design, was at least artistically correct. But it was objected to as not only mean and shabby, but inconvenient in form and perishable. It was accordingly determined that for the future a medal should be given in place of the paper certificate. This has now been issued to all who took part in last year's Exhibition; and it is simply impossible, except by an examination of it, to understand how vile a thing it is. In design it is tame, weak, and inharmonious, and on the obverse side absolutely barbarous. In colour it looks as if it had been plastered over with some metallic varnish to imitate gold, and in workmanship it is most carelessly finished. But still, as the paper accompanying it informs you that it is composed of a mediæval metallic compound, and that the appearance of its having been varnished to imitate gold belies its truthful nature, it might have been accepted for its convenient shape and durability, quite irrespective of its aesthetic demerits. But one recipient, who has dared to look the Commissioners' gift in the mouth and has chemically analysed it by the simple process of combustion in a domestic fire, has found that after all the mediæval metal of which it is composed is not at all of a golden colour, but is simply pewter varnished over to make the base metal look like gold—the thing it is not. The medal, therefore, is not only bad in design and bad in workmanship, but is an absolute falsehood foisted on the exhibitors and others as an example of the revival of the arts of the Middle Ages—and of the great things which South Kensington can do in art designing and die-sinking. This is a worse blunder than the Denman correspondence published in the *Times* the other day; and if this is the way Her Majesty's Commissioners are going to mismanage their perennial Exhibitions, this year's will prove a greater loss than last—which we hear put them out of pocket some ten thousand pounds.

M. DE CHENNEVIERES has received a letter, signed by some of the most distinguished of French artists, thanking him for his project of the "National Academy of French Artists," which we mentioned recently. The project seems to give great

satisfaction and to meet a want—a want of liberty—long felt by the artists of France. The statutes of the new Academy, as published in the *Journal Officiel*, are as follows:—

"The National Academy of French Artists is instituted under the honorary presidency of the Minister of Fine Arts.

"It is composed provisionally of all French painters, sculptors, designers, architects, engravers, and lithographers who have received awards for their work, either by admission into the fourth class of the Institute, or by the decoration of the Légion d'Honneur, or by one of the medals given after the Paris exhibitions, or by the great prize of Rome.

"The commission elected each year by the Academy to organise and conduct exhibitions shall be empowered to designate among the exhibitors, without limit of number, such as appear worthy to form part of the Academy; the entire Academy deciding on their final admission.

"The same commission shall have the right of proposing other artists who have not taken part in the exhibitions.

"Foreign members of the Academy will not be allowed to participate in its organisation or internal regulations. Besides the artist members the Academy may elect honorary members.

"The Academy will be charged with the regulation and organisation of exhibitions, the State imposing no other obligation in return for the loan of the Palais de l'Industrie than that of opening every year, as heretofore, an exhibition of the works of French and foreign artists.

"All artists who have taken part in the Paris exhibitions (the exhibition of 1848 excepted) will be called upon to elect the jury for the annual exhibitions. Members of juries both past and future, will be by right members of the Academy.

"The National Academy will be divided into four sections.

"1. The section of painters and designers.

"2. The section of sculptors, medallists, and engravers.

"3. The section of architects.

"4. The section of engravers and lithographers.

"The National Academy will elect every three years, at a general meeting, a president, two vice-presidents, a committee of administration, and two secretaries, who may be re-elected at the expiration of that term.

"One month after the election of its officers the society will proceed to the election of an administration and a treasurer.

"The National Academy will demand the power of accepting, in conformity with the laws, legacies and donations.

"Its resources will consist of the profits resulting from the receipts at the Palais de l'Industrie, in the Champs-Élysées, that it will beg the State to put at its disposal.

"Future regulations will determine its internal government, the holding of assemblies, the order and direction of its works, the administration of profits, and in general all that has not been foreseen and regulated in these present statutes."

More than 400 signatures of artists are attached to this *projet de statut*. It followed M. de Chennevières' report to the Minister of Public Instruction.

M. CARPEAUX has sent to Havre a beautiful terra-cotta statuette, entitled "After the War," to be raffled for the benefit of the sufferers in the shipwreck of the *Ville du Havre*. It represents a young girl begging: she holds a little brother in her arms, and is followed by a dog.

LONGHI's celebrated engraving of Raphael's "Marriage of the Virgin" (*Sposazio*) is, it is said, more than rivalled by Rudolph Stang's recent engraving of the same work. Stang has devoted more than seven years to the perfecting of his plate, and has produced, according to critics, a work that is not only truer in point of detail than Longhi's, but that likewise renders with much greater delicacy the tender sentiment of the original. In one respect Stang was more fortunate than his predecessor, for when Longhi engraved the *Sposazio*, much of its beauty was hidden underneath a veil of over-paint and dirt that since his time has

been removed by a most successful restoration. In many particulars Stang's rendering differs materially from that of Longhi. The various groups are brought into their proper relation with the Temple, so that the figures in the fore-court do not appear as in Longhi's engraving to be treading on the heads of those below. The lantern of the dome of the Temple is visible, and the horse to the left, which Longhi made white in order properly to enhance the effect of his engraving, is in Stang's of dark colour, as in the original. Changes are also observable in the principal group, especially in the drapery of the Virgin. The execution of this work is praised as "leaving nothing to be desired."

THE works at Cologne cathedral have positively "progressed." So much so indeed that a competition is now open for the best decoration of the inside of the dome.

THE Société des Amis des Arts at Lyons, founded in 1836, has just opened its thirty-seventh exhibition. The catalogue contains no less than 700 members. Most of the artists who have sent works to Lyons are also contributors to the *salon*.

THE Bishop of Lincoln, on the occasion of the presentation of prizes to the Nottingham School of Art, spoke at some length on the subject of artistic decoration. He regretted that mural painting was so little in use in England. No one who had seen the ruined houses of Pompeii, and the town-halls and dwellings in Belgium and elsewhere, could help being struck by the bareness of our walls and ceilings. Much might be done to improve them at very trifling cost: at all events, our public buildings, our halls and council chambers might be made to shine with the representations of the noble doings of our ancestors, and inspire their descendants to go and do likewise. His Lordship praised the local authorities of Nottingham for their project of converting their old castle into a permanent home for their successful Art Museum, and hoped that the Museum, when established, would be worthy, not only of Nottingham, but of the Midland Counties.

THE Nottingham School of Art took more prizes this year than any other in the kingdom, with the exception of South Kensington.

THE Egyptian antiquities of the Louvre have lately been enriched by two new objects. One is a Stele, covered with inscriptions, given to the Louvre by M. de Vogué. It was erected in honour of Asa, a priest of the goddess Boset, and represents the tomb of this personage in the centre. The other is a head from a sarcophagus found in the sixth tomb of the Valley of the Kings at Thebes by M. Villiers de Terrage, member of the Egyptian Commission. Traces of colour are still to be seen on it. It had evidently been entirely painted. It was deemed so interesting, that it has been placed in the Musée Historique of the Louvre.

THE current number of the *Zeitschrift für bildende Kunst* does not contain anything very interesting in the way of literature. Dr. Alfred Woltmann continues his "Tour in Alsace," Jacob Falke his notices of the Vienna Exhibition (which, we see, he is likewise bringing out as a separate work under the title of *Die Kunstindustrie auf der Wiener Weltausstellung*. II. Abtheilung: Die Industrie-zweige. Wien), and Franz Reber contributes a long essay on Christian Daniel Rauch. The chief attraction of the number lies in its frontispiece—an admirable etching by Unger, after a picture by Jan Van der Meer van Delft. The picture represents a quaint Dutch family of the seventeenth century, regaling themselves in a sheltered corner of an old-fashioned garden. They all, however, look painfully conscious that they are sitting for their portraits. Indeed, the group has much of the formal character of the family groups of the modern photographer, who is under the necessity of bringing everyone who comprises it into focus. Notwithstanding this defect, the figures are decidedly lifelike and in-

dividual, and the warm lighting of the picture, which is effectively rendered in the etching, gives it a charming effect. One young gentleman who has, it may be surmised, been sent away from the sedate family group in disgrace (perhaps because he ventured to laugh), turns his back upon us as he walks down a long garden walk. The painting is in the Royal Academy Gallery at Vienna. *Moonrise*, by Aug. Schäffer, etched by L. Fischer, the other illustration of the *Zeitschrift*, is somewhat dreary in conception and blotchy in execution.

A SMALL exhibition of the works of female artists is now open in Berlin. A great number of the pictures are copies from celebrated works; the lady artists of Berlin not having, apparently, as much original talent, or perhaps ambition, as their sisters in England.

Ancient Unedited Monuments (Unedirte Antike Bildwerke, Heft 1, Jena, 1873). By Rudolf Gaedechens.—Here is a modest task modestly accomplished. In this, the first of a short series of publications, the author has set it before him to make known certain ancient works of art hitherto either not at all or imperfectly published and explained, confining himself to works illustrative of the stories of Europa and Theophrastus. The former, after Otto Jahn's elaborate enquiry, can scarcely be said to want elucidation again, except in some small difficulties, and these it has not been the main object of our author to remove. One half of his purpose is to publish unknown monuments, and it is that half that he acts upon here in the case of Europa. The story of Theophrastus, on the other hand, having escaped all the Greek writers whom we possess—and coming to us, as it does, from Roman writers alone—has rarely presented itself as a possible subject for a Greek artist, and hence a good deal of pressure has been used to get somewhat similar subjects to fit into its place. As the story goes, Theophrastus, the beautiful daughter of Bisaltes, in the island of Krinissa, was carried off from her numerous suitors by the god Poseidon, who took the form of a ram, and conveyed her over the sea on his back. The frequent recurrence of a figure crossing the sea on the back of a ram must then be Theophrastus, unless there is a rival candidate. But there is no rival except Phrixos, and he ought obviously to be accompanied by some indication of his ill-fated sister; at least, he must be unmistakeably male, which the figures here published are not in any case, some being clearly female. By a stretch of ingenuity, prompted by a liking for familiarly-known subjects, even Helle has been identified sometimes with the figure which is now brought under the name of Theophrastus.

An Introductory Lecture on Classical Archaeology, delivered at University College last summer by Professor Lewis of Cork, is, it may be hoped, not a fair specimen of the discourses which followed. After defining his subject, apparently under the inspiration of the practice of last century, he is fully entitled to call Herodotus the father of archaeology, though at present this honour is usually supposed to belong to Winckelmann. Still a mistake about the parentage of his science need not have led him to state (p. 4) that "painting reached its zenith about a century later than architecture and sculpture, so that Apelles was the contemporary of Aristotle and Alexander the Great." The force of the words "so that" is here very dimly perceptible, and as to architecture he may or may not be right. But if painting culminated in Apelles, then assuredly sculpture reached its zenith in Praxiteles and Skopas, in which case the difference in time would be very small. Those who regard Pheidias as at the head of Greek sculpture, regard also his older contemporary and early master, Polygnotos, as at the head of painting. Professor Lewis is correct in declaring (p. 21) that "the Lycian saloon of the British Museum presents examples of Assyrian influence;" but

to point to the Harpy tomb as evidence of his statement, is to surprise those learned German archaeologists who have uniformly identified the style of this monument with the style of the Attic reliefs. The art of the Phoenicians (p. 23) may have "displayed itself in richness of decoration, not in colossal size;" but according to the present state of knowledge, this remark is quite visionary. "The worship of Venus was derived from Phœnicia" (p. 23); one phase of it was. "The Etruscans never advanced, like the Greeks, to the highest development of art; this may be attributed to their defeat by Iliero and to their subjugation by the Romans. . . . Probably the Etruscans never had the same aesthetic faculty that distinguished the Greeks" (p. 24). Considering the very different suggestions which they contain, these two sentences are in remarkably close proximity. Finally it may be gathered from the following what the lecturer expected of his audience (p. 31): "The restoration of a Pompeian house (at the Crystal Palace) gives a better idea of a Græco-Roman interior than can be derived from seeing the actual remains at Pompeii: there everything is faded and dingy, and a considerable effort of imagination is required to realise the ancient appearance." Still University College is to be congratulated on having inaugurated the study of classical archaeology.

IN summing up the results of the year 1873 with regard to the history of the theatre and dramatic art generally at Vienna, the Supplement to the *Allgemeine Zeitung* shows that during the twelve months in which performances were held almost daily, from December 1, 1872, to November 30, 1873, the Court Theatre at Vienna brought out 148 pieces, by sixty-eight different authors. Of these the Germans were in the proportion of nearly 50 per cent. on the whole number. Eight of Shakespeare's plays were given thirty-one times, showing a greater popularity than Schiller's plays, the same number of which were given only twenty-eight times. The most noteworthy novelties of the year were *Die Jüdin von Toledo*, by Grillparzer; *Oenone*, the first production of the young and rising dramatist, Alfred Berger; the *First Part of Henry VI.*, somewhat freely rendered by Councillor von Dingledstedt, and put on the stage with considerable modifications of the original, although so entirely to the satisfaction of the Viennese public, that the appearance of this piece may be regarded as the greatest and most successful dramatic event of the year, to which the only parallel was the nearly equally popular production, by the same writer, of the *Second Part of Henry VI.*

LACE is one of the objects to be represented in this year's International Exhibition; and in order to render the collection more complete, ancient lace will be exhibited simultaneously with modern, that the public, as well as those professionally interested in the subject, may have the means of studying the history of the art. For this purpose, a committee of ladies has been appointed to decide on the specimens to be admitted. They held their first meeting at the Albert Hall on the 4th inst., Lady Chesham presiding, and it was resolved that circulars should be issued, inviting all persons possessing lace, either of curious workmanship or historic interest, to contribute to the Exhibition. Much hereditary lace exists in our old families, and it is hoped that those who have it in their power may show the will, to promote this laudable purpose, and send their specimens to the Exhibition.

M. F. REISET has been appointed Director-General of the National Museums of France. This office was held under the Empire by the Comte de Nieuwerkerke, and afterwards merged in the post—specially created for him—of Superintendent of the Fine Arts; but it has now been re-established. M. Reiset was the custodian of drawings and chalcography in the Museum of the Louvre,

and has for some time past been a member of the Administration des Beaux Arts; he is the author of the voluminous catalogue of the paintings of the Louvre. The Vicomte Both de Tausia, assistant custodian, succeeds M. Reiset as custodian of the paintings of the Louvre.

THE monument in the Cour du Mûrier of the Ecole des Beaux Arts, in memory of Henri Regnault and six other pupils of the Ecole who fell in action during the war, will be commenced very shortly.

THE *Débats* announces that the sale of the water-colours, drawings, sketches, &c., of the late Célestin Nanteuil, will take place at the Hôtel Drouot, on Monday and Tuesday next. His water-colour studies of Spanish and Italian life and scenery will, of course, attract special attention; and the sale will include three pieces of tapestry, one of the Renaissance and two of the Louis Quatorze period, which formed part of M. Nanteuil's choice collection of works of art. Three important works of G.-B. Trepolo, the celebrated Venetian artist of the last century, will also be sold by auction on Monday next.

THE just-issued volume which concludes Mr. Forster's *Life of Charles Dickens* contains an admirable criticism of Frédéric Lemaître, in days when Frédéric Lemaître was at his greatest. Dickens was a constant playgoer: during one or two years of his youth scarcely a night passed without his "looking in" at the theatre. His notice of Lemaître is of a later time. He never made a study of criticism, but the spontaneous comments of a man of genius and sleepless observation can hardly be without insight and fine appreciation, and, though we do not quote the passage in question, we shall refer our readers to it. It is to be found on the one hundredth and one hundred and first pages of the new volume.

IN noticing the performance at the Théâtre Français of *Le Jeune Mari*, a comedy by Mazères, M. Caraguel, the critic of the *Débats*, remarks that its leading idea is very much the same as that of M. Dumas' latest work, *M. Alphonse*. But the treatment is entirely different. The play of Mazères belongs to an epoch at which, says the critic, old theatrical conventionalities took the place of observation, and comedies were excused from containing any faithful picture of the manners of the day, so only that they caught a reflection from popular comedies of an older date. Between the work of Dumas and the work of Mazères fifty years seem plainly to intervene. And the critic, without going very much further, says this is as it should be—above all things, a writer must belong to his own time.

A SUCCESS of a popular kind has evidently been made by *Les Deux Orphelines*,—the piece by Messieurs d'Ennery and Cormon, produced two or three days ago at the Porte Saint Martin. Throughout, it appears to be dramatic and moving. Nothing, says the *Figaro*, has been seen so striking as the last act, since *Trente Ans de la Vie d'un Joueur*. The cast is a strong one: Madame Doche (lent by the Odéon) and M. Taillade appearing in two principal parts, and Mademoiselle Angèle Moreau, from the little Theatre of Montmartre, having obtained, in the part of the young heroine, a very remarkable success—some such an one, we imagine, as Mlle. Orphée Vial deserved and got two years ago, at the Théâtre de Cluny, in the elder Dumas' *Richard Darlington*.

THE Viennese public have been listening with rapt attention to *Libussa*, which the best dramatic critics of Germany regard as the crowning achievement of the author. This piece, which may be characterised as Grillparzer's poetic legacy, has been put on the boards of the "Burg-Theater" with artistic finish and completeness.

THE first of M. Gounod's new series of concerts, which takes place this evening at St. James's

Hall, will be of more than ordinary interest, from the production, for the first time in this country, of his new music to *Jeanne d'Arc*.

MR. KUHE's annual musical festival at Brighton commences on Tuesday next, and extends over nearly a fortnight, terminating on the 23rd instant. The principal features announced are the oratorios of the *Messiah*, *St. Paul*, and *Elijah*, Rossini's *Stabat Mater*, Randegger's *Fridolin*, Sir Julius Benedict's Symphony in G minor, and Sullivan's *Light of the World*—the three last-named works being conducted by their respective composers.

A NEW tenor singer is said to have been discovered at Hamburg, in the person of a letter-carrier named Gustav Walter, who is said to possess a magnificent voice, which is at present undergoing cultivation in one of the musical institutes of that city.

ON the close of his engagements in this country, Dr. Bilow is about to undertake a long tour through Russia.

M. ANATOLE CRESCENT, who died at Paris in 1869, bequeathed by his will the sum of 100,000 francs for the foundation of a triennial prize for the best opera-book, serious or comic. The result of the first competition has lately been announced, and is by no means encouraging. Of fifty-six manuscripts submitted to them, the judges, among whom were some of the first French composers and librettists, found not one of sufficient merit to justify them in awarding the prize. A second trial is therefore announced, and manuscripts are to be sent in by April 15.

HANDEL's music appears to be gradually making its way in France, *Alexander's Feast* having been recently produced with great success at Dijon.

RUBINSTEIN has lately been giving a series of concerts at Rome.

THE Royal Italian Opera will open for the present season on Tuesday, March 31. Mr. Gye's prospectus will be shortly issued.

THE Italian obituary for the month of January includes the name of the well-known clarionette-player, Cavaliere Ernest Cavallini, who died at Milan after a short illness.

THERE is great excitement just now in the musical world of Frankfort-on-the-Maine, where the St. Cecilia Society have for some time been diligently studying Max Bruch's latest and best work, the *Odysseus*, which was to be brought out in that city on February 3, under the direction of Herr Müller.

POSTSCRIPT.

WE have been favoured by Dr. Kirk with the following private telegram, which he received from Brigadier-General Schneider, C.B., Her Britannic Majesty's political resident at Aden, with reference to the news of the death of Livingstone. Dr. Kirk considered that the details given in the telegram as published concerning Livingstone's death and the embalming of his body presented so many doubtful points that required clearing up, that he was anxious to ascertain whether Cameron had convinced himself as to the accuracy of these reports by personal examination of the messengers who, it is said, preceded Livingstone's dead body to Unyanyembe, and among whom was Chumah, his servant; or whether the reports had come to his ear before Chumah himself reached Unyanyembe in the usual untrustworthy and exaggerated native manner. He therefore telegraphed to General Schneider; but, as will be seen by the reply from General Schneider, it cannot be ascertained at present whether Cameron actually saw Chumah. The evil tidings may have preceded him by some days; and there is nothing for it but to await the receipt of Cameron's written advices:—

"General Schneider to Dr. Kirk.

"Aden, February 2, 5.15 p.m.

"Captain Prideaux merely says Chumah went ahead and gave intelligence to Cameron."

SATURDAY, FEBRUARY 14, 1874.

It is particularly requested that all letters respecting subscriptions, the delivery of copies, and other business matters, be addressed to the PUBLISHER and not to the EDITOR.

LITERATURE.

The Life and Death of John of Barneveld, Advocate of Holland; with a View of the Primary Causes and Movements of the Thirty Years' War. By John Lothrop Motley, D.C.L., LL.D. (London: Murray, 1874.)

(First Notice.)

A NEW work from Mr. Motley's pen is certain to meet with a general welcome. In becoming the historian of the Dutch Republic he chose a subject singularly adapted to his powers. The heroic resistance of the founders of the new state against the apparently overwhelming might of Spain had roused all his enthusiasm, and he found a congenial work in calling the world to witness their patriotic devotion in the hour of danger, and the wise thoughtfulness with which, when victory had been won, they ordered the people which they had saved. If, on the other hand, Mr. Motley is inclined to do scant justice to the men whose tyranny was the cause of so much human misery, and if he seldom attempts to put himself in the position of those whose deeds were so evil, it may fairly be pleaded on his behalf that rarely, in the course of the world's history, have light and darkness been so clearly divided from one another, rarely have the redeeming points, which are always to be found in the worst of causes, been so hard to detect.

It is hardly worth while to say that the name which Mr. Motley has given to his book is a misnomer. The greater part of Barneveld's life has already been told by himself in his *History of the United Netherlands*, and, except that we are reminded in a few pages of Barneveld's younger days, Mr. Motley has given us but the nine closing years of an old man's career. But those years are full of significance. In them we see the last great statesman of Continental Protestantism till Gustavus arose, dealing successfully for a time with those miserable distractions of Germany which called upon every statesman worthy of the name to find some remedy for the well-nigh hopeless disease; and then, when the danger is postponed, if not averted, we find the same man facing the greater question of religious toleration, and falling a victim to his honest, if imperfect, efforts to vindicate the rights of conscience.

The twelve years' truce with Spain, which was signed in 1609, was, as we know from Mr. Motley's former volumes, the work of Barneveld. The Commonwealth of which this man was the guiding spirit was a rough federation of seven states, one of which—that of Holland—was far beyond the others in wealth and population, and, as long as it was not divided by internal strife, its representatives occupied much the same position

amongst the States-General, or Federal Assembly, as is occupied by Prussia in the Federal Council of Germany in the present day. And to all intents and purposes, as Mr. Motley shows, the Provincial Government of Holland—the States of Holland, as it was called—whether they were engaged in the management of their own internal affairs, or whether they were taking part by representation in the States-General, spoke by the voice and thought with the thoughts of Barneveld.

"The advocate and keeper of the seal of that province," Mr. Motley tells us (i. 10), "was, therefore, virtually prime minister, president, attorney-general, finance minister, and minister of foreign affairs of the whole republic. This was Barneveld's position. He took the lead in the deliberations both of the States of Holland and the States-General, moved resolutions, advocated great measures of State, gave heed to their execution, collected the votes, summed up the proceedings, corresponded with and instructed ambassadors, received and negotiated with foreign ministers, besides directing and holding in hand the various threads of the home policy and the rapidly growing colonial system of the republic."

He was, in fact, on a lesser stage, if extent of territory only be regarded, the Bismarck of the day, the statesman of a province, becoming the leader of a federation. Yet he strikes us as altogether a greater man. He was less ready to appeal to blood and iron, more ready to trust in human worth, and to value intellectual freedom for its own sake. And if his confidence led him to the scaffold, we need judge him none the harder for that. His work was not for his own life, but for the centuries to come. His blood spoke to his countrymen from the dust which drank it up, and all that was great in the future history of the Netherlands, especially the magnificent example of toleration which they were to give to the world, was only possible when the men of the next generation began once more to tread in the course which Barneveld had traced out.

The religious strife, which was to cost the statesman his life, haunts us like a shadow almost from the beginning of Mr. Motley's pages. But for some time the interest lies principally with the affairs of this world. Scarcely was the ink dry on the instrument which put an end for a time to the war between Spain and its revolted provinces, when the Duke of Cleve and Jülich died, leaving almost as many competitors for his succession as those who strove for the Crown of Scotland after the death of the Maid of Norway. The two who were foremost in their claims were the Elector of Brandenburg and the Count Palatine of Neuburg, and of these the Elector seems to have had the better right. Both of these were Protestants, and whilst they were preparing to put forward their claims as best they might, the Catholics were acting. Leopold, the militant Bishop, who was the brother of Ferdinand of Styria, threw himself into Jülich and took possession of the Duchies in the name of the Emperor, to whom, alone, he said, it belonged to adjudge the prize.

There is more to be said for the Emperor's claim than Mr. Motley seems to be aware of. But if his claim were just by all the laws of the Empire, it was not one to which the Dutch Government could possibly submit.

The lands in dispute were situated along the Rhine, where it flows into the territory of the Republic, and if it were occupied by Spanish troops it would be a terrible thorn in the side of the States if war should ever recommence. That the Emperor, whatever might be his rights, had no power to maintain them without Spanish aid from Brussels, was too evident to need further proof. Barneveld, therefore, without troubling himself further about the laws of Germany, saw that he had a plain task before him. Whoever else got the Duchies, the Emperor and his episcopal henchman must have nothing to do with them.

The object was clear, but the Republic alone was not strong enough to attain it. Application must be made to two men more unlike in every feature of body and mind than any two who ever existed on this earth. Barneveld's statesmanship would be taxed to the uttermost in conducting in one common path Henry IV. of France and James I. of England.

We must confess we should have been better pleased if Mr. Motley had been able to tell us what it was precisely which Barneveld wanted to do. There were evidently two policies between which he might choose. He may, on the one hand, have been content to occupy the Duchies, and to place them in the hands of the enemies of Spain. On the other hand, he may have seen a fair occasion for recommencing a general war with a powerful ally, and may have welcomed Henry's plan of revolutionising Europe, to be commenced by an attack upon the Spanish Netherlands, and to be followed up by a general overthrow of the House of Austria. It seems hardly likely that a statesman of Barneveld's experience should have hoped so much as Henry did from these wide-reaching projects, and we suspect from Mr. Motley's narrative, that Barneveld would have been well content if Henry had merely offered to secure the Duchies from the grasp of Spain.

Henry's plans, as they are developed by Mr. Motley, were of stupendous magnitude. The King was to move on the Rhine to seize the Duchies at the head of 35,000 men, supported by a Dutch force of 14,000. Another army was to attack Spain itself, and to raise, if possible, the Moors to insurrection. A third French army would join the Duke of Savoy, and conquer the Milanese for that ambitious potentate, whilst Genoa and Savoy were to be annexed to France.

So much has been said about Henry's designs, and so many doubts have been thrown over the information which has reached us, that we are deeply indebted to Mr. Motley for the abstract which he has given us of a despatch from Aerssens, the Dutch ambassador at Paris, dated January 24, 1610, and which has up to this time remained unread by historians. Henry had expressed a wish that Barneveld would come in person to Paris.

"He told the Ambassador (i. 164) that he was anxiously waiting for the Advocate in order to consult with him as to all the details of the war. The affair of Cleve, he said, was too special a cause, a more universal one was wanted. The King preferred to begin with Luxemburg, attacking Charlemont or Namur, while the States sought at the

same time to besiege Venlo, with the intention afterwards of uniting with the King or laying siege to Maestricht.

"He was strong enough, he said, against all the world, but he still preferred to invite all princes interested to join him in putting down the ambitious and growing power of Spain. Cleve was a plausible pretext, but the true cause, he said, should be found in the general safety of Christendom."

By and by he expressed his immediate design with complete plainness.

"I mean," he said (i. 106), "to assemble my army on the frontier, as if to move on Jülich, and then suddenly sweep down on the Meuse, where, sustained by the States' army and that of the princes," i.e. the princes of the German Protestant Union, "I will strike my blows and finish my enterprise before our adversary has got wind of what is coming."

A French ruler of our own times has been accused of making war like a conspirator. It will be seen that in this respect he was only following the example of the hero of the white cockade. What follows is still worse. Spinola, the Spanish general, trusting in the peace which existed with France, "was about to make a journey to Spain on various matters of business" (i. 107). Henry thought of finding a pretext for arresting him as he passed through France. "The object," he told Aerssens, "would be to deprive the archdukes of any military chief, and thus to throw them into utter confusion."

Barneveld, cautious as usual, seems hardly to have approved that magnificent scheme, though Mr. Motley attributes his conduct to motives of prudence rather than to any actual disapprobation. In March (i. 185) Aerssens was only able to inform Henry "that for the affair of Cleve and Jülich he had instructions to promise entire concurrence," whilst he does not appear to have had anything to say about the attack upon Venlo and the siege of Maestricht. Henry again repeated (i. 186) that he could not reach Jülich without a war with the Spanish Netherlands, and that he could do nothing without the active help of the States. By the end of the month (i. 192) he was complaining that the States wished "to excuse themselves from sharing in his bold conceptions," and saying that he could resolve on nothing without their concurrence.

In the middle of April special Dutch commissioners, Barneveld being too busily engaged at home to be one of the number, arrived in Paris. But though they had much to say about the Duchies, they had nothing to say about the attack on the Netherlands.

"It would have been culpable carelessness, therefore, at this moment," Mr. Motley observes (i. 211), "for the Prime Minister of the States to have committed his Government in writing to a full participation in a general assault upon the House of Austria; the first steps in which would have been a breach of the treaty just concluded, and instant hostilities with the Archdukes Albert and Isabella."

And so when Henry prepared at last to set out for his attack upon the Netherlands, he set out upon an enterprise in which, as far as his immediate object was concerned, he had not a single ally. And Mr. Motley brings out all the more strongly, because unconsciously, how weak his chances were. The knife of Ravallac cut short his hopes, and it is useless

to speculate what might have happened if he had made a leap, which was as perilous as that on which he ventured when he passed from one religion to another. The isolation in which Henry stood at home, stands out in Mr. Motley's pages in terrible distinctness, though Mr. Motley is hardly aware how great a moral strength accrued to the Catholic powers from the reputation of self-seeking and restless ambition which was gathering round their opponents. We may be sure that James of England did not stand alone when he wrote (ii. 451) of some plan of Henry's, in one of those letters which Mr. Motley has rescued from their seclusion in the Hatfield Library.

"As for the French project, I confess that it is set down in very honourable and civil terms, as to the exterior part, but the whole substance thereof runs upon that main ground of his particular advantage, which is not to be wondered at in one of his nature, who only careth to provide for the felicity of his present life, without any respect of his life to come."

And though Mr. Motley tells us enough to enable us to judge for ourselves, and takes good care to paint in proper relief the follies and crimes of the man whom he admires, we should have been better pleased if he had said less about the continual aggression of the Catholic powers, and more of the feeling of distrust awakened by the mode in which men like Henry thought fit to meet that aggression.

That this distrust, though justifiable on other grounds, was deepened by the ridiculous passion of Henry for the Princess of Condé, there can be no doubt whatever. We are not therefore inclined to find fault with Mr. Motley for telling that episode at its full length. The story is given in his best manner. We seem to see before us the old king frantically making love to the lovely child of sixteen summers, taking to his bed and groaning wildly when his prey is snatched and carried off to Brussels, offering to make war or peace with the rulers of the Spanish Netherlands in which she had found shelter, according to the effect which either seemed at the moment to be likely to have upon the gratification of his guilty passion. And we see too, what Mr. Motley does not see, the rising disgust of the conservative respectabilities of Europe, and we acknowledge that one more link was forged in the chain of the causes of the Thirty Years' War, when it could be said, with whatever exaggeration, that the great enemy of the House of Austria was about to plunge half a continent into a sea of blood, in order that a grey-bearded adulterer might gratify his never-satiated lust.

When Henry IV. fell before the murderer's knife, Barneveld could not hope for much assistance from France. He therefore looked all the more anxiously to James of England.

There is no question more difficult for an historian to decide than that which relates to the extent to which he ought to carry his researches into the history of countries other than his own, as it cannot be right for him to take up more time in this way than is absolutely necessary for the elucidation of his own immediate subject. Mr. Motley has, however, it must be acknowledged, hardly

that acquaintance with English affairs which might reasonably be expected of him. One would have thought that he would have known that the title of Lord Hayes (ii. 77) did not exist in the English peerage, that Archbishop Whitgift (i. 266) had been dead some years before 1611, and that in 1612, when he says of James (i. 288), "but was not Gondomar ever at his elbow, and the Infanta always in the perspective?" Gondomar had not arrived in England, and there was no marriage with an Infanta in contemplation; the negotiation for the hand of the Infanta Anne having been broken off in 1611, and the negotiation for the hand of the Infanta Maria not being entered on till 1614. These, however, are small slips. The important matter is that Mr. Motley should be content with giving us the mere caricature of James with which he has satisfied himself, and should have thought it right to speak of the English King as one who was in the habit of hanging Puritans (i. 287), as a man who was a "Catholic at heart" (i. 54), and who was surrounded by a court "compared to which the harem of Henry was a temple of vestals" (i. 159). In fact, however, the despatches of the Dutch ambassadors do not furnish the best materials for forming a true conception of James's character. The tiresome way in which he failed at the critical moment those who were building upon his word must have been very disgusting to all who were in need of his help; and if we think that Mr. Motley has failed to bring out the shrewdness and good sense which was often rendered useless by his infinite incapacity for taking trouble, and his aptness to go astray in pursuit of some minor object, it should not be forgotten that Mr. Motley has shown his desire to be fair and just by the care with which he draws attention to any specially sensible remark of the king's whenever it happens to come in the way.

To dispute with Mr. Motley on James's character would lead us too far from the central subject of his book. But it is impossible to avoid noticing that his want of interest in James has led him to give a totally incorrect account of James's connection with the siege of Jülich and the occupation of a portion of the Duchies. Prince Maurice and the Dutch, he says, did the work alone. When Henry was dead, the Dutch commissioners in England implored the assistance of James in vain (i. 253).

"The barren burthen of knighthood, and a sermon on predestination were all he could bestow upon the high commissioners in place of the alliance which he eluded, and the military assistance which he point-blank refused."

On the contrary, James was represented at the siege of Jülich, as we shall show presently, by 4,000 men. So far from James wishing, as Mr. Motley represents him to have wished, to abstain from taking part in the quarrel, his whole anxiety, and the anxiety of his Ministers, had been to make sure that he should not have to fight alone. He did not trust Henry, and as Mr. Motley does not trust Henry much either, he cannot blame him very hardly for that.

Mr. Motley acknowledges his obligations to the present Marquis of Salisbury for copies of letters which we have to thank him for

printing in the Appendix. Let us present him in return with an extract from a despatch written by the Marquis's ancestor, the Earl of Salisbury, to the English Agent at Paris on Nov. 9, 1609 (*State Papers—France*).

"His Majesty being often earnestly solicited not only by the pretendants, i.e. to the Duchies, but by divers princes their allies, hath been pleased, according to that which he hath before made known in his declaration, that Sir R. Winwood should repair to Düsseldorf or elsewhere, if he were so entreated by the princes, and that the French king and the States did likewise send up their ministers. So, as you see, his direction to go thither is limited by two circumstances, the one to attend the princes' entreaty, and the other to be assured that France and the United Provinces would do the like. For from the first overture his Majesty had no purpose for any second or collateral respects to embark himself on their party first and alone, but only to go hand in hand with others, whom peradventure it doth more nearly import, and by a common consent of counsel and assistance to establish the true proprietors against any third person, that by colour either of a title or of Imperial power and prerogative would usurp upon their right, which course his Majesty knew to be most compatible with his present estate, both as it is in itself, and as it hath relation and confederacy with others."

Mr. Motley can hardly wish anything more straightforward than this. But as he may still argue that these are the words of Salisbury and not the deeds of James, it will be as well to add the solution of the mystery about the troops.

James, as is well known, had no standing army. If he levied a force of 4,000 men in England, he would merely get a number of raw recruits, who would not become trained soldiers till the need for them was over. The States, on the other hand, had a standing army, and amongst their troops were certain English and Scotch regiments in the pay and under the orders of the States. James, therefore, proposed that, as soon as the expedition was ready to start for Jülich, he should take 4,000 of these men into his pay, upon the agreement that, as soon as the fighting was over, they should return to the service of the States. Everybody was satisfied. The States got from James the service of 4,000 efficient men without paying for them, and James was saved the trouble of levying a force on England. If this is what Mr. Motley calls a sermon on predestination, it was certainly drawn up in a very tangible shape.

And so Jülich was taken, and part at least of the Duchies was saved from the grasp of Spain. The thing was done, not in Henry's way, but in James's way. Peace was preserved in Europe for eight years to come; and who could tell in 1610 that it might not be prolonged indefinitely? The remainder of the story of the bickerings which ensued must be left to Mr. Motley to tell in his own way; and, as far as we can judge from a narrative in which the Spanish side is scarcely heard, he seems to have convicted Spain of shuffling and deception. But we have no space for all this. We have still to speak of his treatment of the great religious quarrel in the Netherlands, and of the view which he has taken of the origin of the war in Germany.

SAMUEL R. GARDINER.

A NEW DODSLEY.

A Select Collection of Old English Plays. Originally published by Robert Dodsley in the Year 1744. Fourth Edition. Now first chronologically arranged, revised, and enlarged, with the Notes of all the Commentators, and new Notes by W. Carew Hazlitt. Vol. I. (London: Reeves & Turner, 1874.)

THOSE readers who delight to recreate and amuse themselves with the beauties and curiosities of our ancient dramatic literature, will heartily welcome this new edition of Dodsley. There is, indeed, one drawback to their satisfaction: "The tendency in each successive edition has been to remodel the undertaking on the principle of rejecting plays which from time to time have been lifted up (so to speak) into the collective works of their respective authors, and to substitute for them plays which have either suffered unmerited obscurity in original and rare editions, or have lain so far scattered about in various other collections; and in the present case that principle has been strictly adhered to." Possibly the principle has been carried too far. It may have been well to exclude the leading dramatists such as Beaumont and Fletcher, Massinger, and Ford; but perhaps it may not be equally judicious to shut out the exceptionally good work of a second-rate writer, merely because some one has been whimsical or charitable enough to edit him. Miller's excellent selection, *The Ancient British Drama*, contained the best plays of those dramatists who had written several of unequal merit, and whose "whole works" comparatively few have the inclination (not to say the means) to procure. In this modified Dodsley, some of the brightest stars of the old galaxy shine no more; and the literary as distinguished from the antiquarian value of the book is thereby somewhat lowered. *Alexander and Campaspe*, *The Woman killed with Kindness*, *Vittoria Corombona*—"all, all are gone, the old familiar faces!"

But we "are not all unhappy." There are additions also, plays edited and inedited. In the case of the former, the prefaces and notes are reprinted, with occasional bracketed corrections by Mr. Hazlitt, whose editorial vigilance must have relaxed somewhat at the end of Haslewood's preface to *Thersites*, where what is evidently intended as a graceful adieu to the reader is thus strangely metamorphosed (Haslewood is apologising for the use of modern type):—

"The now almost 'olden' venial transgression of him who will probably continue sinning, until the forced guest to banquet with the doctor and his associate."

There is but one inedited play in this volume—*Calisto and Meliboea*. A table of contents has, seemingly, been forgotten. As the arrangement is intended to be strictly chronological, it is, perhaps, by an oversight that the *Four P. P.*, of which the earliest edition was published "1540 or thereabout," is put before *Thersites*, which must have been played (though not published) in 1537. Mr. Hazlitt speaks very modestly of his execution of his unambitious programme, "in which there was a fair share of labour and difficulty." Judging from this sample,

the reader will readily allow that the labour was one of love, and that the difficulty has been overcome.

We are here presented with specimens of the interludes in vogue during the reigns of Henry VII. and Henry VIII., but produced in some abundance about the year 1540. The *Four Elements* is philosophical; *Every Man, Hickscorner, World and Child, God's Promises* are moral and religious; *Calisto and Meliboea* is a rhetorical comedy, and *Thersites* a broad farce of the most primitive construction; while the *Pardoner* and the *Friar* and the *Four P. P.* are controversial and comic.

The character of the *Four Elements* is unique. It is an exposition of the popular science of the Tudor days and of days long before—for Mr. Halliwell remarks that there is no scientific advance on what is found in a curious poem in the time of Edward I. It is an attempt to combine instruction with amusement, and has the usual fate of that undertaking. The need of a knowledge of material things as a means to the knowledge of higher matters is insisted upon in the Prologue:

"By little and little ascending,
To know God's creatures and marvellous working.
And this wise man at the last shall come to
The knowledge of God and His high majesty,
And so to learn to do his duty.
But because some folk be little disposed
To sadness, but more to mirth and sport,
This philosophical work is mixed
With merry conceits, to give men comfort."

The fundamental physical doctrines of the time are enunciated by Natura Naturata, who instructs Humanity concerning the action and indestructibility of the elements, and acquaints him with the reasons of the position of the earth and water in the midst of the world, compassed about with air and fire "as the white about the yolk of an egg doth lie." Lest Humanity should forget what he has been taught, a tutor, Studios Desire, is left to assist him in his progress:

"The cause of things first for to learn,
And then to know and laud the high God eterne."

The tutor proves to his own and his pupil's satisfaction that the earth hangs in the midst of the firmament, because the sun and moon move round the earth, and therefore meet with no impediment from its "endless deepness":

"Therefore, in reason, it seemeth most convenient.
The earth to hang in the midst of the firmament."

These abstruse studies are interrupted by Sensual Desire, who is not of Sir Toby's opinion that our life consists of the four elements, but of Sir Andrew's, that it "rather consists in eating and drinking." Humanity confesses that he is hungry, and that his "wits are weary." A Taverner, who has his good wit out of the *Hundred Merry Tales*, appears to refresh Humanity and the audience with some of the promised "conceits." Humanity now withdrawing from the inquisition of final causes to more material enjoyment, Studios Desire receives a lesson in geography from a traveller, Experience. The stranger, after some notice of the lands "found westward within these twenty years," and of the idolatry therein prevailing, is interrupted in a description of the realm of the "Can of Catowe" by the return of Humanity from the tavern, bent on obtaining satisfaction on the question of the earth's

rotundity. Experience undertakes the solution of his doubts, and after a hiatus of eight leaves we find Ignorance in possession of the stage, for whose delight and that of Humanity Sensual Desire arranges a song and dance—a “break-down” of the period. Natura returns and rebukes Humanity for his folly, but the lecture and the piece end abruptly—the concluding leaves being lost.

Of the moralities here given, the best is unquestionably that of *Everyman*. Its editor, Hawkins, says that its design is “to inculcate great reverence for old Mother Church and her Popish superstitions,” but with truer insight Percy (of the *Reliques*) remarks that “this old simple drama is constructed on the severest model of the Greek tragedy. Everyman is summoned to go on a journey whence is no return, in order to give an account of his life ‘to God’s magnificence.’ He is deserted by Fellowship, Goods, and Kindred, and not until he is brought by Knowledge to Confession is Good Deeds (who had been paralysed until Everyman had done penance) able to become his companion. He summons his friends Discretion, Strength, Five Wits, and Beauty. They advise him to receive the last sacraments, which he has no sooner done than they also prepare to depart, leaving Good Deeds only to stay with him. Everyman dies, and an angel having rejoiced over his goodly ending, a Doctor points the obvious moral.” It is not merely “in the conduct of the fable” that this quaint piece merits the tribute Percy pays it. The consistency of the tone, and the rugged pathos that knows no touch of sentiment, preserve our interest in the action, notwithstanding the merely allegorical personages who sustain it. Everyman himself is more than an emblem. He is an individual instance of mortality. His death on the stage (noticed by Percy as a breach of tragic rules) powerfully assists this effect, and is indeed a stroke of real art. He might have gone his journey, and the conditions of the allegory would have been satisfied; but this figurative rendering of his death would not have stirred our sympathies as does this blending of fact with symbol.

The *Child and the World* treats of a kindred theme—the late repentance of one whose childhood, youth, and manhood have been devoted to the “prince of power and plenty,” Mundus. When the hero has attained knighthood, and is named Manhood Mighty, Conscience comes to him unbidden, and warns him against the Kings (the seven deadly sins) to whose service Mundus had bound him. The Knight determines to serve Conscience and Mundus, and so make the best of both worlds. In this mood he is found by Folly, who renames him Shame, and persuades him to go to London, to “learn revel.” He re-enters soon after as Age—having lost health, wealth, and character. In despair, he calls on Death “to end his woe and care,” when he is met by Perseverance, the brother of Conscience. He is again re-named Repentance, and duly instructed in the Creed. Perseverance then takes leave of the audience with a prayer—the usual conclusion of these moralities.

Hickscorner is a far inferior production. The hero is a reprobate whose companions, Imagination and Freewill, are as dissolute

as himself. They are met by Pity, whom they put in the stocks for remonstrating with them on their immoralities. Pity is released by Perseverance and Contemplation, who descant, as holy men have always done, on the peculiar enormities of now-a-days—“worse was it never,”—and who, on the return of the revellers, effect their conversion. The poverty of the dialogue is at once shown when any play of motive is necessary. The rogues repent, as it were, in a stage direction. Freewill, who has been suddenly wrenched from his evil courses, warns his fellow-sinner—

“Beware, for when thou art buried in the ground,
Few friends for thee will be found :
Remember this still.
Nothing I dread so sore as death,
Therefore to amend I think it be time ;
Sin have I used all the days of my breath,
And spent amiss my five wits ; therefore I am sorry.
Here of all my sins I axe God mercy.”

God’s Promises, by John Bale, Bishop of Ossory (the bitter controversialist known as Bilious Bale), is the longest of these moralities. Its seven acts are colloquies between Pater Coelestis and Adam, Noah, Abraham, Moses, David, Isaiah, and John the Baptist. The main theme of each is the promise of the Messiah, but the leading incidents of the personal history of each worthy are worked into the dialogue. It is poor in conception and poorly carried out. The writer abruptly changes from conventional severity to colloquial familiarity. He certainly could not have intended that David should fence cautiously with his Divine interrogator, but from sheer want of imagination he has represented him as assuming ignorance, making no more admissions than he can help, and measuring out his general expressions of contrition with a discreet and wary economy.

“*Pater Coelestis*. David my servant, somewhat I must say to thee,
For that thou lately hast wrought such vanity.

David Rex Pius. Spare not, blessed Lord, but say thy pleasure to me.

Pater C. Of late days thou hast misused Beer-sheba.
The wife of Uriah, and slain him in the field.

David. Mercy, Lord, mercy, for doubtless I am defiled.

Pater C. I constituted thee a king over Israel,
And thee preserved from Saul, which was thy enemy—
Why hast thou then wrought such folly in my sight,
Despising my word against all godly right?

David. I have sinned, Lord ; I beseech thee pardon me.

Pater C. Thou shalt not die, David, for this thy iniquity,
For thy repentance ;
From thy house for this the sword shall not depart.

David. I am sorry, Lord, from the bottom of my heart.

Pater C. To further anger thou dost me yet compel.

David. For what matter, Lord ? I beseech thy goodness tell.

Pater C. Why didst thou number the people of Israel ?
Supposest in thy mind therein thou hast done well?

David. I cannot say nay, but I have done indiscreetly
To forget thy grace for a human policy.

Pater C. Though thy sins be great, thy inward heart’s contrition
Doth move my stomach in wonderful condition.”

It is singular that a man who was so steadily attached to the old religion as to die in exile for its sake, should have so unsparingly attacked its most popular exponents—the pardoners and the friars. Heywood, in the first of his interludes here printed, exhibits the contention between a friar, anxious to preach a charity sermon on voluntary poverty for the good of his convent, and a pardoner who, with his relics and indulgences, takes up his position in the same church, and tries to outbawl his rival. From words they come to blows, and are parted by the parson and neighbour Prat. The champions of order attempt to put them in the stocks, but they make good their escape after a struggle, leaving Prat and the parson, with broken heads, to shout curses after them.

The dialogue of the *Four PP*—a palmer, a pardoner, a ‘pothecary, and a pedlar—is equally daring. The palmer—a great traveller, who has seen Noah’s Ark “on the hills of Armenia”—trusts to obtain salvation by his meritorious pilgrimages. The pardoner vaunts the possession of a shorter road to heaven. The ‘pothecary, proud of the many divorces he has effected between soul and body, boasts himself superior to either. They agree to unite in their efforts for the spiritual good of mankind, but fall out upon the question which shall command the other two. The pedlar, as umpire, will only decide by the test of superiority in the art of lying, wherein they all excel. The prize liar is the palmer, who declares that in all his travels he never saw a woman out of patience. The others refuse to abide by their bargain, from which he releases them. The pedlar leads the dialogue to an orthodox ending by rebuking the sceptical ‘pothecary for “railing here, openly at pardons and relics so rudely,” while allowing him to treat with contempt such relics as he knows false.

“But where ye doubt, the truth not knowing,
Believing the best, good may be growing—
In judging the best, no harm at the least :
In judging the worst, no good at the best.”

The anonymous *Thersites* is a comic scene, displaying the braggart humour of the hero, who defies the world, fights a snail, and finally runs from a soldier whom he has challenged. The fun is of the coarsest and most puerile kind, when its place is not supplied by a jingle of gibberish as in the long charm against worms, recited by the mother of Thersites over young Telemachus, and occupying nearly half the piece. Among familiar phrases of a higher antiquity than that we should be apt to assign them, is “a sure card” occurring in this interlude, where is found also Bromwicham (Brom-magem).

In such rude essays we see the puny efforts of the art which, within a century from the date of the earliest piece in this volume, was to reach “the height of its compass.” From

Thersites to Falstaff, from *Celestine* (the go-between in the insipid *Calisto and Meliboea*) to *Quickly*, is the interval from infantine babbling to winged words of perfect utterance. The subsequent volumes of the series will help us to follow the development stage by stage. R. C. BROWNE.

The Oxford Methodists. By Rev. L. Tyerman. (London: Hodder & Stoughton, 1873.)

THE eighteenth century in England has undoubtedly a bad reputation. Even Buckle, who styles it "that great age," censures in unmeasured terms its political degeneracy; while nearly all contemporary observers—the theologians from Butler to Wilberforce, the philosophers from Leibnitz to Burke, the satirists from Pope to Cowper—were unanimous in denouncing its venality, recklessness, and licentiousness. It is precisely at such times that experience teaches us to look for some notable reaction. The Benedictine movement in the ninth century, that of the Franciscans and Dominicans in the thirteenth, Savonarola at Florence and Luther at Wittenberg, each represented the inevitable recoil from the startling immorality of their age. And so in the year 1729, when the eighteenth century was at about its darkest, we find meeting in each other's rooms at Oxford a Mr. John Wesley, of Lincoln College; a Mr. Charles Wesley, student of Christchurch; a Mr. Morgan, commoner of Christchurch; and a Mr. Kirkham, of Merton College, for the purpose of reading together the Greek Testament.

Oxford at that time was pretty much what it was a quarter of a century later, when Gibbon described the conversation of the Fellows of his college as "a round of Tory politics, personal anecdotes, and private scandal;" that is to say, the mental atmosphere was not simply unintellectual, but positively hostile to learning and earnest thought; and under the auspices of indolent college tutors, and amid the frivolity of the students, the youthful enthusiasm of the historian languished, to revive again in his dull chamber and ascetic life as the pupil of Pavilliard at Lausanne.

In the movement here described by Mr. Tyerman, we have all the characteristics which distinguish a genuine from a spurious enthusiasm, and it is interesting to observe the general resemblance of these young Oxford students to the Cambridge Reformers of two centuries before. Clayton and the Wesleys, like Bilney, Barnes, and Latimer, were the centre of a little society, meeting at first in an unobtrusive way for study and converse, gathering from thence new rules of life and new conceptions of duty to their fellow-men, practising a rigid self-denial for the purposes of charity, visiting the sick and the prisoners, and finally proclaiming their doctrines from the pulpit with a fervour of conviction and a boldness of denunciation unsurpassed by the most zealous Dominican in the age of Grosseteste. It is remarkable, however, in comparing the two movements, that—after Protestantism had reigned with but little interruption for nearly two hundred years—we find among these early Oxford Methodists by far the larger amount of sympathy with the theories and practice of

Romanism. Mr. Tyerman himself observes that, up to the time of their "dispersion" from Oxford, they were all Church of England *Ritualists*. Their extreme asceticism, indeed, was at one time near bringing the whole party into disrepute, especially after one of their number (Morgan) died in a fit of frenzy, and popular rumour attributed his loss of reason and life to his rigorous fasting. Some, again, were violent Jacobites. Clayton, whom Mr. Tyerman styles "the Jacobite Churchman," fell on his knees before Charles Edward Stewart, when the latter was on his march through Salford, and invoked the Divine blessing on his enterprise; and Dr. Deacon, the nonjuror, and "Wesley's chosen counsellor," was fated to see the head of his own son exposed as that of a traitor on the Exchange at Manchester. At last, however, Wesley took to preaching in the open air, and this flagrant departure from discipline was more than Clayton could tolerate, and the two separated, never, it would seem, to meet again in friendly intercourse.

The account of Clayton is succeeded by that of Ingham, "the Yorkshire Evangelist," John Wesley's companion to Georgia, but who afterwards deserted him for a time to join the Moravians. Ingham married the Lady Maria Hastings, sister-in-law to the celebrated Countess of Huntingdon. The Countess, as is well known, was a convert to Whitefield's doctrines, and was consequently Calvinistic in her belief, while the teaching of Wesley was distinctly Arminian. Ingham, in the latter part of his career, after having long enjoyed the latitude of Dissent, was destined in turn to suffer from its licence. The rise and spread of the doctrines of Sandeman in Scotland induced him to send two of his "fellow-helpers" to learn from a personal conference the precise character of the new teaching. Sandeman, who regarded Wesley as "one of the most virulent reproachers of God that this island had produced," completely converted the deputies to his own views, and they returned hopeless perverts from Inghamism. This "horrid blast from the North," as it was characterised by Romaine, Ingham's personal friend, proved well-nigh fatal to the cause. Of some "eighty flourishing churches" in Yorkshire, only thirteen remained faithful, and Ingham himself, to use Mr. Tyerman's own words, "never afterwards recovered from the effects."

Passing by the short account of Gambold, we come to that of Hervey, "the Literary Parish Priest," the author of *Theron and Aspasia*, whose pious sentiments and ornate but somewhat emasculate prose gained such extensive popularity with the religious public of fifty years ago, though we were scarcely prepared for the statement that "few are greater favourites at the present day." It slightly jars on nineteenth-century notions to find the author of *Meditations among the Tombs*—who was undoubtedly a pious, amiable, and accomplished clergyman—presenting Whitefield with 30*l.* for "the purchase of a negro;" a transaction which his kindly expressions with reference to "the precious soul of the poor slave," do not seem very much to mend. It is to be observed that Hervey, though eminently a conscientious man, died the incumbent of a church

living, and it is consequently at least questionable whether, notwithstanding his active sympathy with the Methodists, he is justly to be classed with them. As it is, his life, occupying nearly a third of the volume, has materially assisted the compiler in making a book.

Mr. Tyerman appears to have been at much pains in collecting his materials, and his treatment, criticisms, and inferences will probably commend themselves to that large circle of readers to whom they are especially addressed. Few indeed will be disposed to deny the unselfishness, the heroism, and high character of those whose lives are here set forth; but as one notes how systematically they wrangled and quarrelled among themselves, how Clayton renounced all part and lot with Wesley, how Wesley and Whitefield started on divergent paths of doctrine, how Sandeman denounced Wesley, and Wesley attacked Hervey, while more than one went over to the Moravians, it is difficult to resist the conclusion that something more is needed than simple honesty of purpose and an ill-regulated enthusiasm in those who profess to be the guides of others in doctrinal belief.

J. BASS MULLINGER.

The Alps of Arabia: Travels in Egypt, Sinai, Arabia, and the Holy Land. By William Charles Maughan. (London: King and Co.)

THE first seventy pages of this well-printed volume are taken up with the author's experience of Egypt, including a short stay at Cairo, and a steam trip up the Nile as far as the first cataract. "The sights of Cairo," as the writer admits, "are so familiar to the readers of the numerous volumes of Eastern travels," that one is not surprised at his failing to contribute an iota of additional information to the existing stock of knowledge respecting the Egyptian capital and its environs. The bazaars and native costumes, camels, donkeys, and donkey-boys, are described as they have been described times without number before, and the remarks on the mosques and pyramids are equally trite and common-place. The Shoobra Gardens, however, "surrounding the palace which a former Viceroy erected to minister to his unholy pleasures," supply a theme for a little word-painting:—

"Cool divans and downy seats invite the wanderer, languid with the heavy balmy atmosphere, to recline awhile and listen to the faint music of the wavelets as they kiss the marble lips which would fain woo them to repose. 'Ah, what a spot!' observes the moralist, 'what a wretched bauble for which to barter away life's glorious career and the soul's immortal destiny! who can wonder at the master of such a palace passing a feeble and unhonoured life in miserable bondage to his passions and senses!'"

This is scarcely complimentary to the Khedive, who also owns "the really handsome Gezeerah palace on the river's bank near Boulac," close to which are "the mysterious regions of the hareem; and woe be to the intruder who dares to set foot in them." The "enlightened ruler" of Egypt is also responsible for having introduced the opera and horse-races, "which, however much their frequenters may laud them to the skies, have

hitherto) proved anything but conducive to pureness of morals." Mr. Maughan does not say whether he was among the audience at the former, but he tells us that—

"For something like ten francs, anyone, if so disposed, may hear the graceful music of Verdi warbled forth by *artistes* of acknowledged European reputation, the *blasé habitué* of the opera may refresh his memory with renewed illustrations of the passionate woe breathed forth in 'Ah, che la morte,' or the pathetic upbraidings of Signor Graziani in 'Il balen.'" As to the races, "all the features of an English racecourse, except the indescribable air of wickedness and blackguardism which is inseparable from such meetings, were conspicuous by their absence;" nevertheless, "the whole affair was wofully dull, hopelessly out of place, and of little advantage to anyone except the donkey-boys and hackney-coach proprietors."

The trip to the first cataract and back was performed in twenty days. Mr. Maughan gives some sensible advice respecting the proper outfit for a tourist, together with a detailed account of the steamer and its passengers; but we have looked in vain through his narrative of the excursion for any new light thrown on the past or present of this portion of the Nile-land. Still, the narrative is pleasantly told, and many of the reflections—apparently the outcome of a devout mind—are apposite and suggestive. We must make an exception, however, against the puerile quotation from Gray's *Elegy*, "Can storied urn?" applied to the Tombs of the Kings at Thebes.

On the 16th of February our author and his two companions set off "on the track of the Israelites to Sinai," passing "Ain Hawarah, the supposed fountain of Marah," the "Wady Ghüründul, the Elim of the Bible," the "Wady Mokatteb, the strange 'Written Valley,'" the Wady Fairan, and Mount Serbâl, on their way to "the Sacred Mountain and its Convent." It was on the journey from the latter locality towards the Gulf of Akabah, and after reaching the top of the ridge forming the watershed between the two gulfs bounding the Sinaitic peninsula, that they had a distant view of "the huge form of Um Shaumer, styled by Stanley the 'Mont Blanc' of those parts." Whether the "cautious Dean" has ever ventured to style this mountainous region "the Alps of Arabia," is questionable; but, after all, there is something in a name, and if not happy, the title which Mr. Maughan has given to his book is certainly *taking*, and it is but fair to give his *rationale* for adopting it:—

"Resembling the desolate magnificence of Alpine fastnesses, without their clothing of dark green pines or snowy summits, these inaccessible heights had a grandeur peculiar to themselves. There was an utter and overpowering stillness here which cast a spell upon the senses. No roar of falling torrent, or crash of avalanche, re-echoed from crag to crag—hushed and death-like were the dark recesses of the valley. Even the harsh scream of the eagle was absent, though those inaccessible peaks might well be his home. No doubt there are times when the awful voice of the tempest thunders amidst those far-off peaks, but now a quivering fleecy mist alone hung lightly on their rent sides."

After four days' stay at Akabah, the travellers took the eastern route to Petra by the Wady Ithm, and thence to Hebron. The descriptions given in this part of the book, although avowedly "mere sketches,"

and containing little or no fresh information respecting "the Children of the Desert," the country traversed, or the marvellous ruins of ancient Edom, are nevertheless decidedly graphic, and, interspersed as they are with appropriate Biblical and other historical references, fill nearly a hundred pages of charming reading, which we doubt not will afford instruction as well as pleasure, especially to those who have not perused the more exhaustive works of Laborde and Robinson, Irby and Mangles, Dr. Robinson, Miss Martineau, and Dean Stanley. We are disposed to go even further in our applause of this portion of Mr. Maughan's narrative, and to say that few will read it without profit; and that though not professedly a guide-book, the detailed account of his journey through Petra will be of great value to all future travellers by that route.

On the author's trip from Hebron to Jerusalem, and from thence to Damascus, Baalbec, and Beyrout, we have little to remark, simply because his account of it contains nothing that is remarkable—nothing, in fact, that has not been said over and over again. Still there is often a pious thoughtfulness in his observations respecting the Holy Land, untinged either with bigotry or superstition, which will prove attractive to many, owing to the striking contrast which it exhibits to the flippancy of rationalistic writers on Palestine on the one hand, and the morbid sensationalism of religionists on the other. In this respect we have too few travellers of Mr. Maughan's stamp. G. BADGER.

Master-Spirits. By Robert Buchanan. (H. S. King & Co.)

MR. BUCHANAN is one of the most formidable beings that await the critic in his path through life. He sits, spider-like, in the den of his own individuality—a den he has himself hewn out by the side of the highway of literature; and though, like Giant Pope, he has grown so crazy and stiff in his joints that he can do little more than sit in his cave's mouth, yet still he grins at pilgrims as they go by, and bites his nails because he cannot come at them. This new book of his is little more than a series of infirm grins at the critics that misapprehend him, at the worn-out leprous world that does not read his books, and at the slavish wretched writers that do succeed in being read. We are, personally, exceedingly well disposed towards Mr. Robert Buchanan; we have always regarded him as quite a gifted person in certain ways, and accordingly we have been afflicted, in reading *Master-Spirits*, to notice what an instrument this book will undoubtedly be in the hands of those ill-affected people that do not like Mr. Buchanan. For ourselves, we hardly know how to proceed; thistles are so tall and so prickly around the den of Giant Pope, and the very air, like that about the grave of Archilochos, is so full of hellebore and the poison of wasp-stings, that a single step will embarrass us. The opening chapter of the book is intended to chastise and correct us at the outset. It is entitled "Criticism as one of the Fine Arts," and is so excessively inartistic, so languid, so commonplace, so diffuse, that it may be considered as showing on a small scale the

internal anatomy of Mr. Buchanan's mind,—a mind gifted with some perception of the features of nature, some slight knowledge of men and books, and a profound ignorance of itself. That a book which consists of a string of unconnected, desultory, and prejudiced essays in infantile criticism should open with an article whose very aim is to show that criticism must be unbiassed, artistic in form, complete, adult, is a curious fact in the intellectual development of the writer.

We shall not take the reader very carefully through the book. Having been doomed ourselves to its slow and complete perusal, we feel, in looking back, that to urge the task on others would be inhuman. Briefly, then, the second essay is a sort of fairy tale about Dickens, a spasmodic effort to say something startling about a writer, whom, being dead, Mr. Buchanan is willing to praise. It is not exactly stupid, it is not exactly clever, and Mr. Buchanan is never quite dull, but it is simply unimportant. The next—on Tennyson, De Musset, and Heine—is worse than unimportant; it is positively shallow and misleading, being solely occupied with the laudable design of showing that De Musset was a sensualist and Heine a mocker, while Tennyson is the pure and spotless flower of the chivalry of English poetry. Very good; no doubt this is the first and most obvious side on which the three great lyrists display themselves; but we have had, unfortunately, the valuable distinction pointed out before, penny-readings have rung with it, debating societies have prosed over it, and Mr. Buchanan need not have taken up thirty-five pages in telling us anything so excessively trite.

As the author is so desultory, perhaps we may be excused for making a digression. It was just at this point in our reading that we hit upon a new idea, and we cannot refrain from taking our readers into our confidence about it. It is our profound conviction that Mr. Buchanan is looking out for the poet-laureateship. We cannot sketch his attitude of mind, as it seems to reveal itself, in any politer form. We have had two Laureates who have uttered nothing base; one still walks among us, and may he do so for many decades yet! But Mr. Buchanan undoubtedly feels that it is as well to be ready for any emergency, and in lieu of the two terse lines of delicate eulogy which sufficed Tennyson in speaking of his dead predecessor, we have many pages of Mr. Buchanan's rather open flattery of his own still-living predecessor. It is wonderful that Mr. Buchanan, who is, we repeat, really a gifted person, should not have perceived that to pay so very many and so very heavily-perfumed compliments to Mr. Tennyson was to overact his deftly-chosen rôle. If Mr. Buchanan is to be the next Poet-Laureate, well and good; we need not moot the advisability of doing away with the office till the time comes. In the meanwhile the man who warmly praises none of his contemporaries should beware of making the present office-bearer his sole exception.

By far the best part of the book is a series of Scandinavian studies, the first on Danish poets; the second, much better done, on the Old Danish Ballads, with translations,

which would have been quite excellent but for the characteristic omission of any reference to Dr. Prior's labours in the same direction; the third, on Björnsterne Björnson's great trilogy of *Sigurd Stenbe*, is the best paper in the book, eloquently and sympathetically written, and illustrated with exceedingly fine translations. With Mr. Buchanan's judgment of Björnson's position in the literature of the North we do not quite coincide. It has always seemed to us that Ibsen is *facile princeps* among living Scandinavians. The fourth of these studies, on Danish ballad-romances, is not quite so well done.

The volume winds up with two chapters on two obscure British poets. Concerning the first, George Heath, after reading his writings and his deeply-pathetic diary, we find ourselves full of tender regret for the poor dying lad, crossed in love, broken in body, and wrapped round with dreariness and discomfort. It would have been sweet to amuse and comfort him; but now that he is dead, it is vain to try to persuade us that his verses had any real merit, save that of genuine desire after musical expression. They are much worse than David Gray's, of whom, by the way, we are told that he possessed "supreme poetic workmanship and a marvellous lyrical faculty," qualities that the author attempts to prove by quoting these words of Gray's:—

"In the distance calling,

The cuckoo answers, with a sovereign sound."

Mr. Buchanan has evidently forgotten that a certain William Wordsworth wrote—

"And the cuckoo's sovereign cry
Fills all the hollow of the sky."

As a matter of fact the *Luggie* was a work of much less promise than *Under-tones*. Personal bias may easily be pushed too far in either direction. The other obscure poet is even less known, but far more worthy. It was a positive delight to us to read something about the man who invented our old friend Willie Winkie, that *enfant terrible* who "rattles in an iron jug, wi' an iron spoon." Everybody has enjoyed Willie Winkie, but how many people know that his creator was a certain W. Miller, whose poems, as here largely quoted, seem to be all of the same tenderly humorous class? It is with something akin to remorse that we learn that this poet has lately died, in extreme penury, at Glasgow.

The end of Mr. Buchanan's book has almost made us forget the sins of the beginning, and we would lay down his critical motley as good-humouredly as possible. But there are certain things in the book that it is difficult to forgive, and some things that one can hardly understand the publication of. Surely Mr. Buchanan's publisher cannot be aware of all that *Master-Spirits* contains. He would undoubtedly have remonstrated against the indecency of talking of *Balaustion's Adventure* as a "mixing up of Euripides and water into a diluted tippie for groggy schoolmasters," and of an attack on Mr. Carlyle which charges him with the possession of "a heart so obtuse as never, in the long course of sixty years, to have felt one single pang for the distresses of man." Such writing is not "criticism treated as one of the Fine Arts."

EDMUND W. GOSSE.

Jupiter's Daughters. By Mrs. Charles Jenkins. (Smith & Elder. 1874.)

Broken Bonds. By Hawley Smart. (Hurst & Blackett. 1874.)

'Tis a Cup and Lip. By Mary Lovett-Cameron. (S. Tinsley. 1874.)

Thorpe Regis. By the Author of the *Rose Garden*. (Smith & Elder. 1874.)

Good titles are scarce, but the author of *Jupiter's Daughters* might easily have found a more appropriate one for a tale so charming, or rather for a tale with so charming a heroine. The scene is laid in St. Gloi, a provincial French town, as dull as St. Oggs, or the cities where Emma Bovary was so unhappy, and Balzac's *vieille fille* so unfortunate. But none of the characters in *Jupiter's Daughters* break the stillness and the decalogue in so passionate a way as the women of Balzac and Flaubert. Yet the materials for an explosion are not wanting. There is a girl, Pauline Rendu, who is "unlike other girls," and has to try "not to be for ever indignant," in a home where conversation resembles nothing so much as a page from the *Matrimonial News*. The interest of the story centres in her relations with Vilpont, a playwright of good family, like Gerfaut in Charles de Bernard's novel of that name. Vilpont is not uninteresting, but he is too much of an English lady's idea of a French poet, too much George Warrington under other skies. It is a pretty incident where Vilpont's eyes are described as filling with tears, when for once he goes to church with Pauline and her family, and the girl notices, and "in a second she had deified this man of the world." And the adventure in the storm is well told, though here, as indeed throughout, the "business," if we may use the term, is too obvious. Still a storm is better than a bull if heroines must be in danger and heroes must be intrepid. After Pauline's marriage, the story gets into regions which "they order better in France." The author's moralisings on English and French views of matrimony, and of the education of girls, come to little more than the trite doctrine, that if one is to be unhappy, it is pleasantest to be allowed to choose one's own way of misery. The war comes in almost too opportunely; a good incident, that of Zélie's attempt at murder, is spoiled by careless handling; and the reader concludes with the feeling that Pauline is a "star" who outshines a second-rate company and rather old properties. For the reason *why* the tale is called *Jupiter's Daughters*, the inquirer must be referred to a well-known passage in the ninth book of the *Iliad*.

Broken Bonds is a lively enough novel in Mr. Whyte Melville's lighter manner. There is less moralising, less reference to the author's salad days and to the classical dictionary, but there is also less adventure. Mr. Whyte Melville, too, would have made his heroines really *piquantes*, but the ladies described by Mr. Hawley Smart are, with the best intentions, only *agaçantes*. We like the dark one best. The fair girl never quite recovers the reader's esteem after her "love-passage" with the first villain, Mr. Rolf Laroom. Mr. Laroom was Miss Rose Fielding's guardian's partner. When Miss Field-

ing insisted on flirting with him, and ultimately on feeding him with strawberries, he kissed her. Thereon ensued what might better be called a "spirited rally," or a "lively set-to," than a "love-passage." The delicate girl "smote him with clenched fist in the face, with great force;" thus, as we afterwards learn, drawing first blood, but severely damaging her knuckles. "One of her many rings was broken, and two of her delicate fingers severely cut." Now later in the story Mr. Dainty Ellerton, a person of much refinement, says, in speaking of his mother, that "the dear old Mum can take a facer." Mr. Laroom could not take a facer: he brooded over his defeat in a spirit unworthy of the English sportsman. He determined to marry Miss Fielding and tame her proud spirit, and incidentally to ruin her family. He only succeeded in getting another of her admirers imprisoned in Portland, and the rest of the tale is taken up with the account of the efforts made to get him out. It is difficult to make an escape from prison uninteresting, but Mr. Hawley Smart, even with the aid of a chart, fails to excite his readers like Dumas or Mr. Charles Read. The novel ends "badly," as most novel readers will think, for the dark heroine is drowned, and the pugilistic heroine marries Dainty Ellerton, whose courage and strength indeed the author cannot too highly extol. The comic characters are dreary, but the book, on the whole, is readable somehow, and, after all, that is the main point. Readableness is like charm, or distinction, or amiability; it defies analysis, and marks off Mr. Hawley Smart's least successful work from such poor stuff as the next book on our list.

From Cup to Lip is the story of a most uninteresting maiden. The best we can say for Fancy Darrel is that she liked Chippendale's chairs; the worst, that she admired Auerbach's *Auf der Höhe*. She married Launcelot Darrel, though she did not care for him. He left her on her wedding day, not alleging "private business in Kam-schatka," like the hero of the *Rover*; but the death of his sister, and the illness of his father. When he did not come back, Fancy did not care, and amused herself with Harry Daventry. On her husband's sudden return from Australia, she said, "How lucky I did not go into the drawing-room: so awkward with Harry there, too." It was awkward, as she was married to Mr. Darrel and engaged to Harry. That gentleman had the good taste to die just when the relations of all parties were getting strained, and Fancy returned to her *premier amour*. They inspected Harry's grave, as is in these cases made and provided, and, after her stormy youth, Fancy "landed at a quiet haven wherein to rest." The "fiery trials of the past were never forgotten," and it was Fancy's delight to think that they would all one day be united within the "golden gates." If they had all been as easy-going as Fancy, one cannot help thinking that they might have lived fairly comfortably on this side the golden gates, wherever they may be.

Thorpe Regis is another proof, if one were wanted, of the rarity of that genius which Scott admired so much in Miss Austen, and

which delights us now in the works of Miss Thackeray. "The exquisite touch," as Scott calls it, "which renders ordinary commonplace things and characters interesting, the wonderful talent for describing the involvements and feelings of ordinary life," is what the author of *Thorpe Regis* just fails to reach. It is no great reproach not to attain to the highest merit, and it is a pity to have to point out the failure in work that is all so careful, so honest, and refined. Yet it must be said that, while involvements abound in this novel, while characters of the most carefully commonplace sort are liberally introduced, while scenery is described with exquisite feeling and charm, there is yet an absence of power and of firmness. And thus the tale fails to captivate and absorb the reader, who is but moderately excited even by the perplexities of Winifred, who is as much the best figure here as Pauline is in the first novel on our list. Perhaps we feel too sure that the author will not leave her always unfortunate, too certain that the mystery of the undelivered letter will be explained, and the honest, though most irritating, hero restored to the good opinion of his neighbours. As a fair specimen of the sentiment of *Thorpe Regis*, we may quote the description of Winifred's melancholy walk through the fields:—

"The day was delicately bright and hot. Across a pale moon that looked herself no more than a stationary cloud, little wilful vapours, which had broken away from larger masses, were sailing. Red cattle, satisfied with their rich flowery pastures, had gathered under the hedges to chew the cud, and sleepily whisk away the flies.

There were cool, flashing lights and tender depths of colour, and a sweet content over everything; and poor Winifred growing sadder and sadder with the sense of contrast, yet walking more slowly and looking wistfully at the long grass, with a vague longing to lie down in it, and let everything go by and away for ever."

If she has not quite succeeded, the author of *Thorpe Regis* has at least been constant in her aim and unsparing in her carefulness. To be more than this is "the gift of Fortune."

A. LANG.

THE MAGAZINES.

In the *Quarterly Review*, besides a long article on Winckelmann, based on Justi's work, the only papers of literary interest are a review of Mrs. Somerville's *Autobiography*, which adds some interesting traits from personal recollection; one of Mérimée's *Lettres à une Inconnue*, taking a rather insular view of the writer, and resenting his defective appreciation of English and Scotch hospitality; and one, which does not profess to add anything to the works themselves, of Mr. Ralston's *Russian Songs and Folk Tales*.

THE *Fortnightly* contains *inter alia* an article on "Renan and France," by Mazzini, interesting as the last words written for publication before his death, criticising the doctrine of the French Revolution as the theory of Rights or Interests, and censuring Renan for not attempting to substitute a sounder philosophy of duties, instead of sanctioning the aristocratic distinction between truth known to the educated and useful errors believed by the many; an account of Belli's sonnets in the Roman dialect; a disquisition on Mr. Tennyson's social philosophy, by Lionel A. Tollenmache, who rather unfairly measures the laureate's reforming zeal by the ideas current now, instead of by those current a quarter of a century ago, when some of his poems were almost too strong

meat for the general public; and an instructive paper by Mr. T. E. Cliffe Leslie, on the Incidence of Taxation on the Working Classes, from which the most obvious inference is that nothing but a special arrangement for taxing wealth will prevent taxation from falling most heavily in proportion upon the masses.

THE *Cornhill Magazine* begins with the second number of "Far from the Madding Crowd," which—by way of illustration, not as reflecting on the author's originality—might be described as resembling Mr. Black's works in spirit, though the turn of several phrases shows that the writer's chief study has been George Eliot. The history of "The French Press" is continued down to the eve of the Revolution, the most interesting figure in the preceding period being one Linguet, a journalist somewhat of the Rochefort type, who was thrown into the Bastille as a clamorous reformer, though he had helped to discredit Turgot and lived to be guillotined as a Royalist in 1794. A paper on Cryptography will interest those curious in such matters, though going rather too much into detail for the general reader.

A paper on Cruelty to Animals in the same magazine should be read in connection with Dr. Michael Foster on Vivisection in *Macmillan*; for though otherwise temperately written, it condemns the infliction of any pain, except with a view to the relief of greater pain, in terms which would prohibit all disinterested scientific research, of which the results can wound the moral sensibilities of the unscientific. The late Sir George Rose is proved by a friend to have been an admirable punster, as well as an admirable reporter in impromptu verse of the legal cases in which he was engaged. "Reminiscences of Duelling in Ireland," by an Irish surgeon, who evidently regrets the good old times, are interesting as fossil remains, but the bloodthirsty morality takes one by surprise in such a serious periodical.

Blackwood has several readable papers of the ordinary magazine type: one on Mme. Bagreeff, the "Russian Miss Edgeworth," and her father's governorship of Siberia; an ingenious, but it is to be feared unscientific suggestion to the effect that the reason dreams so seldom prove prophetic may be that they lose their way in the dark and enter the wrong brain, which has not the key to their interpretation; an account of the school for native nobles which has been founded to let the young king of Mysore have a liberal and not too secluded education; and a review of Lord Lytton's *Fables in Song*.

Temple Bar contains some recollections of Walter Scott by Miss Ferrier, the authoress of the once popular novels *Marriage and Inheritance*, and the conclusion of "Chateaubriand and his Times," which is more rhetorical and less generally entertaining than most of the series to which it belongs. "Juvenal in London" is growing rather long, and his parallel situations forced and improbable, but the satire contains pointed lines—at long intervals.

IN the *Gentleman's Magazine* Mr. Charles Cowden Clarke gives an "augmented summary" of his recollections of John Keats, previously communicated to Lord Houghton and the *Atlantic Monthly*; though, like Miss Ferrier, the writer has nothing absolutely new to relate, there is always something interesting about the record of personal impressions by one who "once saw Shelley plain."

WE have also received *Tinsley's Magazine* (of which the staple is fiction; but one romance, "The Melancholy Minstrel," may be selected for praise, as it reminds us of "The Lady Crinoline," the first literary adventure of Charlie in "The Three Clerks"); *The Argosy*, which again is mainly fiction, but in smaller doses and of the domestic tragic kind in which the editress excels; the *Charing Cross Magazine*, *The Leisure Hour*, and the *Sunday at Home*, to which a missionary has communicated extracts from the sermons of a

native Polynesian preacher (under the title of "Old Truths in New Lights"), that are interesting for their resemblance to the quaint moralities of the *Gesta Romanorum* and mediaeval preachers in general. For instance, the proverb "Kill not your foes as Teata killed Rangai"—i.e. striking the rock in the dark by mistake for the enemy's skull—is applied as an exhortation to the faithful to be sure that they quite finish killing their sins. It is unfortunate that Protestant magazines for family reading should not be able to resist inserting exaggerated and unwholesome attacks on "Auricular Confession."

EDITH SIMCOX.

NOTES AND NEWS.

FROM the just-published third volume of *Population Abstracts* (Census of England and Wales, 1871), which relates to the ages, civil condition, occupations, and birth-places of the people, we may gather a few interesting statistics of the literary and artistic professions of the country. Thus we find in the London district at the time of the census-taking no less than 1,141 males entered under the head of "author, editor, journalist," 21 of whom had not then reached twenty years, while 19 had attained the patriarchal age of seventy-five and upwards. Comparing this with the similar return in 1861, we find an increase of 346 persons who acknowledge themselves indebted for their livings entirely to their pens, 795 "authors, editors, writers"—two of them, by the way, being between ten and fifteen years of age—being the earlier return under that head. Among the ladies we find 144 classing themselves as "authors, editors, and writers"—one between ten and fifteen years old, and one confessing to number at least seventy-five years. In 1861 but 110 ladies in London owned their connection with literature—two of them under twenty, and three over seventy-five years of age. Altogether, throughout England and Wales, we meet in this return with 2,148 male and 255 female authors, editors, journalists, or writers, according to their own description of themselves; a large addition to the numbers in the profession since 1861, when only 1,528 males and 145 females claim direct connection with the press.

There are 5,005 male artists, and 799 male sculptors in England and Wales, no less than 92 of the former and 16 of the latter being over seventy-five years of age. The female "painters, artists" number 1,069, of whom 10 have reached their seventy-sixth year. When the previous census was taken there were 4,637 artists, 612 sculptors, and 853 female artists. In London alone in 1871 there were 3,034 artists (598 being females) and 370 sculptors.

In the musical profession there are engaged throughout England and Wales 11,575 males and 7,056 females, upwards of 100 of whom, it is painful to notice, struggle on though long past their seventieth year. London finds a home for 3,516 male, and 2,708 female musicians. Of actors there were 723 in London, and 1899 in all England, the respective numbers in 1861 being 495 and 1311. Of actresses the total number was 1693 in 1871 against 891 in 1861, those living in London in the same years being respectively 782 and 400.

M. DOUEN, a writer well known to all who follow with any attention the literary and scientific progress of French Protestantism, who is now the agent of the Paris Bible Society, and member of the committee of the Society for the History of French Protestantism, is on the point of completing a work to which he has devoted five years of labour—*Clément Marot et le poëte Huguenot: Etude historique, littéraire, musicale et bibliographique*. M. Douen is in the habit of exhausting any subject which he takes up, and the subject which he has now selected is a most interesting one, for Clément Marot is acknowledged to be one of the most original figures

of the French Reformation; and he is likewise one of the least known in his own country, though in England Mr. H. Morley's remarkable work has called attention to his name. It is true there is in French an excellent *History of the Psalter*, published last year by M. Félix Boret, of Neuchâtel, but M. Douen's work will cover altogether different ground. M. Boret has completely omitted the musical portion of his subject, which will form perhaps the most original part of M. Douen's book. M. Douen, after long research, has discovered the source of a considerable number of the melodies of the French Psalter, and he will give in an appendix a number of specimens of the harmonies of Bourgeois, Thomas Champion, Philibert Jambe de Fer, Goudimel, Crassot, Delattre, Swaelinck, Stobée, and others whose works are now extremely rare.

The book will be published in two octavo volumes, and, in the opinion of the most competent judges, it will be a standard work to which it will be difficult to add hereafter.

MR. JOSEPH PAYNE (Professor of the Science and Art of Education, College of Preceptors) is about shortly to publish a recast of the paper he read in 1872 at the Plymouth Congress of the Social Science Association, and which was sharply criticised by Mr. Fitch in the *Fortnightly Review*, November 1873. The title of the new publication will be, *Why are the Results of our Primary Instruction so Unsatisfactory? The Case and the Remedy. With a Reply to Mr. Fitch's Article.*

WE may predict with confidence that two things will have been swept away completely before the century is over—the old mail-coaches and the old libraries. The wonder is that buildings which date from the fifteenth and sixteenth centuries, when printing was a luxury, should have proved so elastic as to accommodate the literature of three more centuries. Our forefathers were more provident than we are. There is, however, a limit to the elasticity of stone walls and oak book-shelves; and such has been the progress in the purely mechanical contrivances introduced into the great repositories of books during the last fifty years, that the sooner the old libraries recognise that their time is past, the better both for themselves and for those who use them. One of the best of the old libraries, that of Berlin, has lately succumbed under the blows dealt to it by Professor Mommsen. (See *ACADEMY*, Jan. 31.) Next to some parts of the British Museum, the best example of what a library of the nineteenth century ought to be may be seen at Munich. Compared with the old libraries, it is like one of Liebig's chemical laboratories by the side of the mediæval kitchens of the alchemists. The work of designing such a library, and of transferring "the old wine into new bottles," is no doubt considerable. The leisurely occupation of the librarian has, in fact, been changed into real service and a science; the principal librarian has been turned into a civil engineer. Munich has not only set the example of how to build and how to arrange a new library; but Dr. Halm, its indefatigable librarian, has likewise shown what can be done with the smallest means to render such a library really and extensively useful. The sum spent on the Munich Library is small in comparison with the budget of any public library in England; and it should be remembered that that library is not only a repository of books, but a lending library open to every poor student. What leads us to call attention to the Munich Library at the present moment is the publication of the catalogues of manuscripts. They are all devised on a uniform plan. Those who compile them, chiefly the under-librarians, are not allowed to indulge in their own fancies. They are told what to do and what not to do. Thus, instead of unwieldy folios, we have small octavo volumes containing all that the student really wants or has any right to expect, in a catalogue. That most unreasonable of all catalogues, the so-called *catalogue raisonné*,

is, we trust, by this time extinct, and will be replaced in future by handy catalogues, such as those published by the librarians of Munich.

The Munich library has published nine catalogues. The first appeared in 1858, *Codices manuscriptorum bibliothecæ regniæ monacensis gallici, hispanici, italici, anglici, suecici, danici, slavici, æsthenici, hungarici descripti*. It describes 1369 manuscripts, many of them containing a number of separate works. Its author is Dr. Thomas. Want of funds prevented the continuation till the year 1866, when two volumes appeared, containing the catalogue of the Persian and Arabic MSS., both by Dr. Aumer. In the same year the important catalogue of the German MSS., more than 5,000 in number, was published, the materials having been prepared by Dr. Schmeller, the editorship devolving on Dr. Keinz. The next work was the *Catalogus Codicum Latinorum Bibliothecæ Regniæ Monacensis*, which was composed by the chief librarian, Dr. Halm, assisted by Dr. Laubmann, and afterwards by Dr. Thomas and Dr. W. Meyer. If one considers that the whole administration of the library devolves on these gentlemen, the fact that, from the year 1868 to 1874, they have completed the publication of four volumes, describing more than 1,200 Latin MSS., is indeed highly creditable, and probably unparalleled in any public library. That Dr. Halm does not rest satisfied even with such gigantic labours, is well known to classical scholars. His last work, *On the Collection of MSS. of the Camerarii and its Fates (Ueber die handschriftliche Sammlung der Camerarii und ihre Schicksale, Munich, 1874)*, is a mere *παράλογος*, but it shows what useful work an active and intelligent librarian may perform.

THE Chevalier de Chatelain has published a prettily printed book, called *Les Dernières Lueurs d'un Flambeau qui s'éteint*. It may be doubted whether it was worth while for a *flambeau* to muster up its last remaining energies, to make such queer darkness visible. In the lurid light we faintly descry a French gentleman plunging about in prose and verse. He writes about all sorts of things, and to all sorts of people. When he addressed the editor of the *Daily News*—"inutile de dire que le *Daily News* n'a pas fait la moindre réponse." It is equally superfluous to say that Mr. Gladstone did answer the Chevalier quite gravely. When the Chevalier, in his political ardour, calls the wife of Napoleon III. *une femelle abominable*, we can only regret that his torch does not go out, as the legendary ghost disappeared, "with a sweet perfume, and a most melodious twang." His little work has one great interest: it proves the possibility of writing in French without even seeming to have any point, or *esprit*.

WE are glad to hear that the Council of University College have, by their Committee of Management, lent a helping hand to the New Shakspeare Society, and granted it the use of the College rooms for its meetings twice a month. During its first session the Society will meet on the second and fourth Fridays of March, April (except in Easter week), May, and June, and possibly in July. The reader of the first paper at the opening meeting on March 13th will be Mr. Fleay, whose list of papers we printed last week. Of the Manchester Branch of the New Society, Mr. George Milner, of 59A, Mosley Street, has been appointed Treasurer. The Literary Society of Manchester has granted the use of a room for the meetings of the Branch Society, and a fair supply of members has been secured. The new Vice-Presidents of the Society are Professor Opzoomer of Utrecht (the best Dutch translator of Shakspeare); Dr. Henry Maudsley, the head physician of the Hanwell Lunatic Asylum, and the author of an able essay on *Hamlet*; Professor T. Spencer Haynes, the editor of the new *Encyclopædia Britannica*, and writer of the articles on certain Shaksperian words, which attracted so much attention a few years ago; the Earl of Gosford; and the Marquis of Lothian.

THE Director of the New Shakspeare Society has persuaded Mr. Halliwell to issue at once twenty-five copies of the important documents he discovered some months since at the Record Office, showing that Shakspeare held no shares in the theatres he was supposed to be part-owner of. The prints of these documents are ultimately to form part of the *Illustrations of Shakspeare's Life*, which Mr. Halliwell intends to publish from time to time in Folio Parts, as he has them ready, in such order of time and subject as suits him. Part I. may be expected in five or six months. All Mr. Halliwell's Notes and Collections to illustrate the several plays of Shakspeare he gave long ago to the Stratford Library, where they remain for use by any student.

IN the Danish weekly journal, *Nær og Fjern*, for Jan. 4 and 11, C. S. A. Bille gives an exhaustive and highly appreciative study of the actor, Joachim Phister, who died last year. He was the greatest of Danish comedians, and the glory of the little eclectic school of Copenhagen actors, who pride themselves, not unjustly, on the delicacy and individuality of their art. Phister's greatest successes were made in the old comedies of Holberg, the contemporary of Dryden, a really great dramatist, whose plays ought long ago to have been translated into English. During his lifetime Phister played in nearly 700 different parts. *Nær og Fjern*, certainly the best paper of its kind now published in Denmark, commences the year with a variety of bright and interesting articles. It would do well, however, to give more space to literature, pure and simple.

HERR K. A. WINTER-HJELM has brought out a collection of Norwegian lyrical poems (*Norsk Lyrik i Udvælg*. Christiania: Cammermeyer), which contains all that is important that has been published since the year of Independence. We recommend the volume to everyone who reads Norwegian, or means to learn to do so. The collection is enriched by a selection from the beautiful Folk-songs of the mountain districts.

THE poetry of the description in Ecclesiastes, ch. xii., has been, for the first time, fully brought out by the Rev. C. Taylor, Fellow of St. John's, Cambridge, in a little work called *The Dirge of Coheloth*. (Williams and Norgate.) He shows that the view which finds in it a description of the gradual decay of the body in old age, under the allegory of a house, cannot be maintained without violence to the text, and that the semi-literal explanation of Umbreit will suit only a small portion of the passage. According to him, it is a picture of the effects of the terror of death, or of some disastrous public event, on various classes of the community, or may have been cited from an authorised book of *Dirges*, such as were composed on the death of King Josiah, and made "an ordinance in Israel." The notes are purely philologico-exegetical, and show a wide reading in Biblical and Arabic literature. It should be added, however, that Mr. Taylor is not so isolated as he supposes, Mr. Dale in his recent commentary (Rivingtons, 1873) having also espoused the literal interpretation.

DR. DAVIDSON'S new work on *A Fresh Revision of the English Old Testament* (Williams and Norgate) contains a great number of well-arranged facts and plausible emendations, though slightly disfigured by dogmatism. It was important that such a handbook should be written, that the public may form some idea of what an honest revision of the Authorised Version ought to be.

MR. SKERT'S Lecture on the Science of the English Language has been printed in No. 23 of the *Journal of the London Institution*, February 3, 1874.

DR. LUDWIG GEIGER, of Berlin, the biographer of Reuchlin, has just finished a new edition of Reuchlin's letters, which will be sent to press at once. The collection contains fifty unpublished letters, besides a revised text of those which are already known.

OUR Shakspeare readers will be glad to learn that the German *Shakspear-Museum, Zeitschrift für Geschichte und Pflege des Shakspear-Studiums und Shakspear-Cultus: Organ für Frage und Antwort, für Rede und Gegenrede in Shakspear-Sachen*, edited by Max Moltke, still flourishes at Leipzig. The yearly subscription for twenty-four numbers is 12 marks, or 4 thalers, cost of a single number 60 pfennigs.

WE are glad to announce that the Queen, on the recommendation of the Lord Chamberlain, has been pleased to allow the Records of the Lord Chamberlain's Department to be transferred to the Public Record Office; and thus a little known source of historical information will shortly be open to public inspection. The removal took place the week before last, and when a proper arrangement of the various documents has been made, every facility, we believe, will be afforded for the consultation of, at any rate, the earlier portions of them. Beyond the very full particulars which these records must of necessity supply regarding all public ceremonials for some centuries past, it is difficult at present to form an adequate idea of the nature of their contents. We are able, however, to state that the earliest volume of the series contains very curious matter about the coronations of Henry IV. and Richard III.; and that among the names of ladies to whom robes were presented on the occasion of the former ceremony appears that of Agnes Chaucer, whose connection with the poet has yet to be traced.

THE *Diritto* of January 31 contained an official order for the sale by public auction of the Roman castle Astura, which was designated as *roba inutile e spregevole*. In consequence, however, of the earnest appeal of Dr. Ferdinand Gregorovius, the Italian Crown Prince has interfered to save this interesting historical relic, which is to be preserved as a national monument. For Germans this spot has a specially tragical interest, since it was the scene of the capture of the Swabian prince, Conradin, the last of the Hohenstauffen, when escaping from the disastrous battle of Tagliacozzo, and of his betrayal by Giovanni Frangipani to his vindictive rival, Charles of Anjou. It was from the dungeon of Astura that this ill-fated young prince was carried direct to Naples to perish on the scaffold.

MESSERS. SANDOZ and Fischbacher (33 rue de Seine, Paris) are about to publish by subscription an important and curious work from the pen of M. Gaullieur, keeper of the archives to the town of Bordeaux. The subject is the history of the College of Guyenne, an institution of great importance in the sixteenth century, with a well-earned reputation abroad as well as in France. Montaigne called it "one of the most flourishing colleges and the best in France;" and it numbered at one time as many as 2,400 members. M. Gaullieur has principally followed unpublished documents, for the collection of which his official post has given him special facilities. He is thus enabled to print *in extenso* the deeds relating to the foundation of the College, which were believed to be lost.

From more than one point of view, the work is of interest for the history of Protestantism, which at one time had great influence in the College of Guyenne; and it possesses some interest for England, but especially for Scotland, which furnished the College with a considerable number of professors and students. Among the names which figure in the book, we may mention George and Patrick Buchanan, Scot., William Fergusson, Robert Balfour, Thomas Barclay, Thaddæus Mahony, and J. Gorman. The work forms a handsome octavo volume of 600 pages, and its price to subscribers will be 10 francs.

DR. RIMBAULT has undertaken to edit for the Camden Society the *Sermons of the Boy Bishop*, left unfinished by the late Mr. J. G. Nichols.

THE Camden Society have added to their list of suggested publications *Reports of Cases in the Court of High Commission in the Reign of Charles I.*

to be edited by L. O. Pike, Esq. These papers give full reports of the sentences delivered; and as Laud and Abbot were amongst the members of the Court, we are enabled to learn what were their respective modes of dealing with ecclesiastical offences. Practically the difference, which is very great in the pages of modern writers, seems, in this respect at least, to have been very slight.

PROFESSOR SEELEY's lectures at Cambridge this time are to be on the Foreign Policy of France during the Great Revolution, and will show the entire faithlessness of Napoleon in his treaty-obligations with other States.

THE question of the origin of the Electoral College in the German Empire, which is first mentioned in the *Speculum Saxonicum* (1230), has recently been made the subject of lively discussion. No less than four monographs, the authors of which appear to be at issue on a number of important points in this complicated problem, have appeared during the last two years: Hadiche, *Kurrecht und Erzsamt der Laienfürsten* (Programm der k. Landesschule Pforta, 1872); Waitz, *Die Reichstage zu Frankfurt und Würzburg*, 1208 u. 1209 (*Forschungen zur deutschen Geschichte*, xiii. 200 folg.); Schirmacher, *Die Entstehung des Kurfürstencollegiums* (Berlin, 1874); and Wilmanns, *Die Reorganisation des Kurfürstencollegiums durch Otto IV. und Innocenz III.* (Berlin, 1873).

A LITERARY theft of the most shameless description has lately been brought before the courts at Berlin. A certain Dr. Wilhelm Dabis, who was in the habit of attending the late Philip Jaffé's lectures at the University, has endeavoured to turn, what he can scarcely consider an honest penny, by publishing a set of Jaffé's lectures on Roman and Mediaeval Christian Chronology as his own, without communication with the historian's representatives, or even so much as mentioning his name. The book is full of *lacunae* and positively swarms with errors, so that the culprit was not long in being detected and brought to justice. We hear that it is intended now to bring out an edition of the genuine work from Jaffé's papers, which will be a most desirable thing to do on grounds quite independent of this case, as the work, or at least the mediaeval part of it, is much superior to any recent compendium on the subject.

THE *Rivista Europea* (February 1), besides the excellently edited *Notizie letterarie* (from nearly every country in Europe except England), which are its most constant and characteristic feature, contains an interesting article by Dr. Giuseppe Pitre on the curious Sicilian *cultas* for the souls of decapitated criminals; they have a church to themselves in Palermo, and the devotion is deeply rooted in popular feeling. Litanies are addressed to them in all sorts of emergencies, generally beginning—

"Armuzzi di li corpi decullati,
Tri 'npisi, tri ocisi e tri annigati,"

(Anime dei corpi decollati, tre appicati, tre uccisi e tre annegati), but their help is supposed to be more especially at the service of persons attacked by robbers or other malefactors, somewhat as if the departed souls were jealous of their successors' indulgence of practices in which they could no longer take a share. The superstition is evidently a specialised form of the commoner devotion to the souls in purgatory; but as it is still living and growing, it deserves the attention of those interested in the comparative study of popular and primitive religious thought.

JULES MICHELET.

M. JULES MICHELET, whose death is announced, deserves more than a passing mention. He was born at Paris in 1798, in the choir of a monastic church, which his father had turned into a printing house. A decree of Napoleon I., which preserved the large printing-houses and suppressed the small,

ruined the father of the future historian. So during the darkest hours of France, the father was occupied out of doors with his customers, the mother stitched books, the grandfather with his trembling limbs worked at the hand-press; in short, the whole family toiled in their humble cottage to publish little volumes of family games, charades, and acrostics. Strange and cruel irony! Jules Michelet himself was the working compositor. The misery was great, the cold so excessive that it left a scar upon one of Michelet's hands to the last. An offer was made to the parents to get their son into the Imprimerie Impériale; they refused, for they had a higher destiny in store for him than that of a workman. The young compositor, who knew a little Latin, but nothing of Latin versification and no Greek, went to college, suffered more there than in the cellar which was his father's workshop, and speedily left, a *Professeur libre*. For the young man would neither enrol himself in the ranks of eclecticism, the official philosophy of the day, nor make a trade of his pen. Michelet therefore gave lessons in languages, history, and philosophy, for a living: but, faithful to his origin, he remained at heart one of the people. He said with Bruyère, "If I must choose, I am of the people." Hitherto Jules Michelet had lived "like a plant without sun between two pavements in Paris." He found his sun in Latin, in Roman History. He was so exquisitely sensitive that he seemed to die with the civilisations he was studying, to revive with those that issued from the wreck of the past, in short "to participate in everything;" to live by history.

His book on *Vico* and his *Précis de l'histoire moderne* opened to him a post at the Ecole Normale, which he soon, however, gave up. M. Guizot and Louis Philippe gave him a chair at the Collège d'Etat, together with a post at the Archives. To the *Coup d'Etat* of 1851—which he had partially unmasked—Michelet replied by resigning both posts.

Jules Michelet's brother-in-arms was Edgar Quinet. Their common adversary was Jesuitism. There remains to us as their joint product a work just but implacable, which bears the title of *La Confession*.

If some do not understand how the author of the *Histoire de France* should be the writer of *L'Amour* and of *L'Oiseau*, we beg them to read *Le Peuple*, published in 1846. There is the heart of Michelet, and there is the proof of the unity of the two sides of his genius. The style of *L'Histoire romaine* is grave, rhythmical, with long periods.

In the first volumes of the *Histoire de France* his style seems to catch fire, little by little, till it sparkles like a cascade of light; but it is in *Le Peuple* that the complete fusion of Michelet's two manners is to be found. Certain subjects—Fatherland, the People, Nature—change the historian into a poet or musician. Prose, ungrateful prose, becomes for Michelet what the guitar became in the hands of Huerta—an orchestra. Poor Huerta's reason gave way: it is the French language which gives way and is shattered at Michelet's needs. This difference deserves most careful attention. *Le Peuple* contains in germ *L'Amour*, *L'Enfant* (chiefly the work of the historian's second wife), *L'Oiseau*, *L'Insecte*, *La Montagne*, *La Mer*. Another work in which the scholarly and artistic elements in Michelet blend, is *La Bible de l'Humanité*, an attempted synthesis between the Bibles of all races. Michelet, we repeat, combines the incomparable scholar and the exquisite poet; but we are forced to add that the results of the combination sometimes oscillate from childishness to senility, and senility, we need not say, is always a little puerile. But these defects are generally on the surface. Many adroit writers have found their best *morceau* in retranslating a bad page of Michelet. But a truce to polemics over the tomb.

It has been said that the soul of Michelet, like that of Livy, could transfigure itself to the likeness of any age. But the two periods in which

Michelet finds a twofold fatherland are the Middle Ages and the Renaissance. This passion, which our poet carried into all subjects, sometimes rendered him unjust, especially in his *Histoire de la Révolution française*. M. Alfred Bougeart, in his *Histoire de P. J. Marat*, has pointed out some singular omissions which would be unpardonable in a less impassioned mind. Besides, this love of love, if one may so speak, led Michelet to fail in understanding the cruel necessities, the most necessary cruelties. This Parisian, a Picard on the father's side, an Ardennois on the mother's, was a Brahmin.

We read with pain his last book, *La France devant l'Europe*, in which there were so many truths and so many illusions. We are happy that death has taken the great patriot before a final deception. If Jules Michelet has felt the bitter pang of seeing his country dismembered by a foreign foe, at least he has escaped experiencing the supreme agony of seeing her rent asunder by those of her own household, and brought low by his old adversaries, the Doctrinaires and the Jesuits.

JULES ANDRIEU.

MR. HERMAN MERIVALE.

MR. HERMAN MERIVALE, whose rather sudden death took place on the 8th instant, will be missed by a limited circle of literary and personal friends, and by a larger number of readers who only knew him from his writings. Commencing his career, after obtaining honours at Oxford, with the most brilliant prospects as a lawyer, he afterwards became Professor of Political Economy at his own university, and eventually settled down into a comfortable post as permanent Under-Secretary of State, which he held, first at the Colonial Office, and afterwards at the India Office, from 1848 until the day of his death. The work by which he will be chiefly remembered is his "Colonisation and Colonies," a series of lectures delivered at Oxford in 1839, 1840, and 1841. This is undoubtedly a work of permanent value; and his method of treating the difficult and complicated questions bearing on the relations between colonies and a mother country strikingly shows the powers of Mr. Merivale's acute and judicial mind. But his essays, which were published collectively on two occasions, were certainly more popular, and the perusal of several of these charming papers furnishes an intellectual treat of the first order. Mr. Merivale loved to take up some minute point in history, and either to subject it to close criticism, or to illustrate it after an exhaustive enquiry. Hence his examination of the Paston Letters, which, though he was proved by the late Mr. Bruce—as he himself most candidly acknowledged—to have been mistaken in denying their authenticity, did the greatest service in calling to the subject renewed enquiry, which placed their position as genuine materials of history beyond further question. Hence, too, his interesting papers on the battle of Lutzen and the battle of Marston Moor. Mr. Merivale's latest literary labours were the completion of the Lives of Sir Philip Francis and Sir Henry Lawrence. There cannot be any question that his intellect was one of a very high order, but it was more remarkable for depth and acuteness of insight than for breadth of view. His quickness in seizing the main points of a complicated question, in detecting fallacies, and so forming correct decisions, was most extraordinary; and his power of exposition was marvellous. His intellectual gifts would naturally have led their possessor to the attainment of a much higher and more conspicuous position than he actually reached; but they were combined with a total absence of ambition, a singular want of enthusiasm, and, in later life, a certain indolence and carelessness of mind. An abrupt manner, and a constitutional inability to conceal any unfavourable impression, occasionally caused offence to those who were only slightly acquainted with the late Under-Secretary for India. The

smaller circle of acquaintances who knew Mr. Merivale well, knew also that he was not only a man of great ability, but also a warm-hearted and affectionate friend, and one who would never intentionally give pain either to equals or subordinates.

NOTES OF TRAVEL.

We publish the following extract from a letter received by Mr. Markham from Lieutenant Cameron, dated October 16, which gives some further details respecting Dr. Livingstone's death; and shows the great difficulties with which the Relief Expedition has had to contend.

Unyanyembe, October 16, 1873.

It is with extreme regret I write to announce to you the melancholy news of the death of Dr. Livingstone, of which we received news from Chumoi, his servant, who came in in advance of his caravan, in order to get some [provisions], as he says they are utterly destitute.

From his report (Chumoi's) they had passed the northern shores of Lake Bemba (Bangweolo), and arrived at about 10° S. lat. on the Luapula, when the Doctor was attacked with dysentery, which carried him off in about ten days or a fortnight. His servants have disembowelled the corpse and filled it with salt, and put brandy into the mouth, &c., so as to preserve it, and are bringing it along with them. They have also two boxes of books with them, and say there is another at Ujiji, which the Doctor told them to fetch and take down to the coast with them; so I intend, as the caravan consists of seventy or eighty men, to send part down to the coast at once with the body, and take part to Ujiji to bring back the said box.

I intend now to strike as soon as possible for the furthest point reached by the Doctor in 1871, and endeavour to trace the river Lualaba to its outlet; for this I have sufficient stores, but I have

been obliged to purchase largely here at very high prices, the Arabs charging fifteen dollars for a piece of *satini* (very inferior sheeting), which might cost three dollars at Zanzibar; certainly they are almost out of stores themselves.

It is very difficult to get pagazi, as Mirambo's men are all over the country and infest every road in the country, and they are all afraid to go; however, I am in hopes of getting off now as soon as I have seen the Doctor's body started for the coast.

The reason of our long stay is the amount of illness; I have had eight fevers, and a bad attack of inflammation of the eyes, which for some time rendered me quite blind, and even now I am unable to use them for long, and my sight is hazy and indistinct.

On our arrival here, after paying off pagazi, we had only 13 bales of cloth left, so that I was obliged to purchase largely, especially as I thought Dr. Livingstone would stand in need of supplies, and as it turns out he was nearly destitute at the time of his death.

V. LOVETT CAMERON, Lieut. R.N.

P.S.—Livingstone first reached the middle of the north shore of Lake Bemba; being unable to cross, doubled back and rounded it, crossing besides the Chambesi three other rivers flowing into the lake: he then went (as far as I can make out) looking for the fountains of Herodotus, and I think crossed the Luapula to the eastward, marching in a dreadful marshy country, with the water for three hours at a time above their waists. Ten of his men died and several ran.

His caravan now consists of 79 men. No doubt I shall learn more when it arrives.

DR. N. VON MIKLUCHO-MACLAY, the Russian traveller who has been sojourning during the year 1872 in the eastern extremity of that huge but little known island, New Guinea, returned to Batavia in the latter part of 1873. From a letter addressed to Dr. Petermann, it appears that he intended in November last to start for Ceram, and thence to make for the south-west coast of New Guinea, either in the vicinity of the Utanata river, or further on towards the Princess Marianne Straits. He intends to travel alone, and, judging from his past researches, will probably devote himself to the investigation of the ethnology of the island.

WE understand that the New Monthly Mail Service between Zanzibar and the French settlements of Nossi Bé and Mayotte—for which, as we announced in our issue of January 3, the French Government have contracted with the British India Steam Navigation Company—will be opened on or about the 8th proximo, on which date a steamer will be in readiness at Zanzibar to take on the Brindisi mail of the 13th instant from London, which will be brought down by the steamer from Aden. This line for the first time brings Madagascar and the Comoro Islands into regular steam communication with the civilised world. Its influence on the trade of East Africa should be very great; and we trust that the Portuguese Government will not be long in following the example of the French and contracting with the same Company for a regular monthly service to the Mozambique.

THE latest news of Dr. Gerhard Rohlfs, received by Dr. Petermann of Gotha, bears the date of January 13. On January 11 the traveller had reached the important oasis, Dachel (17,000 inhabitants), in the Libyan Desert. Dr. Rohlfs has sent six charts to Europe as the first-fruits of the rich harvest which we may anticipate from his interesting expedition.

By private advices from Zanzibar we learn that a man had been sent in by the Governor of Lamoo, as the murderer of McCausland, but it was doubted whether he was the real culprit. The Sultan had sent orders for witnesses to be forwarded. Another expedition of 400 men had started for Melinda against Mubarak, who was in

rebellion against the Sultan, and the Governor of Lamoo had received orders to unite his forces with those sent from Zanzibar.

Mr. Justice Gibbs at Bombay, in a case referred to him, having decided that he had no jurisdiction over the subjects of the Rao of Kutch, as not being British subjects, it was anticipated that difficulties would arise as to the measures lately put in force against all Kutchis holding slaves.

The Universities Mission House has been purchased by the Government as the future British Consulate.

H.M.S. *Briton*, *Daphne*, *Shearwater*, and *Vulture* had been at Zanzibar. Captain Malcolm had given over the command of the *Briton* to Captain J. Brine. No slave vessels had been captured, showing how effectually the late treaty is being enforced.

Captain Elton, the Acting Assistant Political Agent, was following out Dr. Kirk's active policy of supervision of trading stations on the African coast, with the view to render our efforts effectual, and prevent our Indian subjects from engaging in and encouraging the slave traffic. At Dar Salaam about fifty slaves had been found, who were held by these Indians. Captain Elton had started overland for Kilwa. This, added to the thorough manner in which Dr. Kirk had himself before carried out the inspection of the Northern Districts and freed nearly 500 slaves, will effectually discourage our Indian subjects from lending their support to slave dealers.

An Austrian man-of-war had visited Zanzibar and saluted the flag; this will probably lead to the establishment of an Austrian consulate.

In the *Commercial Report from Her Majesty's Consuls in Japan*, which has just been issued among the Parliamentary papers, is printed an interesting account by Mr. R. G. Watson of the resources of the Island of Yezo and the progress of the works now being carried on by the American surveyors and other officers, under the direction of General Capron. Sir Harry Parkes, in transmitting Mr. Watson's report to the Foreign Office, writes: "It is to be regretted that the Japanese Government do not evince a fuller appreciation of the benefits they might derive from the great natural resources of the Island of Yezo, and of the manner in which these might be best developed. Energy and integrity, capital and enterprise, are all shown by this report to be wanting."

THE following statistics regarding the Island of Cuba may be found interesting:—"The population of Cuba in 1872 was about 1,200,000 inhabitants, of which about 350,000 were negro slaves, and 60,000 Chinese immigrants. The chief productions of the country are sugar, molasses, and tobacco. The first-named article is exported in large quantities to the northern United States. England, France, Holland, and other countries have their share, but Spain, strange to say, consumes but a small quantity of this, her chief colonial product, although the sugar itself is of excellent quality, and most carefully prepared. The tobacco of Cuba is also held in high repute, particularly that from that fertile portion of the island called Vuelta-Abajo. By far the largest quantity of it goes to the United States, no less than 8,300,000 lbs. having been exported there in 1870, Spain coming next with 1,700,000 lbs. Rice is one of the chief imports, and is derived mainly from the States of North and South Carolina, and from British India. Cuba has some good harbours, viz., Havana, Santiago, Matanzas, and Cienfuegos, the first, however, being by far the best in the island, if not in the whole New World. The greatest proportion of the shipping hails from the United States, Spain and England ranking next. The public debt in 1872 amounted to thirteen millions sterling."

WE understand that Mr. Ney Elias leaves Brindisi by the mail of the 16th instant, *en route*

to India, where he hopes to find an opening under Government for further explorations into Thibet *via* Sikkim. It may be deemed probable that, should Mr. Ney Elias succeed in his object, our commercial and political relations with the tribes in the vicinity of those frontiers, the Lepchas, would be materially benefited. Our readers will not have forgotten that the gold medal of the Royal Geographical Society was awarded last year to Mr. Ney Elias, for his unprecedented journey taken alone across Mongolia into Siberia and Russia, the scientific results of which were found especially valuable.

PARIS LETTER.

4 Place Wagram, Feb. 10, 1874.

Who will deliver us from the "Inconnue"? The veiled lady is taking a permanent place at the household hearth; she is irrepresible in the gossip columns of the literary press; she haunts the foyers on "first nights," and the central drawing-rooms whence the wit and wisdom of the coming week's *premiers-Paris* radiate. The Iron Mask may bow to her, and Junius call her sister. Mérimée's valet is the last speaker in the unquenchable debate. "Baptiste" has written to an ex-senator, one of his old master's friends, professing a perfect knowledge of the Inconnue's identity. He can remember carrying letters and messages to her house. She was a well-known actress—"très gracieuse," the servant states; but his proofs are not conclusive, and it is perhaps advisable for the sake of all who are interested in the question, to withhold the name he ventures to publish. Then M. Arsène Houssaye comes forward again incidentally as a debater on the vexed question. He consecrates an amusing biographical article to the three names recently connected by an academical séance—those of Mérimée, Jules Sandeau, and M. de Loménie. Arsène Houssaye was director of the Théâtre Français when the author of *Clara Gazul*, stimulated by the theatrical successes of his friend De Musset, made his first and last dramatic effort. This effort was *Le Carrosse du Saint Sacrement*, a "jolie impiété" in the Voltairian manner. M. Houssaye produced it. Mérimée refused to superintend or witness the rehearsals, and arrived at the theatre on the first night with all the virginal illusions of the débutant fresh and intact. He was late. The Inconnue accompanied him, and had delayed the expedition "pour être plus belle." When the door of the box was opened, the hisses of a unanimous audience became audible; and Mérimée asked with calm ingenuousness: "Que siffle-t-on là?" Thus M. Houssaye knew the Inconnue, but refuses to satisfy the yearnings of all literary France. His obduracy in this case is the more exemplary and irritating that the author of *Made-moiselle des Trente-six Vertus* is not as a rule remarkable for the delicate discretion of his biographies. He has a hand in the following *plat* of strong spices and pungent flavour. The *menu* must be given in M. Houssaye's own poetic French—savouring of Marivaux, Racan, and Paul de Kock: *Le Roman des Femmes qui ont Aimé, par Madame la Princesse XXX. Commenté par Arsène Houssaye*. And the dainty worshipper of Pompadour adds as an epigraph Mlle. de l'Espinasse's sentimental axiom: "Aimer c'est faire un pacte avec la douleur." It may be added that the anonymous Princess is generally supposed to be a Bonaparte, the gracious and generous hostess of the Palais Royal, where M. Houssaye was the most frequent and intimate guest.

This is an era of Recollections, Revelations, and Petits Mémoires. Who will direct the popular taste for and into an unexplored channel, and describe anecdotically the history and influence of literary professors in Parliament? In France the field would yield matter for a hundred volumes, and M. de Lorgeril would furnish the subject of an amusing paragraph. The Vicomte de Lorgeril is one of the least governable of the Light Horse; but that is his smallest title to fame. He is one of the "grotesques" of literature, whom Gautier would have painted with a joyous and ready hand. The Breton politician is a Breton bard; he sings the cider and *sacré cœur* of his native province in verses that manage to halt on sixteen feet. He hails the advent of Henri V. once a quarter in well-meaning modifications of "Vive Henri Quatre," which in point of rhyme, rhythm, and metaphor, are like the effusions of nightmare suffered by the poet Gagne—"archi-pantodrate" and "candidat de l'Humanité." M. de Lorgeril's speeches are as absurd as his poetry. His last achievement is the proposition of a tax on the tall hat of respectability. The Vicomte requires that wearers of the beaver shall pay two francs fifty centimes to the State per head; and he estimates that the impost would yield more than a million francs a year. He has just answered the universal chorus of laughter that greeted this proposal with the dignified rebuke: "I prefer the taxes that make one laugh to those that make one weep." Another literary deputy has recently made himself conspicuous by mentioning a "class of spoliation" at the tribune. The *premier pas* is terribly expensive in France: one is seldom allowed to take a second. Edouard Lockroy was, with Rochefort, some ten years ago, the supreme representative of Parisian wit and satire—a laughing chronicleur, a social celebrity, a master of ridicule and epigram. In an evil hour he wrote the most amusing vaudeville of the modern *répertoire*, "*Le Zouave est en bas*," and that Zouave has followed him ever since. He has written on educational questions, on political economy, on internal administration. The Zouave was *en bas*. He has recently spoken at some length in the Assembly on a question of financial reform, and the Zouave has reappeared again more ludicrous than ever. The Monarchist press reproduces the financial essay of to-day in juxtaposition with the vaudeville of ten years ago, and ends the quotation with "Ci-git Edouard Lockroy!"

There are one or two changes in the University corps. The death of Philàrète Chasles left vacant the professorship of Teutonic languages and literature at the Collège de France. Two successors were presented by the College for ministerial approval—M. Bossert and M. Guillaume Guizot. The first candidate was avowedly preferred by the Collège de France, being incomparably the most capable and experienced. M. Guizot has been appointed by the Minister, being the most orthodox. At the same date M. Gaston Maspero was appointed to the professorship of Egyptian Archaeology and Philology. M. Maspero is very favourably known in England as an eminent Egyptologist. M. Gustave Bertrand, member of the Comité des Travaux Historiques, has just returned from his third scientific mission to St. Petersburg. He brings with him the copies of four collections of the letters of Henri III. to his Minister Villeroi; a volume of the letters of Antoine, King of Navarre, father of Henri IV.;

and two more volumes containing letters from several princes and princesses of the House of Navarre. Moreover, M. Bertrand will now be able to publish a complete catalogue of the French manuscripts belonging to the Imperial Library of St. Petersburg. This is an important step towards the collection of the innumerable quantities of historical documents taken out of France at different troubled periods, and deposited in foreign libraries.

M. Dumas, fils, has read to the actors of the Odéon the five revised acts of the *Jeunesse de Louis XIV.* The drama is now complete, corrected and amended. The ceremony of the reading was very impressive by reason of the new Academician's simple and withal delicate and effective delivery. This piece is the only unpublished work of the elder Dumas. It is a drama in his early style, comprising thirty "speaking" parts. Lafontaine will play Mazarin, and Mlle. Pauline Lebrun Anne of Austria.

EVELYN JERROLD.

DR. SCHLIEMANN'S DISCOVERIES AT ILIUM NOVUM.

Mr. Newton, who returned from Athens last week, sends us the following report on Dr. Schliemann's Trojan Collection.

British Museum, Feb. 10.

The controversy as to the merits of Dr. Schliemann's discoveries promises to be a sharp one. Without attempting to criticise now what has been written on either side by M. Burnouf in the *Revue des deux Mondes*, by Professor Max Müller in the *ACADEMY*, and by Professors Conze, Rhospulo, and Stark in German periodicals which I have not yet seen, I think it as well at the present stage of the controversy to offer a few remarks on the antiquities discovered by Dr. Schliemann, to examine which I have recently made a journey to Athens.

Now, the opinions current as to these antiquities are somewhat conflicting. First, it is confidently believed by those who regard the Trojan war as an historical event that these antiquities, found at a great depth under the Greek city of Ilium Novum, are actual remains of the Troy over which Priam ruled, which the Greeks sacked, and which Homer has immortalised. This, I need hardly add, is the opinion of Dr. Schliemann himself. Secondly, those who either reject entirely the story of the Trojan war, or think that there is no sure test by which the historical facts, possibly latent in the legend, can be detected and detached, still allow that there is a *prima facie* case for considering the Schliemann antiquities as prehistoric, and consequently as antecedent to the earliest Greek antiquities as yet discovered. Thirdly, there are archaeologists who, while admitting the truth of Dr. Schliemann's narrative and the genuineness of his antiquities, have maintained that they have no pretensions to the remote antiquity which he claims for them, and that they are probably the work of some barbarous race in Asia Minor in comparatively recent and even in Christian times. Lastly, some few persons have received Dr. Schliemann's narrative with scornful incredulity, and have insinuated that the gold and silver ornaments were fabricated at Athens, or that they were purchased by Dr. Schliemann in some other part of Asia Minor, and associated with the antiquities from Ilium Novum. In other words, they consider his story of the finding of a treasure as altogether apocryphal.

I think it right here to state that, from the day I first saw the photographs of Dr. Schliemann's antiquities and read his narrative, I entertained no doubt whatever as to the genuineness of the objects found, nor did his account of the mode of their discovery suggest to me any doubt as to the truth of his statements. This, my original opinion, has been amply confirmed since by per-

sonal inspection of the antiquities; by the opinion of several other experienced archaeologists who have seen them; and lastly, by the fact that similar objects in gold and silver, found on the same site, have recently come to light in the Troad, as already mentioned in the *ACADEMY*. While fully recognising the authenticity of Dr. Schliemann's narrative and the genuineness of his antiquities, I am not prepared at present to accept his assumption that he has found the site of the Homeric Troy. Doubtless he has a very fair case. He has dug on the undoubted site of Ilium Novum, on the site which, till the time of Demetrius of Skepsis, the ancients believed to be that of Troy; and on this site, at a great depth, far below the remains of the Hellenic city, he has found remains of a city which has evidently been consumed by fire. But before we can prove that this burnt city was the Homeric Troy, we must assume that the Troy which Homer describes had a real existence; and this is an assumption which, I need not observe, will be disputed by a large number of students trained in the modern school of historical criticism. Therefore I prefer to leave the question an open one, whether Dr. Schliemann has found the site of Homeric Troy or not. But while declining to enter on this vexed and, as appears to me, rather hopeless question as to the site of Troy, I think it right to express my opinion *quantum valeat* as to whether Dr. Schliemann's antiquities are of that remote antiquity which we, vaguely groping in the twilight of an uncertified past, call prehistoric; or whether, as has been alleged, they are the work of one of the barbarous races who in comparatively recent time have occupied Asia Minor. Before pronouncing a decided opinion on this point, I could have wished to have had the means of comparing the Schliemann antiquities with some of those collections of prehistoric and barbarous remains which have in recent years been so diligently formed and intelligently classified in continental museums. These collections I have never had the leisure to study, and therefore in judging of the Schliemann antiquities my range of comparison does not extend much beyond the limits of the Hellenic world. I think that all Greek archaeologists will admit that these antiquities have a decidedly *non-Hellenic* character. So far as I have at present the means of judging, they are *Prehellenic*.

The evidence which leads me to this conclusion is of two kinds, negative and positive. By negative evidence, I mean that there is, in the multifarious collection of objects accumulated by Dr. Schliemann in his excavations, a marked absence of certain classes of antiquities which we associate with the most archaic period of Hellenic art. There is no glass, and, if the analysis is correct which has been made of the weapons and implements, there is no wrought bronze, but in its place copper. Pottery has been found in abundance, and with great variety of form, but not one single example of painted or varnished pottery such as is found at Mycenae, Camirus, Ialysus, Cyprus, Athens, and other very ancient sites. With the exception of the one doubtful instance mentioned by Professor Max Müller, there is no intelligible writing; and in regard to plastic art, though in those rude productions in which Dr. Schliemann recognises the *λανκῶπις Ἀθήνη* there is certainly an attempt to model a face, whether human or owl, the conception of the human form as an organic whole, a conception which we meet with at the very dawn of Greek art, nowhere appears. Nor can I detect, as in archaic Greek art, any trace of Oriental or Egyptian influence in any of the ornaments or devices.

On the other hand, if we compare these antiquities carefully with the archaic objects which have been found in Rhodes, in Cyprus, in Santorin, and in Etruria, certain resemblances may be detected which can hardly be the result of chance. For instance, a peculiar type of *oinochoe* repeatedly recurs in the Schliemann collection, which I would call the two-necked type, the jug having

two necks or throats. In the Cesnola collection from Cyprus were several of this form, and in the small collection of Cypriote pottery in the British Museum is one which, like a large proportion of the Schliemann vases, has the red clay not painted, but wrought by hand-polishing to a lustrous surface, and ornamented, like the Schliemann vases, with incised patterns.

Again, the forms of the spear-heads and other implements resemble those found in the most ancient tombs in Cyprus, and in both cases the analysis of the metal is said to have yielded not bronze, but pure copper.

The pottery generally has a strong family likeness in fabric and shapes to that pottery found under the lava at Albano which is reputed to be the most ancient pottery of Italy, and of which the British Museum possesses several examples. Again, M. Burnouf, in his article in the *Revue des deux Mondes*, already referred to, recognises a resemblance between some of the Schliemann vases and the pottery found at Santorin, and which is believed to be of the prehistoric period. I regret very much that at the time of my late visit to Athens I had not the opportunity of examining this Santorin pottery, as it was packed up for transfer to the new house to which the École Française has migrated. I am only slightly acquainted with the prehistoric pottery of Germany, but I have reason to think that, on comparison with that found by Dr. Schliemann, considerable analogies will be discovered.

I have given these few instances as samples of resemblances which may be detected on careful comparison. I would add that among the Camirus and Cypriote terra-cottas are certain rude representations of the human form which seem to be just one stage in advance of the *λανκῶπις Ἀθήνη* of Schliemann, but only one stage. In these progressive efforts it would seem that the artist began with something even more elementary than Shakespeare's manikin "made after supper out of a cheeseparing," and that what gradually converted this manikin into an organic form was the instinct of Greek genius trained and developed by the contact with more civilised races round, and imbibing ideas of Egyptian and Assyrian art through traffic with the Phoenicians. My present theory, then, about the Schliemann antiquities is, that they are Prehellenic, and that those resemblances to the antiquities from other ancient sites which I have indicated are not accidental coincidences, but that in places like Rhodes and Cyprus a few relics of the Prehellenic period survived to a later age, and have thus been found intermixed with what I would call Graeco-Phoenician or archaic Greek antiquities. If those who maintain the more recent origin of the Schliemann antiquities will show by comparison that they present equally striking resemblances to antiquities known to be later than the Christian era, of course my argument will be so far invalidated, but, as yet, I believe no such resemblances have been established.

C. T. NEWTON.

CORRESPONDENCE.

A "REVOLUTION IN PSYCHOLOGY."

43 Conduit Street, W., Feb. 11.

A passage quoted by Professor Clifford in his recent review of Mr. Lewes' *Problems of Life and Mind* (*ACADEMY*, Feb. 7), together with his comment on it, raises an important question on the connection of general psychology with certain other sciences, to the discussion of which the *ACADEMY* may possibly be willing to allow a short space.

Mr. Lewes, veteran philosopher and Positivist historian of philosophy as he is, has recently effected, as he tells us, a "change of front," and

"positis novus exuviis, nitidusque juvena."

has come forward with the first instalment of a work which is to contain a treatment of metaphysical questions by scientific methods, so as to

lead them finally to a satisfactory solution. No wonder that such a work from such a man should arouse the keen interest of all who cultivate philosophy.

"Human psychology," writes Mr. Lewes in the passage mentioned above, "the science of psychical phenomena, has to seek its data in Biology and in Sociology. The great mistake hitherto has been either that of metaphysicians, seeking the data solely in introspective analysis of Consciousness; or that of biologists, seeking data in the combination of such an analysis with interpretation of nervous phenomena."

Sociology is thus introduced as the source of the data for one half of psychology; and, says the reviewer, "the sense of relative importance implied in it amounts, we believe, to a revolution in psychology."

Now here I would say, *Distinguo*. If human psychology is taken in the above unrestricted sense, as the science of psychical phenomena in general, it is another name for Metaphysic; but if taken in the restricted sense of the science of psychical phenomena in their relation to the sentient organism in which they arise, then we have psychology proper as distinguished from metaphysic—a distinction which, from Professor Clifford's acute exposition of an allied doctrine of mine, I hope he will be prepared to accept.

In the former sense, which in the words quoted is adopted by Mr. Lewes, it cannot, I would urge, be said that psychology has to seek its data in biology and in sociology, without adding as of equal right—and in the physical sciences; for all alike are sciences of its object-matter. Nor again is it an error of biologists to have excluded sociology, for biology enters into the data of general psychology in another and a special manner, not shared by either the social or the physical sciences, being the science of the organism in which the psychical phenomena arise, and upon which alone they immediately and directly depend. The individual organism and its psychical phenomena stand in complete correlation to each other: he that studies the one studies now the antecedent, now the consequent, of the other; there is nothing as consequence in the one which is not as condition in the other. But this coextensive correlation does not include the Media, or environments, whether social or physical, wherein the individual organism is placed, necessary as both are, one to the moral, the other to the physical existence of the organism. Both act upon the organism, and only through the organism do they modify the psychical phenomena.

For let us consider what is meant by the facts of sociology. Take, for instance, such relations as the family bond, companionship in war, buying and selling, the administration of justice, &c. Every such fact is ultimately of a double, and no more than a double character: there is in it the physical part, the men related and their outward acts; and there is the mental part, the imagined nature of the relation and the acts, and the felt value, obligation, or interest attaching to them. Of these two components, physical and mental, the former affects the organism immediately, is a fact of biology, and gives data to psychology proper; the latter is already a part of the data of general psychology itself. To count sociological phenomena, over and above biological and physical, as a special source of data for general psychology, is merely to group some data of general and some of special psychology together under a new name.

General psychology, then, seeks its data in all three domains—biology, sociology, and the physical sciences; psychology proper only in biology. And if any psychologist seeks his data only in biology, he thereby restricts his research to psychology proper.

Professor Clifford, in calling Mr. Lewes' introduction of sociology a "revolution in psychology," appears to have confused between the data belonging to general psychology, or metaphysic, and those belonging to psychology proper. For to introduce sociological data into general psychology

is no revolution at all; it is what has always been done: the moral and social relations of men have always been held to be of prime importance as its data; while as data of psychology proper, these same moral and social relations are capable of being data in no other sense than are also the relations of the individual to his physical environment, and, in the present condition of biology, are not so much data as *problems*,—the great problem being to discover what specifically are the physiological changes in an individual organism, which are correlated as conditions with those moral and social conceptions and feelings which are summed up in the term Civilisation.

There is a change in the individual organism intermediate between the social organism and the change in the psychical phenomena of the individual. The question for the future is—what specifically this intermediate change consists in; how the physical component in social phenomena becomes clothed, so to speak, with the mental; and how, in consequence, the organism bears its part in sustaining and developing that general world of ideas in which civilisation consists.

The facts of sociology, then, are data of general psychology, but problems of psychology proper. Only if the facts of sociology could be shown to be immediate antecedents of changes in the psychical phenomena, instead of acting mediately through changes wrought by their physical components in the individual organism (which Mr. Lewes, as I read him, would be the last to admit), could a revolution be said to be effected in psychology. It would be a revolution in psychology proper, not in general psychology; but it would be a revolution of immense significance, and that in the direction of abstract entities and immaterial causation.

SHADWORTH H. HODGSON.

THE "SATURDAY REVIEW" ON CHAUCER'S "CANTERBURY TALES."

3 St. George's Square, N.W.

THE *Saturday Review* seems determined to keep up its reputation for elaborate blunders about Chaucer. Its former famous performance was on April 15, 1871, when it took in hand that poet's *Parlament of Foules*, and with a flourish of trumpets announced its discovery of the hero, heroine, date and scene, of the poem; namely, as the hero, Enguerrand de Couci, who "in the hall of Eltham won the heart of Isabel Plantagenet" (Edward III.'s daughter) "on the 14th of February," 1364, when Edward III. entertained at Eltham King John of France. This supposed discovery I tested by documents in the Public Record Office, by Froissart, &c., and showed that on February 14, 1364, Edward III. was at Westminster, not at Eltham; that the day on which he entertained King John was a Sunday in January (the 7th or 14th), while February 14 in that year was on a Wednesday; and so burst the *Saturday Review's* bubble, with which the hero and heroine also disappeared. Seemingly the same writer has now taken Chaucer's *Canterbury Tales* in hand, and in an article in last Saturday's number has, with his old recklessness, undertaken to show that it is all nonsense to set any value on the careful and patient work of one of the best Chaucer scholars in the world, Mr. Henry Bradshaw, the learned librarian of Cambridge University, in separating Chaucer's *Canterbury Tales* into their component groups, and thereby reconciling, for the first time since Chaucer's death, the difficulties in the geography and the succession of the *Canterbury Tales*. The merest tyro in Chaucer knows those difficulties, which have been often dwelt on: that by Tyrwhitt's arrangement of the Tales—that of the best MSS. of the best type, the A or Ellesmere one—the Pilgrims are put by the Wife's Prologue near Sittingbourne, forty miles from town, then made to tell twelve Tales, and by that time find they have countermarched, and gone ten miles back towards London, instead of twenty or thirty towards Canterbury, and are close to Rochester, thirty miles

from town; then they tell only three Tales, and in that time have countermarched again, and got back, past Sittingbourne, to Boughton, some fifty miles from London. This well-known difficulty the *Saturday Reviewer* boldly declares does not exist at all; and in the face of Tyrwhitt's often-reprinted text, which he evidently has not read with any care, says, on the strength of § xxvii. of Tyrwhitt's "Introductory Discourse," "nor did Tyrwhitt plant his pilgrims at Boughton, within seven miles of their journey's end, to carry them backwards twenty miles to Rochester, and anon in a third part of the time, twenty-three miles forward." No, but he did carry them backwards ten miles, and then in a third of the time, twenty miles forward, which is nearly as bad, and makes quite as much confusion in the geography and progress of the journey. Mr. Bradshaw's happy lift of the Shipman and its linked-on Tales up to the Man of Law's Tale, thus uniting the severed members of Group B, of course removes the difficulty, and brings Rochester before Sittingbourne, as it in fact is. However, the *Saturday Reviewer* having thus boldly denied one well-known fact, thinks he had better deny a second. Chaucer tells us that his Pilgrims started one morning from the Tabard at Southwark; and yet he also tells us that when the Pilgrims were fifty-four and a half miles from Southwark, at Bob up and down (Harbledown), it was still a morning, and that the Host, seeing the Cook sleepy (and very drunk)—which he was not when the Pilgrims passed (Greenwich on the first morning of their journey, as he began to tell his tale—called to this Cook, saying:

"What cyleth the to slepe by the morwe? [that is, in the morning.]

Hastow had flecu [fleas] al night, or artow drunke?" Which means as plainly as it can, that the Cook, Host, and all the party had, on some night after they had left London, slept somewhere on the road, a short distance from Harbledown, say either at Boughton, about fifty miles from town, or more probably at Ospringe, forty-six miles, and had then started again next morning. How does the *Saturday Reviewer* get over these facts? Quite easily; he flatly denies the existence of any such passage as the above; and, to make people believe him better, he denies it twice. Here are his words: "If these things were so, they would have some weight, especially if also there were passages in Chaucer which made it doubtful whether the journey was one day or more; but there is no such passage." "There is nothing in any printed copy, nor, so far as appears, in any MS. of the *Canterbury Tales*, to raise a suspicion that the journey lasted more than a day." Now, though these assertions look very like a carrying out of the naughty schoolboy's maxim, "Tell a lie, tell a good 'un, and stick to it," I am quite content to believe that the explanation of them is Dr. Johnson's "Pure ignorance," and astounding recklessness. Only I hope *The Saturday* will not continue the practice. I have not instanced Chaucer's notice of a probable third morning, in the Squire's "it is pryne," 6 (or 9) A.M., which can hardly be made consistent with the *Saturday's* notice of a one day's journey.

F. J. FURNIVALL.

DR. SCHLIEMANN'S DISCOVERIES.

Athens, Jan. 23, 1874.

The strata of red ashes and calcined ruins, which I found in the Mount Hissarlik in a depth of 7 to 10 metres (23½ to 33½ feet), must be considered coincident with the events related by Homer: for we see in *Iliad*, iii. 149, 154; vi. 373, 386, and 393, that there was a gate called the Skacan Gates (Σκαίου Πύλαι) in Ilium's Great Tower. This gate led to the plain; it must, therefore, needs have been in a westerly direction, and this is besides confirmed by the Greek word Σκαίου. My excavations have, indeed, brought to light in the said strata a vast tower, 6 metres (20 feet) high, which is built 14 metres (46½ feet) below the surface of the virgin rock; its

north side, which leans on an artificial hill of nearly equal height, shows no real masonry except for one metre at its upper border. At the north-west extremity of this monument is a double gate, from which a street, paved with large flat stones, runs in a south-western direction down to the plain. On the artificial hill, just above the two gates, and in the most imposing position of the whole mount, are the ruins of a large mansion, which must have been the residence of the chief or king of the town or citadel, and of the whole surrounding country, for it is built of stones joined with earth, whilst the remainder of the town is built of unburnt brick. Moreover, I found in this stone-house the most beautiful objects of my whole collection, and I discovered, hardly two yards from it, on the great wall, the rich treasure of vases, diadems, and other jewels of gold, electrum, or silver, which must necessarily have belonged to that chief or king and his family. The town or citadel was destroyed by a tremendous conflagration, of which the red ashes and calcined ruins, nay, every stone and every potsherd, bear unmistakable testimony. The houses, and particularly the king's *μέγαρον*, must have been very high, and wood must have entered largely into their construction, besides very large wooden defences must have existed above both the Skaean gates and the tower; for otherwise, it is totally inexplicable how these monuments could have been completely buried by the red ashes and ruins. But it is a fact that they were buried, and that after the awful catastrophe they were never dug out and used again, for a new town was built right upon the ruins of the old, and the foundations of the new *μέγαρον* of the king were laid on the ruins which covered in some places two and three metres deep the skeleton of the old palace, the double Skaean gate, and part of the great tower.

In the atlas which accompanies my work, *Trojanische Alterthümer*, there are several photographs, which show the new royal mansion still covering the Skaean gates, and others which show it after I had broken away as much of it as was necessary to bring to light the whole of the gates. Foreseeing that my discoveries would appear too wonderful not to rouse incredulity, I have taken particular care to leave the remainder of the new royal mansion *in situ* upon the old *μέγαρον*, of which I have cleared out only those parts which were not covered by the posterior building. Thus every visitor can convince himself of the accuracy of my statements.

The chief or king at the time of Troy's tragic end is called Priamos by Homer and by tradition, and for that reason I call him by the same name, and shall continue to do so until Professor Max Müller proves to me that he had another name. In the same way I shall continue to call the last Trojan king's treasure Priam's treasure until the Professor proves that the Homeric Ilium's last monarch had a different name.

There can be no doubt that the treasure has been contained in a wooden chest, because the gold, silver, and copper vases and other objects had retained in the ashes the shape of a parallelopiped, and, besides the long copper plate with two immovable wheels (on the lower side of which has been soldered a silver vase) which was lying on the top, must have served to sustain the wooden cover, the wheels serving as hasps. The existence of the chest is further proved by the key.

In further reply to the learned Professor's article, I affirm that the name of the queen Hekabe never occurs in my publications. Only in speaking of three or four gold rings in the shape of earrings, but which on account of their thickness and heavy weight can never have been used as such, I mentioned that the same may have been worn as finger-rings by the princesses of the royal house, because they are too small and too splendidly ornamented for the male sex. The learned Professor asks me, "If the golden head-

dresses, which I call *κρίδεμνα*, had been worn by Hekabe or Helen, would not Homer have described them, instead of speaking of the *κρίδεμνα* as simple veils tied round the head?" My reply is that the Homeric *κρίδεμνον* is not always a mere veil, and that the *λαπαροκρίδεμνον* can be nothing else but a head-dress of gold. If, however, the Professor finds that the head-dresses represented on Plates 205 and 206 of my Atlas deserve another Homeric denomination, he would certainly oblige the scientific world by announcing their right name. Homer could, besides, describe only such ornaments as he saw, and it would be very wonderful indeed if he had described the exact shape of such as I found in the treasure, for these were probably in use 900 or 1,000 years before he was born. In fact, the Trojan vases, with a long, straight, or backward bent neck, and two large female breasts, were also dug up in Santorin (*Θήρα*) by my learned friend M. Emile Burnouf, the director of the French School at Athens, from below a stratum sixty-eight feet thick, of pumice-stone and volcanic ashes, thrown out by that immense central volcano, which, in the opinion of competent geologists, has sunk and disappeared about 2,000 years before our era, and, according to De Longpérier, similar vases figure in the tomb of Rekhmara, in Thebes, of the time of King Thutmes III. (seventeenth century before Christ), among the offerings which the inhabitants of Rhodes, Cyprus, Crete, &c., present to that monarch. The subterranean houses brought to light in Santorin by M. Burnouf are besides of the same architecture as the king's palace, the great tower, and the Skaean Gate at Ilium; that is to say, they consist of small and large stones joined with mud. But all the inner walls of the Santorin houses are covered with plaster and painted, whereas in Troy I never found a vestige of either plaster or painting. In the same way, all the Santorin pottery has painted ornaments, whereas, on the Trojan terra-cottas, all ornaments are engraved. These items may serve to guide us in fixing the chronology of the Trojan antiquities.

If the town or citadel, which I have brought to light in the depths of Hissarlik, were not the Homeric "Ilium," it would be very wonderful indeed that Professor Max Müller should find there, in primitive Phœnician characters, the name *Ἰλιον* or *Ἰλιον* on a terra-cotta seal, discovered in a depth of 7 metres, or 23½ feet; nor would it be less wonderful that I should have found there more than 100 of those elegant bright red goblets with two gigantic handles, which cannot be put down except on the mouth, of which no single example has ever yet been found elsewhere, and which I identify with the Homeric *δίπας ἀμφικύπελλον*; for I found the same even in the highest prehistoric stratum which just precedes the ruins of the Greek colony, and it must therefore have been in use for a series of centuries after the destruction of the Homeric Ilium. But it is still more wonderful than all the rest that I should find there hundreds of idols and vases with owls' heads, and the female figure, nay even the petrified vertebra of an antediluvian animal modelled into an owl's head, if the citadel were not identical with the Homeric Troy, of which Homer makes the θεὰ γλαυκῶπις Ἀθήνη (literally translated the Goddess Athene with the owl's face), the patron goddess, for no such idol or vase with an owl's head has ever been discovered elsewhere. But since a Minerva with an owl's head seems somewhat incongruous with the Homeric idea of that goddess, I would suggest that she, as goddess of the rising sun, having first received the epithet *γλαυκῶπις*, with the meaning of owl light or glancing face, this ideal name was gradually forgotten, and Athene was thought to have an owl's head, and was represented so on the idols, because *γλαύξ* means an owl, and *ὤψ* means a face. But this change must have occurred at a very early period of the Trojan people, and certainly long before their first settlement in the Plain of Troy, for I found the owl's head modelled on vases and in monogram, even at a depth of

14 mètres, or 46½ feet, and thus 13½ feet below the foundations of the Homeric Ilios. It may be readily admitted, as M. Emile Burnouf suggests, that, civilisation having advanced, Minerva had at the time of Homer already thrown off her owl's head, and received a woman's face (her former owl's head having been converted into her favourite bird); whilst the goddess still preserved the epithet *γλαυκῶπις*, which had been consecrated by the use of a long series of centuries. But if so, I find it very strange that Homer should never have spoken of the owl as Athene's sacred bird.

The learned Professor says *γλαυκῶπις* cannot mean owl-headed, unless we suppose that Here *Βοώπις*, was represented as a cow-headed monster. Certainly she was represented so, just as her mother Rhea in Phrygia, and Demeter in the cave at Phigaleia, were represented with the head of a horse. Had the Greek Government accepted my offer to excavate Mykene and Olympia at my own expense, in consideration of a museum I engaged to build, and of my Trojan collection which I offered to present to the nation, I should no doubt long since have dug up in the former place lots of idols with cows' heads, for Mykene is too close to the great *Ἡραῖον* for Here not to be the patron-divinity of that place.

The learned Professor says: "Whatever goddess may be assigned to the Trojans in the Homeric poems, the real deities of that country were not Zeus or Athene, but the Kabeiroi, the Idaean Daktyloi, and the mother of the Gods." But, whencesoever he may have taken this information, it must necessarily be derived from Strabo (X., chap. iii., pages 364-368), who mentions it as occurring in the legends gathered by Demetrius of Skepsis, the same man who identifies the site of Troy with that of *Ἰδίων Κώμη*, and whose theory has been upset by my excavations in that locality. It appears very strange indeed that the learned Professor, who peremptorily rejects the existence of Homer and of an Homeric Ilium, and the historical character of the war of Troy, though acknowledged by all antiquity, should believe in and publicly defend the legends gathered by a man like Demetrius, whose tales are every way overthrown by my researches. In fact, had the cultus of the Kabeiroi, the Idaean Daktyloi, and Rhea existed at Troy, it could not have passed away with such a materialising people as the Ilians, without leaving most evident traces of its existence. But since I found no vestige of such a cultus, and, on the contrary, hundreds of idols of the owl-headed Minerva—which Homer describes to us as the patron-deity of the place—the learned Professor's argument does not sustain a single moment's discussion.

The learned Professor calls the Trojans barbarians, or at least non-Hellenic. But I think he proves himself, by his interpretation of the inscriptions on the Trojan seal, that they spoke Greek, and this is further proved by the fact that they turned the figurative epithet of their patron-deity, *γλαυκῶπις*, into an owl's head. Besides, Mr. Gladstone proves in his celebrated work, *Studies on Homer and the Homeric Age*, beyond any doubt that the Trojans were Pelasgians, and, as such, they must needs have spoken Greek or a kindred dialect. Professor Müller further says: "To look for the treasure of the Homeric Priamos at Hissarlik would be like looking for the treasure of the Niebelunge at Worms, or for the bracelet of Helle in the Dardanelles." If I had been excavating for three years at Hissarlik without discovering anything, I should have had to accept this observation as perfectly just; but since my gigantic labours have been crowned with full success, since I have dug up the real Homeric Troy, and the treasure of its last king, I think, and with me every man will think, the learned Professor's remark as unjust as it is unfounded. The tradition, of which Homer makes himself the echo, called the last king Priamos; and as long as we have no proofs to the contrary, we can have

no reason whatever to doubt that this name is correct. But even if it could be proved that Homer and the tradition were mistaken, and that this last king had another name, I do not see how this could diminish the charm which the treasure must have for every admirer of Homer. It is certain that the Homeric Troy, which had no Pergamos, and which is only 140 mètres long by 90 mètres broad, cannot have stood a ten years' siege by an army of 110,000 men, and thus it is equally certain that Homer has magnified the extent of the city as much as he has magnified the events of the war. But the historical character of the Trojan war has never been doubted in classical antiquity, nor can it be doubted by anyone who looks on the calcined ruins of the Homeric Ilium, or on the large treasure found close to the king's *pyrapa* on the great wall. However, this is not the only treasure I found. I discovered on the same premises another treasure of golden bars and magnificent gold ornaments, which was stolen from me and hid by my labourers, and which has, at the end of December, been seized by the Ottoman Government. (See the *Levant Herald* of January 7, 1874.) Treasures were never left behind in peaceful times; and I venture to say that there is no instance of a single gold, pearl, or golden ring, and much less a golden goblet, or even a whole treasure, being turned up in the strata of prehistoric ages.

As soon as Greece is blessed with a Ministry which is free from jealousy, selfishness, and egotism, and which understands that this country possesses a boundless wealth in its antiquities, I shall at once begin the excavations in Mykene, which will no doubt throw still more light on the Greek expedition against the Homeric Troy and its chronology.

H. SCHLIEMANN.

APPOINTMENTS FOR NEXT WEEK.

SATURDAY, Feb. 14,	3 p.m.	Saturday Popular Concerts. (Last appearance of Billow.)
	8 p.m.	Crystal Palace Concerts (Joachim). First night of the <i>White Pilgrim</i> at the Court Theatre.
	1 p.m.	Sale of old playbills and dramatic MSS. at Sotheby's.
	3 p.m.	Asiatic.
MONDAY, Feb. 16,	4 p.m.	London Institution: Mr. E. B. Tylor on "The Development of Civilisation" (II.).
	7 p.m.	Entomological.
	8 p.m.	Monday Popular Concert (Joachim and Agnes Zimmermann).
	8.30 p.m.	Medical. Surveys: Mr. Clutton on "The Self-sown Oak Woods of Sussex."
TUESDAY, Feb. 17,	1 p.m.	Royal United Service Institution: Dr. Maclean on "Sanitary Precautions to be observed in the Moving and Camping of Troops in Tropical Regions."
	1 p.m.	Sale of china and old furniture at Christie's.
	1 p.m.	Sale of books and MSS. at Sotheby's.
	7.45 p.m.	Statistical.
WEDNESDAY, Feb. 18,	8 p.m.	Society of Arts: African Section: Mr. Trelawny Saunders on "The Present Aspects of Africa, with reference to the Development of Civilised Trade with the Interior."
	8.30 p.m.	Civil Engineers. Pathological. Anthropological.
	8.30 p.m.	Zoological.
	1 p.m.	Horticultural.
THURSDAY, Feb. 19,	7 p.m.	London Institution: Mr. Hales on "Samson Agonistes." Meteorological.
	8 p.m.	Messiah at Royal Albert Hall.
	8 p.m.	Telegraph Engineers: Mr. Holmes on "The Use of Torpedoes in War."
	1 p.m.	Sale of English engravings at Sotheby's.
FRIDAY, Feb. 20,	4 p.m.	Zoological.
	6 p.m.	Royal Society Club.
	7 p.m.	Nomismatic.
	8 p.m.	Mr. Leslie's Choir at St. James's Hall.
	8.30 p.m.	Linnean. Chemical.
	8.30 p.m.	Antiquaries. Royal: Mr. Huggins on the Motion of Nebulae.
	8 p.m.	Royal Institution: Mr. Vernon Heath on the Autotype and other photographic processes and discoveries.
	8 p.m.	Philological: Mr. Rieu on "Persian and its Affinities." Geological (Anniversary).

SCIENCE.

A History of the Mathematical Theories of Attraction and the Figure of the Earth, from the Time of Newton to that of Laplace. By I. Todhunter, M.A., F.R.S. Two Volumes. (London: Macmillan & Co. 1873.)

SCIENTIFIC men must often experience a feeling not far removed from alarm, when they contemplate the flood of new knowledge which each year brings with it. New societies spring into existence, with their Proceedings and Transactions, laden with the latest discoveries, and new journals continually appear in response to the growing demand for popular science. Every year the additions to the common stock of knowledge become more bulky, if not more valuable, and one is impelled to ask, Where is this to end? Most students of science who desire something more than a general knowledge, feel that their powers of acquisition and retention are already severely taxed. It would seem that any considerable addition to the burden of existing information would make it almost intolerable.

It may be answered that the tendency of real science is ever towards simplicity; and that those departments which suffer seriously from masses of undigested material are also those which least deserve the name of science. Happily, there is much truth in this. A new method, or a new mode of conception, easily grasped when once presented to the mind, may supersede at a stroke the results of years of labour, making clear what was before obscure, and binding what was fragmentary into a coherent whole. True progress consists quite as much in the more complete assimilation of the old, as in the accumulation of new facts and inferences, which in many cases ought to be regarded rather as the raw materials of science than as science itself. Nevertheless, it would be a mistake to suppose that the present generation can afford to ignore the labours of its predecessors, or to assume that so much of them as is really valuable will be found embodied in recent memoirs and treatises. Of the dangers of such a course History gives ample warning. The case of Young will at once suggest itself as that of a man who from various causes did not succeed in gaining due attention from his contemporaries. Positions which he had already occupied were in more than one instance reconquered by his successors at a great expense of intellectual energy.

It is one of the objects of books like Mr. Todhunter's to check this deplorable waste of labour, by bringing together all the writings of the older authors which bear on certain selected subjects. No one who has not tried it, can imagine how much time is lost in hunting backwards and forwards through endless Transactions and periodicals in various tongues, many of them difficult of access, for memoirs of which after all the value may prove very trifling. When the problem in hand is of no great difficulty, the student may even find an independent attack the shortest in the end. There cannot be two opinions as to the great importance of the work that Mr. Todhunter has undertaken.

It is one demanding much clear-sightedness and patience, and we are not surprised to learn that it occupied seven years. Some may think that the same talents and industry would be better devoted to original work; but it must be allowed that to elucidate and render accessible the labours of others may be a service as valuable as the addition of new material to the common store. To deny this would be to commit an error parallel to that of some economists, who glorify the labourer and manufacturer at the expense of the merchant.

The theory of Attraction and of the Figure of the Earth is a subject to which most of the greatest mathematicians have contributed. In itself of great interest, it was the occasion of the invention of the mathematical weapons which have since been so successfully used in almost all branches of Physics. The first steps, or rather strides, were made by Newton. His theorems with respect to the attraction of spheres,—that a spherical shell exerts no force on an internal particle, and attracts an external one exactly as if its mass were concentrated at the centre—are the foundation of the whole subject, and it is difficult to imagine anything more simple and beautiful than his exposition of them. To him we owe the first investigation of the earth's figure. A mass of uniform attracting fluid, if at rest, would evidently shape itself into a sphere. The question is, How will this form be altered when the whole revolves? What will be the effect of the centrifugal force? Newton's solution of this important problem was not complete; but on the assumption that the form might be that of an oblate spheroid—or, as Mr. Todhunter calls it, an *oblatum*—he investigated the degree of eccentricity and the law of variation of gravity at the surface. Though progress had been made by Stirling and Clairaut, the gap in Newton's work was not fully filled up until the time of Maclaurin, who proved conclusively that the conditions of relative equilibrium were satisfied in the case of an *oblatum*.

The period embraced in Mr. Todhunter's history extends to the first quarter of the present century. Perhaps this was the best point at which to stop, though a slight sketch of more recent discoveries would have been acceptable. The most important part of the work considered as a book of reference, is probably the analysis of the memoirs of Legendre and Laplace; but for the genuine student of scientific history the earlier efforts are of equal, if not superior, interest. The whole work bears evidence of its author's well-known care; and the claims of the various mathematicians whose labours are reviewed, appear to be discussed with perfect impartiality. D'Alembert and Ivory are perhaps those whose reputation suffers most in Mr. Todhunter's hands, while Laplace takes a position even higher than had been assigned to him by previous writers. Without a complete survey of earlier memoirs, it was difficult to know how much of the *Mécanique Céleste* was original, and how much borrowed; for Laplace, like too many modern French writers, was not in the habit of acknowledging his obligations.

In such a work as that before us accuracy

and completeness are almost everything, and minor defects may well be passed over. Of course many points are discussed which admit of some difference of opinion. In estimating the value of various contributions to his subject, Mr. Todhunter shows perhaps a tendency to prefer rigour of treatment to originality of conception. But the strictest proof is not always the most instructive, nor even the most convincing. To deserve the name of demonstration an argument should make its subject-matter plain, and not merely force an almost unwilling assent.

RAYLEIGH.

Numismatic and other Antiquarian Illustrations of the Rule of the Sassanians in Persia, A.D. 226-652. By Edward Thomas. (London: Trübner.)

It is not too much to say that the greatest numismatic enterprise of this century, so far as the coins of the East are concerned, is about to be undertaken in the publication of a new edition of Marsden's *Numismata Orientalia*. In this work, which should deserve the name of a Cyclopaedia of Oriental Numismatics, it is proposed that individual sections should be separately and exhaustively treated by some of the best-known numismatic scholars of Europe.

The volume now before us is an outline of what we may look for in that division of this great work which will deal with the coins of the Sassanian Fire-worshippers, and which has been entrusted to Mr. Thomas. This last essay, which is avowedly intended as a basis for a larger treatise on the same subject in the *Numismata Orientalia*, sufficiently proves that the hope for a more complete realisation of the high expectations which Mr. Thomas's former works have raised and sustained rests on firm ground.

It may be objected that the subject of the coins of the Sassanians has already received full justice at the hands of Dr. Mordtmann, and that a second treatise would be superfluous; but to this we cannot assent. Dr. Mordtmann's work, excellent as it is as a summary of what had been done by Mr. Thomas and others, before its publication, in the branch of coin-lore of which it treats, and as the exponent of Dr. Mordtmann's own opinions, yet leaves room for much addition and improvement, not to say correction; and surely no hand is better fitted for this task than that from which a very great part of Dr. Mordtmann's book is derived. A comparison of the *Erklärung der Münzen mit Pehlvi-legenden* with Mr. Thomas's last work will show many points of difference, some of which are of no little importance, and all of which demonstrate the boon which will be afforded to numismatists when Mr. Thomas carries out his intention of writing an extended treatise on Sassanian coins. Moreover, the English scholar has a considerable advantage over Dr. Mordtmann in being able to bring into the field all the artillery of the British collections, to which the industrious German was unable to obtain access.

It is partly in the character of a harbinger of a larger work, and partly for its own intrinsic merit, that we welcome Mr. Thomas's essay: it is for the more com-

plete and systematic treatise that we would reserve our criticism, though we cannot forbear to mention a few of the salient points of the volume now before us.

Most of us know the general appearance of a Sassanian coin, with the bust of the king (sometimes with his queen and son) on one side, and on the other the fire-altar, with the worshipping monarch or attendant *mobed*. The chief subject of interest on the obverse is the form of the king's tiara and his mode of trimming and curling his beard. Besides the fact that a coin with illegible inscriptions may often be satisfactorily assigned to its proper place by indications in the head-dress of the king, an additional interest accrues to this portion of the coin-representations when we find that the changes in the head-dress were probably typical of an accession of territory and a consequent assumption of greater state and sovereignty. On this Mr. Thomas has some interesting notes, which we quote; he is speaking of the founder of the Sassanian dynasty:—

"Ardeshr's earliest coinage clearly imitates, in the treatment of the head-dress, the recognised style of the front face of Vologeses V. This assimilation may either refer to his assumption of the sovereignty of Johar, the local ruler of Persopolis, during the lifetime of Vologeses V., or may, perhaps, be designed to indicate the later defeat of Vologeses VI. in Kermán. The next gradation in the State currency is indicated by Ardeshr's modified reproduction of the archaic plaited hair and beard, which was probably intended to denote the revival and reassertion of the ancient Persian empire, combined with the reverse device of the new Zoroastrianism matured amid the Fire-temples of the South. The original Parthian tiara of Mithridates I. (B.C. 173, 136), is associated with an absolute likeness of that great conqueror, who, in effect, raised the Parthian monarchy to the higher rank of the Arsacidan empire. There can be no question, in this instance, as to the modern profile, which is absolutely identical with some of the more finished portraits of Mithridates I. on his own proper coins of four centuries' prior date. It is evident that the head of the Sassanian period was an intentional copy of the old model, and it is in no wise to be confounded with any attempt at a subdued likeness of Ardeshr himself, whose type of countenance will be seen to differ entirely, both in the numismatic and sculptured examples, from the physiognomy of the Parthian Emperor; while Ardeshr's name and titles which surround the central device declare his accession to the supreme authority, and the fall of the last scion of the house of Arsaces, the bust of whose most prominent ancestor appears upon the field, and on the reverse, the new symbol of the Sassanian Fire-altar supersedes the Parthian Bowman. These changes of course point to Ardeshr's final conquest over Ardeván and the consolidation of the restored Persian monarchy. The latest development of emblematic varieties is to be found in the mural crown adopted by Ardeshr and copied by Sapor, which would appear to have been a rehabilitation of the coronet of Darius the Mede, the adversary of Anthony. The appropriation of which may be taken to allude to the final and hard-won conquest of Atropatène and Armenia."

However much we may be disposed to question the possibility of any absolutely certain interpretation of this symbolism or any indisputable arrangement of the sequence of types, we must yet admit the reasonableness of Mr. Thomas's view, as well as the real importance of the line of study.

Out of many interesting points in the

book we select one which Mr. Thomas seems satisfactorily to have established. On the reverse of all the early Sassanian coins there is, round the fire-altar, an inscription containing the name of the king and a disputed word. On a coin of Ardeshr this inscription would stand thus:—"Artahshatr *nurwazi*." Mr. Thomas, basing his opinion on the connection between *nurwazi* and *nurus* "a fire-temple," (in the Pahlavi vocabulary of the Farhang-i-Jehāngiri), translates the inscription "Ardeshr's Fire-altar." But Dr. Mordtmann, objecting that *nurus* is nothing but the Greek *ναός* (a consideration which surely does not affect the question), substitutes the reading *nurwaz*, and translates "the supplicating" ("der Anrufende") Ardeshr. This rendering is intelligible enough on those coins on which the king is represented praying at the side of the altar; but, as Mr. Thomas argues, how can we account for the inscription being identically the same on coins which have only the bust of the king on the obverse and no representation of him by the altar on the reverse? Mr. Thomas has brought forward a very strong piece of evidence for the correctness of his reading, by his interpretation of the legend on a coin of Varahrán II. If his translation of this legend, *atir zi ladi* [*kadi*] *Varahrán* "fire of King Varahrán," be admitted,—and it is difficult to see how it can justly be rejected (waiving the discussion as to the substitution of *k* for *l* in *ladi*),—his rendering of *nurwazi* is made probable almost to demonstration. One of the coins (no. 40) published in this essay is most remarkable, and worthy of careful study. On it Mr. Thomas reads the words *avasta murta*, "The Image of Avesta." The Pahlavi characters of the former word present no ambiguity: and there can be little doubt about the correctness of *murta*. The interest of the coin is, therefore, not only religious but also philological, as it bears upon the orthography of the name Avesta. We would also call special attention to the sections on the mints of Feróz and his successors, and on the temporary issues of Hormazd III. The engravings of the coins are boldly yet delicately executed, and contrast favourably with the light outlines of the recently published plates of the late General Bartholomäi's collection.

STANLEY LANE POOLE.

DR. STRAUSS.

THE most famous of the destructive theologians of Germany—the only one, we may say, whose name is a household word in this country as well as his own—has just died. It is nearly forty years since the publication of Strauss's *Leben Jesu* broke up the hollow truce between Reason and Tradition which the dominant philosophy had effected. To the religious public of Great Britain, innocent of Hegelianism, and very little acquainted with the Old-rationalistic method of scriptural interpretation against which half of Strauss's strictures are directed, this book has always remained really incomprehensible. Strauss's acceptance of Christian dogma, while he rejected the Christian story, has seemed to most a feeble accommodation-theory, hastily thrown up to meet the convenience of free-thinking ministers: and this view has been confirmed by the author's subsequent abandonment of this philosophical quasi-orthodoxy. But in the mere combination of what

claimed to be a kind of dogmatic orthodoxy with a disbelief in miracle, Strauss followed strictly in the footsteps of Hegel, whose influence in 1835 was still nearly at its height; for with all its air of conservatism, in Hegel's doctrine of Nature the repudiation of the miraculous is as much implied as it is in the assumptions of modern physical science: and the theological dispute between the "Right" and "Left" centres, into which Strauss was said to have split the Hegelian school, turned much more on the content of the Hegelian neodogmatism than on its relation to the Gospel narratives. In fact, Strauss' treatment of these narratives is a particular answer to a question which Hegelianism obviously suggests: "If Christian dogma is profoundly rational, and if at the same time Miracle is to be excluded from our representation of the development of the world in time, how then did the narratives of miracles grow up?" Some originality was required to find the answer in an adaptation of an already current method of interpreting polytheistic fables; but the effectiveness of Strauss' work lies less in his exposition of the mythical theory than in the elaborate and exhaustive manner in which the ground was cleared for it. In the region of historical criticism the Myth-theory was soon thrown into the shade by the Tendency-theory of Baur and his disciples: which has at least the advantage of giving a more definite stimulus to historical research: and when Strauss nearly thirty years afterwards re-edited his *Leben Jesu* "für das deutsche Volk," it was regarded by sober critics as an extravagant exaggeration of what is undoubtedly a *vera causa* of miraculous narratives.

Strauss' style has merits very rare in German prose, to which we may attribute a part of the influence of his writings. In the utmost intricacy and complexity of the details with which he deals, his exposition never loses any of its vigour or lucidity: though often ungraceful, his writing has always a hard definite transparency which gives it the highest degree of controversial effectiveness.

His non-theological books represent rather the literary occupations in which a man, *destitué* and hunted by the world, takes refuge for a living or for consolation, but they do not attach themselves in any very definite sense to the main position which makes Strauss famous in the history of thought.

NOTES AND NEWS.

A MAGNIFICENT dolmen, apparently belonging to the stone age, has been discovered near Conflans, where the Oise flows into the Seine. The barrow is two mètres wide, two deep, and eight long. The vertical walls are lined with slabs of stone, and have a superficial extent of two mètres. In this ancient Celtic burial-place, no less than seventeen human skeletons have been found, besides a number of daggers in cut silex, stone hatchets and stone vases. It is divided into three chambers separated by slabs of stones placed vertically, and in this and in all other respects seems, according to the description given of it in the *Chronique*, to agree exactly with the dolmens in Brittany described in James Ferguson's *Rude Stone Monuments in all Countries*.

The dolmen now discovered has been bought by the Musée de Saint-Germain, and will, it is understood, be built up in trenches outside the Museum.

Effect of Variations in the Nature of Food on the Composition of the Bones.—In a series of researches recently published by H. Weiske and E. Wildt in the *Zeitschrift für Biologie* (Band vii. and viii.), they showed, from experiments on adult goats, that the withdrawal of lime or phosphoric acid from the food produced little or no influence on the composition of the bones, and, in particular, did not render them more friable, although it did interfere with the general nutrition of the animals, and ultimately led to death. Still more recently (*Zeitschrift für Biologie*,

Band ix., p. 541) they have made an additional series of experiments, in which the subjects have been young lambs of the Southdown breed. Their age was about ten weeks. One of these was fed on food poor in phosphoric acid, a second on food poor in lime, and a third on normal diet; the latter, of course, serving as a means of comparison. After the lapse of fifty-five days, the animals were killed and an analysis of various bones made. The general result was that, just as in adults, so in young animals, no remarkable change was produced in the composition of the several bones by the different diets. In other words, the composition of the bones is independent of the nature of the food. The bones were, however, stunted in their growth as compared with those of the animal supplied with normal diet.

Origin and Development of the Coloured Blood Corpuscles in Man.—Dr. H. D. Schmidt, of New Orleans, in a communication read before the Royal Microscopical Society (January 7, 1874), stated that for the last four years he has been engaged in the study of the development of the nervous tissues, but has also taken the opportunity of paying some attention to the development of the coloured corpuscles of the blood. In one instance he obtained a human ovum, which, with its membranes, did not exceed $2\frac{1}{2}$ centimètres in diameter, half-an-hour after its expulsion. On opening the membrane a rudiment of an embryo appeared with its umbilical vesicle. The walls of the vesicle contained blood-vessels; and when a small portion was cut away and examined under the microscope, the walls of the vesicle were found to be composed of very large and clear hexagonal cells containing a large round nucleus, which proved to be the primary organs of origin of the coloured blood-corpuscles. The blood-corpuscles contained in the anastomosing canals were of the usual yellowish tint, entirely homogeneous in composition, soft, elastic, and round. No trace of the existence of a membrane could be discovered in their fresh and unchanged condition. The greater portion of them were of the size of the fully developed human corpuscles, and differed from these in no way, excepting that the central depression was either wanting, or but slightly marked. The larger specimens, consisting of breeding or mother corpuscles, had a diameter varying from $\frac{50}{100}$ to $\frac{55}{100}$ mm., or even more. These bodies contained within their substance embryo blood-corpuscles, and many of them furthermore distinguished themselves from other blood-corpuscles, by certain regularly formed concave depressions on their surface, corresponding to the segment of a sphere, and indicating the place where the young corpuscle had been detached from the mother body. Whilst the larger of these mother bodies contained from three to four embryo corpuscles, the smaller ones usually contained but one. From careful examination of these bodies, he believes that the process of development of the corpuscles in the mother cells consists in the separation of a small globular portion in the substance of the corpuscle, and near the surface. This, enlarging at the expense of the parent cell, makes its way to the surface, and, finally detaching itself, leaves behind a concave depression corresponding to its form. Judging from the number of depressions presented by many mother corpuscles, as well as from the young blood contained in them, this process appeared to have repeated itself from three to four times in the same body. The reproductive power did not always seem to be in a constant proportion to the size, as in some instances the smaller ones showed as many depressions as the larger. In some instances also three generations were represented in one body, the young corpuscle bearing with its substance another early corpuscle even prior to its own birth.

Methods of investigating the Nervous System. An elaborate paper, by W. Betz, with this heading appears in the last part of Schultze's *Archiv für microscopische Anatomie* (Band ix. p. 101). He

first describes the mode of hardening the cord and pons Varolii; next the mode of preparing transverse sections; thirdly, the mode of colouring them; and lastly, the mode of mounting them. In regard to the first point, he recommends the whole spinal cord to be removed from the dura mater, and suspended for from one to three days in a tall jar containing seventy-five to eighty per cent. spirit, just stained yellow with iodine. At the expiration of this time the cord is to be taken out and the pia mater and arachnoid stripped off, and it is then to be returned to the spirit, which will now be found to be nearly colourless, owing to the absorption of the iodine by the nervous tissue; from day to day a drop of a strong solution of iodine in spirit is to be added till the metalloids cease to be absorbed—which is usually the case within six days. It is now removed to a three per cent. solution of bichromate of potash. The cervical region hardens most rapidly; the dorsal region most slowly. The temperature should be cool, but not cold. The completion of the hardening process is recognised by the fluid becoming cloudy, and the formation of a brown precipitate. The fragments may then be washed and preserved in a half to one per cent. solution of bichromate of potash for many months. Proper directions are given for the cerebellum and for the cerebrum. To make good sections, M. Betz has invented a microtome. The colouring is effected by placing the sections in frequently-renewed water for one to three days, and then immersing them in carmine-ammonia. The specimen should be put up in Dammar resin.

Functions of the Cerebrum.—A short pamphlet has just been published by M. Dupuy on this subject, in which he gives the details of a considerable number of experiments he has made with a view of testing the accuracy of Professor Ferrier's researches, and he has arrived at the following conclusions:—

1. That it is possible by exciting certain points of the cortical layer of the cerebrum to obtain contractions in every limb.
2. That as a rule the fore-limb of the opposite side is that affected.
3. That the electric current must be propagated to the base of the cerebrum to excite either the nerves which arise from it, or the base itself, or the pons Varolii.
4. That if the dura mater be electrically excited, contractions are observed in the fore-leg, and generally in that of the opposite side.
5. The fact that the galvanoscopic frog is thrown into a state of contraction when its nerve touched some point of the cerebral mass far from the point excited, confirms the view that the electric current is propagated.
6. Contrary to the effects obtained by Ferrier, M. Dupuy has never been able to obtain any effects upon the tongue either of projection or of retraction.
7. The whole cortical layer of the cerebrum is probably a centre of reflexion for a certain kind of sensibility capable of exerting a reflex action on motor or sensory nerves, but that its preservation is not indispensable for the manifestation of voluntary and even intelligent action.
8. In the animals on which M. Dupuy has experimented, contractions of the opposite limbs can still be produced, even after the ablation of the optic thalami and corpora striata of the opposite side to that on which the irritation is applied.

A VERY interesting contribution to our knowledge of the phenomena of sensitiveness in the leaves of the sundew is contained in a paper by Mrs. Mary Treat, in the number of the *American Naturalist* for December 1873. She had chiefly observed *Drosera filiformis*, a New Jersey species with leaves large enough to entrap moths and butterflies as much as two inches across. In this species, as well as in *D. longifolia* and *rotundifolia*, the glands of the leaves in a short time curve round and completely enclose live flies or pieces

of raw meat (and in the last-mentioned species also a piece of apple), apparently deriving nourishment from them. By mineral substances, as dry chalk, magnesia, or pebbles, the glands were in no way excited, while a piece of wet chalk caused the bristles to curve round it, but they soon unfolded again, leaving the chalk perfectly free. This observation that the leaves of *Drosera* are not sensitive to inorganic substances is in harmony with unpublished observations of Mr. Darwin's and with those by Mr. A. W. Bennett, presented to the Bradford meeting of the British Association. But the most extraordinary of Mrs. Treat's statements is that in the case of *D. filiformis*, when a living fly is pinned at the distance of half an inch from the apex of the leaf, the glands and leaf itself bend towards the insect and at length completely envelope it. Notwithstanding that this irritability of the leaves of the sundew has been known since the time of Roth, who published on it in 1782, much has yet to be learned in regard to its physiological nature, its causes, and its object.

MESSRS. LAWES & GILBERT have published an exhaustive treatise under the title *Report of Experiments on the Growth of Barley for Twenty Years in Succession on the same Land*. The main results are the same as those previously obtained by the same gentlemen in the case of wheat; viz., that when the same crop is grown consecutively on the same ground for a series of years, mineral manures alone fail to enable the plant to obtain sufficient nitrogen and carbon to yield even a fair crop; that nitrogenous manures alone increase it very considerably; but that the largest crops are obtained when nitrogen and mineral manures are applied together. In the case of barley these combined manures gave, for twenty years in succession on the same land, rather more of both corn and straw than farmyard manure did, considerably more than the average barley crop of the country grown under a system of rotation of crops, and an average weight per bushel of between fifty-three and fifty-four pounds. Messrs. Lawes and Gilbert's treatise should be in the hands of every practical agriculturist.

THE Emperor of Austria has appointed Dr. Franz Brentano, late Professor of Philosophy at Würzburg, to the Professorship of Philosophy in the University of Vienna.

DR. A. G. THEORELL, of Upsala, has invented a most ingenious meteorograph, which by the agency of powerful electro-magnetic batteries can be made to register meteorological phenomena for a period of six or even eight months. It takes cognisance of, and registers independently of all further aid, the barometric and thermometric conditions of the atmosphere, together with the degree of moisture, the force of the wind, and the direction and velocity of the atmospheric currents for the hour at which the instrument is set.

WE are informed that a number of persons at Zürich have entered into a compact to make such provisions as lie within their own power, to secure that their bodies shall after death be burnt, and not buried in the ordinary manner. This idea of cremation in opposition to burial is engaging the attention of professional and scientific men in other parts of the Continent. At Leipzig, Dr. Reclam has made it the subject of a special address, in which he minutely described the process by which, through the agency of excessive heat and by means of various chemical agents, human remains may in the course of twenty minutes, or less, be reduced to a handful of snowy white ashes, which may either be enclosed within a small urn for preservation, or be scattered abroad over the ground. The immediate cost of this process of human cremation is estimated by the learned Professor at from 2 to 3 thalers; but he

conjectures that a sum of nearly 15,000 thalers, or about 2,140*l.*, would be required to defray the original expenses of the buildings and apparatus necessary for the process.

M. FERDINAND DELAUNAY has read before the last two meetings of the *Académie des Inscriptions et Belles-Lettres* a paper detailing the results of an examination of parts of the Sibylline books, with a view to the determination of their date and authorship. That these books, as they have reached us, are composed of a patchwork of fragments of diverse dates, was first maintained by M. Alexandre, who proceeded to indicate in Book III. two fragments, the older of which he attributed to an Alexandrian Jew, who wrote B.C. 169. M. Delaunay recognises a much larger number of fragments, dating from the end of the third century B.C. to the commencement of the Christian era; he also sees in the older portions the productions of the Jews of Alexandria. He divides the two fragments of M. Alexandre each into four separate bits of different dates, one of them, the apostrophe to Greece, written about the epoch of the Achaean League. About 200 lines of this book consist of mere shreds put together without any coherence or continuity of ideas. Some of these seem to belong to the time of the Macedonian War and the reign of Ptolemy Philometor. None of the fragments of Book III. present the complete text of an oracle, while Book IV. seems on the other hand to be complete, and to form a unity. M. Delaunay promises to continue his investigation of the question.

M. HALÉVY, in a paper read to the *Société de Linguistique* upon the Talmudic and mediaeval Asmodeus, and his non-identity with the Persian *Aeshma daéva*, has advanced arguments to show that the origin of the Zend-Avesta is posterior to the age of Alexander. He has also discussed the geography of the Zoroastrian books, the centre of which he places in Armenia. These views have led to a discussion between their holder and Messieurs Oppert and Robiou.

DR. DRECHSLER, Director of the Mathematico-Physical Cabinet at Dresden, has had the happy idea of reproducing the famous Arabic celestial globe, preserved in the museum of Dresden. He has also published a pamphlet, containing a detailed description of it. Seven such globes are to be found in European museums, viz.: two in London (at the Royal Astronomical and the Royal Asiatic Society), two at St. Petersburg, one in the collection of the late Cardinal Borgia, one in Paris, and the one in question at Dresden. Out of these seven the last is really the most worthy to be reproduced, on account of its having been constructed about the year 1279 A.D., by Mohamed ben Mowayed el-Ordhi (not el-Ardhi, as Dr. D. writes, Ordhi being a small place near Tadmor or Palmyra), under the guidance of his father, the celebrated astronomer Mowayed, who made astronomical observations, at Maragah, together with Holagu, king of the Mongols. In spite of the descriptions, more or less fully given by Assemani, Sedillot, Professor B. Dorn, and Schier, of some of the above-mentioned globes, Dr. Drechsler's reproduction will be most welcome to students of astronomy, for nothing can give a better idea of a globe than a fac-simile like this, the technical execution of which is excellent. The descriptive pamphlet is rather meagre, and does not add much to the explanation of the names of the stars to be found on the globe. All Arabic sources having been exhausted by Dr. D.'s predecessors, he ought to have resorted to the works of Jewish astronomers, such as Abraham Ibn Ezra, Levi ben Gerson, and others, who translate the Arabic names of the stars into Hebrew. Dr. D. has completed his work in a manner worthy of his reputation as an astronomer.

At a meeting of the *Académie des Inscriptions et Belles-Lettres* on January 30, M. Grivel sought to show that the biblical Nimrod is no other than the Babylonian god Merodach. The name is a

Semitised (Nifal) form of the Accadian Amar-ud, "the circle of the sun," from which the Assyrian Merodach was derived. Mr. Sayce pointed out the same fact in a paper read before the Society of Biblical Archaeology about a year ago. M. Grivel remarked that Merodach is called "the messenger who goes before the Lord," and stated his belief that this was the original reading of the passage in Genesis, afterwards corrupted by a copyist who had mistaken a letter, and so changed "messenger" into "hunter." Such a view, however, is by no means necessary, since Merodach is regarded as a "mighty hunter" in the mythological tablets, where we find him accompanied by four divine dogs, "the Avenger, the Devourer, the Seizer, and the Consumer" (W. A. I. iii. 56). The identification of Nimrod with Merodach seems quite certain when we consider, what M. Grivel does not appear to have noticed, that Nimrod and Asshur stand in the same relation to one another in the Old Testament as Merodach and Asshur in the inscriptions. The one was the patron-deity of Babylon, the other of Assyria.

BLOW after blow falls on the University of Berlin. Mommsen has left, and now we hear of the death of Moritz Haupt. He died on February 5, at the age of sixty-six. He began his professorial career at Leipzig, under Gottfried Hermann, whose daughter he married. His lectures, both on Latin and German literature, which he delivered at Leipzig, were most attractive and animated, though sometimes marred by personal invective. In his Latin Society at Leipzig, he formed some of the best scholars of the day. When in 1853 he went to Berlin, to succeed his friend Lachmann, he lectured chiefly on Latin and Latin literature, though, like Lachmann, he always kept up an active interest in German scholarship. In exact and critical knowledge of the classics, Haupt was probably without an equal in Europe. In politics he was a liberal, before the days when liberalism was a safe amusement. Like Mommsen, he was once deprived of his professorship on account of his political opinions. He was an intimate friend of the Grimms, and of Hoffmann von Fallersleben, whose death we recorded some weeks ago. We are glad to learn that the rumour of the death of Professor Petermann, one of the best Oriental scholars of the University of Berlin, is contradicted.

THE January number of the *Journal des Savants* contains an article by M. Renan, on Ignatius of Antioch. The only one of the Epistles ascribed to Ignatius which he accepts as authentic is that to the Romans.

A CURIOUS statement appears in the *Rappel*. M. Charles Blondel, a young Greek scholar, has left among his papers a copy made by himself from an ancient MS. of the *Iliad*, which contains the same scholia as the Codex A at Venice, and supplies *lacunae* in the Venice scholia, extending, it is said, to 935 verses. As neither the place nor the age of the MS. is given, we must wait for more exact information.

MEETINGS OF THE WEEK.

ROYAL GEOGRAPHICAL SOCIETY (*Monday, Feb. 9*).

At the ordinary fortnightly meeting of this society, on Monday evening last, the President, the Right Hon. Sir Bartle Frere, in the chair, a paper was read on "A Journey outside the Great Wall of China," by Dr. S. W. Bushell, physician to the British Legation at Peking. The route taken was north-westerly, through Inner Mongolia to Kalgan, and thence north-easterly to Dolomnor (a large town the exact position of which was previously unknown), and Shang-tu, the old northern capital of the Yuan dynasty, described in glowing terms by Marco Polo. The ruins of Shang-tu, built by the famous Kublai Khan, were identified by the existence of a marble tablet, with an inscription of the thirteenth century. It is the

* What would some recent writers on vivisection say to this experiment?

place referred to by Coleridge in his well-known lines:—

"In Xanadu did Kublai Khan
A stately pleasure dome decree," &c.

The author found the site a complete desert, overgrown with rank weeds and grass, the abode of foxes and owls, which prey on the numerous prairie rats and partridges. The walls of the city, built of earth faced with unhewn stone and brick, are still standing, but are more or less dilapidated, and the enclosed space is strewn with blocks of marble and other remains of large temples and palaces, while broken lions, dragons, and the remains of other carved monuments lie about in every direction, half hidden by the thick and tangled overgrowth. From Shang-tu the author travelled south-easterly past the great enclosed park called the Imperial Hunting-grounds, to the city of Jehol, and thence to Peking. A second paper was read on a Chinese subject by Mr. George Phillips, entitled "Notices of Southern Mangi."

SOCIETY OF TELEGRAPH ENGINEERS.

ON Wednesday last, Mr. Holmes read a preliminary paper on the History of Torpedoes, which was followed by a short discussion. It will be followed on Wednesday week by a paper on the use of torpedoes in war, which, with the discussion upon it, is expected to be of the highest interest.

ROYAL SOCIETY (Thursday, Feb. 12).

A PAPER by Sir B. C. Brodie, on the Synthetic Formation of Formic Aldehyde, was read. By submitting a mixture of carbonic acid and hydrogen to the action of the inductive discharge, the author had obtained a gaseous mixture which contained in 100 parts (after the removal of carbonic acid and carbonic oxide, and deducting a small quantity of nitrogen), 97.14 parts hydrogen, 0.1 marsh-gas, and 2.76 formic aldehyde. He considered that the reaction might be represented by the equation, $CO^2 + 2H^2 = CH^2O + H^2O$. Dr. E. A. Parkes gave an account of experiments on the Influence of Alcohol (brandy containing about 50 per cent. absolute alcohol) on the Temperature of the Body. The experiments were made on healthy soldiers, and care was taken to guard against the disturbing effects of exercise and food. The general result was a slight lowering of temperature, at most scarcely exceeding 0.4° Fahr., after administering brandy. Professor Tyndall gave a more detailed account of his researches into the Acoustic Transparency of the Atmosphere (to which reference has already been made in the ACADEMY), illustrating his conclusions by an experiment which proved that sound is to a great extent obstructed by a succession of alternate layers of carbonic acid and coal-gas. This effect Professor Tyndall, following Humboldt, attributes to the partial reflections of the sound-wave at the separating surfaces of the gaseous layers of different densities. A striking confirmation of this explanation was afforded by an experiment, devised by Mr. Coterell, which was exhibited to the meeting. Two tin tubes, each about a yard long, were placed horizontally, making an acute angle with each other, thus

A magneto-electric bell enclosed in a padded box was placed at A, a sensitive flame at B, and another sensitive flame at C. When the bell rang the flame at C was affected, while that at B remained quiet; but on placing a batswing gas-flame at D, or merely allowing the column of heated air from the flame to rise up past the ends of the tubes, the sound waves were reflected along the tube D B so as to agitate the flame at B, while in this case the flame at C was unaffected by them.

MATHEMATICAL (Thursday, Feb. 12.).

PROFESSOR CLIFFORD read a paper on the Foundations of Dynamics; urging that force should be defined as rate of change of momentum considered as dependent upon position of surrounding bodies, and statics then founded on the doctrine of momenta. Remarks were made by Mr. Perigal, Mr. Wilkinson, and Mr. Moulton. Professor Clifford read a second paper on the Free Motion of a Solid in Elliptic Space.

DR. DORAN lectured last night at the Royal Institution, on the "Opponents of Shakspeare."

FINE ART.

Richard Wagner: his Tendencies and Theories. By Edward Dannreuther. (London: Augener & Co.)

The Music of the Future: a Letter. By Richard Wagner, translated from the original German by Edward Dannreuther. (London: Schott & Co.)

THE two works which we have placed together at the head of this article may be looked upon as mutually explanatory. Mr. Dannreuther, the author of the one and the translator of the other, is, so to speak, the chief apostle of Wagner in this country, and probably there is no man better qualified to treat of the art-problems propounded by the great German composer and author, whose writings are at this time arousing such attention and exciting such controversy among musicians. The pamphlet on 'Richard Wagner: his Tendencies and Theories' is, in the main, a reprint, with some additional elucidatory matter, of a series of articles which were published in the columns of the *Monthly Musical Record*; the letter by Wagner himself has not previously appeared in an English dress.

Whoever ventures to propound theories startling in their novelty and revolutionary in their tendency, is certain to excite strong feelings of partisanship. No living musician, probably, has at once such enthusiastic friends, and such bitter and determined enemies, as Richard Wagner. The latter fact is accounted for by Mr. Dannreuther in the following words:—

"There are three facts, I believe, to which nearly all the pen-and-ink quarrels concerning Wagner can be traced. First, that he published his criticisms and abstract theories at a time when his later works of art, by which alone these theories could receive their sanction, were little known, and but rarely and inadequately performed; secondly, that the social and political heresies, which he propounded by way of clearing the air and finding free breathing-space for his artistic ideals, frightened people; and, lastly, that he now and then thought fit to point his moral by attacking living men of repute—Meyerbeer, for instance—in a most savage and merciless manner."

It is no easy task, within the limits of such an article as the present, to summarise the contents of these two interesting little books; and the difficulty arises from the fact that the chain of reasoning is so close and so continuous as to be almost incapable of further condensation. Mr. Dannreuther himself remarks with respect to Wagner's writings (and the observation will as justly apply to his own pamphlet), "they want elucidation, illustration, and translation into a more popular phraseology, rather than further compression." All that will be possible here will be to notice some of the

conclusions arrived at, referring our readers in most cases for the processes by which these conclusions are reached to the works themselves.

And first it should be distinctly understood that Wagner's music is not, as commonly supposed, the result of certain preconceived theories; but that, on the contrary, these theories have gradually formed themselves in his mind during the process of composition. This will be seen clearly from many passages in the letter on "The Music of the Future," which are too long to quote here, in which Wagner points out how, in composing, he was hampered by the insufficiency of ordinary operatic forms, and thus driven to enquire in what way they could be modified to meet his requirements. He possesses in an unusual degree the power of analysing his own mental operations, and of explaining them clearly to his readers. Being also pre-eminently one who thinks for himself, his writings are invariably worthy of attention even from those who may differ from his conclusions.

It must, moreover, be borne in mind, that Wagner is above and before all a poet. This even his bitterest enemies will hardly deny. Had he never written a note of music, such libretti as those of his *Tannhäuser*, *Lohengrin*, *Tristan und Isolde*, and, perhaps, most of all, the *Ring des Nibelungen*, would have stamped him as the possessor of no ordinary poetical gifts. There are certainly no operas existing in which the drama bears so important a relation to the music as the works we have named. And the ground of this importance lies in what is in fact the fundamental peculiarity of Wagner's theories. He maintains that under Beethoven music pure and simple has attained its highest possible development; that having arrived at this point it demands to be joined with some other art, such as poetry or painting, and (to quote Mr. Dannreuther) "he points to the aberrations in which we find modern music under the hands of Berlioz, where it tries to accomplish what poetry alone can do, or to the latest French operas à la Meyerbeer, where it tries to construct a drama out of its own means by way of proof." Wagner's ideal drama then may be defined as one in which, instead of the music being the most important factor, as it is e.g. in the operas of Mozart, all the various arts, music, poetry, painting, mimetics, shall be fused and amalgamated into the new whole which he calls *das Drama*. He endeavours to "lead the full stream of Beethoven's music into a dramatic channel," and maintains that the music will thereby, instead of occupying, as might be anticipated, only a secondary position, acquire a power and a significance which, unaided by other arts, it could never hope to reach. How far this is the case can of course only be determined by the actual effect in performance of works constructed on this plan, and of this musicians in this country have as yet had no opportunity of forming an opinion, as the only work of Wagner's which has at present found its way to England is *Der Fliegende Holländer*—an opera which, while containing much that is highly characteristic of its composer, is by no means a complete exemplification of his later views.

It is this new combination of music with the other arts to which Wagner has given the name of the "art-work of the future."

Wagner, however, as Mr. Dannreuther points out in his essay, does not regard his late works, written as they are on this plan, as more than the germs of a new development in art. How far these works will exert a permanent influence on the composition of dramatic music it would be perhaps somewhat hazardous to prophesy. Mr. Dannreuther thinks that his influence is too great to be ever ignored; but it seems at least doubtful whether he will found a school of composers, as some of his great predecessors have done; nor is the reason for this far to seek. Much of the indisputable effect of Wagner's great lyric dramas depends undoubtedly on the masterly mutual adaptation to one another of poetry and music. He has himself been able to carry his own theories into practice, because he is at once poet and musician. But what other living composer is capable of writing such *libretti*? or what other poet could so accurately fit the appropriate music to his own dramatic conceptions? Wagner's works are in this respect perfectly unique, and it would be difficult, almost impossible, to find two men, one to write the drama, the other to set it to music, whose joint production should possess that perfectly homogeneous character which we find when both words and music emanate from the same brain. As regards mere externals, he can of course be imitated; other composers can copy his method of thematic treatment, his orchestration, nay, even his melodic style; but the one distinguishing feature which more than any other characterises his works—the wonderful "mutual penetration" (*Durchdringung*) of music and words—is hardly likely to be reproduced.

In the second section of his pamphlet, Mr. Dannreuther says that the real question at issue is not that of the relative inventive powers of various composers, but of the musical form in which their melodies are to be embodied. He gives us an abstract of the historical development of the opera as Wagner sketches it in his *Oper und Drama*, and points out more especially the utterly unsatisfactory character of the older operas as a whole, frequently owing to the miserable imbecility of the *libretti*. And here it may be remarked, parenthetically, that Mr. Dannreuther is not one of those injudicious and one-sided admirers of Wagner who attempt to exalt him by depreciating all other composers. Many of his foolish friends, abroad rather than in this country, have, by abusing everyone else in order to glorify their idol, done his cause as much or more harm than his strongest opponents. To this Wagner himself would be no party: he is indeed always ready to acknowledge the beauties to be met with in the works of his predecessors, but, as he himself says, it was precisely the combination of the wonderful dramatic moments with the veriest platitudes which showed him the unsatisfactory character of the present method of combining music and words, and induced him to look for a remedy. After tracing the history of opera down to its latest phase—the modern French "grand opera" of Meyerbeer on the one side, and the "naked, absolute, ear-tickling melody"

of Rossini on the other—Wagner arrives, by steps for which the reader must refer to the pamphlet itself, at the conclusion that either music or the drama alone is insufficient to produce a really satisfactory opera. The true solution of the problem is to be found in the union of all the arts upon equal terms, instead of music, as hitherto, taking the chief place, and the other branches of art holding a merely subordinate position. Music must thus forego some of her pretensions to pre-eminence, but, says Wagner, she thereby gains instead of losing.

The first and most obvious result of this perfect assimilation of music and words is the entire avoidance of all repetition of the text, and consequently the total abandonment of all the old-established forms—airs, duets, &c. And, as a matter of fact, in Wagner's last, and in many respects greatest work, the *Ring des Nibelungen*, we find no detached movements, scarcely even a fragment which can be extracted for concert performance. In the first part of this great tetralogy (*Das Rheingold*), there is not one single portion which can be effectively played apart from the whole, and only one ("Siegfried's Liebeslied") in *Die Walküre*, which follows. It must not, however, be therefore supposed that Wagner's music consists of nothing but a series of independent and incoherent phrases. On the contrary, few composers have pushed the science of what musicians call "thematic development" further than he. But this development in his hands is very different from what it has been with his predecessors, and requires repeated hearing, and even considerable familiarity with his music, for its just appreciation.

Wagner's method of treatment is somewhat as follows:—On the first enunciation of any salient point of the action, or the first expression of any particular sentiment, he accompanies it with its appropriate musical colouring; thereafter, whenever the thought either recurs or is suggested, the orchestra in its accompaniment recalls the theme which at first expressed it. But, just as in actual conversation, though the same thought might recur, one would never repeat *verbatim* a sentence previously uttered, so this musical suggestion comes back in a more or less varied form according to circumstances, yet always with sufficient clearness to remind the hearer at once of what is intended. A single illustration from the *Ring des Nibelungen* will perhaps make this point more intelligible. At the opening of the second scene of the *Rheingold*, the glittering pinnacles of the "Walhalla" (the castle in which dwell the souls of departed heroes) come into view. This scene is accompanied by a theme in the orchestra, which may be called the "Walhalla theme." In the first act of *Die Walküre*, Siegmund is telling Sieglinde how he lost his father. He describes how in battle he was separated from him, and never saw him again; he says, "My father I found no more," and at this point the orchestra in the most felicitous manner breaks in with the first strain of the "Walhalla theme," thus indicating that the father was gathered with the slain warriors. Numberless other instances of a similar kind might be given; but this one will suffice to explain the method

adopted. Hence though, on a first reading or hearing, Wagner's later works undoubtedly appear fragmentary and disjointed, they gain wonderfully on closer study, and every new reading reveals beauties hitherto unnoticed and unsuspected. With respect to his choice of subjects, his verse, melody, and orchestration, it must suffice here to refer our readers to Mr. Dannreuther's able elucidation of these points in his essay. We must also pass over his interesting remarks on Wagner's literary writings, and the biographical sketch contained in the pamphlet, and conclude with a few general remarks suggested by the subject under notice.

Wagner's musical dramas cannot, in the ordinary acceptation of the term, be called operas. We are speaking, of course, of his later works, in which his views on art are most fully illustrated. He must, in fairness, be judged from his own standpoint. As mere music, apart altogether from any dramatic considerations, few unprejudiced musicians would think of comparing *Die Meistersinger* or *Tristan* with *Fidelio* or *Don Juan*. To judge from what he has actually done, Wagner could not write a symphony which would equal the "Jupiter" or the "Pastoral." His principal instrumental productions, the "*Faust* overture," the "Kaisermarsch," and the "Huldigungsmarsch," interesting and impressive as they are, cannot be placed on a level with the greater creations of the tone-poets of "pure music." But in his own particular line of art, in the construction of the complex whole which he calls the "drama," in which music, poetry, scenery, and acting are all of equal importance, he stands alone; indeed no one has as yet attempted to rival him in this field.

It is therefore no matter of surprise that in this country Wagner should still be, to a large extent, entirely unappreciated. Though the thanks of all musicians are due to the Wagner Society for the specimens of his music which they have brought before the public, and though some of the detached pieces performed, such as the "Procession Music," and the Introduction to the Third Act of *Lohengrin*, have been warmly, nay enthusiastically received; yet any mere fragments of this kind give not the least idea of the composer's real strength, and almost remind one (without any malicious *arrière pensée*, be it said) of the old story of the man who showed a brick as the sample of a house. It may be doubted if there are twenty men in this country really qualified to form an opinion respecting Wagner—an opinion, that is, not obtained at second-hand, or founded on mere hearsay, but the result of an actual acquaintance with his works. There are only two possible ways of gaining this acquaintance. The first, and by far the best, where practicable, is the actual hearing of the works themselves on the stage. One hearing is not sufficient; they must be repeatedly listened to, in order to be fully appreciated. It may be interesting, as bearing on this point, to give the experience of a good musician, as related by himself to the writer of this article. He said: "When in Germany last summer I took the opportunity of going to see *Die Meistersinger*, and I attended three performances of it. From the first hearing I came away with

a bad headache; the music was so novel, and the strain on the attention so continuous, that I was thoroughly wearied. At the second performance I seemed to grasp the work much more thoroughly; and at the third it all became clear, and the impression it produced upon me was such as I have seldom experienced. It was *simply wonderful!*" The gentleman in question is a well-known London professor, and being a German, he could of course fully appreciate the connection between music and words which is so important a feature in the Wagnerian drama. And it is probable that the emotions he experienced would be aroused in others if only adequate opportunity of hearing the works were afforded in this country.

The only other, and a less satisfactory method of becoming thoroughly acquainted with Wagner's music is one which is beset with difficulties—the study of his full orchestral scores. The difficulties here are various. In the first place, the books themselves are so expensive (costing three or four pounds each, and some of them more), that they are beyond the means of many. But besides this, these scores are among the most elaborate and intricate in the whole range of musical literature, and there are but few musicians who have devoted sufficient time and practice to this branch of their art to be able to seize with the eye and hear with the mind's ear the effect of these complex orchestral combinations. Yet the instrumentation is frequently as much an integral part of the effect as the melody or the harmony. It might almost be said that in Wagner's hands the different instruments are often so many *dramatis personae*, for in many passages which might be cited the orchestration has a dramatic as well as a musical significance. He therefore who only knows these works in the pianoforte score cannot, at best, be said to more than half know them. But supposing that a musician has procured these full scores, and is thoroughly capable of reading them, his difficulties are not yet wholly overcome. He must, in addition, possess such a knowledge of the German language as to be able to follow every shade of the meaning of the *libretto*, in which he will hardly find a line which does not in some way bear upon the dramatic action. Without this thorough understanding of the drama, much of the significance of the music will escape him altogether. Then his imagination must be constantly on the stretch; he must figure to himself the progress of the stage-action, otherwise the subtle and ingenious "pantomime-music" (using the phrase of course in its wider sense) will appear meaningless. The reader will easily perceive that those who are in a position to estimate aright the value of Wagner's music without hearing it must of necessity be very few. Indeed the reading of one of his scores can only be described as a severe mental exercise.

It would be very interesting, did space permit, to trace the gradual development of Wagner's style from his earliest dramatic work, *Rienzi*, down to his latest and greatest, *Der Ring des Nibelungen*; but this article has already extended to such a length that this subject must be left for a future occasion. It would be premature as yet to hazard an

opinion as to the real place which he is likely to hold among composers; but it is impossible to deny him the possession of great originality, of remarkable poetic feeling, and of unsurpassed dramatic power. His day will probably come even in this musically conservative country; and time will no doubt ultimately award him his appropriate position in the "Walhalla" of musicians.

Ebenezer Prout.

THE DUDLEY GALLERY (Second Notice).*

THERE is not in this exhibition any landscape supereminent for importance and excellence combined. As examples of the higher level of work, we may take the contributions of Messrs. Toft, Howard, Harry Hine, and E. A. Waterlow.

Mr. Toft, who is a Dane, sends *The Courtyard of Koldinghues, Denmark, the Ancestral Castle of the Princess of Wales*. This is a moonlight view of a dismantled edifice, painted with much simplicity and directness, which do not however in any way exclude a full indication of the appropriate sentiment. The old historic building, left to the influences of Nature, has come (as we may perceive) to have as much natural as historic association. Mr. Howard is the author of two works—*Lanercost Priory, Cumberland*, and *Mushroom Gatherers*. They are both firm and definite renderings of the scenes depicted, with the sentiment inherent in them, interpreted, especially the second work, in a sad mood. In the former, the steady rapidity of the full-flowing stream under the light of sunset is well expressed; in the latter, the upward slope and the joyless group of trees. *The Pouckle Rock near Dublin*, by Mr. H. Hine, has been executed with manifest care, and shows a well-managed balance of the various qualities suitable to such a theme. Mr. Waterlow's work—*A Peat-moss near Loch Luer, Sutherland*—is the most immediately striking of all: the sky, dappled with sailing clouds, and stirred with moonlight, is vividly portrayed.

The Goodwin family are, as usual, represented on these walls. Mr. Albert Goodwin takes as his theme the words, "And they saw on the other side a pleasant land full of flowers and winding paths, and did hear the song of the singing-birds:" rather a ponderous induction to a simple little picture of children pacing along a river-bank in spring. This gentleman used to paint forcibly, and for effect. Of late years, however, he has been doing what Blake called "experiment-pictures;" has been essaying a different scale of colour, light and bright, and in result flat, but evidently with a serious and progressive purpose of study. Just now he seems to have got into a failing stage of this process: the present picture, while pretty enough, is too faint in handling, and even crude in tone. Mr. Harry Goodwin sends a large and commendable work, *Twilight by a river-side*. The same period of the day is treated by Mrs. Goodwin in her *Autumn Twilight—St. Catherine's Hill, near Guildford*. There is a good feeling of *succession* in this work: the daylight is waning, the dusk coming on, the present phase of beauty an intermediate one, too soon to lapse. Another impressive rendering of a beautiful sundown rapidly darkening is the *Hevham* of Mr. T. J. Watson. The *Return of the Beer Fleet*, by Mr. Hamilton Macallum, is among the more important of the sea-pieces, bright and telling, with no extreme elaboration. Similar qualities appear to much advantage in this gentleman's *Florence, from the Hotel d'Arno*; the sheen and motion of the river are given here with a very happy touch. Mr. Arthur Severn treats the same aspect of Florence on a much larger scale, and of course with a proportionate expenditure of means. On a near inspection, the picture is somewhat chilly and

* Mr. Hemy's name was twice spelled "Henry" in our last.

flayed in colour: this unpleasant appearance diminishes sensibly on a more distant view, but after all the work does not rank among Mr. Severn's best. His *Moonlight, Venice*, is very agreeable. *No Man's Land*, by Mr. Farren, stands high among the landscapes here. It exhibits a dreary heath, with scanty comfortless trees, and a dismal old white horse. Wind and rain-drift have their will with the scraggy boughs, and the clotted flanks and mane and tail. The sorry life here present will soon have yielded to the untoward influences, and other life, equally sorry, will succeed. *Kings and Ladies*, by Mr. Tristram Ellis, with figures by Mr. E. R. Hughes, looks cheerful after this. It presents a grove of beeches, leafless in winter; they have probably been studied from Burnham Beeches, and with some assistance from photographs. The whole is steadily and resolutely painted, with a creditable result. Another of the more prominent contributions is *The Mill at Rest*, by Mr. E. H. Fahey. Here the material is ample and pleasantly varied, and everything well rendered within a certain limitation: one only misses an ultimate touch of distinction and emphasis which would set the truly pictorial stamp upon the whole. In *The Wintry Sea*, by Mr. Edwin Ellis, there is a right sense of grandeur, desolation, and ceaselessness: sea and sky are almost fused together. *Salmon-Fishers off the Ayrshire Coast*, by Mr. Bannatyne, is another able and sympathetic study of sea, here severe and yet gentle in its blue-grey monotone. Two really satisfactory works are those of Mr. W. P. Burton—the *Old Monastery of the Dominicans, Ghent*, and *At Bruges*: the mottled surface of aged stone buildings, used to much wear and tear in their time, and capable of an indefinite further amount of it, is capably indicated. Other meritorious works are the *Evening, Morecambe Bay*, and *Near Gravesend, Sunrise*, of Mr. Holloway; *A Coast Scene*, by Mr. Sheffield; *Ponte Vecchio, Florence*, by Mr. Aston; *Evening, Barges off Greenwich*, Frank Dadd; *Orchardleigh Ponds, Somerset—Clearing the Weeds*, Alfred Parsons; *Ballard Down, Dorset*, W. J. Calcott; *The Thames at Waterloo Bridge*, H. M. Marshall; *Folkestone Harbour*, by Miss Fanny Seddon; *Pembroke College, Cambridge*, by Miss Colkett; *Rocks at Cullercoats*, by Mr. John O'Connor; and *Evening near Esker*, by Mr. Pritchett.

Mr. Charles Richardson is a very talented painter of animal life in combination with landscape, true in observation, forcible in handling, and extremely lifelike in result; there is no indirectness and no mannerism. His works are entitled *After Sunset, Westmoreland*, and *Mid-day. A Sheepfold in Surrey* is very carefully realised by Mr. F. Williamson. *Doves* can seldom have been treated with more genuine success than by Miss Crozier; this is an exact and highly elegant study, more especially as regards the actions of the birds. Among the flower-pieces, those of Miss Helen Coleman hold a front rank. W. M. Rossetti.

"THE RIVALS," AT THE GAIETY THEATRE, AND MR. AIDÉ'S "PHILIP," AT THE LYCEUM.

AMONG all last-century comedies, *The Rivals* probably stands second in general estimation now-a-days. Only one comedy can stand before it, and that can be no other than the *School for Scandal*. And *The Rivals*, though it may justly be the second, cannot pretend to be the first. Though its length is as great as that of the masterpiece, its subject is less full. It bears signs of the lack of experience which neither genius nor labour has been able to hide in a first dramatic work. Its interest is never very engrossing. Its unrestrained fun gets sometimes dangerously near to farce. When writing it, Sheridan knew where to begin, but scarcely knew where to stop. Mrs. Malaprop's "nice derangement of her epitaphs" is surely too continual. Julia's sentiment passes into sentimentality. Even Lydia Languish is something of a broad caricature. In the *School for Scandal* she would have been impossible. She would have been quite at home in *The Critic*.

That which enabled *The Rivals* to win its own high place, and hold it, at a time when the intellectual world gave *rendezvous* at the theatre—and after a critical first-night audience had received it but coldly, thanks in part to Mr. Lee's bad acting as Sir Lucius O'Trigger—is probably not so much its wit of dialogue as its freshness of conception and vigour of character. Familiar acquaintances of every day, who had not yet become tiresome on the stage, were introduced along with the more conventional characters of comedy. Sheridan's execution afterwards became more perfect, but his range was never greater, than when he wrote *The Rivals*. The distance is great between fiery Sir Anthony and boasting Bob Acres; between Julia, who loves the romance of sentiment, and Lydia, who cares for the romance of adventure. These characters are as far apart as any characters can be who proceed from a mind more observant than imaginative, and a mind which when observant is observant only of the world of fashion—idle masters of idle body-servants: mincing mistresses of mincing waiting-maids. The study of the higher class is carried further and is very notably keener than is that of the lower. Sheridan fathoms Sir Anthony and Mrs. Malaprop; but of Fag he knows only that Fag can imitate his master, and of Lucy, the tiring-maid, he knows only that she gets kisses and will take bribes. Further he does not go. Perhaps no writer of comedy, who was really so great, was ever so limited. That is because he did not study humanity. He studied St. James's Street.

In old days the part of Julia seems to have been a favourite. It seems to have been possible then to take a serious interest in that monotonous but reputable damsel. She and "her Falkland" were, in truth, as sentimental as any persons in the novels that Sheridan wisely satirised. The sentimental novels were popular favourites, and so were Sheridan's own sentimental lovers. The actresses of that day did their best to bring out the very characteristic which the actresses of our day often do their best to suppress. What fault we find with the Julia of Miss Carlisle at the Gaiety is that she lends herself a little to what we conceive to be the older interpretation of the part. Mr. Vezin, as Falkland, makes that character real to us. His jealousy is intelligible. It is the result of a disordered brain and a too-finely organised nervous system, belonging to a man who must have begun life with the instinct of Puritanism—see his bare approval of the stately minuet and his morbid horror of Sir Roger de Coverley. Mr. Vezin has often been better fitted with a part. He has made one or two parts distinguished. He should be seen, by those who wish to know him, in *Doctor Dacy*—Mr. Albert's version of *Sullivan* or *David Garrick*—or in Mr. Wills's *Man o' Airlie*. Falkland is a part he cannot make distinguished. But he is so good an actor that he saves it from failure.

The acting, indeed, throughout the piece is good: the cast is so strong that as a whole we are not likely to see a better. For the smaller characters are represented as efficiently as the greater ones, and about the whole performance there is a completeness that, while it will not stand comparison with that of *The School for Scandal* a year ago, at the Vaudeville, is very remarkable, when we consider that the piece can only be played on a few Saturday mornings. Mr. Hollingshead has wisely confined his expenses to the engagement of a few distinguished players. There is no lavish outlay upon scenery and dress; no outlay that we could consider a liberal one, were the piece destined to amuse the town for fifty or a hundred consecutive nights. Of course there are exceptions to the excellence of the performance. Mr. Charles Harcourt, in the midst of much that is thoughtful, fails to give quite what we conceive to have been the spirit of Captain Absolute. A certain mental, not physical, importance seems lacking to his part. And the Mrs. Malaprop of Mrs. Leigh is

undoubtedly wanting in finish and individuality; and this is due apparently not so much to any carelessness in the actress, as to the part over-weighting her. She delivers her words accurately, but not pointedly. Her facial expression has little variety. She does not bring Mrs. Malaprop before us at all vividly. The character may be in her voice, but it is not in her face. Mr. Lionel Brough's David expresses much anxious solicitude—a glimpse of a quiet tenderness which is not a common quality (hardly even a possible one) of Sheridan's. The Sir Lucius O'Trigger of Mr. Maclean is less demonstrative than one is accustomed to fancy him. Perhaps it is a stage tradition to oppose his very tranquil matter-of-fact courage to Bob Acres's blustering self-assertion: at all events, the thing is well done. Here, however, a certain raciness is missed which seems natural to the character. Mr. Taylor's Fag, Captain Absolute's servant, is satisfactory. The part is not one to which it is possible to give either much colour or much elaboration; and herein it differs from another small part—that of Lucy, the waiting-maid—which Miss Gresham plays with a good deal of quiet intelligence of what the part demands, though with no uncommon comic power. Her demureness is truly assumed, her liveliness not forced; there is nothing in her of the familiar soubrette's pertness. But when Lucy is quite by herself, and counting up in triumph, or at all events with satisfaction, the gains of her not-ill-meant duplicity, Miss Gresham has perhaps something less than the requisite spirit. The fault of Miss Farren's Lydia Languish is probably its exaggeration. It is so entertaining, that one does not complain of it at the time; but one asks afterwards whether this boisterous embodiment of self-will and petulance—angular and ungenial—which the actress chooses to represent, could by any possibility have won and kept the love of Captain Absolute; and whether Miss Farren has not, with all her cleverness, been mistaken in caricaturing that which was enough caricature to begin with.

To say that Mr. Toole, as Bob Acres, is fuller of broad fun than of intellectual subtlety is only to say, in other words, that Mr. Toole is a low comedian, and not a high comedian. But certainly, to our eye, this absence of subtlety is "the head and front of his offending" as Bob Acres. Bob Acres belongs to low comedians: low comedians are not generally subtle: *ergo* Mr. Toole is as good a Bob Acres as we are likely to see. The fact remains that there are conceivable delicacies of expression, double meanings of voice—as where, for instance, the coward suggests "we won't run, will we?"—that Mr. Toole fails to indicate. We want to feel, from our first introduction to him, that Bob Acres is not at all the hero he pretends to be. He is not a man who could impose upon us as Falstaff could. The declaration of his valour is less serviceable to his reputation. But Mr. Toole does not enable us to perceive this. In much of the duel scene, however, the actor's command of expression of the face is very great and striking. The valiant fellow is dying of fright. He is pale; his eyes start; his knees knock together. All of this that Mr. Toole chooses to do, he seemingly is capable of doing. He is a master of the resources of his art. His execution is ahead of his conception. He is always effective. He is not always delicately true.

One compares Mr. Phelps with those musicians who, following closely the master's work, are occupied wholly with its interpretation, and are called cold, as their reward, because they do not obtrude their individuality,—because they think always of displaying their author, and never of displaying themselves. What Mr. Charles Hallé does for Beethoven, Mr. Phelps does for Shakspeare, and for Sheridan. He is a careful, accurate, keenly intelligent interpreter. Mr. Phelps has not the pretension to improve upon Sheridan, or to think his own emotions of greater interest than Shakspeare's. He plays his part so well because

he never goes out of it. He understands the principle of the division of labour. And this being so—and forty years of almost unceasing work having done all that Time can do to make a man a finished artist—it is not to be expected that we shall require to single out, in his reading of Sir Anthony Absolute, a passage here and there for special praise. The choice would be arbitrary: the criticism of detail unnecessary. But if the intending playgoer, with a disposition to differ from us, will read to himself the scene between Sir Anthony and the Captain, in the early part of the second act—will read it at home as carefully as it is possible to do—and upon it proceed to the theatre, he shall find, we promise him, with all respect for his intelligence, that Mr. Phelps has read it more carefully than he.

Intellectual subtlety, united with sobriety and a measured employment of the physical means—that is perhaps the characteristic of the old school of acting, of which Mr. Phelps has been for now many years the accredited representative. Intellectual subtlety, not seldom overshadowed by new and unaccustomed shows of violence and passion—that is perhaps the characteristic of the strenuous school of acting, of which Mr. Henry Irving is easily the chief. The playgoer who sees something more than mere amusement in the theatre, will not be sorry when the performances of a week suggest to him a comparison not without its interest. Mr. Phelps in *The Rivals*: Mr. Irving in *Philip*—here is food for much curious consideration of the stage. Mr. Phelps, as is his wont, appears in a character which he has chiefly to interpret, and Mr. Irving in a character which he has chiefly to create. Mr. Irving's parts have generally given him scope for invention, and his inventive faculty is both great and delicate. His acting, even when it is most faulty—and it is very faulty in the new drama of *Philip*—is always worthy of careful discussion, for if it is often grievously disappointing, it is oftener in the highest degree suggestive. But well-nigh all we can say of it to-day, when a new play, itself of considerable importance, presses for notice, is that those who see Mr. Irving in this new drama will see the old faults—of occasional exaggeration, mannerism, even staginess—with all the familiar, but only too uncommon merits of a broad grasp of the general character, and a delicate grasp of detail, and thoughtful study and much earnestness, and one or two new phases of power. And of these the most noticeable is a very short and very perfect love-scene in the first act, where Philip kneels to Marie, his mother's companion—a French girl. The common *jeune premier* kneels as a matter of business. It is a trick of his trade: an every-day process of love-making, and though the spectator believes it to be possible, he cannot be asked to consider it persuasive. Mr. Irving does quite otherwise. He kneels for an instant—flushed with sudden passion. Strong feeling floods his whole frame, as the Nile floods Egypt. So much must be said for one fine moment—let us pass to the play itself.

In recent days, Philip de Mirafloure and Juan de Mirafloure lived with their mother in Andalusia. Juan is occupied with Divine right, and Philip with human wrongs, and the mother has heard of Communism, and thinks that between that and feudalism there is no middle ground, and being the widow of a Spanish noble, the second seems to her the desirable thing. There was never much love between the brothers, and now that both love Marie, their mother's companion, there is little but hate between them. Quarrelling over the French girl, Juan stabs Philip, ineffectually, and Philip thereupon shoots Juan, dead, as he thinks, and the first act closes. Eight years afterwards, the old Countess having died, and republican Philip having made his fortune in trade in America, the girl Marie—still young—is companion to Madame de Privoisin, in Paris. One Monsieur de Flamarens is enamoured of her there, but her condition is that of a dependant, who
